Profile of Respondent Companies

The purpose of this survey is to identify the current and future trends of overseas business operations* and foreign direct investment (FDI) activities of Japanese manufacturing companies. This year's survey was the 17th of an annual series that began in 1989. The survey covered 945 manufacturing companies that have three or more foreign affiliates, including at least one manufacturing base, as of November 2004. The questionnaire was mailed to 945 companies and 590 valid responses were returned over the period from July to September. The effective response rate was 62.4%. (In the FY 2004 survey, valid returns were 595 out of 939 companies, with the response rate of 63.4 %.) This year's survey covered issues such as "China and ASEAN," "Economic Partnership Agreement (EPA) and Free Trade Agreement (FTA) in East Asia," and "EU enlargement."

* "Overseas business operations" is defined as production, sales, research and development activities in overseas bases, as well as outsourcing of manufacturing and procurement overseas.

Northern China (Beijing, Tientsin, Hebei Province, and Shandong Province)
Eastern China (Shanghai, Jiangsu Province, Anhui Province, and Zhejiang Province)
Southern China (Fujian Province, Guangdong Province, and Hainan Province)
Inland China (Provinces other than those mentioned above and Autonomous regions)

In the graph above, "EU15" have been consolidated into the "EU" since the FY 2004 survey.

Overseas business operations will continue to be strengthened or expanded

Medium-term (next 3 years or so) prospects on overseas business operations have indicated that the proportion of companies that responded to strengthen or expand overseas operations was 79.1% (all industries). Although it is lower by 2.8 points than the previous year's figure, it can be considered that the positive stance toward overseas operations continues to be strong.

The overseas production ratio and the overseas sales ratio in FY 2004 are respectively 27.8% and 28.6%, and expected to show further increase to 29.2% and 30.1% in FY 2005 (estimates).

Positive stance is also continuously observed in domestic operations

As to the medium-term prospects for the domestic business operations, the share of the companies that have responded they would strengthen or expand the operation has reached 47.0%, exceeding the share (46.3%) of the respondents of "will maintain the present level of operations." Thus, the stance to strengthen or expand the domestic operations is becoming even firmer.

Expansion of overseas business operations have less effects on domestic operations

When asked about the effects of overseas business operations on domestic operations, the largest proportion (40.3%) of the respondents, in FY 2003 survey, answered they would "offset the portion of production shifted to the overseas base by launching production of other goods or in other areas in Japan." In contrast, this year, the largest group (38.3%) answered that "the foreign investment was intended for maintaining or expanding the sales market in the host country and thus had no impacts on domestic business operations." This indicates that the impacts of strengthening or expanding overseas business operations on domestic operations over the past three years were smaller than forecasted 3 years before.

Strongly positive stance in China, Central and Eastern Europe, and Russia, while the same stance surged in India and Vietnam

As in the previous year, China obtained the highest proportion (71.2%) of the companies among the surveyed regions/countries that responded to "strengthen or expand the overseas business operations" over the medium term. This was followed by Russia and other CIS (66.3%), Central & Eastern Europe (65.9%). Comparison with the previous year indicates that the shares of Other Europe and China declined, while significant growth was registered by Other Asia/Oceania, Latin America, Russia and other CIS countries. In particular, the increase of Other Asia/Oceania was largely driven by a growing number of companies that would "strengthen or expand" in India and Vietnam.

Evaluations of Business Performance improved in many regions, but a significant decline in China

The evaluation on the level of satisfaction for sales and profitability in their overseas business operations showed more improvement as in the previous year. In particular, NIEs recorded the high levels of satisfaction, and EU15, Latin America, and North America largely improved. In contrast, China took a sharp downward turn from the previous year.

As to the reasons for profitability satisfaction, the proportion of "Difficult to obtain customers (intense competition)" has decreased as the reason for "unsatisfactory/somewhat unsatisfactory," while the share of "Cost reductions are difficult" has much increased.

Good balance between China and ASEAN in the business strategies, and effects of the Anti-Japan Demonstrations in China was limited

As to the stance toward China and ASEAN, the largest proportion chose "well-balanced approach for risk diversification" (58%), followed by "approach weighted for China" (23%), and "Incomparable for business objectives that are different for each country" (12%).

Companies that reported there were some negative effects of the Anti-Japan Demonstrations on production and sales operations in China accounted for 10%, but almost companies responded they would not amend their medium-term business plans in China

Production in both China and ASEAN is likely to head for high-value-added products, and both bases are to reduce the share of sales to Japan and shift to China

Production functions currently undertaken by affiliates in China and ASEAN has been surveyed along with the reinforcing functions for the medium term. The survey results common to both bases are that most of the companies are currently producing generalpurpose products, but in the medium term high-value-added products will be more focused on.

As for the main sales markets of Chinese and ASEAN bases, respective local markets were the largest with over 80%, followed by Japanese market. In the medium term, more Chinese bases will strive to increase sales within Chinese market, while less ASEAN bases are to increase sales within ASEAN. Sales to Japan is likely to decrease from both bases, and ASEAN bases are more focusing on Chinese market in the medium term.

Utilisation of EPA/FTA varies according to the partner country and the industry

When asked about the intention to utilise the six EPAs that are either under negotiation or in substantial agreement by Japanese government and the status of the utilisation of three already signed EPA/FTAs, the highest share of "will use it" or "already using it" was yet 30% for Japan-Thailand EPA (al industries). Extent of utilisation differs depending on the signatory country to EPA and type of industry.

54.8% have given any positions to New EU Member States

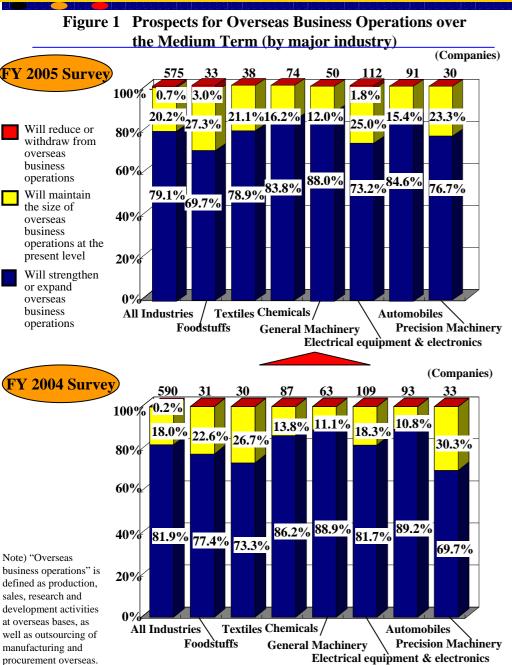

More than half of the respondents gave any position to the EU new member states in their overseas business strategies. On the other hand, share of companies that replied "not relevant to the company's overseas business strategy" has reached to 42.7% (all industries). As emerging market countries with high potential are located graphically nearer, such as China and India, Japanese companies do not necessarily have a strong interest in the new EU member states. However, it is noteworthy that there were a few companies that consider these countries as a production base for Russia and other CIS countries.

BRICs, India, and Russia among others rose in the rankings of promising countries

In the countries/regions that companies viewed as promising for business development in the medium term, the top four—China, India, Thailand, and Vietnam—remained unchanged from the previous year. However, India, which ranked third last year, outpaced Thailand and rose to second; and Brazil, which was 13th last year, went up to ninth. Russia remained sixth as in the previous year. These indicate that Japanese companies have a growing interest in the BRICs. However, in three countries, excluding China, the number of companies that have no specific plans far exceeded that have concrete business plans. We should closely watch the development of specific planning by the companies over the coming years.

_7

III. Survey Results 1. Prospects for Domestic and Overseas Business Operations (1) Medium-term Prospects for Overseas Business Operations

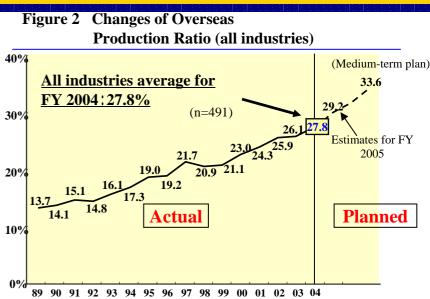

Figure 3 Overseas Production Ratio (major industries)

\backslash	Number of	FY 2004	FY 2005	Medium-term
	companies	actual	estimates	plan
All Industries	491	27.8%	29.2%	33.6%
Chemicals	60	17.0%	18.5%	23.7%
General Machinery	42	21.7%	23.3%	29.7%
E & E	98	39.7%	41.0%	44.2%
Automobiles	77	26.2%	28.3%	34.0%

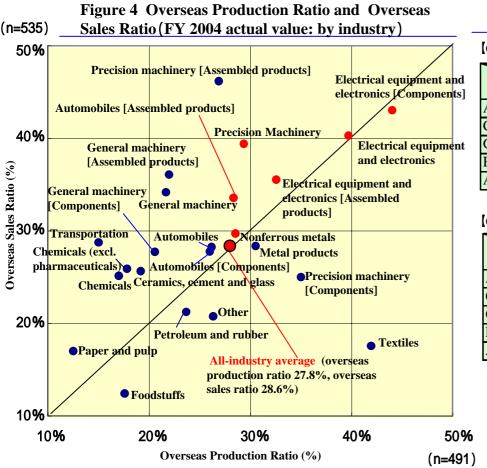

Proportion of the companies taking the stance to "strengthen or expand overseas operation" is down by 2.8 points below the previous year's, but the positive stance remains strong

Medium-term (next 3 years or so) prospects on overseas business operations have indicated that the proportion of companies whose response is to strengthen or expand overseas operations is 79.1% on an all-industry average. Though it is lower by 2.8 points than the previous year's figure, it can be considered that the positive stance toward overseas operations continues to be strong.

Overseas production ratio continues to rise

The actual ratio of overseas production in FY 2004 rose to 27.8% on an all-industry average, showing an increase over the previous year for six consecutive years since 1999. The estimates for FY 2005 and the medium-term plan until FY 2008 are 29.2% and 33.6% respectively, indicating the continued trend that many companies plan to expand their overseas production.

(2) Overseas Sales Ratio and Overseas Production Ratio

Note) Marked in red if the both of Overseas Production Ratio and Overseas Sales Ratio are above the all- industry average (overseas production ratio: 27.8%; overseas sales ratio: 28.6%) and marked in blue if otherwise.

*Overseas Production Ratio = (Overseas production) / (Domestic production + Overseas production) Not including outsourcing production.

**Overseas Sales Ratio = (Overseas sales)/ (Domestic Sales + Overseas Sales)

***Dots in the graph are based on each industry's average per company.

Figure 5 Overseas Production Ratio and Overseas Sales Ratio (major industries)

[Overseas Production Ratio]

	Number of	Fiscal 2004	Fiscal 2005	Medium-term
	respondent	actual	estimates	plan
All industries	491	27.8%	29.2%	33.6%
Chemicals	60	17.0%	18.5%	23.7%
General machinery	42	21.7%	23.3%	27.9%
E & E	98	39.7%	41.0%	44.2%
Automobiles	77	26.2%	28.3%	34.0%

Overseas Sales Ratio

	Number of	Fiscal 2004	Fiscal 2005
	respondent	actual	estimates
All industries	535	28.6%	30.1%
Chemicals	72	25.1%	26.8%
General machinery	48	34.2%	36.9%
E & E	104	40.3%	41.2%
Automobiles	83	28.3%	30.7%

Overseas sales ratio is also on the increase

The actual value of the overseas sales ratio in FY 2004 was 28.6% on an all-industry average. The estimates for FY 2005 is 30.1% on an all-industry average, showing that many companies continue to expect expansion of sales at overseas.

Trend by industry

When examining overseas production ratio and overseas sales ratio by industry, industries such as Electrical equipment and electronics (E&E) and Precision Machinery showed higher ratios in both production and sales, reflecting the significant weight of overseas business operations in these industries.

(3) Medium-term Prospects for Domestic Business Operations - Relations with Overseas Business Operations -

Figure 6 Prospects for Domestic Business Operations over the Medium Term

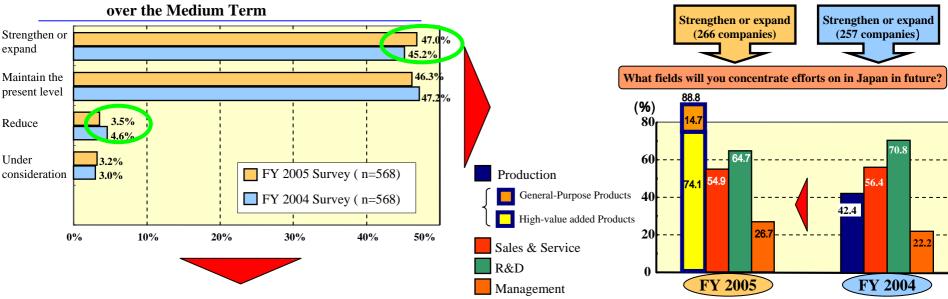

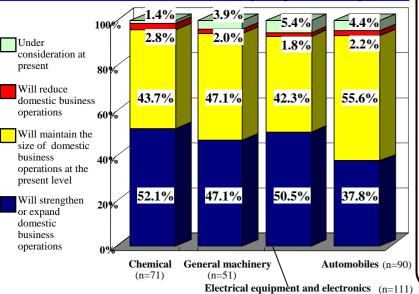

Figure 7 Prospects for Domestic Business Operations over the Medium Term(by major industry)

Positive stance is continuously observed for strengthening or expansion in domestic operations as well

When questioned about their stance on domestic business operations over medium term (next 3 years or so), 47.0% of the companies in all industries responded "Strengthen or expand," and 46.3% answered "Maintain the present level." These two responses each account for nearly half of respondents, with a mere 4.6% respondent to "Reduce" in scale. Comparison with FY 2004 survey results for reference shows that the proportion of companies stating "Strengthen or expand" rose 1.8 points to occupy the largest share, while those responding "Reduce" fell by 1.1 points.

Figure 8 Fields to Focus on in Japan in Future (multiple responses)

By major industry, the proportion choosing "Maintain the present level" in the Automobiles exceeded the proportion for "Strengthen or expand," but in Chemicals and Electrical equipment and electronics, a majority chose "Strengthen or expand." In these industries, the results showed a clearer tendency towards medium-term expansion of the scale of domestic business operations.

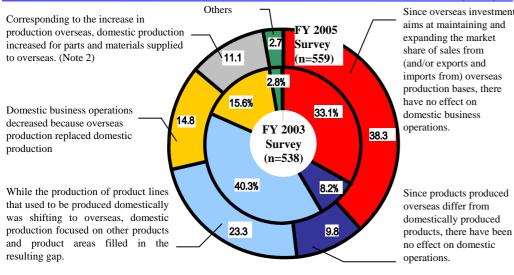

Production of high-added value product and R&D is the area to be reinforced in domestic business operations

Companies which responded "Strengthen or expand" for the scale of their domestic business operations were asked which fields they would concentrate their efforts on in Japan. A high proportion in those groups chose "high-added value" and "R&D," suggesting that a large number of companies aspire to raise added value in their domestic business operations.

Strict comparison with FY 2004 survey result is difficult because the option of "production" in this survey differs from the FY 2004 survey, but the stance to place emphasis on "R&D" is expressed as strongly as the previous year.

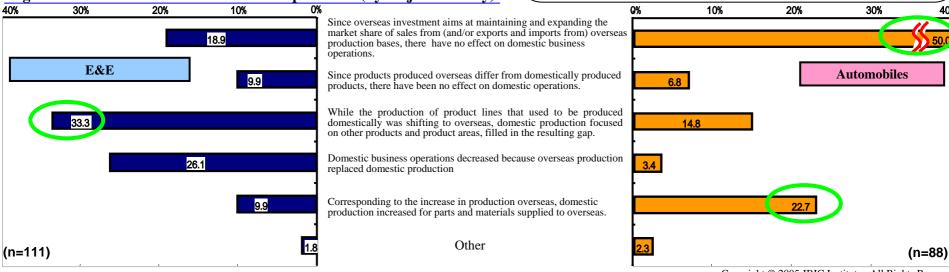

40%

Figure 9 Effects on Domestic Business Operations (All Industries) (Note 1)

Note 1) The FY 2003 Survey was made with different option categories from those developed for the FY 2005 Survey. Therefore, FY 2003 data have been reclassified so as to simulate the option categories in the FY 2005 Survey. Questions in the FY 2003 Survey were designed to check the effects on domestic business operations over the medium term (next 3 years or so), while the questions in the FY 2005 Survey are designed to check the effect on domestic business operations over the last 3 years. Note 2) This item is an option newly added to the FY 2005 Survey.

Figure 10 Effects on Domestic Business Operations (by major industry)

Expansion of overseas business operations have less effects on domestic business operations

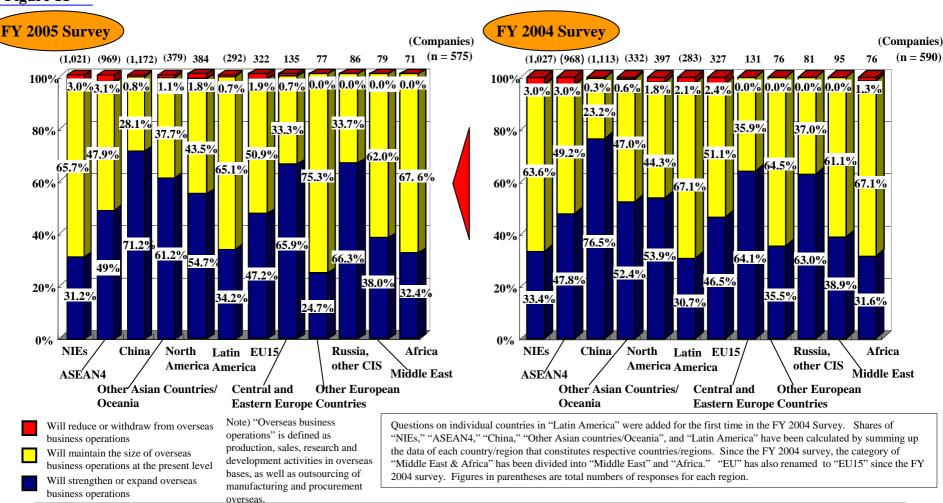

Influence of the expansion of overseas operations over the domestic operations has been examined in comparison with FY 2003 survey results. "Since overseas investment aims at maintaining and expanding the market share of sales from (and/or exports and imports from) overseas production bases, there have no effect on domestic business operations" (33.1% 38.3%): the proportion of the companies that gave this response has risen to become the highest of all, followed by "While the production of product lines that used to be produced domestically was shifting to overseas, domestic production focused on other products and product areas filled in the resulting gap" (40.3% 23.3%), which was the highest in proportion in the previous survey. On the other hand, the response of "Domestic business operations decreased because overseas production replaced domestic production" has decreased in number of respondent companies though it still retains a proportion of 15%, especially Textiles (26.7% 45.9%) and Electrical equipment and electronics (24.0% 26.1%) showed highproportion.

E&E and Automobiles pursue different courses in deploying business operations

In the Electrical equipment and electronics (E&E) industry, a high proportion of companies have rendered the following responses: "While the production of product lines that used to be produced domestically was shifting to overseas, domestic production focused on other products and product areas, filled in the resulting gap" and "Domestic business operations decreased because overseas production replaced domestic production." In the Automobile industry, on the other hand, the proportion of the companies that have chosen the following responses is high: "Since overseas investment aims at maintaining and expanding the market share of sales from (and/or exports and imports from) overseas production bases, there have no effect on domestic business operations" and "Corresponding to the increase in production overseas, domestic production increased for parts and materials supplied to overseas." This difference appears to derive from the fact that Automobiles companies have a strong tendency to produce near the market, while the Electrical equipment and electronics is likely to move its production to low-cost overseas sites along with the implementation of mass production to meet the needs of short product cycle and consequent strong pressure on cost reductions. The option for the response that was added in this year's survey, namely, "Corresponding to the increase in production overseas, domestic production increased for parts and materials supplied to overseas" indicates that, though overseas production progressed, production of key components are still carried out domestically in Japan. The present survey has clarified that this tendency is more evident for Automobiles than for Electrical equipment and electronics.

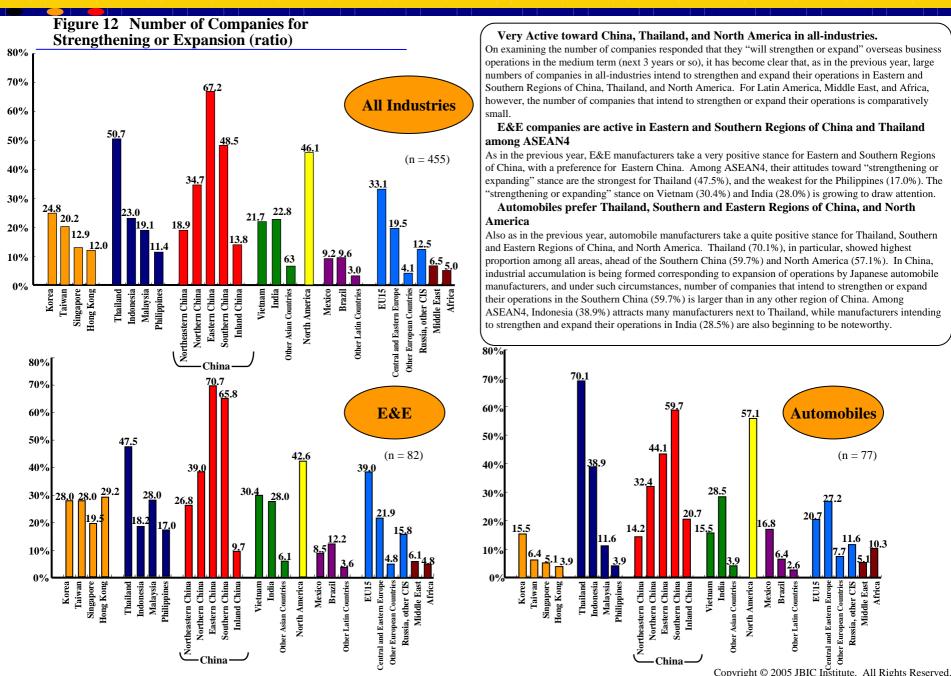

Convright @ 2005 IBIC Institute All Rights Reserved

Figure 11

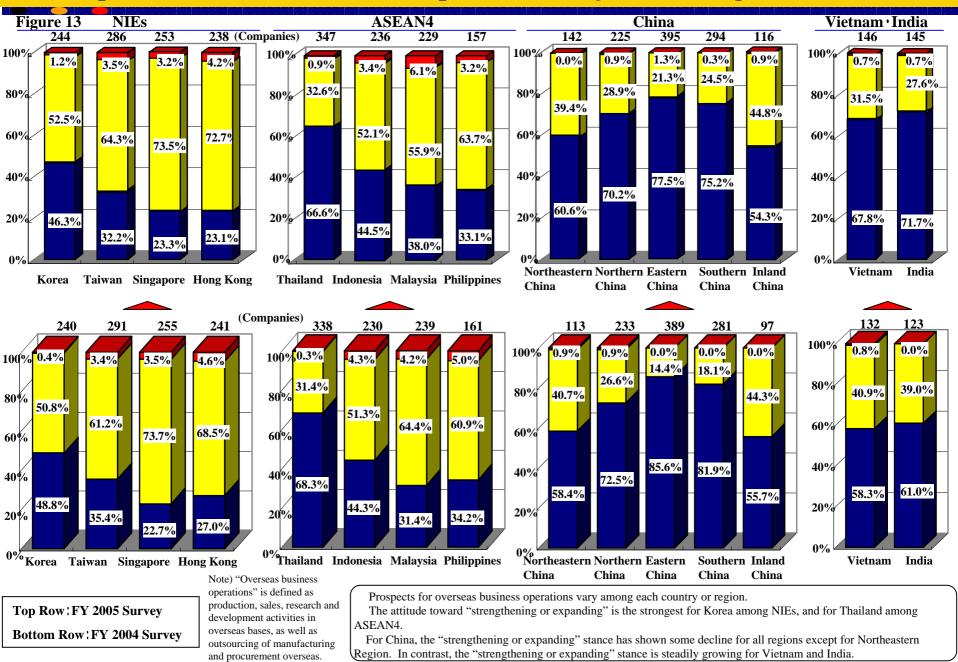

Strongly positive stance on China, Central and Eastern Europe, and Russia, with the same stance also gaining force for Other Asian Countries/Oceania When asked about their prospects for overseas business operations in the medium-term (next 3 years or so), country/region that obtained the highest proportion of "will strengthen or expand the scale of overseas operations" was China (71.2%), followed by Russia/Other CIS (66.3%), Central and Eastern Europe (65.9%), Other Asian Countries/Oceania (61.2%), North America (54.7%), and so on. Comparison of this year's survey with the previous year exhibits the feature that for the two regions of Other Asian Countries/Oceania and Latin America, the proportion of the "strengthening or expanding" stance has shown a growth of 8.8 points and 3.5 points, respectively (See Figure 13). On the other hand, as for China, the proportion of the "strengthening or expanding" stance is the highest but it has decreased by 5.3 points below the previous year's figure.

(2) Countries and Regions for Strengthening or expansion

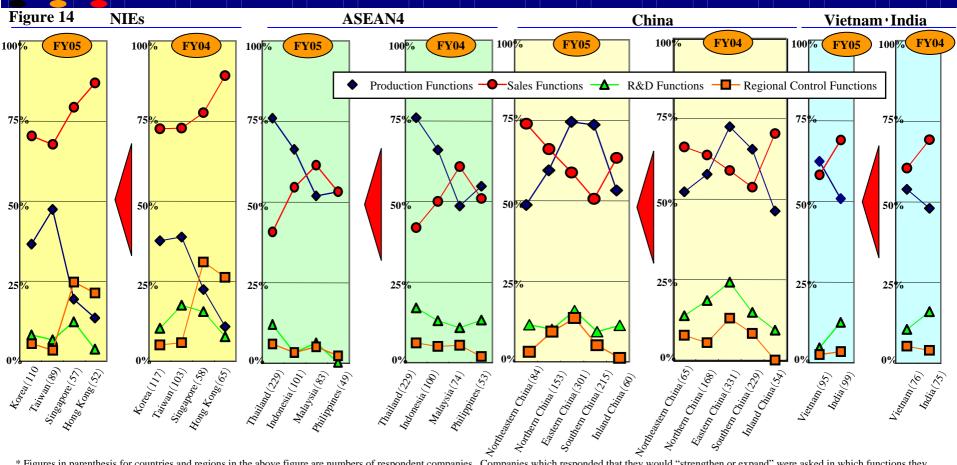

(3) Prospects for Overseas Business Operations (major Asian regions)

p.11

Copyright © 2005 JBIC Institute. All Rights Reserved.

(4) Functions for Strengthening or Expansion (major Asian regions)

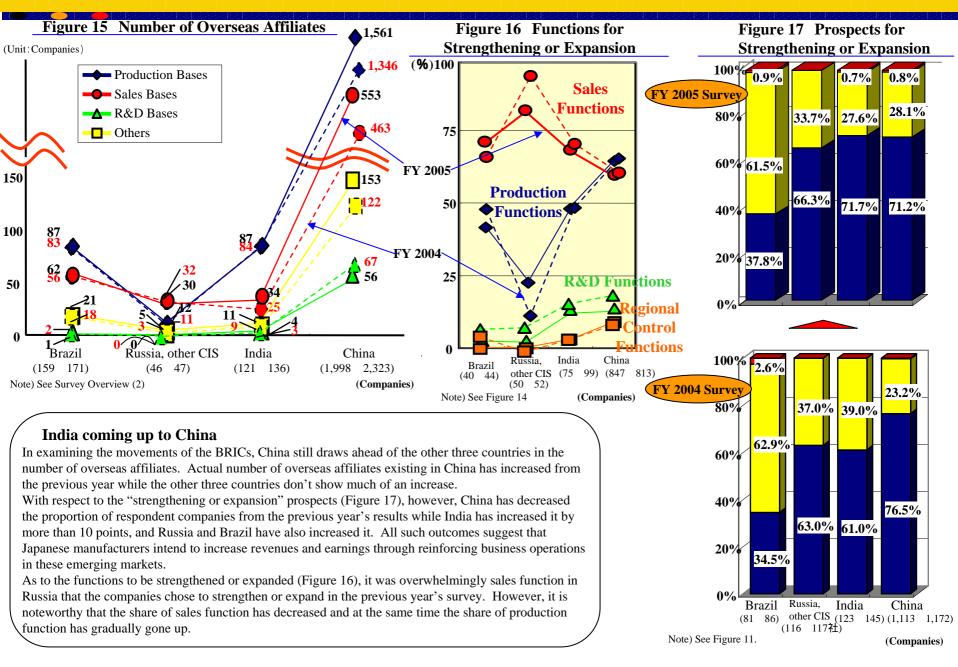

* Figures in parenthesis for countries and regions in the above figure are numbers of respondent companies. Companies which responded that they would "strengthen or expand" were asked in which functions they intended to do so, from production, sales, R&D and regional control functions. Multiple options were presented within each function, and a company which selected any one of them was counted as one company in the corresponding function.

The share of R&D has declined in most countries and regions.

Specific functions that are to be expanded in the overseas business operations were surveyed and compared to the FY 2004 results. The observed features of each region are as follows. [NIEs] Strengthening or expansion of sales functions is clearly higher than production or other functions in each country. Production functions have a larger weight in Korea and Taiwan, while regional control functions in Singapore and Hong Kong. [ASEAN4] Production functions surpass sales functions in Thailand and Indonesia, but in the Philippines, share of sales functions has gone up and that of production functions has gone down, which narrowed the difference between the two functions to almost zero. In Malaysia, sales functions surpass production functions, but the gap between the two functions has narrowed slightly as a result of production functions having gone up from the previous year's survey. [China] In Eastern and Southern regions, production functions surpass sales functions in Northeastern region, and regional control functions in Northern and Southern regions. [Vietnam/India] For both countries, the proportion of production functions has moved up, and in Vietnam, that of production functions has surpassed sales functions for the first time in two years.

Movements of bases across countries and regions

A total of 85 companies responded "reduce or withdraw" in their medium-term (next 3 years or so) prospects for overseas business operations in each region or country (See Figure 11). Of these, 38 companies gave their reason as "reduction or withdrawal from the business concerned," 37 said "relocation or division to a third country" and 10 said "To return to Japan".

Companies relocating their operations to China are a prominent trend

When the 37 companies that chose "relocation or division to a third country" are investigated further to find which functions they are moving, and to where. The most common relocation origin is Malaysia (9 bases), followed by Hong Kong (6), Taiwan (4), Singapore (4) and Indonesia (5). Of those, the movement of both production and sales functions is more common from Malaysia, production functions is from Indonesia and Taiwan, and sales functions is from Hong Kong. The most common destination is China (18 bases), followed by Vietnam (6), Indonesia (5), and Malaysia (4). The common areas relocated to China are production, sales and regional control functions from Hong Kong (6), and production and sales functions from Taiwan (3). By industry, the E&E showed most relocations including from Malaysia and Hong Kong, which implies that a reviewing production and sales function is carrying out in China and ASEAN region.

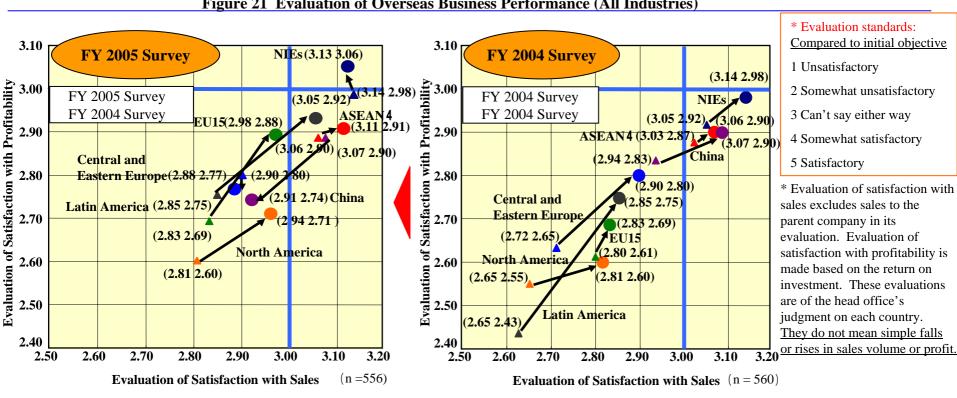

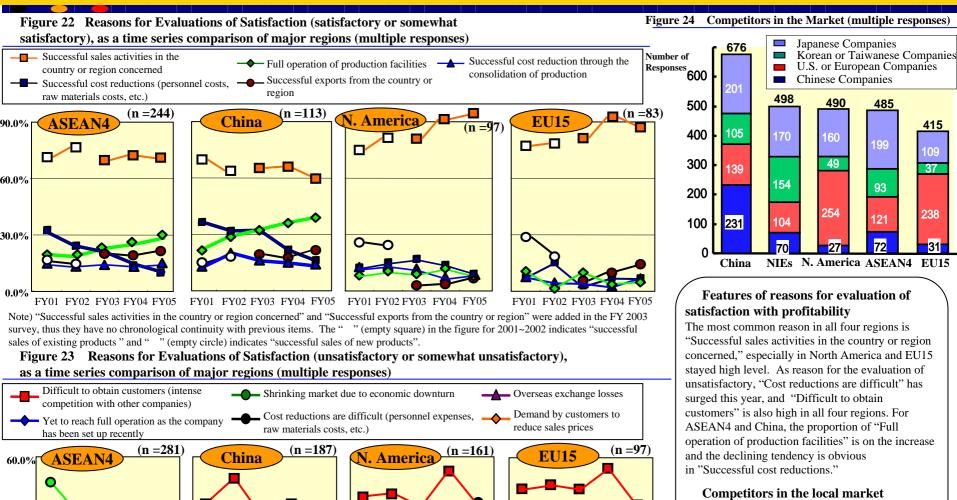

Figure 21 Evaluation of Overseas Business Performance (All Industries)

Evaluations have improved, but a significant decline was seen for China

Respondent companies' evaluations of sales and profitability satisfaction with their overseas business performance showed a more improving trend in each region and country from the FY 2004 survey. Business performance evaluations for the NIEs showed the highest levels of satisfaction, and there has been remarkable improvement in EU15, Latin America, and North America. In contrast, China showed measurable decline from relatively satisfied level to unsatisfied. As to the evident declining of business performance evaluation for China in this year's survey, comparison with FY 2004 survey results by industry tells that satisfaction with sales declined considerably in the Others, Textiles, and Ceramics, cement and glass. Also satisfaction with profitability declined in the Others, Steel, and Textiles. However, satisfaction with both sales and profitability improved in the Foodstuffs. In NIEs where satisfaction with both sales and profitability were evaluated at high level (satisfaction being over medium level "3"), Steel, Non-ferrous metals, and Automobiles, in particular, showed year-to-year increase in both of sales and profitability at the level above "3." Whether or not any particular industry is in a good condition in the local market is an influential factor in the evaluation of the profitability of each country/region.

(2) Reasons for Evaluation of the Profitability

Competitors in the local market
 A survey on competitors in each market disclosed that in China, which collected the largest number of responses, competitors of local company accounted for the largest share. For all five countries/regions, competition with Japanese companies occupies a comparatively high share, probably because the overseas markets reflect the competitive relations they have in Japan. By industry, severe competition is reported by Electrical equipment and electronics and Automobiles in every region.

4. Topics (1) China and ASEAN - Balancing between China and ASEAN, etc. -

Figure 25 Business Strategy Approaches to China and ASEAN

Priority was given to good balance between China and ASEAN in the business strategies

A survey was made as to what approaches toward China and ASEAN the companies consider in their business strategies. Of the 555 companies in all industries, the largest proportion responded "well-balanced approach for risk diversification" (58%), followed by "approach weighted for China" (23%), and "Incomparable for business objectives that are different for each country" (12%).

There were some negative effects on production and sales operations caused by the Anti-Japan Demonstrations in China (April 2005), but almost companies responded they would not amend their mediumterm (next 3 years or so) business plans in China

Results of this survey on the negative effects that the Anti-Japan Demonstrations in China may have caused on the production and sales operations in China were as follows. Of the 557 companies in all industries, a number of the companies that reported any negative effects like "severely affected" (1%) and "affected" (9%) totaled 10%, but most of the rest were "not affected" (77%). Furthermore, the 552 companies in all industries were asked whether or not any amendment to the medium-term (next 3 years or so) business plans for China was necessitated due to the Anti-Japan Demonstrations in China. In contrast to the companies that suggested amendment, "amendment has been made" (1%) and "amendment to be made" (3%), an overwhelming majority responded "no amendment" (96%). However, considering the decrease of China (on a year-to-year comparison) in the "medium-term prospects for overseas business operations" and the "promising countries and regions for overseas business operations over the medium-term", it would be necessary to watch carefully how Japanese manufacturers will proceed with their business operations in China hereafter.

Note) "The Anti-Japan Demonstrations in China" means a series of acts or activities in various cities in China in April 2005, such as a street demonstration and march protesting Japan, destructive activities wrecking Japan-related facilities, and a boycott movement against Japanese goods.

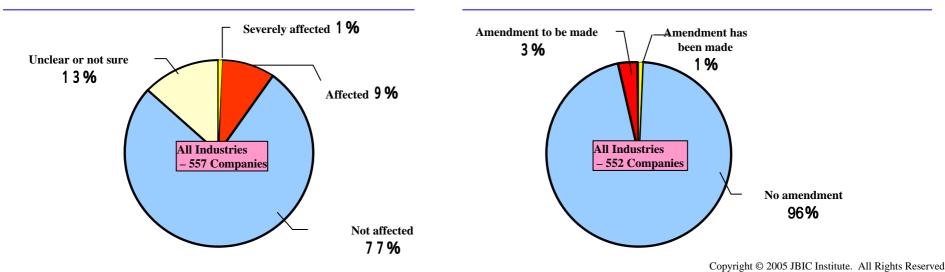

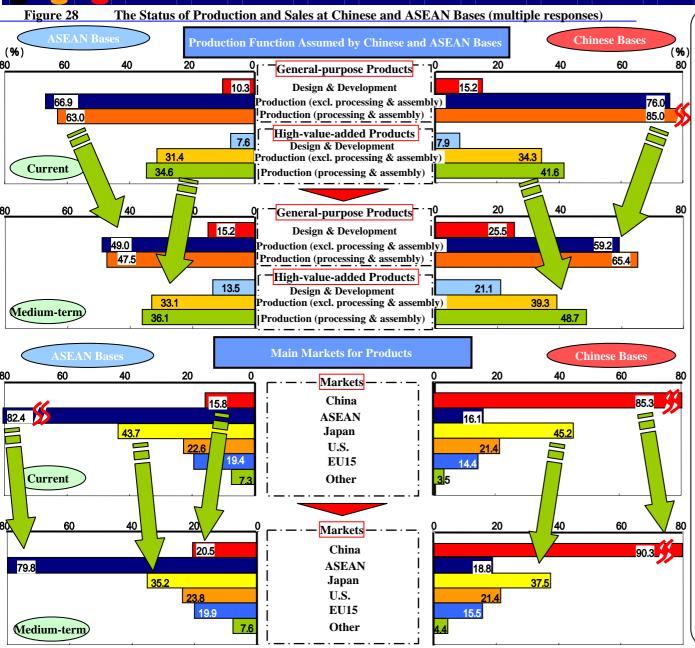

Figure 27 Amendment to the Medium-term (next 3 years or so) Business Plans for China in the wake of the Anti-Japan Demonstrations in China (April 2005)

(1) China and ASEAN (continued)

- Production and Sales of Chinese and ASEAN Bases-

Note) n = 341 (Companies that responded on both Chinese and ASEAN bases)

As for production functions, both Chinese and ASEAN bases are to increase high-value-added products in the medium term

The production functions currently undertaken by affiliates in China and ASEAN countries has been surveyed along with the reinforcing functions for the medium term (next 3 years or so).

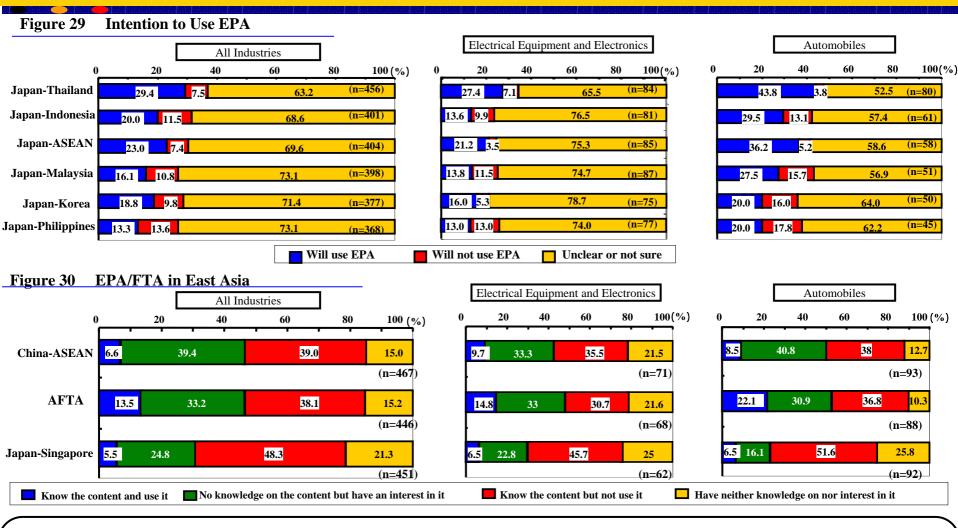

The survey results, which are common to both bases, are that most of the respondent companies are currently using these bases for producing generalpurpose products, but in the medium term (next 3 years or so) high-value-added products will be more focused on in stead of general-purpose products. Such tendencies are rather strong with Chinese bases where the design and development of high-value-added products are expected to increase from the current level of 7.9% to 21.1% (around three times) in the medium-term.

In the medium term (next 3 years or so), both Chinese and ASEAN bases are to reduce the proportion of sales to Japan and shift to China A survey was made on the current main sales markets for products produced by Chinese or ASEAN bases, as well the target sales markets they are going to develop or expand in the medium term (next 3 years or so).

The results of the survey, which are commonly applicable to China and ASEAN bases, revealed that sales within the region in which the bases are located has the largest share, amounting over 80%, followed by Japan as the second largest market. In the medium term, so far as Chinese bases are concerned, more companies are striving to increase sales within China. But the situation is contrary in ASEAN countries where less companies are attempting to increase sales within ASEAN countries. The proportion of sales to Japan is likely to decrease from both bases. Now, China is the market targeted by more ASEAN bases. It is noteworthy that in both Chinese and ASEAN bases, number of companies that are focusing on China as a prospective market in increasing on a mediumterm basis.

(2) Economic Partnership Agreements (EPA) and Free Trade Agreements (FTA) in East Asia p.19

Extent of Utilisation of Economic Partnership Agreements (EPA) and Free Trade Agreements (FTA) varies according to the partner country and the industry

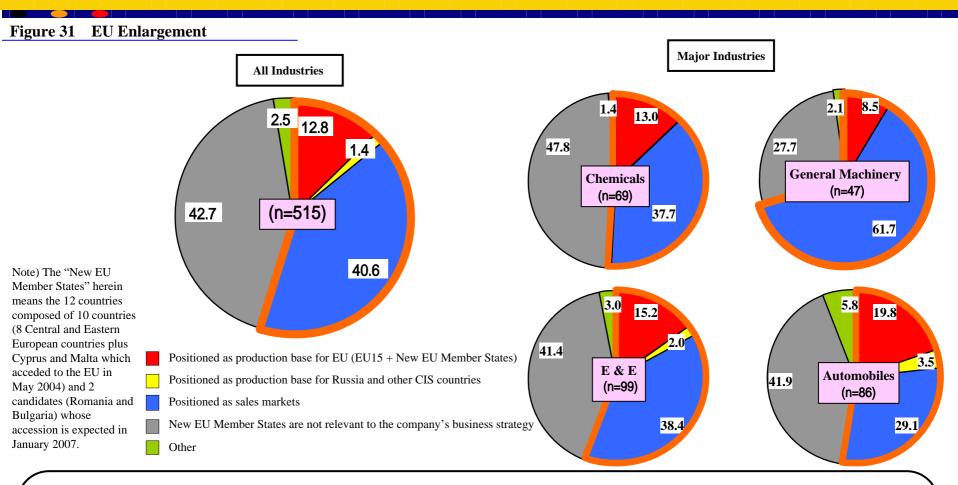

A survey was made about the intention to utilise the six EPAs, which are either under negotiation or in substantial agreement by the Japanese government (Figure 29), and the status of utilisation of the three already signed EPA/FTAs (Figure 30). The shares of responses of "use EPA/FTA" or "will use EPA" are not necessarily high. Among the EPAs/FTAs that have already signed, when looking into the Japan-Singapore EPA that came into force in November 2002 as the first EPA with Japan, the proportion of companies that are using it is not any higher than 5.5%. The proportion stands at only 13.5% even for AFTA, which is being utilised most (percentages shown are on an all-industry basis).

Among the six agreements expected to be concluded hereafter, the share of companies that intend to use the EPA with Thailand is high; particularly, 43.8% of Automobiles responded they would utilise the agreement. In contrast to the foregoing, the share of companies that will use the EPA with the Philippines is 13.3% for all industries and 20% for Automobiles, being less than half the proportion for Thailand. The degree of utilisation seems to be different by the partner country. To compare Automobiles with Electrical equipment and electronics, both of which are very active in overseas business, the former is likely to have more interest than the latter when compared the proportion of companies responded that they would utilise the agreements.

(3) EU Enlargement - Positioning in the Business Strategy of New EU Member States -

p.20

New EU Member States are given positions in the business strategy by 54.8% of all respondent companies

Ten countries consisting of five Eastern European countries, including Czech Republic, Hungary, and Poland, three Baltic States, and Cyprus, and Malta, formally acceded to the EU in May 2004. Further with the background that Romania and Bulgaria are also expected to accede in 2007, positioning of these New EU Member States in the overseas business strategies was asked. The result revealed that companies that gave any position such as "production base for EU," "production base for Russia and other CIS countries," and "sales markets" accounted for more than half, 54.8%. However, companies that chose "are not relevant to the company's business strategy" accounted for 42.7% (all industries), which implies that these New EU Member States may not necessarily be a great concern to Japanese manufacturers under the circumstances where huge promising emerging markets like China and India exist geographically nearby.

Some companies, though not many, have given a position to these countries as their production base for Russia and other CIS countries The most often appearing positioning is selling market, and not many manufacturers regard these countries as production base. However, it should be noted that in Electrical equipment and electronics and Automobiles that are very positive industries on overseas operations, a few companies, though not many, responded they consider these countries as their production base for Russia and other CIS countries.

5. Promising Countries/Regions for Overseas Business Operations (1) Ranking and existence of business plans

Notes)

(1) In this survey, respondent companies cited the top five countries that they saw as having promising prospects for business operations in the medium term (next 3 years or so). Tallies were made based on the number of companies each countries/regions was cited and the countries were listed according to that number.

(2) Other than the countries/regions listed above, North America (cited by 34 companies, 7% share) and the EU (cited by 43 companies, 9% share) gathered some votes.

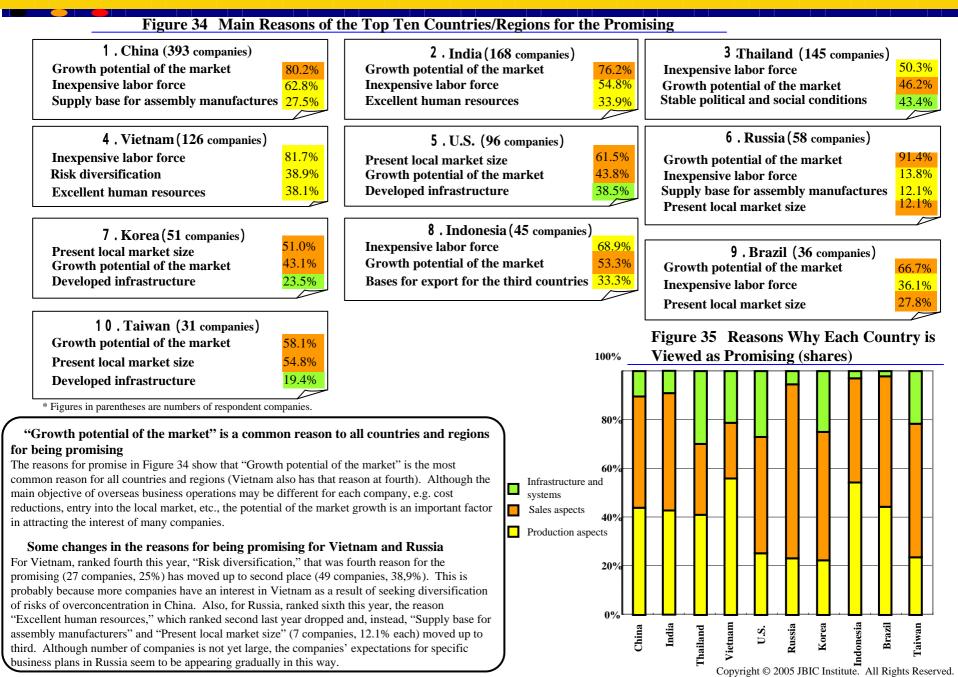

The same members as the previous year are in the top four, but BRICs are drawing more attention of Japanese manufacturers

Looking at the countries or regions that companies view as promising for business operations in the medium term (next 3 years or so), in this year's survey, the members in the top four are the same as the previous year, but India, in third place last year, has overtaken Thailand for second place, and Brazil, in thirteenth place last year, has moved up to ninth this year. Russia has maintained the same sixth place as last year, and such result indicates the fact that Japanese companies' concern about the BRICs is becoming even greater. The actual number of respondent companies that cited the above-mentioned three countries, except China, has also shown a steady increase. However, in these three countries, excluding China, the number of companies that do not have a specific business plan is still even greater than the number of the companies that have a business plan ready. Future materialization of business plans shall be carefully watched.

Compared to the previous year, Korea moved up by one place, while Indonesia and Malaysia moved down one place, respectively. The fact that Mexico, in 19th place last year, has emerged in 12th place this year should be also noted. Companies' expectation for the Japan-Mexico EPA that came into effect in April 2005 has assumably pushed Mexico into the upper ranking.

China continued to keep its ranking of first place from last year. However, compared to the last year, there was a considerable reduction of 9 points in the response ratio or 56 in the number of respondent companies, in addition to the reduction of proportion of "strengthening or expansion" for the medium-term (next 3 years or so) prospects of overseas business operations. We will need to keep an eye carefully on China's positioning for Japanese companies.

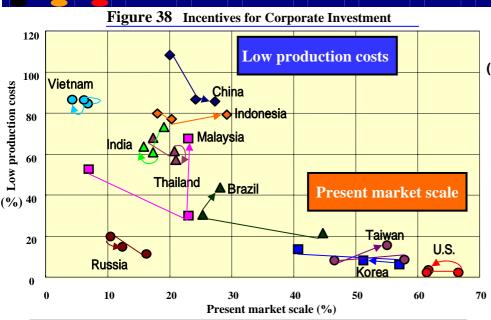

(2) Reasons for Promising Prospect

(3) Issues in Promising Countries and Regions

Figure 36 Main Issues of the Top Ten Most Promising Countries/Regions 1. China (380 companies) 2. India (127 companies) 3. Increase in labor costs 28.0% 24.0% Figure 37 Issues Characteristically indicated Increase in tax burden 📥 Vietnam – 🖓 – Brazil 📥 Russia 5.0 Changes are observed in the Note) The proportions of respondents indicating each issue issues of the top four countries 3 was averaged overall and that value assigned as 1 to "Intense local competition" is the top issue generate the issue indication ratio. (multiple responses) in the U.S., Korea, and Taiwan. However, there were some changes in the main issues in the top four countries/regions. China still has so many issues, and "Local restrictions on currency exchange and remittance," which ranked fifth last year moved up to third this year. As for India, "Underdevelopment of infrastructure" remained first, but "Unclear operation of local legal system" rose to third from fifth last year. For Thailand, "Difficulty in securing local personnel (management level)" climbed up Legal system Insufficient protection of IPR Local procurement of funds Instability of local currency and price Operation of legal system Fax collection systems Operation of taxation system investment permit procedures Immigration or working visas Import restrictions and customs clearance Securing local managers Increase in labor costs Local labor problems ntense local competition Collecting receivables Supporting industries Infrastructure curity and social conditions nsufficient information on climate Anti-dumping measures Distribution services Increase in tax burder Restrictions on foreign capital Local restrictions on currency exchange and remittance to first from third last year. For Vietnam, "Under-development of infrastructure" investment moved up to first from third last year. According to the changes in investment environment and the stage of business deployment, fluctuations can be seen in reasons and orders which the companies recognize as problems. (4) From Reasons for Promising Prospects and Issues

Infrastructure development is required not only for hardware but also for software

As the major reasons for being promising (incentives for investment), as well as growth potential of the market, either low production cost (production orientation) or present market size (market orientation) are cited; highly ranked promising countries/regions can be classified by the ratios of the reasons for promising; furthermore, the trends from 2003 to 2005 are plotted (Figure 38). In the case of a developing country, a shift from production orientation (upper left corner in the figure) to market orientation (lower right corner in the figure) is generally expected in accordance with changes in foray motivation and investment environments. In this connection, China and Thailand is showing a gradual transition from a production orientation to a market orientation. On the other hand, as for Vietnam, the tendency for the production orientation is still strong. As for Malaysia and Brazil, evaluation of companies to value low cost or market size looks very fluid.

In relation to the labor cost, industrial accumulation, infrastructure, and distribution services in every upper-ranked promising countries/regions, the ratio of both the reasons for promising and issues were summarized in a bar graph (Figure 34). China and Thailand are expected to provide low-cost labor, while not a few companies worry about the upswing in labor costs. In regard to industrial accumulation, the results are not decisive in many developing countries. Countries or regions that were cited underdevelopment of infrastructure and distribution services are consistent, and it is essential that, in order to attract foreign investment, infrastructure development should be carried out not only on hardware basis but also on software basis.
