Acceptability Summary	<ul style="list-style-type: none"> • The control measures selected for implementation manage the potential impacts and risks to ALARP. • In the event of a hydrocarbon spill for the PAP, the control measures selected, meet or exceed the requirements of Woodside Management System and industry best-practice. • Throughout the PAP, relevant Australian standards and codes of practice will be followed to evaluate the impacts from an instantaneous marine diesel release. • The level of impact and risk to the environment has been considered with regard to the principles of Environmentally Sustainable Development; and risks and impacts from a range of identified scenarios were assessed in detail. The control measures described consider the conservation of biological and ecological diversity, through both the selection of control measures and the management of their performance. The control measures have been developed to account for the combined credible spill scenarios for Scarborough Seabed Intervention and Trunkline Installation activity, and uncertainty has not been used as a reason for postponing control measures. 	
<p>On the basis from the impact assessment above and in Section 6 of the Scarborough Seabed Intervention and Trunkline Installation activity EP, Woodside considers the adopted controls discussed manage the impacts and risks associated with implementing scientific monitoring activities to a level that is ALARP and acceptable.</p>		

7 ENVIRONMENTAL RISK ASSESSMENT OF SELECTED RESPONSE TECHNIQUES

The implementation of response techniques may modify the impacts and risks identified in the EP and response activities can introduce additional impacts and risks from response operations themselves. Therefore, it is necessary to complete an assessment to ensure these impacts and risks have been considered and specific measures are put in place to continually review and manage these further impacts and risks to ALARP and Acceptable levels. A simplified assessment process has been used to complete this task which covers the identification, analysis, evaluation and treatment of impacts and risks introduced by responding to the event.

7.1 Identification of impacts and risks from implementing response techniques

Each of the control measures can modify the impacts and risks identified in the EP. These impacts and risks have been previously assessed within the scope of the EP. Refer to the EP for details regarding how these risks are being managed. They are not discussed further in this document.

- Atmospheric emissions
- Routine and non-routine discharges
- Physical presence, proximity to other vessels (shipping and fisheries)
- Routine acoustic emissions vessels
- Lighting for night work/navigational safety
- Invasive marine species
- Collision with marine fauna
- Disturbance to Seabed

Additional impacts and risks associated with the control measures not included within the scope of the EP include:

- Vessel operations and access in the nearshore environment
- Presence of personnel on the shoreline
- Human presence (manual cleaning)
- Additional stress or injury caused to wildlife
- Secondary contamination from the management of waste

7.2 Analysis of impacts and risks from implementing response techniques

The table below compares the adopted control measures for this activity against the environmental values that can be affected when they are implemented.

Table 7-1: Analysis of risks and impacts

	Environmental Value						
	Soil & Groundwater	Marine Sediment Quality	Water Quality	Air Quality	Ecosystems/Habitat	Species	Socio-Economic
Monitor and evaluate		✓	✓		✓	✓	
Source control		✓	✓	✓	✓	✓	✓
Shoreline Protection & Deflection	✓	✓	✓		✓	✓	✓
Shoreline Clean-up	✓	✓	✓		✓	✓	✓
Oiled Wildlife					✓	✓	
Scientific Monitoring		✓	✓		✓	✓	✓
Waste Management	✓			✓	✓	✓	✓

7.3 Evaluation of impacts and risks from implementing response techniques *Vessel operations and anchoring*

During the implementation of response techniques, where water depths allow, it is possible response vessels will be required to anchor (e.g. during shoreline surveys). The use of vessel anchoring will be minimal and likely to occur when the impacted shoreline is inaccessible via road. Anchoring in the nearshore environment of sensitive receptor locations will have the potential to impact coral reef, seagrass beds and other benthic communities in these areas. Recovery of benthic communities from anchor damage depends on the size of anchor and frequency of anchoring. Impacts would be highly localised (restricted to the footprint of the vessel anchor and chain) and temporary, with full recovery expected.

Presence of personnel on the shoreline

Presence of personnel on the shoreline during shoreline operations could potentially result in disturbance to wildlife and habitats. During the implementation of response techniques, it is possible personnel may have minimal, localised impacts on habitats, wildlife and coastlines. The impacts associated with human presence on shorelines during shoreline surveys may include:

- Damage to vegetation/habitat to gain access to areas of shoreline oiling;
- Damage or disturbance to wildlife during shoreline surveys;
- Removal of surface layers of intertidal sediments (potential habitat depletion); and
- Excessive removal of substrate causing erosion and instability of localised areas of the shoreline.

Human presence

Human presence for manual clean-up operations may lead to the compaction of sediments and damage to the existing environment especially in sensitive locations such as mangroves and turtle nesting beaches. However, any impacts are expected to be localised with full recovery expected.

Additional stress or injury caused to wildlife

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Scarborough Seabed Intervention and Trunkline Installation Environment Plan.

Additional stress or injury to wildlife could be caused through the following phases of a response:

- Capturing wildlife
- Transporting wildlife
- Stabilisation of wildlife
- Cleaning and rinsing of oiled wildlife
- Rehabilitation (e.g. diet, cage size, housing density)
- Release of treated wildlife

Inefficient capture techniques have the potential to cause undue stress, exhaustion or injury to wildlife, additionally pre-emptive capture could cause undue stress and impacts to wildlife when there are uncertainties in the forecast trajectory of the spill. During the transportation and stabilisation phases there is the potential for additional thermoregulation stress on captured wildlife. Additionally, during the cleaning process, it is important personnel undertaking the tasks are familiar with the relevant techniques to ensure that further injury and the removal of water proofing feathers are managed and mitigated. Finally, during the release phase it's important that wildlife is not released back into a contaminated environment.

Waste generation

Implementing the selected response techniques will result in the generation of the following waste streams that will require management and disposal:

- Liquids (recovered oil/water mixture), recovered from shoreline clean-up operations
- Semi-solids/solids (oily solids), collected during shoreline clean-up operations
- Debris (e.g. seaweed, sand, woods, plastics), collected during shoreline clean-up operations and oiled wildlife response.

If not managed and disposed of correctly, wastes generated during the response have the potential for secondary contamination similar to that described above, impacts to wildlife through contact with or ingestion of waste materials and contamination risks if not disposed of correctly onshore.

7.4 Treatment of impacts and risks from implementing response techniques

In respect of the impacts and risks assessed the following treatment measures have been adopted. It must be recognised this environmental assessment is seeking to identify how to maintain the level of impact and risks at levels that are ALARP and of an acceptable level rather than exploring further impact and risk reduction. It is for this reason that the treatment measures identified in this assessment will be captured in Operational Plans, Tactical Response Plans (**ANNEX E**), and/or First Strike Plans.

Vessel operations and access in the nearshore environment

- If vessels are required for access, anchoring locations will be selected to minimise disturbance to benthic primary producer habitats. Where existing fixed anchoring points are not available, locations will be selected to minimise impact to nearshore benthic environments with a preference for areas of sandy seabed where they can be identified (Performance Standard (PS) 8.1, 11.1, 14.1)
- Shallow draft vessels will be used to access remote shorelines to minimise the impacts associated with seabed disturbance on approach to the shorelines (PS 11.2, 14.2)

Presence of personnel on the shoreline

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Scarborough Seabed Intervention and Trunkline Installation Environment Plan.

- Oversight by trained personnel who are aware of the risks (PS 14.6)
- Trained unit leader's brief personnel of the risks prior to operations (PS 14.7)

Human Presence

- Shoreline access route (foot, car, vessel and helicopter) with the least environmental impact identified will be selected by a specialist in shoreline contamination assessment techniques (SCAT) operations (PS 7.3, 14.5)
- Vehicular access will be restricted on dunes, turtle nesting beaches and in mangroves (PS 14.3)

Additional stress or injury caused to wildlife

- Operations conducted with advice from the DBCA Oiled Wildlife Advisor and in accordance with the processes and methodologies described in the WA OWRP and the relevant regional plan (PS 16.3)

Waste generation

- All shoreline clean-up sites will be zoned and marked before clean-up operations commence (PS 12.4)
- Removal of vegetation will be limited to moderately or heavily oiled vegetation (PS 14.4).

8 ALARP CONCLUSION

An analysis of alternative, additional and improved control measures has been undertaken to determine their reasonableness and practicability. The tables in **Section 6** document the considerations made in this evaluation. Where the costs of an alternative, additional, or improved control measure have been determined to be clearly disproportionate to the environmental benefit gained from its adoption it has been rejected. Where this is not considered to be the case the control measure has been adopted.

The risks from a hydrocarbon spill have been reduced to ALARP because:

- Woodside has a significant hydrocarbon spill response capability to respond to the WCCS through the control measures identified.
- New and modified impacts and risks associated with implementing response techniques have been considered and will not increase the risks associated with the activity.
- A consideration of alternative, additional, and improved control measures identified any other control measures that delivered proportionate environmental benefit compared to the cost of adoption for this activity ensuring :
 - All known, reasonably practicable control measures have been adopted.
 - No additional, reasonably practicable alternative and/or improved control measures would provide further environmental benefit.
 - No reasonably practical additional, alternative, and/or improved control measure exists.
- A structured process for considering alternative, additional, and improved control measures was completed for each control measure.
- The evaluation was undertaken based on the outputs of the WCCS so that the capability in place is sufficient for all other scenario from this activity.
- The likelihood of the WCCS spill has been ignored in evaluating what was reasonably practicable.

9 ACCEPTABILITY CONCLUSION

Following the ALARP evaluation process, Woodside deems the hydrocarbon spill risks and impacts to have been reduced to an acceptable level by meeting all of the following criteria:

- Techniques are consistent with Woodside's processes and relevant internal requirements including policies, culture, processes, standards, structures and systems.
- Levels of risk/ impact are deemed acceptable by relevant persons (external persons/ organisations) and are aligned with the uniqueness of, and/or the level of protection assigned to the environment, its sensitivity to pressures introduced by the activity, and the proximity of activities to sensitive receptors, and have been aligned with Part 3 of the EPBC Act.
- Selected control measures meet requirements of legislation and conventions to which Australia is a signatory (e.g. International Convention for the Prevention of Pollution from Ships (MARPOL), the World Heritage Convention, the Ramsar Convention, and the Biodiversity Convention etc.). In addition to these, other non-legislative requirements met include:
 - Australian IUCN reserve management principles for Commonwealth marine protected areas and bioregional marine plans.
 - National Water Quality Management Strategy and supporting guidelines for marine water quality).
 - Conditions of approval set under other legislation.
 - National and international requirements for managing pollution from ships.
 - National biosecurity requirements.
- Industry standards, best practices and widely adopted standards and other published materials have been used and referenced when defining acceptable levels. Where these are inconsistent with mandatory/ legislative regulations, explanation has been provided for the proposed deviation. Any deviation produces the same or a better level of environmental performance (or outcome).

11 GLOSSARY & ABBREVIATIONS

11.1 Glossary

Term	Description / Definition
ALARP	Demonstration through reasoned and supported arguments that there are no other practicable options that could reasonably be adopted to reduce risks further.
Availability	The availability of a control measure is the percentage of time that it is capable of performing its function (operating time plus standby time) divided by the total period (whether in service or not). In other words, it is the probability that the control has not failed or is undergoing a maintenance or repair function when it needs to be used.
Control	The means by which risk from events is eliminated or minimised.
Control effectiveness	A measure of how well the control measures perform their required function.
Control measure (risk control measure)	The features that eliminate, prevent, reduce or mitigate the risk to environment associated with PAP.
Credible spill scenario	A spill considered by Woodside as representative of maximum volume and characteristics of a spill that could occur as part of the PAP.
Dependency	The degree of reliance on other systems in order for the control measure to be able to perform its intended function.
Environment that may be affected	The summary of quantitative modelling where the marine environment could be exposed to hydrocarbons levels exceeding hydrocarbon threshold concentrations.
Incident	An event where a release of energy resulted in or had the potential to cause injury, ill health, damage to the environment, damage to equipment or assets or company reputation.
Major Environment Event	The events with potential environment, reputation, social or cultural consequences of category C or higher (as per Woodside's operational risk matrix) which are evaluated against credible worst-case scenarios which may occur when all controls are absent or have failed.
Performance outcome	A statement of the overall goal or outcome to be achieved by a control measure
Performance standard	The parameters against which [risk] controls are assessed to ensure they reduce risk to ALARP. A statement of the key requirements (indicators) that the control measure has to achieve in order to perform as intended in relation to its functionality, availability, reliability, survivability and dependencies.
Preparedness	Measures taken before an incident in order to improve the effectiveness of a response
Reasonably practicable	... a computation ... made by the owner, in which the quantum of risk is placed on one scale and the sacrifice involved in the measures necessary for averting the risk (whether in money, time or trouble) [showing whether or not] that there is a gross disproportion between them ... made by the owner at a point of time anterior to the accident. (Judgement: Edwards v National Coal Board [1949])
Receptors at risk	Physical, biological and social resources identified as at risk from hydrocarbon contact using oil spill modelling predictions.
Receptor areas	Geographically referenced areas such as bays, islands, coastlines and/or protected area (World Heritage Area, WHA, Commonwealth or State marine reserve or park) containing one or more receptor type.
Receptor Sensitivities	This is a classification scheme to categorise receptor sensitivity to an oil spill. The Environmental Sensitivity Index (ESI) is a numerical classification of the relative sensitivity of a particular environment (particularly different shoreline types) to an oil spill. Refer to the Woodside Oil Pollution Emergency Arrangements (Australia) for more details.

Term	Description / Definition
Regulator	NOPSEMA are the Environment Regulator under the Environment Regulations.
Reliability	The probability that at any point in time a control measure will operate correctly for a further specified length of time.
Response technique	Measures taken in response to an event to reduce or prevent adverse consequences. Response techniques are selected to achieve an effective response that meets incident objectives. Response techniques are selected according to the specific conditions and environment of the event.
Survivability	Whether or not a control measure is able to survive a potentially damaging event is relevant for all control measures that are required to function after an incident has occurred.
Threshold	Hydrocarbon threshold concentrations applied to the risk assessment to evaluate hydrocarbon spills. These are defined as: surface hydrocarbon concentration – $\geq 10 \text{ g/m}^2$, dissolved – $\geq 100 \text{ ppb}$ and entrained hydrocarbon concentrations – $\geq 500 \text{ ppb}$.
Zone of Application (ZoA)	The zone in which Woodside may elect to apply dispersant. The zone is determined based on a range of considerations, such as hydrocarbon characteristics, weathering and metocean conditions. The zone is a key consideration in the Net Environmental Benefit Analysis for dispersant use.

11.2 Abbreviations

Abbreviation	Meaning
AHV	Anchor Handler Vessel
AIIMS	Australasian Inter-Service Incident Management System
ALARP	As low as reasonably practicable
AMOSC	Australian Marine Oil Spill Centre
AMP	Australian Marine Park
AMSA	Australian Maritime Safety Authority
API	American Petroleum Institute
APPEA	Australian Petroleum Production & Exploration Association
AUV	Autonomous Underwater Vehicle
BAOAC	Bonn Agreement Oil Appearance Code
BOPE	Blowout Preventer Equipment
CEDRE	Centre of Documentation, Research and Experimentation
CERCLA	Comprehensive Environmental Response, Compensation, and Liability Act
CIMT	Corporate Incident Management Team
CMT	Crisis Management Team
COP	Common Operating Picture
CS	Credible Scenario
DBCA	Department of Biodiversity, Conservation and Attractions (former Department of Parks and Wildlife)
DM	Duty Manager
DNA	Deoxyribonucleic Acid
DoT	Department of Transport
DP	Dynamically Positioned
EMBA	Environment that May Be Affected
EMSA	European Maritime Safety Agency
EP	Environment Plan
EPBC	Environment Protection and Biodiversity Conservation
EROD	ethoxyresorufin-O-deethylase
ESI	Environmental Sensitivity Index
ESD	Environmentally Sustainable Development
ESP	Environmental Services Panel
FSP	First Strike Plan
FST	Functional Support Team
GIS	Geographic Information System
GSI	Gonadosomatic Index
HSE	Health Safety and Environment
HSEQ	Health Safety Environment and Quality
HSP	Hydrocarbon Spill Preparedness
IAP	Incident Action Plan

No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Scarborough Seabed Intervention and Trunkline Installation Environment Plan.

Abbreviation	Meaning
I&CM	Incident and Crisis Management
IC	Incident Controller
ICE	Internal Control Environment
ID	Identification
IGEM	Industry-Government Environmental Meta-database
IMIS	Incident Management Information System
IMS	Incident Management System
IMO	International Marine Organisation
IMT	Incident Management Team
IPIECA	International Petroleum Industry Environment Conservation Association
IR	Infrared
ISV	Infield Support Vessels
ITOPF	International Tanker Owners Pollution Federation
IUCN	International Union for Conservation of Nature
KBSB	King Bay Support Base
KGP	Karratha Gas Plant
LEL	Lower Explosive Limit
LSI	Liver Somatic Index
MARPOL	International Convention for the Prevention of Pollution from Ships
MoU	Memorandum of Understanding
MSRC	Marine Spill Response Corporation
NATA	National Association of Testing Authorities
NEBA	Net Environmental Benefit Analysis
NOAA	National Oceanic and Atmospheric Administration
NOPSEMA	National Offshore Petroleum Safety and Environmental Management Authority
NRDA	Natural Resource Damage Assessment
NWBM	Non-Water Based Muds
OIE	Offset Installation Equipment
OILMAP	Oil Spill Model and Response System
OM	Operational Monitoring
OMP	Operational Monitoring Program
OPEA	Oil Pollution Emergency Arrangements
OPEP	Oil Pollution Emergency Plan
OPGGS	Offshore Petroleum and Greenhouse Gas Storage
OSPRMA	Oil Spill Preparedness and Response Mitigation Assessment
OSRL	Oil Spill Response Limited
OSRO	Oil Spill Response Organisation
OSTM	Oil Spill Trajectory Modelling
OWR	Oiled Wildlife Response

Uncontrolled when printed. Refer to electronic version for most up to date information.

A NEBA has been conducted to assess the net environmental benefit of different response techniques to selected receptors in the event of an oil spill from the PAP for marine diesel (representing platform surface release during operations). The locations utilised for the NEBA were limited to the identified RPAs of the PAP identified from modelling. These include receptors which have potential for the following:

- Surface contact (>50 g/m²)
- Shoreline accumulation (100 g/m²)
- Entrained contact (>100 ppb and <14 days)

The detailed NEBA assessment outcomes are available via this [Link](#).

Table A-1: NEBA assessment technique recommendations for marine diesel

Receptor	Contact	Monitor and Evaluate	Source control via vessel SOPEP	Dispersant application: > 20 m water depth and > 10 km from shore/reefs	Mechanical dispersion	In situ burning	Containment and Recovery	Shoreline protection	Shoreline clean-up (manual)	Shoreline clean-up (mechanical)	Shoreline clean-up (chemical)	Oiled Wildlife Response
Open Commonwealth waters (Operational Area)	>50 g/m ² surface >100 ppb entrained	Yes	Yes	No	No	No	No	No	No	No	No	Yes
Dampier Archipelago	>100 g/m ² shoreline >50 g/m ² surface >100 ppb entrained	Yes	Yes	No	No	No	No	Yes	Yes	No	No	Yes
Muiron Islands, Muiron Islands MMA-WHA	>100 ppb entrained	Yes	Yes	No	No	No	No	Potentially	Potentially	No	No	Yes
Pilbara - Middle Pilbara – Islands & Shoreline	>100 ppb entrained	Yes	Yes	No	No	No	No	Potentially	Potentially	No	No	Yes
Pilbara Islands – Southern Island Group	>100 ppb entrained	Yes	Yes	No	No	No	No	Potentially	Potentially	No	No	Yes
Montebello Marine Park	>100 ppb entrained	Yes	Yes	No	No	No	No	Potentially	No	No	No	Yes
Montebello State Marine Park	>100 ppb entrained	Yes	Yes	No	No	No	No	No	No	No	No	Yes

Overall assessment

Sensitive receptor (Sites identified in EP)	Monitor and Evaluate	Source control via vessel SOPEP	Dispersant application: > 20 m water depth and > 10 km from shore/reefs	Mechanical dispersion	In situ burning	Containment and Recovery	Shoreline protection	Shoreline clean-up (manual)	Shoreline clean-up (mechanical)	Shoreline clean-up (chemical)	Oiled Wildlife Response
Is this response Practicable?	Yes	Yes	No	No	No	No	Potentially	Potentially	No	No	Yes
NEBA identifies Response potentially of Net Environmental Benefit?	Yes	Yes	No	No	No	No	Potentially	Potentially	No	No	Yes

NEBA Impact Ranking Classification Guidance

To reduce variability between assessments, the following ranking descriptions have been devised to guide the workshop process:

		Degree of impact ¹⁶		Potential duration of impact	Equivalent Woodside Corporate Risk Matrix Consequence Level
Positive	3P	Major	Likely to prevent: <ul style="list-style-type: none"> behavioural impact to biological receptors behavioural impact to socio-economic receptors e.g. changes to day-to-day business operations, public opinion/behaviours (e.g. avoidance of amenities such as beaches) or regulatory designations. 	Decrease in duration of impact by > 5 years	N/A
	2P	Moderate	Likely to prevent: <ul style="list-style-type: none"> significant impact to a single phase of reproductive cycle of biological receptors detectable financial impact, either directly (e.g. loss of income) or indirectly (e.g. via public perception), for socio-economic receptors. 	Decrease in duration of impact by 1–5 years	N/A
	1P	Minor	Likely to prevent impacts on: <ul style="list-style-type: none"> significant proportion of population or breeding stages of biological receptors socio-economic receptors such as: <ul style="list-style-type: none"> significant impact to the sensitivity of protective designation; or significant and long-term impact to business/industry. 	Decrease in duration of impact by several seasons (< 1 year)	N/A
	0	Non-mitigated spill impact	No detectable difference to unmitigated spill scenario.		
Negative	1N	Minor	Likely to result in: <ul style="list-style-type: none"> behavioural impact to biological receptors behavioural impact to socio-economic receptors e.g. changes to day-to-day business operations, public opinion/behaviours (e.g. avoidance of amenities such as beaches), or regulatory designations. [Note 1]	Increase in duration of impact by several seasons (< 1 year)	Increase in risk by one sub-category, without changing category (e.g. Minor (E) to Minor (D))
	2N	Moderate	Likely to result in: <ul style="list-style-type: none"> significant impact to a single phase of reproductive cycle for biological receptors; or detectable financial impact, either directly (e.g. loss of income) or indirectly (e.g. via public perception), for socio-economic receptors. This level of negative impact is recoverable and unlikely to result in closure of business/industry in the region. 	Increase in duration of impact by 1–5 years	Increase in risk by one category (e.g. Minor (D) to Moderate (C or B))
	3N	Major	Likely to result in impacts on: <ul style="list-style-type: none"> significant proportion of population or breeding stages of biological receptors socio-economic receptors resulting in either: <ul style="list-style-type: none"> significant impact to the sensitivity of protective designation; or significant and long-term impact to business/industry. 	Increase in duration of impact by > 5 years or unrecoverable	Increase in risk by two categories (e.g. Minor (E) to Major (A))

¹⁶ NOTE: the maximum likely impact should be considered; for example, if a spill were to directly impact the behaviour that results in an impact to reproduction and/or the breeding population (such as fish failing to aggregate to spawn), then the score should be a 2 or 3 rather than a 1. Similarly, if a change in behaviour resulted in an increased risk of mortality of a population, then it should be scored as a 2 or 3

ANNEX B: OPERATIONAL MONITORING ACTIVATION AND TERMINATION CRITERIA

Table B-1: Operational monitoring objectives, triggers and termination criteria

Operational Monitoring Operational Plan	Objectives	Activation triggers	Termination criteria
<p>Operational Monitoring Operational Plan 1 (OM01)</p> <p>Predictive Modelling of Hydrocarbons to Assess Resources at Risk</p>	<p>OM01 focuses on the conditions that have prevailed since a spill commenced, as well as those that are forecasted in the short term (1–3 days ahead) and longer term. OM01 utilises computer-based forecasting methods to predict hydrocarbon spill movement and guide the management and execution of spill response operations to maximise the protection of environmental resources at risk.</p> <p>The objectives of OM01 are to:</p> <ul style="list-style-type: none"> • Provide forecasting of the movement and weathering of spilled hydrocarbons • Identify resources that are potentially at risk of contamination • Provide simulations showing the outcome of alternative response options (booming patterns etc.) to inform on-going Net Environmental Benefit Analysis (NEBA) and continually assess the efficacy of available response options in order to reduce risks to ALARP 	<p>OM01 will be triggered immediately following a level 2/3 hydrocarbon spill.</p>	<p>The criteria for the termination of OM01 are:</p> <ul style="list-style-type: none"> • The hydrocarbon discharge has ceased • Response activities have ceased • Hydrocarbon spill modelling (as verified by OM02 surveillance observations) predicts no additional natural resources will be impacted
<p>Operational Monitoring Operational Plan 2 (OM02)</p> <p>Surveillance and reconnaissance to detect hydrocarbons and resources at risk</p>	<p>OM02 aims to provide regular, on-going hydrocarbon spill surveillance throughout a broad region, in the event of a spill.</p> <p>The objectives of OM02 are:</p> <ul style="list-style-type: none"> • Verify spill modelling results and recalibrate spill trajectory models (OM01) • Understand the behaviour, weathering and fate of surface hydrocarbons • Identify environmental receptors and locations at risk or contaminated by hydrocarbons • Inform ongoing Net Environmental Benefit Analysis (NEBA) and continually assess the efficacy of available response options in order to reduce risks to ALARP • To aid in the subsequent assessment of the short- to long-term impacts and/or recovery of natural resources (assessed in SMPs) by ensuring that the visible cause and effect relationships between the hydrocarbon spill and its impacts to natural resources have been observed and recorded during the operational phase. 	<p>OM02 will be triggered immediately following a level 2/3 hydrocarbon spill.</p>	<p>The termination triggers for the OM02 are:</p> <ul style="list-style-type: none"> • 72 hours has elapsed since the last confirmed observation of surface hydrocarbons • Latest hydrocarbon spill modelling results (OM01) do not predict surface exposures at visible levels

No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Scarborough Seabed Intervention and Trunkline Installation Environment Plan.

Operational Monitoring Operational Plan	Objectives	Activation triggers	Termination criteria
<p>Operational Monitoring Operational Plan 3 (OM03)</p> <p>Monitoring of hydrocarbon presence, properties, behaviour and weathering in water</p>	<p>OM03 will measure surface, entrained and dissolved hydrocarbons in the water column to inform decision-making for spill response activities.</p> <p>The specific objectives of OM03 are as follows:</p> <ul style="list-style-type: none"> • Detect and monitor for the presence, quantity, properties, behaviour and weathering of surface, entrained and dissolved hydrocarbons • Verify predictions made by OM01 and observations made by OM02 about the presence and extent of hydrocarbon contamination <p>Data collected in OM03 will also be used for the purpose of longer-term water quality monitoring during SM01.</p>	<p>OM03 will be triggered immediately following a level 2/3 hydrocarbon spill.</p>	<p>The criteria for the termination of OM03 are as follows:</p> <ul style="list-style-type: none"> • The hydrocarbon release has ceased • Response activities have ceased • Concentrations of hydrocarbons in the water are below available ANZECC/ ARMCANZ (2000) trigger values for 99% species protection.
<p>Operational Monitoring Operational Plan 4 (OM04)</p> <p>Pre-emptive assessment of sensitive receptors at risk</p>	<p>OM04 aims to undertake a rapid assessment of the presence, extent and current status of shoreline sensitive receptors prior to contact from the hydrocarbon spill, by providing categorical or semi-quantitative information on the characteristics of resources at risk.</p> <p>The primary objective of OM04 is to confirm understanding of the status and characteristics of environmental resources predicted by OM01 and OM02 to be at risk, to further assist in making decisions on the selection of appropriate response actions and prioritisation of resources.</p> <p>Indirectly, qualitative/semi-quantitative pre-contact information collected by OM04 on the status of environmental resources may also aid in the verification of environmental baseline data and provide context for the assessment of environmental impacts, as determined through subsequent SMPs.</p>	<p>Triggers for commencing OM04 include:</p> <ul style="list-style-type: none"> • Contact of a sensitive habitat or shoreline is predicted by OM01, OM02 and/or OM03 • The pre-emptive assessment methods can be implemented before contact from hydrocarbons (once a receptor has been contacted by hydrocarbons it will be assessed under OM05) 	<p>The criteria for the termination of OM04 at any given location are:</p> <ul style="list-style-type: none"> • Locations predicted to be contacted by hydrocarbons have been contacted • The location has not been contacted by hydrocarbons and is no longer predicted to be contacted by hydrocarbons (resources should be reallocated as appropriate)

Operational Monitoring Operational Plan	Objectives	Activation triggers	Termination criteria
<p>Operational monitoring operational plan 5 (OM05)</p> <p>Monitoring of contaminated resources</p>	<p>OM05 aims to implement surveys to assess the condition of fauna and habitats contacted by hydrocarbons at sensitive habitat and shoreline locations.</p> <p>The primary objectives of OM05 are:</p> <ul style="list-style-type: none"> Record evidence of oiled fauna (mortalities, sub-lethal impacts, number, extent, location) and habitats (mortalities, sub-lethal impacts, type, extent of cover, area, hydrocarbon character, thickness, mass and content) throughout the response and clean-up at locations contacted by hydrocarbons to inform and prioritise clean-up efforts and resources, while minimising the potential impacts of these activities. <p>Indirectly, the information collected by OM05 may also support the assessment of environmental impacts, as determined through subsequent SMPs.</p>	<p>OM05 will be triggered when a sensitive habitat or shoreline is predicted to be contacted by hydrocarbons by OM01, OM02 and/or OM03.</p>	<p>The criteria for the termination of OM05 at any given location are:</p> <ul style="list-style-type: none"> No additional response or clean-up of fauna or habitats is predicted Spill response and clean-up activities have ceased <p>OM05 survey sites established at sensitive habitat and shoreline locations will continue to be monitored during SM02.</p> <p>The formal transition from OM05 to SM02 will begin on cessation of spill response and clean-up activities.</p>

ANNEX C: OIL SPILL SCIENTIFIC MONITORING PROGRAM

Oil Spill Environmental Monitoring

The following provides some further detail on Woodside's oil spill scientific monitoring Program and includes the following:

- The organisation, roles and responsibilities of the Woodside oil spill scientific monitoring team and external resourcing.
- A summary table of the ten scientific monitoring programs as per the specific focus receptor, objectives, activation triggers and termination criteria.
- Details on the oil spill environmental monitoring activation and termination decision-making processes.
- Baseline knowledge and environmental studies knowledge access via geo-spatial metadata databases.
- An outline of the reporting requirements for oil spill scientific monitoring programs.

Oil Spill Scientific Monitoring – Delivery Team Roles and Responsibilities

Woodside Oil Spill Scientific Monitoring Delivery Team

The Woodside science team are responsible for the delivery of the oil spill scientific monitoring. The roles and responsibilities of the Woodside scientific monitoring delivery team are presented in Table C-1 and the organisational structure and Corporate Incident Management Team (CIMT) linkage provided in Figure C-1.

Woodside Oil Spill Scientific monitoring program - External Resourcing

In the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors, scientific monitoring personnel and scientific equipment to implement the appropriate SMPs will be provided by SMP Standby contractor who hold a standby contract for SMP via the Woodside Environmental Services Panel (ESP). In the event that additional resources are required other consultancy capacity within the Woodside ESP will be utilised (as needed and may extend to specialist contractors such as research agencies engaged in long-term marine monitoring programs). In consultation with the SMP Standby Contractor and/or specialist contractors, the selection, field sampling and approach of the SMPs will be determined by the nature and scale of the spill.

Table C-1: Woodside and Environmental Service Provider – Oil Spill Scientific Monitoring Program Delivery Team Key Roles and Responsibilities

Role	Location	Responsibility
Woodside Roles		
SMP Lead/Manager	Onshore	<ul style="list-style-type: none"> • Approves activated the SMPs based on operational monitoring data provided by the Planning Function • Provides advice to the CIMT in relation to scientific monitoring • Provides technical advice regarding the implementation of scientific monitoring • Approves detailed sampling plans prepared for SMPs • Directs liaison between statutory authorities, advisors and government agencies in relation to SMPs.
SMP Co-Ordinator	Onshore	<ul style="list-style-type: none"> • Activates the SMPs based on operational monitoring data provided by the Planning Function • Sits in the Planning function of the CIMT. • Liaises with other CIMT functions to deliver required logistics, resources and operational support from Woodside to support the Environmental Service Provider in delivering on the SMPs. Acts as the conduit for advice from the SMP Lead/Manager to the Environmental Service Provider • Manages the Environmental Service Provider’s implementation of the SMPs • Liaises with the Environmental Service Provider on delivery of the SMPs • Arranges all contractual matters, on behalf of Woodside, associated with the Environmental Service Provider’s delivery of the SMPs.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Scarborough Seabed Intervention and Trunkline Installation Environment Plan.

Role	Location	Responsibility
Environmental Service Provider Roles		
SMP standby contractor: SMP Duty Manager/Project Manager	Onshore	<ul style="list-style-type: none"> • Coordinates the delivery of the SMPs • Provides costings, schedule and progress updates for delivery of SMPs • Determines the structure of the Environmental Service Provider's team to necessitate delivery of the SMPs • Verifies that HSE Plans, detailed sampling plans and other relevant deliverables are developed and implemented for delivery of the SMPs • Directs field teams to deliver SMPs • Arranges all contractual matters, on behalf of Environmental Service Provider, associated with the delivery of the SMPs to Woodside • Manages sub-consultant delivery to Woodside • Provides required personnel and equipment to deliver the SMPs
SMP Field Teams	Offshore – Monitoring Locations	<ul style="list-style-type: none"> • Delivers the SMPs in the field consistent with the detailed sampling plans and HSE requirements, within time and budget. • Early communication of time, budget, HSE risks associated with delivery of the SMPs to the Environmental Service Provider – Project Manager • Provides start up, progress and termination updates to the Environmental Service Provider – Project Manager (will be led in-field by a party chief).

Table C-2: Oil Spill Environmental Monitoring: Scientific Monitoring Program - Objectives, Activation Triggers and Termination Criteria

Scientific monitoring Program (SMP)	Objectives	Activation Triggers	Termination Criteria
Scientific monitoring program 1 (SM01) Assessment of Hydrocarbons in Marine Waters	<p>SM01 will detect and monitor the presence, extent, persistence and properties of hydrocarbons in marine waters following the spill and the response.</p> <p>The specific objectives of SM01 are as follows:</p> <ul style="list-style-type: none"> Assess and document the extent, severity and persistence of hydrocarbon contamination with reference to observations made during surveillance activities and / or in-water measurements made during operational monitoring; and Provide information that may be used to interpret potential cause and effect drivers for environmental impacts recorded for sensitive receptors monitored under other SMPs. 	<p>SM01 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors</p>	<p>SM01 will be terminated when:</p> <ul style="list-style-type: none"> Operational monitoring data relating to observations and / or measurements of hydrocarbons on and in water have been compiled, analysed and reported; and The report provides details of the extent, severity and persistence of hydrocarbons which can be used for analysis of impacts recorded for sensitive receptors monitored under other SMPs. <p>SMP monitoring of sensitive receptor sites:</p> <ul style="list-style-type: none"> Concentrations of hydrocarbons in water samples are below NOPSEMA guidance note (2019¹⁷) concentrations of 1 g/m² for floating, 10 ppb for entrained and dissolved; and Details of the extent, severity and persistence of hydrocarbons from concentrations recorded in water have been documented at sensitive receptor sites monitored under other SMPs.
Scientific monitoring program 2 (SM02) Assessment of the Presence, Quantity and Character of Hydrocarbons in Marine Sediments	<p>SM02 will detect and monitor the presence, extent, persistence and properties of hydrocarbons in marine sediments following the spill and the response.</p> <p>The specific objectives of SM02 are as follows:</p> <ul style="list-style-type: none"> Determine the extent, severity and persistence of hydrocarbons in marine sediments across selected sites where hydrocarbons were observed or recorded during operational monitoring; and Provide information that may be used to interpret potential cause and effect drivers for environmental impacts recorded for sensitive receptors monitored under other SMPs. 	<p>SM02 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented as follows:</p> <ul style="list-style-type: none"> Response activities have ceased; and Operational monitoring results made during the response phase indicate that shoreline, intertidal or sub-tidal sediments have been exposed to surface, entrained or dissolved hydrocarbons (at or above 0.5 g/m² surface, 5 ppb for entrained/dissolved hydrocarbons and ≥1 g/m² for shoreline accumulation). 	<p>SM02 will be terminated once pre-spill condition is reached and agreed upon as per the SMP termination criteria process and include consideration of:</p> <ul style="list-style-type: none"> Concentrations of hydrocarbons in sediment samples are below ANZECC/ ARMCANZ (2013¹⁸) sediment quality guideline values (SQGVs) for biological disturbance; and Details of the extent, severity and persistence of hydrocarbons from concentrations recorded in sediments have been documented.
Scientific monitoring program 3 (SM03) Assessment of Impacts and Recovery of Subtidal and Intertidal Benthos	<p>The objectives of SM03 are:</p> <ul style="list-style-type: none"> Characterize the status of intertidal and subtidal benthic habitats and quantify any impacts to functional groups, abundance and density that may be a result of the spill; and Determine the impact of the hydrocarbon spill and subsequent recovery (including impacts associated with the implementation of response options). <p>Categories of intertidal and subtidal habitats that may be monitored include:</p> <ul style="list-style-type: none"> Coral reefs Seagrass Macro-algae Filter-feeders <p>SM03 will be supported by sediment contamination records (SM02) and characteristics of the spill derived from OMPs.</p>	<p>SM03 will be activated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented as follows:</p> <ul style="list-style-type: none"> As part of a pre-emptive assessment of PBAs of receptor locations identified by time to hydrocarbon contact >10 days, to target receptors and sites where it is possible to acquire pre-hydrocarbon contact baseline; and Operational monitoring identified shoreline potential contact of hydrocarbons (at or above 0.5 g/m² surface, 5 ppb for entrained/dissolved hydrocarbons and ≥1 g/m² for shoreline accumulation) for subtidal and intertidal benthic habitat. 	<p>SM03 will be terminated once pre-spill condition is reached and agreed upon as per the SMP termination criteria process and include consideration of:</p> <ul style="list-style-type: none"> Overall impacts to benthic habitats from hydrocarbon exposure have been quantified. Recovery of impacted benthic habitats has been evaluated. Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.
Scientific monitoring program 4 (SM04) Assessment of Impacts and Recovery of Mangroves / Saltmarsh	<p>The objectives of SM04 are:</p> <ul style="list-style-type: none"> Characterize the status of mangroves (and associated salt marsh habitat) at shorelines exposed/contacted by spilled hydrocarbons; Quantify any impacts to species (abundance and density) and mangrove/saltmarsh community structure; and Determine and monitor the impact of the hydrocarbon spill and potential subsequent recovery (including impacts associated with the implementation of response options). <p>SM04 will be supported by sediment sampling undertaken in SM02 and characteristics of the spill derived from OMPs.</p>	<p>SM04 will be activated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented as follows:</p> <ul style="list-style-type: none"> As part of a pre-emptive assessment of receptor locations identified by time to hydrocarbon contact >10 days; and Operational monitoring identified shoreline potential contact of hydrocarbons (at or above 0.5 g/m² surface, 5 ppb for entrained/dissolved hydrocarbons and ≥1 g/m² for shoreline accumulation) for mangrove/saltmarsh habitat. 	<p>SM04 will be terminated once pre-spill condition is reached and agreed upon as per the SMP termination criteria process and include consideration of:</p> <ul style="list-style-type: none"> Impacts to mangrove and saltmarsh habitat from hydrocarbon exposure have been quantified. Recovery of impacted mangrove/saltmarsh habitat has been evaluated.

Scientific monitoring Program (SMP)	Objectives	Activation Triggers	Termination Criteria
Scientific monitoring program 5 (SM05) Assessment of Impacts and Recovery of Seabird and Shorebird Populations	The Objectives of SM05 are to: <ul style="list-style-type: none"> Collate and quantify impacts to avian wildlife from results recorded during OM02 and OM05 (such as mortalities, oiling, rescue and release counts) and undertake a desk-based assessment to infer potential impacts at species population level; and Undertake monitoring to quantify and assess impacts of hydrocarbon exposure to seabirds and shorebird populations at targeted breeding colonies / staging sites / important coastal wetlands where hydrocarbon contact was recorded. 	SM05 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented as follows: <ul style="list-style-type: none"> As part of a pre-emptive assessment of receptor locations identified by time to hydrocarbon contact >10 days; Operational monitoring predicts shoreline contact of hydrocarbons (at or above 0.5 g/m² surface, 5 ppb for entrained/dissolved hydrocarbons and ≥1 g/m² for shoreline accumulation) at important bird colonies / staging sites / important coastal wetland locations; or Records of dead, oiled or injured bird species made during the hydrocarbon spill or response. 	<ul style="list-style-type: none"> Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill. SM05 will be terminated once it is agreed that the receptor has returned to pre-spill condition. The SMP termination criteria process will be followed and include consideration of: <ul style="list-style-type: none"> Impacts to seabird and shorebird populations from hydrocarbon exposure have been quantified. Recovery of impacted seabird and shorebird populations has been evaluated. Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.
Scientific monitoring program 6 (SM06) Assessment of Impacts and Recovery of Nesting Marine Turtle Populations	The objectives of SM06 are to: <ul style="list-style-type: none"> To quantify impacts of hydrocarbon exposure or contact on marine turtle nesting populations (including impacts associated with the implementation of response options); Collate and quantify impacts to adult and hatchling marine turtles from results recorded during OM02 and OM05 (such as mortalities, oiling, rescue and release counts) and undertake a desk-based assessment to infer potential impacts at species population levels (including impacts associated with the implementation of response options); .and Undertake monitoring to quantify and assess impacts of hydrocarbon exposure to nesting marine turtle populations at known rookeries (including impacts associated with the implementation of response options). 	SM06 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented if operational monitoring has: <ul style="list-style-type: none"> As part of a pre-emptive assessment of receptor locations identified by time to hydrocarbon contact >10 days; Predicted shoreline contact of hydrocarbons (at or above 0.5 g/m² surface, 5 ppb for entrained/dissolved hydrocarbons and ≥1 g/m² for shoreline accumulation) at known marine turtle rookery locations; or Records of dead, oiled or injured marine turtle species made during the hydrocarbon spill or response. 	SM06 will be terminated once it is agreed that the receptor has returned to pre-spill condition. The SMP termination criteria process will be followed and include consideration of: <ul style="list-style-type: none"> Impacts to nesting marine turtle populations from hydrocarbon exposure have been quantified. Recovery of impacted nesting marine turtle populations has been evaluated. Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.
Scientific monitoring program 7 (SM07) Assessment of Impacts to Pinniped Colonies including Haul-out Site Populations	The objectives of SM07 are to: <ul style="list-style-type: none"> Quantify impacts on pinniped colonies and haul-out sites as a result of hydrocarbon exposure/contact. Collate and quantify impacts to pinniped populations from results recorded during OM02 and OM05 (such as mortalities, oiling, rescue and release counts) and undertake a desk-based assessment to infer potential impacts at species population levels. 	SM07 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented if operational monitoring has: <ul style="list-style-type: none"> As part of a pre-emptive assessment of receptor locations identified by time to hydrocarbon contact >10 days; Identified shoreline contact of hydrocarbons ((at or above 0.5 g/m² surface, ≥5 ppb for entrained/dissolved hydrocarbons and ≥1 g/m² for shoreline accumulation) at known pinniped colony or haul-out site(s) (i.e. most northern site is the Houtman Abrolhos Islands); or Records of dead, oiled or injured pinniped species made during the hydrocarbon spill or response. 	SM07 will be terminated once it is agreed that the receptor has returned to pre-spill condition. The SMP termination criteria process will be followed and include consideration of: <ul style="list-style-type: none"> Impacts to pinniped populations from hydrocarbon exposure have been quantified. Recovery of pinniped populations has been evaluated. Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.
Scientific monitoring program 8 (SM08) Desk-Based Assessment of Impacts to Other Non-Avian Marine Megafauna	The objective of SM08 is to provide a desk-based assessment which collates the results of OM02 and OM05 where observations relate to the mortality, stranding or oiling of mobile marine megafauna species not addressed in SM06 or SM07, including: <ul style="list-style-type: none"> Cetaceans; Dugongs; Whale sharks and other shark and ray populations; Sea snakes; and Crocodiles. 	SM08 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented if operational monitoring reports records of dead, oiled or injured non-avian marine megafauna during the spill/ response phase.	SM08 will be terminated when the results of the post-spill monitoring have quantified impacts to non-avian megafauna. <ul style="list-style-type: none"> Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.

Scientific monitoring Program (SMP)	Objectives	Activation Triggers	Termination Criteria
	The desk-based assessment will include population analysis to infer potential impacts to marine megafauna species populations.		
Scientific monitoring program 9 (SM09) Assessment of Impacts and Recovery of Marine Fish associated with SM03 habitats	The objectives of SM09 are: <ul style="list-style-type: none"> • Characterise the status of resident fish populations associated with habitats monitored in SM03 exposed/contacted by spilled hydrocarbons; • Quantify any impacts to species (abundance, richness and density) and resident fish population structure (representative functional trophic groups); and • Determine and monitor the impact of the hydrocarbon spill and potential subsequent recovery (including impacts associated with the implementation of response options). 	SM09 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented with SMO3.	SM09 will be undertaken and terminated concurrent with monitoring undertaken for SM03, as per the SMP termination criteria process <ul style="list-style-type: none"> • Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.
Scientific monitoring program 10 (SM10) SM10 - Assessment of physiological impacts important fish and shellfish species (fish health and seafood quality/safety) and recovery	SM10 aims to assess any physiological impacts to important commercial fish and shellfish species (assessment of fish health) and if applicable, seafood quality/safety. Monitoring will be designed to sample key commercial fish and shellfish species and analyse tissues to identify fish health indicators and biomarkers, for example: <ul style="list-style-type: none"> • Liver Detoxification Enzymes (ethoxyresorufin-O-deethylase (EROD) activity) • PAH Biliary Metabolites • Oxidative DNA Damage • Serum SDH • Other physiological parameters, such as condition factor (CF), liver somatic index (LSI), gonado-somatic index (GSI) and gonad histology, total weight, length, condition, parasites, egg development, testes development, abnormalities. • Seafood tainting may be included (where appropriate) using applicable sensory tests to objectively assess targeted finfish and shellfish species for hydrocarbon contamination. Results will be used to make inferences on the health of commercial fisheries and the potential magnitude of impacts to fishing industries.	SM10 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented if operational monitoring (OM01, OM02 and OM05) indicates the following: <ul style="list-style-type: none"> • The hydrocarbon spill will or has intersected with active commercial fisheries or aquaculture activities. • Commercially targeted finfish and/or shellfish mortality has been observed/recorded. • Commercial fishing or aquaculture areas have been exposed to hydrocarbons (≥ 0.5 g/m² surface and ≥ 5 ppb for entrained/dissolved hydrocarbons); and • Taste, odour or appearance of seafood presenting a potential human health risk is observed. 	SM10 will be terminated once it is agreed that the receptor has returned to pre-spill condition. The SMP termination criteria process will be followed and include consideration of: <ul style="list-style-type: none"> • Physiological impacts to important commercial fish and shellfish species from hydrocarbon exposure have been quantified. • Recovery of important commercial fish and shellfish species from hydrocarbon exposure has been evaluated. • Impacts to seafood quality/safety (if applicable) have been assessed and information provided to the relevant persons/ organisations and regulators for the management of any impacted fisheries. • Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.

Activation Triggers and Termination Criteria

Scientific monitoring program Activation

The Woodside oil spill scientific monitoring team will be stood up immediately with the occurrence of a hydrocarbon spill (actual or suspected) Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors via the first strike plan for the petroleum activity programme. The presence of any level of hydrocarbons in the marine environment triggers the activation of the oil spill scientific monitoring program (SMP). This is to ensure the full range of eventualities relating to the environmental, socio-economic and health consequences of the spill are considered in the planning and execution of the SMP. The activation process also takes into consideration the management objectives, species recovery plans, conservation advices and conservations plans for any World Heritage Area (WHA), CMRs, State Marine Parks, other protected area designations (e.g., State nature reserves) and Matters of National Environmental Significance (including listed species under part 3 of the Environment Protection and Biodiversity Conservation (EPBC) Act) potentially exposed to hydrocarbons. With the first 24-48 hours of a spill event, such information will be sourced and evaluated as part of the SMP planning process guided by Appendix D (identified receptors vulnerable to hydrocarbon contact), the information presented in the Existing Environment section of the EP as well as other information sources such as the Woodside Baseline Environmental Studies Database.

The starting point for decision-making on what SMPs are activated and spatial extent of monitoring activities will be based on the predictive modelling results (OM01) in the first 24-48 hours until more information is made available from other operational monitoring activities such as aerial surveillance and shoreline surveys. Pre-emptive Baseline Areas (WHA, CMRs and State Marine Parks encompassing key ecological and socio-economic values) are a key focus of the SMP activation decision-making process, particularly, in the early spill event/response phase. As the operational monitoring progresses and further situational awareness information becomes available, it will be possible to understand the nature and scale of the spill. The SMP activation and implementation decision-making will be revisited on a daily basis to account for the updates on spill information. One of the priority focus areas in the early phase of the incident will be to identify and execute pre-emptive SMP assessments at key receptor locations, as required. The SMP activation and implementation decision tree is presented in Figure C-2.

Scientific monitoring Program Termination

The basis of the termination process for the active SMPs (SMPs 1-10) will include quantification of impacts, evaluation of recovery for the receptor at risk and consultation with relevant authorities, persons and organisations. Termination of each SMP will not be considered until the results (as presented in annual SMP reports for the duration of each program) indicate that the target receptor has returned to pre-spill condition.

Once the SMP results indicate impacted receptor(s) have returned to pre-spill condition (as identified by Woodside) a termination decision-making process will be triggered and a number of steps will be undertaken as follows:

- Woodside will engage expert opinion on whether the receptor has returned to pre-spill condition (based on monitoring data). Subject Matter Expert (SMEs) will be engaged (via the Woodside SME scientific monitoring terms of reference to review program outcomes, provide expert advice and recommendations for the duration of each SMP.
- Where expert opinion agrees that the receptor has returned to pre-spill condition, findings will then be presented to the relevant authorities, persons and organisations (as defined by the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulation 11A). Stakeholder identification, planning and engagement will be managed by Woodside's Reputation Functional Support Team (FST) and follow the stakeholder management FST. These guidelines outline the FST roles and responsibilities, competencies, persons/ organisations communications and

planning processes. An assessment of the merits of any objection to termination will be documented in the SMP final report.

- Woodside will decide on termination of SMP based on expert opinion and merits of any persons/ organisations objections. The final report following termination will include: monitoring results, expert opinion and consultation including merits of any objections.
- Termination of SMPs will also consider applicable management objectives, species recovery plans, conservation advices and conservations plans for any World Heritage Area (WHA), CMRs, State Marine Parks, other protected area designations (e.g., State nature reserves) and Matters of National Environmental Significance (including listed species under part 3 of the EPBC Act).

The SMP termination decision-making process will be applied to each active SMP and an iterative process of decision steps continued until each SMP has been terminated (refer to decision-tree diagram for SMP termination criteria, Figure C-3).

Receptors at Risk and Baseline Knowledge

In order to assess the baseline studies available and suitability for oil spill scientific monitoring, Woodside maintains knowledge of environmental baseline studies through the upkeep and use of its Environmental Knowledge Management System.

Woodside's Environmental Knowledge Management System is a centralised platform for scientific information on the existing environment, marine biodiversity, Woodside environmental studies, key environmental impact topics, key literature and web-based resources. The system comprises a number of data directories and an environmental baseline database, as well as folders within the 'Corporate Environment' server space. The environmental baseline database was set up to support Woodside's SMP preparedness and as a SMP resource in the event of an unplanned hydrocarbon spill. The environmental baseline database is subject to updates including annual reviews completed as part of SMP standby contract. This database is accessed pre-PAP to identify Pre-emptive Baseline Areas (PBAs) where hydrocarbon contact is predicted to occur <10 days.

In addition to Woodside's Environmental Knowledge Management System, it is acknowledged that many relevant baseline datasets are held by other organisations (e.g. other oil and gas operators, government agencies, state and federal research institutions and non-governmental organisations). In order to understand the present status of environmental baseline studies a spatial environmental metadata database for Western Australia (Industry-Government Environmental Metadata, I-GEM) was established. IGEM is a collaboration comprising oil and gas operators (including Woodside), government and research agencies and other organisations. IGEM held data were integrated into the Department of Water and Environmental Regulation (WA) Index of Marine Surveys for Assessment (IMSA)¹⁹ in 2020. The Index of Marine Surveys for Assessments (IMSA) is an online portal for information about marine-based environmental surveys in Western Australia. IMSA is a project of the Department of Water and Environmental Regulation (the department) for the systematic capture and sharing of marine data created as part of an environmental impact assessment (EIA).

In the event of an unplanned hydrocarbon release, Woodside intends to interrogate the information on baseline studies status as held by the various databases (e.g. Woodside Environmental Knowledge Management System, IMSA and other sources of existing baseline data) to identify Pre-emptive Baseline Areas (PBAs), i.e., receptors at risk where hydrocarbon contact is predicted to be >10 days, and baseline data can be collected before hydrocarbon contact.

Reporting

For the scientific monitoring program relevant regulators will be provided with:

- Annual reports summarising the SMPs deployed and active, data collection activities and available findings; and
- Final reports for each SMP summarising the quantitative assessment of environmental impacts and recovery of the receptor once returned to pre-spill condition and termination of the monitoring program.

The reporting requirements of the scientific monitoring program will be specific to the individual SMPs deployed and terms of responsibilities, report templates, schedule, Quality Assurance/Quality Control (QA/QC) and peer-review will be agreed with the contractors engaged to conduct the SMPs. Compliance and auditing mechanisms will be incorporated into the reporting terms.

Studies: 1. Glomar Shoal and Rankin Bank Environmental Survey Report, 2013, quantitatively surveyed benthic habitats and communities. AIMS report to Woodside. Scientific Publication - Biodiversity and spatial patterns of benthic habitat and associated demersal fish communities at two tropical submerged reef ecosystems, 2018. 2. Rankin Bank Environmental Survey Extension, 2014, Habitat assessment of an area southeast of Rankin Bank. 3. Glomar Shoal and Rankin Bank surveys, 2017. GWF-2 Monitoring Programme. Quantitatively surveyed benthic habitats and communities. 4. Temporal Studies survey of Rankin Bank and Glomar Shoal, 2018.	1. Broad benthic habitat classifications and habitat maps for the Montebello islands by DBCA. 2. Coral monitoring at sites across Barrow Island, Lowendal and the Montebello islands. Most recent survey 2012 3. Benthic community monitoring as part of DBCA Western Australian Marine Monitoring Program (2015-ongoing). 4. Pilbara Marine Conservation Partnership Seabed biodiversity survey (2013).	1. Chevron LTM of corals for the Gorgon Gas Development. Marine Baseline Program (2008), Marine Monitoring Program (2010) Post Development Surveys (2011 – 2013). 2. Coral monitoring at sites around Barrow Island, Lowendal and the Montebello islands. Most recent survey 2012. 3. Benthic community (coral, seagrass and macroalgae) monitoring as part of DBCA's Western Australian Marine Monitoring Program (2015-ongoing). 4. Pilbara Marine Conservation Partnership Seabed biodiversity survey (2013).	1. Benthic habitats surrounding the Lowendal Islands for the Gorgon Gas Development. Coral assemblages on the eastern side of Double Island, and coral bommies on the south-western edge of the Lowendal Shelf. 2. Coral monitoring at sites across Barrow Island, Lowendal and the Montebello islands. Most recent survey 2012. 3. Pilbara Marine Conservation Partnership Seabed biodiversity survey (2013).	1. Benthic habitat mapping of the subtidal and intertidal habitats of the islands and shoals. Coral communities in shallow subtidal habitat, intertidal pavement. 2. Coral monitoring at Varanus and Airlie Islands (2000 to present) to identify corals, growth from and percentage cover 3. Pilbara Marine Conservation Partnership Seabed biodiversity survey (2013; 2016)	Coral Reefs & Filter Feeders 1. Montebello Marine Park, 2019, Identification and qualitative descriptions of benthic habitat. 2. Montebello Australian Marine Parks – 2019 – Baseline survey on benthic habitats. 3. Pluto Trunkline within Montebello Marine Park – Monitoring marine communities.	1. DBCA LTM Ningaloo Reef program: 1991-ongoing 2. AIMS/DBCA 2014 Baseline Ningaloo and Muiron Islands Survey – repeat and expansion on the LTM (Co-funded survey: Woodside and AIMS). 3. Pilbara Marine Conservation Partnership. 4. WAMSI LTM Study: Ningaloo Research node: 2009 -10 over the length of Ningaloo reef system (with a focus on coral and fish recruitment). 5. Ningaloo Outlook (CSIRO) - Shallow and Deep Reefs Program (2015-ongoing). 6. Ningaloo Collaboration Cluster: Habitats of the Ningaloo Reef and adjacent coastal areas determined through hyperspectral imagery.	1. Coral Monitoring, Mermaid Sound. URS on behalf of Chevron, 2004. 2. Pluto baseline marine habitat surveys 2007 – 2008. 3. Pluto dredge and post dredge monitoring 2008-2010. 4. Benthic habitat survey at the Eastern Flank Development area commissioned by Woodside. 5. Benthic community monitoring as part of DBCA's Dampier Archipelago Marine Monitoring Program (2007-ongoing). 6. WA Museum study on the Scleractinian corals collected in 1998. (Griffith 2004). 7. Pilbara Marine Conservation Partnership Seabed biodiversity survey (2013). 8. Coral recruitment in the Northern Pilbara (2015 and 2016). 9. Distribution, patterns and key processes of major marine communities and large marine fauna – DBCA Pluto Offset Program (of the proposed Dampier Archipelago Marine Park and Cape Preston Marine Management Area). 10. Establishment of long-term monitoring reference sites in the Pluto Offset program with DBCA (proposed Dampier Archipelago Marine Park and Cape Preston Marine Management Area). 11. Study of the spatial and temporal distribution of coral assemblages at Dampier Archipelago (Cape Preston to Delambre Island), using 871 datasets dating back to the early 1970s. Sites surveyed in May 2017.

		N/A – See Table D-1	1. Bird observations and counts.	1. Species, total numbers, Distribution, Roosting locations and foraging numbers. Migratory behaviour. 2. High tide roost counts, abundance counts. 3. Nest burrow density (number of burrows per m2); presence/absence of eggs or chicks in burrows; collapsed burrows and predation and mortality records. 4. Barrow Island: Variation in abundance and spatial/temporal distribution on beaches. Middle Island: Abundance; nest density; Presence and absence of eggs/chicks in nest.	1. Nest Density, presence and absence of chicks, predation and mortality counts. 2. Nest burrow density (number of burrows per m2); presence/absence of eggs or chicks in burrows. 3. Burrow scopes, Ultrasonic monitors to monitor burrows. 4. The distribution and abundance of other nesting seabirds within the Lowendal Island group, including up to 45 islands and islets, also occurred from 2004 onwards.	1. Ground counts, aerial surveys of wetlands by helicopter. 2. Burrow count and observation data, burrow density, colony stability, breeding participation, incubation effort and reproductive success has been determined. Tagging data 3. Aerial surveys and onshore island surveys.	N/A	1. Counts of nesting areas, counts of intertidal zone during high tide. 2. The Shorebirds 2020 database comprises the most complete shorebird count data available in Australia. The data have been collected by volunteer counters and BirdLife Australia staff for approximately 150 roosting and feeding sites, mainly in coastal Australia. The data go back as far as 1981 for key areas. 3. The Exmouth Sub-basin Marine Avifauna Monitoring Program undertook a detailed assessment of seabird and shorebird use in the Exmouth Sub-basin. Four aerial surveys and four island surveys were conducted between February 2013 and January 2015 for this Program, inclusive of the mainland coasts, of shore islands and a 2,500 km ² area of ocean adjacent to the Exmouth Sub-basin. 4. Shorebird counts, Shearwater Burrow Density. 5. Telemetry (GPS & Satellite).	1. Species, total numbers, Distribution, presence/absence of eggs or chicks in burrows. 2. Desktop literature review

APPENDIX F	285
1 CONSULTATION (2021)	285
1.1 Woodside Consultation Information Sheet (sent to all relevant stakeholders) (August 2021)	285
1.2 Email sent to Australian Border Force (ABF), Department of Transport (DoT), Department of Biosecurity, Conservation and Attractions (DBCAs), Department of Industry, Science and Resources (DISR), Department of Mines, Industry Regulation and Safety (DMIRS), Australian Petroleum Production and Exploration Association (APPEA), Marine Tourism WA, Recfishwest – 31 August 2021	289
1.2.1 Oil Pollution First Strike Plan emailed to DOT (5 November 2021)	291
1.3 Email sent to Director of National Parks (DNP) (31 August 2021)	294
1.4 Email sent to Australian Maritime Safety Authority (AMSA) – Marine Safety and Australian Hydrographic Office (AHO) (31 August 2021)	298
1.4.1 Shipping lanes map sent to AMSA and AHO (31 August 2021)	300
1.4.2 Oil Pollution First Strike Plan emailed to AMSA (5 November 2021)	300
1.5 Email sent to Department of Climate Change, Energy, the Environment and Water Agriculture (DCCEEW) / Department of Agriculture, Fisheries and Forestry (DAFF) – Fisheries (formerly DAWE) (31 August 2021)	301
1.6 Email sent to Department of Defence (DoD) (31 August 2021)	303
1.6.1 Defence areas map sent to Department of Defence (DoD) (31 August 2021)	306
1.7 Email sent to WAFIC (31 August 2021)	306
1.8 Email sent to State fisheries licence holders (Pilbara Line, Pilbara Trap, Pilbara Trawl) (31 August 2021)	310
1.9 Email sent to Commonwealth fisheries licence holders (North West Slope Trawl Fishery, Western Deepwater Trawl, Western Skipjack, Northern Prawn, Western Tuna and Billfish, Southern Bluefin Tuna) (31 August 2021)	314
1.10 Letter sent to licence holders (Mackerel Areas 2 and 3, Pilbara Crab, Marine Aquarium, Specimen Shell, Nickol Bay Prawn, Southern Bluefin Tuna) (1 September 2021)	319
1.11 Email sent to DPIRD (31 August 2021)	322
1.12 Email sent to Karratha Recreational Marine Users and WA Game Fishing Association (31 August 2021)	326
1.13 Email sent to Pearl Producers Association (31 August 2021)	329
1.14 Email sent to Australian Fisheries Management Authority (AFMA) and CFA (31 August 2021)	331
1.15 Email sent to Chevron Australia, Santos, Western Gas, Vermilion Energy, KUFPEC, Jadestone Energy – 31 August 2021	335
1.15.1 Titleholders map sent to Chevron, Santos, Western Gas, Vermilion Energy, KUFPEC, Jadestone Energy (31 August 2021), Coastal Oil and Gas (11 November 2022)	338
1.16 Email sent to Australian Southern Bluefin Tuna Industry Association (ASBTIA) (31 August 2021)	338
1.17 Email sent to Murujuga Aboriginal Corporation (31 August 2021)	342

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

1.18	Email sent to Karratha Community Liaison Group (including Pilbara Ports Authority (PPA)) – 31 August 2021.....	344
1.18.1	Oil Pollution First Strike Plan emailed to Pilbara Ports Authority – 5 November 2021 ...	347
1.19	Email sent to KDCCI (31 August 2021).....	348
1.20	Email sent to City of Karratha (31 August 2021)	350
1.21	Email sent to Conservation Council of WA (CCWA) – 31 August 2021	352
1.22	Commonwealth Fisheries map sent to DCCEEW / DAFF, WAFIC, DPIRD, PPA, AFMA, CFA, ASBTIA, Commonwealth fisheries licence holders (North West Slope Trawl Fishery, Western Deepwater Trawl, Western Skipjack, Northern Prawn, Western Tuna and Billfish, Southern Bluefin Tuna), Australian Southern Bluefin Tuna Industry Association (31 August 2021).....	353
1.23	State Fisheries map sent to, WAFIC, State fisheries licence holders (Pilbara Trap, Pilbara Trawl, Pilbara Line), DPIRD, AFMA, CFA, Pearl Producers Association, Australian Southern Bluefin Tuna Industry Association (ASBTIA) (31 August 2021)	357
1.24	Map sent to licence holders (Mackerel Areas 2 and 3) (1 September 2021)	361
1.25	Map sent to licence holders (Specimen Shell) (1 September 2021)	361
1.26	Map sent to licence holders (Pilbara Crab) (1 September 2021).....	362
1.27	Map sent to licence holders (Marine Aquarium) (1 September 2021).....	362
1.28	Map sent to licence holders (Nickol Bay Prawn) (1 September 2021).....	363
1.29	Map sent to licence holders (Southern Bluefin Tuna) (1 September 2021).....	363
2	CONSULTATION (2023).....	364
2.1	Updated Consultation Information Sheet (January 2023).....	364
2.1.1	Simplified Overview Information Sheet (January 2023).....	378
2.1.2	Bespoke Consultation Information Sheet (January 2023)	380
2.2	Email sent to The Wilderness Society (TWS) (30 September 2022)	383
2.3	Email sent to Say No to Scarborough Gas – 30 September 2022.....	386
2.4	Email sent to Australasian Centre for Corporate Responsibility (ACCR) (30 September 2022)	390
2.5	Email sent to Sea Shepherd Australia (SSA) (30 September 2022).....	393
2.6	Email sent to World Wildlife Fund (WWF) (30 September 2022).....	397
2.7	Email sent to International Fund for Animal Welfare (IFAW) (30 September 2022)	400
2.8	Email sent to Australian Marine Conservation Society (AMCS) (30 September 2022) ..	402
2.9	Email sent to Market Forces (30 September 2022).....	406
2.10	Email sent to Extinction Rebellion WA (XRWA) (30 September 2022)	411
2.11	Email sent to Climate Council (30 September 2022).....	414
2.12	Email sent to Buurabalayji Thalanyji Aboriginal Corporation (BTAC) (20 January 2023)	417
2.13	Email sent to the University of Western Australia (UWA) (11 November 2022).....	418
2.14	Email sent to National Energy Resource Australia (NERA) Collaborative Seismic Environment Plan Project (CSEP) (11 November 2022)	421
2.15	Email sent to Australian Institute of Marine Science (AIMS) (11 November 2022)	422
2.16	Email sent to Coastal Oil and Gas (11 November 2022).....	423
2.17	Email sent to Commonwealth Scientific and Industrial Research Organisation (CSIRO) (11 November 2022).....	425
2.18	Email sent to Australian Institute of Marine Science (AIMS) (6 February 2022).....	426
2.19	Emails sent to Malgana Aboriginal Corporation (MAC) – 20 January 2023	429

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

3	CONSULTATION (2023)	430
3.1	Email sent to Yinggarda Aboriginal Corporation (YAC) – 20 January 2023	430
3.2	Email sent to Nanda Aboriginal Corporation – 20 January 2023)	432
3.3	Email sent to Nganhurra Thanardi Garrbu Aboriginal Corporation (NTGAC) – 20 January 2023	433
3.4	Email sent to Yindjibarndi Aboriginal Corporation (YAC) – 20 January 2023.....	434
3.5	Email sent to Murujuga Aboriginal Corporation (MAC) – 20 January 2023.....	435
3.6	Email sent to Ngarluma Aboriginal Corporation (NAC) (20 January 2023)	436
3.7	Email sent to Robe River Kuruma Aboriginal Corporation (RRKAC) (20 January 2023)	437
3.8	Email sent to Wirrawandi Aboriginal Corporation (WAC) – 20 January 2023	438
3.9	Email sent to Nyangumarta Warrarn Aboriginal Corporation (23 January 2023)	439
3.10	Email sent to Wanparta Aboriginal Corporation – 23 January 2023	440
3.11	Emails sent to Kariyarra Aboriginal Corporation – 23 January 2023	441
3.12	Email sent to Karajarri Traditional Lands Association (23 January 2023)	443
3.13	Email sent to Kariyarra Aboriginal Corporation – 24 January 2023	444
3.14	Email sent to Buurabalayji Thalanyji Aboriginal Corporation (BTAC) – 27 January 2023	445
3.15	Email sent to Nyangumarta Karajarri Aboriginal Corporation (23 January 2023).....	446
4	ACTIVITY UPDATE (2023)	447
4.1	Email sent to Australian Border Force (ABF), Director of National Parks (DNP), Australian Maritime Safety Authority (AMSA) – Marine Pollution, Department of Transport (DoT), Department of Biosecurity, Conservation and Attractions (DBCA), Department of Industry, Science and Resources (DISR), Department of Mines, Industry Regulation and Safety (DMIRS), Australian Petroleum Production and Exploration Association (APPEA) – (27 January 2023)	447
4.2	Email sent to Australian Hydrographic Office (AHO) and Australian Maritime Safety Authority (AMSA) – Marine Safety (27 January 2023).....	452
4.3	Email sent to Department of Defence (DoD) (27 January 2023)	457
4.4	Email sent to Recfishwest, Marine Tourism WA and WA Game Fishing Association – 27 January 2023.....	461
4.5	Email sent to Chevron Australia and Osaka Gas Gorgon, Tokyo Gas Gorgon, JERA Gorgon via Chevron Australia – 27 January 2023.....	465
4.6	Email sent to Western Gas, Santos, Exxon Mobil Australia Resources Company, Shell Australia, Finder Energy, KUFPEC, OMV Australia / Sapura OMV Upstream (WA) – 27 January 2022	470
4.7	Email sent to Jadestone, Coastal Oil and Gas, Bounty Oil and Gas, Vermilion Oil and Gas, KATO Energy (27 January 2023).....	474
4.8	Email sent to BP Developments Australia, Carnarvon Energy, PE Wheatstone, Kyushu Electric Wheatstone, Eni Australia Ltd, Fugro Exploration, JX Nippon O&G Expln (Australia) (27 January 2023).....	477
4.9	Email sent to INPEX Alpha (27 January 2023).....	481
4.10	Email sent to Lightmark Enterprises (27 January 2023)	485
4.11	Email sent to Ningaloo Coast World Heritage Advisory Committee (NCWHAC) (27 January 2023).....	488
4.12	Email sent to Karratha Community Liaison Group (including City of Karratha) (27 January 2023)	490

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.13	Email sent to Shire of Ashburton (27 January 2023)	495
4.14	Email sent to Town of Port Hedland (27 January 2023)	497
4.15	Email sent to Shire of Carnarvon (27 January 2023).....	499
4.16	Email sent to Onslow Chamber of Commerce and Industry (27 January 2023).....	502
4.17	Email sent Port Hedland Chamber of Commerce and Industry (27 January 2023).....	504
4.18	Email sent Carnarvon Chamber of Commerce and Industry (27 January 2023).....	506
4.19	Email sent to Exmouth Community Reference Group (ECRG) (including Shire of Exmouth) (1 February 2023)	509
4.20	Email sent to Cape Conservation Group (1 February 2023).....	513
4.21	Email sent to Protect Ningaloo (1 February 2023).....	515
4.22	Email sent to Pilbara Ports Authority (PPA) – 1 February 2023.....	518
4.23	Email sent to Malgana Aboriginal Corporation (1 February 2023)	520
4.24	Email sent to Nanda Aboriginal Corporation via Yamatji Marlpa Aboriginal Corporation (YMAC) (1 February 2023).....	521
4.25	Email sent to Department of Planning, Lands and Heritage (DPLH) – 1 February 2023	521
4.26	Email sent to Western Australian Museum (1 February 2023)	524

Table 1: Consultation Report with Relevant Persons or Organisations

Commonwealth and WA State Government Departments or Agencies – Marine		
Australian Border Force (ABF)		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Consultation information provided to Australian Border Force on 31 August 2021 based on their function, interest, and activities. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Woodside has sent a follow up email seeking feedback on the proposed activities. • Woodside has provided the ABF with the opportunity to provide feedback over a 22 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 31 August 2021, Woodside emailed ABF advising of the proposed activity (Appendix F, reference 1.2) and provided a Consultation Information Sheet. • On 27 January 2023, Woodside emailed ABF with an update on the proposed activity (Appendix F, reference 4.1) and provided an updated Consultation Information Sheet. • On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.1). 		
Summary of Feedback, Objection or Claim	Woodside Energy’s Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	Woodside has addressed maritime security-related issues in Section 6 of this EP based on previous offshore activities. No additional measures or controls are required.

Australian Fisheries Management Authority (AFMA)

Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:

- Consultation Information Sheet publicly available on the Woodside website since August 2021.
- Consultation information provided to AFMA on 31 August 2021 based on their function, interest, and activities.
- Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback.
- Woodside addressed and responded to AFMA over a 22 month period.

Summary of information provided and record of consultation:

- On 31 August 2021, Woodside emailed AFMA advising of the proposed activity (Appendix F, reference 1.14) and provided a Consultation Information Sheet and fisheries map (Appendix F, reference 1.22 and 1.23).
- On 1 September 2021, AFMA emailed Woodside:
 - AFMA stated that due to limited resources they were unable to comment on individual proposals, however, they noted it was important to consult with all fishers who have entitlements to fish within the proposed area.
 - AFMA advised this could be done through the relevant fishing industry associations or directly with fishers who hold entitlements in the area and provided information for contacting them.
- On 3 February 2023, Woodside emailed AFMA with an update on the proposed activity (Appendix F, reference 4.28) and provided an updated Consultation Information Sheet and fisheries maps.
- On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.2).
- On 22 May 2023, Woodside emailed AFMA requesting Commonwealth fishery licence holder contact details unrelated to this proposed activity.
- On 30 May 2023, AFMA responded to advise there will be a change in providing this information. In a further follow up email on the same day, AFMA advised there is a fee payable for this information and a need to sign a Deed of Confidentiality.
- On 17 July 2023, an agreement was reached with AFMA for Woodside to consult directly with Commonwealth fisheries as per contact details provided by AFMA under the new Deed of Confidentiality.

Summary of Feedback, Objection or Claim	Woodside Energy’s Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
--	--	----------------------------------

<p>AFMA provided feedback stating:</p> <ul style="list-style-type: none"> • They were unable to comment on individual proposals but Woodside should consult with all fishers with entitlements within the proposed area. • This could be done via relevant fishing industry associations and contacts were provided. • AFMA advised they were changing the way they provided information and requested Woodside sign a Deed of Confidentiality. <p>Whilst feedback has been received, there were no objections or claims.</p>	<p>Woodside has addressed AFMA's feedback, including confirming that Woodside had provided information to relevant fishery licence holders as well as representative organisations on behalf of Commonwealth fishery licence holders who have entitlements to fish within the proposed area.</p> <p>Woodside has provided consultation information to AFMA, DAFF - Fisheries, CFA, ASBTIA, Tuna Australia, WAFIC and individual relevant licence holders.</p> <p>An agreement was reached with AFMA for Woodside to consult directly with Commonwealth fisheries as per contact details provided by AFMA under the new Deed of Confidentiality.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>Woodside has assessed the potential for interaction with Commonwealth and State managed commercial fisheries in Section 4.9.2 of this EP.</p> <p>Woodside will provide notifications to AFMA, DAFF – Fisheries, DPIRD, WAFIC, CFA, Recfishwest and relevant Fishery Licence Holders that have the potential to be directly impacted by planned activities in the Operational Area (see Table 4-28) prior to the commencement and at the end of the activity, as referenced as PS 1.4 in this EP.</p> <p>No additional measures or controls are required.</p>
--	---	---

Australian Hydrographic Office (AHO) / Australian Hydrographic Service (AHS)

Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:

- Consultation Information Sheet publicly available on the Woodside website since August 2021.
- Consultation information provided to AHO on 31 August 2021 based on their function, interest, and activities.
- Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback.
- Woodside has addressed and responded to AHO over a 22 month period.

Summary of information provided and record of consultation:

- On 31 August 2021, Woodside emailed AHO advising of the proposed activity (Appendix F, reference 1.4) and provided a Consultation Information Sheet and shipping lanes map (Appendix F, reference 1.4.1).
- On 31 August 2021, AHO responded, acknowledging receipt of Woodside’s email.
- On 27 January 2023, Woodside emailed AHO with an update on the proposed activity (Appendix F, reference 4.2) and provided an updated Consultation Information Sheet. Woodside confirmed it would make available a shipping lane map as soon as possible.
- On 30 January 2023, the AHO responded and acknowledged receipt of Woodside’s consultation email.
- On 28 February 2023, Woodside emailed AHO and provided an updated shipping lane map (Appendix F, reference 5.48).
- On 1 March 2023, AHO emailed Woodside and acknowledged receipt of Woodside’s consultation email.

Summary of Feedback, Objection or Claim	Woodside Energy’s Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
Whilst feedback has been received, there were no objections or claims.	AHO has acknowledged receipt of Woodside’s consultation emails. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	Woodside will notify the AHO no less than four working weeks before operations commence, as referenced as PS 1.3 in this EP. No additional measures or controls are required

Australian Maritime Safety Authority (AMSA) – Marine Safety

Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:

- Consultation Information Sheet publicly available on the Woodside website since August 2021.
- Consultation information provided to AMSA – Marine Safety on 31 August 2021 based on their function, interest, and activities.
- Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback.
- Woodside has addressed and responded to AMSA – Marine Safety over a 22 month period.

Summary of information provided and record of consultation:

- On 31 August 2021, Woodside emailed AMSA advising of the proposed activity (Appendix F, reference 1.4) and provided a Consultation Information Sheet and shipping lanes map (Appendix F, reference 1.4.1).
- On 1 September 2021, AMSA emailed Woodside requesting:
 - The AHS be contacted no less than four working weeks before operations commence for the promulgation of related notices to mariners.
 - AMSA's Joint Rescue Coordination Centre (JRCC) be notified at least 24–48 hours before operations commence
 - Provide updates to the AHS and JRCC should there be changes to the activity.
 - Vessels exhibit appropriate lights and shapes to reflect the nature of operations and comply with the International Rules of Preventing Collisions at Sea.
 - AMSA provided advice on obtaining vessel traffic plots, including digital datasets and maps.
- On 27 January 2023, Woodside emailed AMSA with an update on the proposed activity (Appendix F, reference 4.2) and provided an updated Consultation Information Sheet.
- On 31 January 2023, AMSA emailed Woodside requesting additional information relating to moorings (the subject of a related Scarborough activity) and their potential impact on shipping traffic. AMSA also requested Woodside to confirm its current GIS data so that AMSA can map it and assess navigation safety. AMSA requested for Woodside to send its updated Shipping Lane figures.
- On 10 February 2023, AMSA emailed Woodside and reiterated its 31 January 2023 request for additional information.
- On 15 February 2023, AMSA emailed Woodside and reiterated its 31 January 2023 and 10 February 2023 request for additional information.
- On 16 February 2023, Woodside received a phone message from AMSA requesting digital data regarding the proposed activity
- On 17 February 2023, Woodside had a phone conversation with AMSA to clarify the data required and was advised that AMSA would like the operational area polygons in shapefile format for the proposed activity.
- On 17 February 2023, Woodside emailed AMSA the operational area polygons in shapefile format for the proposed activity.
- On 21 February 2023, AMSA emailed Woodside and sent through a vessel traffic plot showing AIS data and an updated vessel traffic plot for the Scarborough area of interest. AMSA reiterated its 31 January 2023 request for additional information.
- On 28 February 2023, Woodside emailed AMSA a response relating to a separate Scarborough activity. Woodside provided an updated shipping lane map (Appendix F, reference 5.48).

<ul style="list-style-type: none"> • On 3 March 2023 AMSA emailed Woodside: • AMSA requested clarification on the vessel traffic plots provided and how the Environment that May Be Affected (EMBA) areas will actually be affected by working vessels, support craft and associated activities. AMSA commented that the EMBAs are quite large unique areas so AMSA is curious about the extent of vessel traffic and activity within these areas and lines of traffic and charted shipping fairways. • On 8 March 2023 Woodside emailed AMSA: <ul style="list-style-type: none"> - Woodside advised that the EMBA is the largest spatial extent where the Petroleum Activities Program could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this Environment Plan (EP) is determined by a highly unlikely release of marine diesel to the environment as a result of vessel collision. The EMBA does not represent the extent of predicted impact of the highly unlikely marine diesel release. Rather, the EMBA represents the merged area of many possible paths a highly unlikely hydrocarbon release could travel depending on the weather and ocean conditions at the time of the release. This means in the highly unlikely event a hydrocarbon release does occur, the entire EMBA will not be affected and the specific and minimal part of the EMBA that is affected will only be known at the time of the release. 		
Summary of Feedback, Objection or Claim	Woodside Energy’s Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>AMSA has provided feedback and requested further information relating to:</p> <ul style="list-style-type: none"> • Moorings and their potential impact on shipping traffic • GIS Data • Updated Shipping Lane figures • Clarification on how the EMBA will affect vessel traffic. <p>AMSA provided details around notifications and contact details.</p>	<p>Woodside has addressed AMSA’s requests and provided additional information including:</p> <p>providing the operational area polygons in shapefile format for the proposed activity.</p> <p>Provided an updated shipping map.</p> <p>Explained the EMBA for the proposed activity.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>Woodside will notify AMSA’s JRCC at least 24–48 hours before operations commence, as referenced as PS 1.5 in this EP.</p> <p>Woodside will notify AHO no less than four working weeks before operations commence, as referenced as a PS 1.3 in this EP.</p> <p>Woodside considers the measures and controls in the EP are appropriate.</p> <p>No additional measures or controls are required.</p>

Australian Maritime Safety Authority (AMSA) – Marine Pollution

Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:

- Consultation Information Sheet publicly available on the Woodside website since August 2021.
- Consultation information provided to AMSA – Marine Pollution on 31 August 2021 based on their function, interest, and activities.
- Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent follow up emails seeking feedback on the proposed activities.
- Woodside has provided the AMSA – Marine Pollution with the opportunity to provide feedback over a 22 month period.

Summary of information provided and record of consultation:

- On 31 August 2021, Woodside emailed AMSA advising of the proposed activity (Appendix F, reference 1.4) and provided a Consultation Information Sheet and shipping lanes map (Appendix F, reference 1.4.1).
- On 5 November 2021, Woodside provided a copy of the Oil Pollution First Strike Plan to AMSA (Appendix F, reference 1.4.2)
- On 27 January 2023, Woodside emailed AMSA with an update on the proposed activity (Appendix F, reference 4.1) and provided an updated Consultation Information Sheet.
- On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.1).

Summary of Feedback, Objection or Claim	Woodside Energy’s Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	Woodside has addressed oil spill preparedness and response strategy in Appendix D . No additional measures or controls are required.

Department of Climate Change, Energy, the Environment and Water Agriculture (DCCEEW) / Department of Agriculture, Fisheries and Forestry (DAFF) – Fisheries (formerly DAWE)

Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:

- Consultation Information Sheet publicly available on the Woodside website since August 2021.
- Consultation information provided to DCCEEW/DAFF on 31 August 2021 based on their function, interest, and activities.

- Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback.
- Woodside has addressed and responded to DCCEEW/DAFF over a 22 month period.

Summary of information provided and record of consultation:

- On 31 August 2021, Woodside emailed DAWE advising of the proposed activity considering biosecurity matters (Appendix F, reference 1.5).and provided a Consultation Information Sheet and fisheries map (Appendix F, reference 1.22).
- On 17 December 2021, Woodside emailed DAWE seeking clarification around the Pygmy Blue Whale CMP, the Department's Guideline and NOPSEMA's FAQ in relation to the definition of, and Woodside's interpretation of BIAs. Woodside requested clarification of its understanding:
 - Reading the documents on DAWE's website (Blue Whale CMP,) our understanding is that "BIAs are not defined under the EPBC Act, but they are areas that are particularly important for the conservation of protected species and where aggregations of individuals display biologically-important behaviour such as calving, foraging, resting or migration. BIAs have been identified using expert scientific knowledge about species' distribution abundance and behaviour". Consequently, distribution in itself, is not a BIA (for blue whales); whereas areas where biologically-important behaviour such as calving, foraging, resting or migration clearly are BIAs. Is that the correct interpretation?
- On 20 December 2021, DAWE responded noting:
 - The definition provided is the agreed working definition of BIAs and this interpretation is correct, BIAs are not defined or described under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act). They are however a geospatial tool used to inform regulatory decision-making given the biologically critical behaviours that they represent.
 - The assumption is correct, that the entire distribution of the blue whale is not considered a BIA. The 'distribution BIA' for the blue whale, as designated in the National Conservation Values Atlas (NCVA) does not constitute a BIA (that represents an area where biologically important behaviour is displayed, such as foraging and migration for the blue whale). We believe the distribution BIA was included in the NCVA following development of the Conservation Management Plan for the Blue Whale (CMP) to flag the importance of their range.
 - DAWE noted that the Blue Whale CMP states (on page 28) "it is not currently possible to define habitat critical to the survival of blue whales. Due to our limited knowledge about the distribution and abundance of these subspecies, little is currently known about the location and characteristics of these habitats. To date, the best information relates to biologically important areas where foraging occurs. These foraging areas can be considered important to the survival of blue whales as they seasonally support highly productive ecosystem processes on which significant aggregations of whales rely." The Blue Whale CMP provides an indicative map of 'Pygmy blue whale distribution around Australia' which shows annual high use, known and possible foraging areas. The Blue Whale CMP also provides an indicative map of known and likely migration routes. These maps may be of use.
- On 30 March 2022, Woodside emailed DCCEEW to ensure DCCEEW was aware NOPSEMA had requested correspondence between DCCEEW and Woodside which must be complied with regarding blue whale distribution and BIAs. Woodside advised details of the correspondence would be included for NOPSEMA's assessment of this EP.
- On 30 March 2022, DCCEEW thanked Woodside for the advice and that DCCEEW had been in contact with NOPSEMA and were aware of this requirement.
- On 3 February 2023, Woodside emailed DCCEEW / DAFF – Fisheries with an update on the proposed activity (Appendix F, reference 4.29) and provided an updated Consultation Information Sheet, fisheries maps and Commonwealth Shipwrecks Information (Appendix F, reference 4.29.1).
- On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.4).

Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>In the course of preparing this and other Woodside EPs, DCCEEW has provided clarification around the Pygmy Blue Whale CMP, the Department's Guideline and NOPSEMA's FAQ in relation to the definition of, and Woodside's interpretation of BIAs.</p> <p>Whilst feedback has been received, there were no objections or claims.</p>	<p>Woodside provided advice about the proposed activity considering biosecurity matters and also provided information and a fisheries map. Woodside later provided updated information and maps.</p> <p>Woodside notes DCCEEW clarification around the Pygmy Blue Whale CMP, the Department's Guideline and NOPSEMA's FAQ in relation to the definition of BIAs. Woodside's interpretation of the Pygmy Blue Whale advice has been applied in the EP, see Section 4.6.3.</p> <p>Woodside has provided consultation information to CFA, AFMA, DAFF – Fisheries, ASBTIA, Tuna Australia, WAFIC and individual relevant licence holders.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>Woodside has addressed maritime biosecurity issues in Section 6 of this EP based on previous offshore activities.</p> <p>Woodside has assessed the relevancy of Commonwealth fisheries issues in Section 4.9.2 of this EP.</p> <p>Woodside will provide notifications to AFMA, DAFF – Fisheries, DPIRD, WAFIC, CFA, Recfishwest and relevant Fishery Licence Holders that have the potential to be directly impacted by planned activities in the Operational Area (see Table 4-28) prior to the commencement and at the end of the activity, as referenced as PS 1.4 in this EP.</p> <p>Pygmy blue whale advice has been applied in the EP, see Section 4.6.3.</p> <p>No additional measures or controls are required.</p>
Department of Defence (DoD)		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Consultation information provided to DoD on 31 August 2021 based on their function, interest, and activities. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Woodside has addressed and responded to DoD over a 22 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 31 August 2021, Woodside emailed DoD advising of the proposed activity (Appendix F, reference 1.6) and provided a Consultation Information Sheet and defence map (Appendix F, reference 1.6.1). • On 31 August 2021, DoD emailed Woodside: 		

- DoD advised it has previously responded regarding the proposed Scarborough Pipeline and associated activities, and that response remains current. The previous response included information about unexploded ordnance risks and DoD notification requirements prior to activity commencement.
- On 10 May 2022 Woodside emailed DoD to clarify the potential risk of UXOs in the Scarborough Development Operational Area.
- On 13 May 2022 DoD emailed Woodside:
 - DoD noted that the UXO risk data has been updated. Currently the UXO webmap has one historical location but it falls outside of the proposed pipeline route. It is reasonable to assess the risk of UXO in the Operational Area to be negligible.
- On 13 May 2022, Woodside thanked DoD for their email of the same date and the information provided.
- On 25 August 2022, Woodside emailed DoD:
 - Woodside noted DoD had previously confirmed there are no specific UXO records for activities in the North West Exercise Area (NWXA) and it is reasonable to assess the risk to be negligible. Woodside asked for clarification as to whether the advice that there are no specific records of UXO in the area means that no categorisation is required and so no further advice is required.
- On 23 September 2022, Woodside followed up on its 25 August 2022 email.
- On 23 September 2022, DoD emailed Woodside:
 - DoD confirmed that the area of the NWXA would be classed as Remote in accordance with its land counterpart. The risk of encountering UXO is Very Low, but not absent.
- On 27 January 2023, Woodside emailed DoD with an update on the proposed activity (Appendix F, reference 4.3) and provided an updated Consultation Information Sheet.
- On 20 February 2023, DoD emailed Woodside and reiterated previous advice provided. In an additional email on the same day DoD also provided Woodside with a figure outlining its restricted airspace and Defence Training Areas off the WA Coast.
- On 13 March 2023, Woodside emailed DoD (Appendix F, reference 5.50) thanking them for their feedback and advised that:
 - In line with Woodside’s previous response to the Department of Defence’s feedback in relation to the proposed activities, Woodside re-confirms that it notes the Department’s advice on the location of the Operational Area and the presence of the NWXA and restricted airspace.
 - Woodside noted the advice with respect to the location, identification, removal, or damage to equipment from unexploded ordinances (UXOs). Woodside provided confirmation that:
 - Woodside will notify the Department of Defence at least five weeks prior to the commencement of activities.
 - Woodside notes the requirement and contact details provided by the Department of Defence to engage with Airservices Australia if the restricted airspace is activated. Woodside will confirm restricted air space status with the Department of Defence as part of its commencement of activity notification.
 - Australian Hydrographic Office (AHO) has already been engaged for this activity and is included in our activity notification protocols. At its request, AHO will be notified four weeks prior to the start of activities. Woodside also provided an updated defence zone map.

Summary of Feedback, Objection or Claim	Woodside Energy’s Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
--	--	----------------------------------

<p>DoD has provided feedback relating to: the location of the activity in proximity to the NWXA and the potential presence of UXO.</p> <p>Notification requirements</p> <p>DoD has provided advice relating to: Details of its restricted airspace and Defence Training Areas off the WA Coast</p>	<p>Woodside has reviewed the proposed activity and the location of the NWXA and UXOs to understand the potential for UXOs to be within the Operational Area. The Learmonth Air Weapons Range (AWR) practice area is approximately 76 km south of the operational area and the location of any UXOs (known to occur) are near Bessieres Island which is located 165 km south of the Operational Area. A UXO survey may be carried out as part of pre-Trunkline installation work where there is deemed to be a credible risk.</p> <p>Woodside acknowledges the potential presence of UXOs and has considered this in its risk assessment planning.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>Woodside has addressed DoDs expectations on notifications – Defence, restricted air space and AHO (PS 1.6 and PS 1.3, Table 7-8).</p> <p>AHO have been engaged for the activity and are included in Woodside’s activity notification protocols. AHO will be notified four weeks prior to the start of activities.</p> <p>Woodside considers the measures and controls in the EP are appropriate.</p> <p>No additional measures or controls are required.</p>
--	---	---

Department of Primary Industries and Regional Development (DPIRD)		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Consultation information provided to DPIRD on 31 August 2021 based on their function, interest, or activities. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Woodside has addressed and responded to DPIRD over a 22 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 31 August 2021, Woodside emailed DPIRD advising of the proposed activity (Appendix F, reference 1.11) and provided a Consultation Information Sheet and fisheries maps (Appendix F, reference 1.22 and 1.23). <ul style="list-style-type: none"> - On 3 February 2023, Woodside emailed DPIRD with an update on the proposed activity (Appendix F, reference 4.30) and provided an updated Consultation Information Sheet and fisheries maps. • On 10 February 2023, DPIRD emailed Woodside to advise it is preparing a draft response and requested information on how far the proposed trunkline will be situated from the Rankin Bank. • On 13 February 2023, Woodside emailed DPIRD to advise that the Scarborough trunkline operational area is ~25 km to Rankin Bank at the closest point in Commonwealth waters. At this location the depth of the trunkline is ~70m and no impacts and risks from planned activities to Rankin Bank are expected. <ul style="list-style-type: none"> - Woodside advised it will update this information in the next revision of the SITI EP. • On 17 February 2023, DPIRD responded noting that as the activity is proposed for waters unlikely to influence fishing activities, it has no further comments at this time. • On 24 February 2023, Woodside emailed DPIRD thanking it for its feedback and confirming that Woodside has consulted state commercial fishery licence holders and recreational fishery licence holders that are active within the EMBA for the proposed activity. 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>DPIRD has provided feedback that the activity is proposed for waters unlikely to influence fishing activities and it has no further comments at this time.</p> <p>Whilst feedback has been received, there were no objections or claims.</p>	<p>Woodside has provided consultation information to DPIRD, WAFIC, and individual relevant licence holders.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>Woodside has assessed the potential for interaction with Commonwealth and State managed commercial fisheries in Section 4.9.2 of this EP.</p> <p>Woodside will provide notifications to AFMA, DAFF – Fisheries, DPIRD, WAFIC, CFA, Recfishwest and relevant Fishery Licence Holders that have the potential to be directly impacted by planned activities in the Operational Area (see Table 4-28) prior to the commencement and at the end of the activity, as referenced as PS 1.4 in this EP.</p>

		No additional measures or controls are required.
Department of Transport (DoT)		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Consultation information provided to DoT on 31 August 2021 based on their function, interest, and activities. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Woodside has addressed and responded to DoT over a 22 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 31 August 2021, Woodside emailed DoT advising of the proposed activity (Appendix F, reference 1.2) and provided a Consultation Information Sheet. • On 3 September 2021, DoT emailed Woodside: <ul style="list-style-type: none"> - DoT requested that if there is any risk of a spill impacting State waters from any of the proposed activities, Woodside must consult DoT (Marine Oil Pollution). • On 5 November 2021, Woodside emailed DoT and provided a copy of the First Strike Plan (Appendix F, reference 1.2.1). • On 7 December 2021, DoT emailed Woodside: <ul style="list-style-type: none"> - DoT advised that they had no queries regarding the First Strike Plan and requested that Woodside provide them with a final accepted version when available. • On 7 December 2021, Woodside emailed to thank DoT for their email and acceptance of the First Strike Plan. • On 27 January 2023, Woodside emailed DoT with an update on the proposed activity (Appendix F, reference 4.1) and provided an updated Consultation Information Sheet. • On 7 February 2023, DoT emailed Woodside: <ul style="list-style-type: none"> - DoT requested that if there is any risk of a spill impacting State waters from any of the proposed activities, Woodside must consult DoT (Marine Oil Pollution). • On 22 February 2023, Woodside emailed DoT: <ul style="list-style-type: none"> - Woodside confirmed that if there is a risk of a spill impacting State waters, the Department of Transport (Marine Oil Pollution) will be consulted. 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>DoT has provided feedback on the proposed activity relating to:</p> <ul style="list-style-type: none"> • The draft Oil Pollution First Strike Plan and a request for a final accepted version of the plan when available. 	<p>Woodside has addressed DoT's feedback regarding the Oil Pollution First Strike Plan and incorporated referenced changes based on feedback.</p> <p>Woodside will send DoT a copy of the First Strike Plan once accepted.</p>	<p>Woodside will provide DoT with a copy of the accepted Oil Pollution First Strike Plan, as referenced in the OSPRMA (Appendix D).</p> <p>Woodside will consult DoT if there is a spill impacting State water from the proposed activity, as referenced in the OSPRMA (Appendix D).</p>

<ul style="list-style-type: none"> • Consultation requirements in the event of a spill impacting State waters from any of the proposed activities. • Whilst feedback has been received, there were no objections or claims. 	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>No additional measures or controls are required.</p>
---	---	---

Department of Planning, Lands and Heritage (DPLH)

Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:

- Consultation Information Sheet publicly available on the Woodside website since August 2021.
- Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback.
- Consultation information provided to DPLH on 1 February 2023 based on their function, interest, and activities.
- Woodside has addressed and responded to DPLH over a 5 month period.

Summary of information provided and record of consultation:

- On 1 February 2023, Woodside emailed DPLH advising of the proposed activity (Appendix F, reference 4.25) and provided a Consultation Information Sheet and map of State Waters Shipwrecks (Appendix F, reference 4.27).
- On 17 February 2023, DPLH emailed Woodside to advise that a Heritage Officer will be in contact regarding this referral.
- On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.31).
- On 28 February 2023, DPLH confirmed that they were still finalising comments, to be provided as soon as possible.
- On 1 March 2023, Woodside responded and thanked DPLH for the update.
- On 3 May 2023, Woodside sent a follow up email.
- On 9 May 2023, DPLH emailed to advise that regarding the State Heritage Referral: P50372 for the SITI activities, no adverse heritage impacts to any place entered into the State Register of Heritage Places had been identified. It further stated the Western Australian Museum is the delegated authority for management of Commonwealth historic shipwrecks and relics in Western Australia and should be contacted for advice regarding any maritime archaeological impacts.
- On 9 May 2023, Woodside emailed DPLH thanking DPLH for the advice regarding heritage impacts.
 - Woodside confirmed that Woodside will contact the Western Australian Museum in the event of any maritime archaeological impacts from the proposed activities.
 - Woodside also asked whether DPLH had any feedback with respect to other Scarborough EPs for which Woodside has also provided consultation information.

Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>DPLH advised no adverse heritage impacts to any place entered into the State Register of Heritage Places had been identified and that the Western Australian Museum is the delegated authority for management of Commonwealth historic shipwrecks and relics in Western Australia and should be contacted for advice in the event of any maritime archaeological impacts. Whilst feedback has been received, there were no objections or claims</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>The EP demonstrates that there are no known underwater heritage sites or shipwrecks within the Petroleum Activities Area and identifies that there are no credible impacts to the values of any underwater heritage or shipwrecks as a result of planned activities (Section 4.9.1). While impacts to underwater heritage sites or shipwrecks are possible in the event of an unplanned hydrocarbon spill, Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of a hydrocarbon spill, as demonstrated in Section 6.8.2 and Section 6.8.3.</p> <p>No additional measures or controls are required.</p>
Pilbara Ports Authority (PPA)		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Consultation information provided to PPA on 31 August 2021 based on their function, interest, and activities. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Woodside has addressed and responded to PPA over a 22 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 31 August 2021, Woodside emailed PPA advising of the proposed activity (Appendix F, reference 1.18) and provided a Consultation Information Sheet. PPA was also informed as a member of the Karratha Community Liaison Group, but is being treated as its own relevant person in this EP. • On 3 September 2021, PPA emailed Woodside, noting it had previously provided feedback on consultation on the overall project. PPA requested confirmation the feedback had been recorded and noted its comments were relevant to both EPs. • On 10 September 2021 PPA responded, acknowledging PPA's previous feedback and requesting information on: <ul style="list-style-type: none"> - The risks of the activities being conducted in Port waters, - What controls/mitigation strategies will be in place, - What monitoring programs will be in place, - Incident reporting requirements. • On 10 September 2021, Woodside thanked PPA for their email and advised it will look into presentation meeting dates for October. 		

<ul style="list-style-type: none"> On 5 October 2021, Woodside held an information session with PPA to address their interests and to provide more detail regarding installation activities and impacts relevant to PPA areas of interest. On 4 November 2021, Woodside emailed PPA to advise details regarding sending the Oil Pollution First Strike Plan. On 4 November 2021, PPA acknowledged Woodside's email. On 5 November 2021, Woodside provided a copy of the Oil Pollution First Strike Plan to PPA (Appendix F, reference 1.18.1) On 5 November 2021, PPA responded, thanking Woodside for the Plan and noted it will review and provide a response in the following weeks. On 15 November 2021, PPA emailed Woodside with feedback on five sections of the Plan. On 26 November 2021, Woodside provided a response to the PPA's feedback, noting all points were amended in line with its feedback. On 2 December 2021, PPA responded, confirming it was happy with the changes. On 2 December 2021, Woodside responded, noting the PPA's acceptance of the amendments, and confirmed it would send the PPA a copy of the final plan once approved. On 1 February 2023, Woodside emailed the PPA advising of the proposed activity (Appendix F, reference 4.22) and provided an updated Consultation Information Sheet. On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.41). On 23 February 2023, PPA emailed Woodside and noted that as the activity occurs outside of the Port waters it has no comments. On 23 February 2023, Woodside emailed PPA to request that PPA provide a response to clarify which specific activity their feedback relates to. On 24 February 2023, PPA emailed Woodside to reconfirm that it notes most of the activities will be occurring outside of port waters with the exception of the SITI EP. PPA reconfirmed it has no comments on the proposed activity. 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>PPA has requested information on the proposed activity:</p> <ul style="list-style-type: none"> The risks of the activities being conducted in Port waters; The controls/mitigation strategies and monitoring programs that would be in place; Incident reporting requirements. <p>PPA reconfirmed it has no comments on the proposed activity.</p> <p>Whilst feedback has been received, there were no objections or claims.</p>	<p>Woodside has provided PPA with additional information relating to its areas of interest, including providing a detailed briefing on the proposed activity.</p> <p>Woodside will send Pilbara Ports Authority's a copy of the First Strike Plan once accepted.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>No additional measures or controls are required.</p>

Commonwealth and WA State Government Departments or Agencies – Environment

Director of National Parks (DNP)

Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:

- Consultation Information Sheet publicly available on the Woodside website since August 2021.
- Consultation information provided to DNP on 31 August 2021 based on their function, interest, and activities.
- Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback.
- Woodside has addressed and responded to DNP over a 22 month period.

Summary of information provided and record of consultation:

- On 31 August 2021, Woodside emailed DNP advising of the proposed activity considering potential risks to Australian Marine Parks (Appendix F, reference 1.3), and provided a Consultation Information Sheet.
- On 13 September 2021, Woodside held a meeting with DNP and provided information relevant to DNP's interests for the proposed activity.
- On 20 September 2021, Woodside provided a copy of the presentation it presented on 13 September 2021.
- On 29 September 2021, DNP thanked Woodside for the meeting and for sending through the presentation slides.
- On 6 October 2021, DNP responded, noting that the activities may affect the values present in the Dampier Marine Park Habitat Protection Zone and the National Park Zone. The DNP noted it has no objections and claims at this time. The DNP noted points relating to the Montebello Marine Park, Dampier Marine Park, cultural heritage, water quality monitoring and guidance information.
- On 25 November 2021, Woodside responded to each of DNP's points with additional information.
- On 1 December 2021, DNP responded, thanking Woodside for the additional information. DNP noted that based on the information provided to date (including modelling, risks identified, controls proposed and consultation outlined in the spreadsheet), the DNP has no objections and claims at this time and no further comments in relation to the proposed EP.
- On 27 January 2023, Woodside emailed DNP with an update on the proposed activity (Appendix F, reference 4.1) and provided an updated Consultation Information Sheet.
- On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.1).
- On 24 February 2023, DNP emailed Woodside noting they have no further comment or objections and claims on the proposed activity. DNP noted that comments on the proposed activity were previously provided to Woodside on 1 December 2021:

- DNP requested clarification on the Operational Area (OA). The Director of National Parks considers the OA to encompass operational activities such as line turns / repositioning, equipment maintenance, deployment and recovery, crew change and resupply. These are offshore petroleum activities and Commonwealth environment regulatory matters and, as such, should be included in the EP so relevant risks are assessed and effective mitigation applied.
- On 8 March 2023, Woodside emailed DNP and acknowledged the comments already provided by DNP previously on each of the relevant EPs and that DNP has no further comment or objections and claims. Copies of DNP's previous responses have been received and have been addressed where relevant within each of the proposed EPs. Woodside clarified the OA that will apply for subsea infrastructure installation.

Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>The DNP has advised they have no further comment or objections and claims on the proposed activity. DNP have noted:</p> <ul style="list-style-type: none"> • The proposed activities may affect the values present in the Dampier Marine Park Habitat Protection Zone and the National Park Zone. • Points relating to the Montebello Marine Park, Dampier Marine Park, cultural heritage, water quality monitoring and guidance information. <p>The DNP has requested clarification of the activities that are encompassed within the OA for the proposed activity to ensure that relevant risks are assessed and effective mitigation applied.</p> <p>Whilst feedback has been received, there were no objections or claims.</p>	<p>Woodside has responded to each of the DNP's points (relating to the Montebello Marine Park, Dampier Marine Park, cultural heritage, water quality monitoring and guidance information) with additional information. Woodside has provided a detailed briefing to DNP on the proposed activity.</p> <p>Woodside has provided clarification to DNP on the OA as requested (see above).</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>The EP demonstrates that the risks and impacts of proposed planned activities within permitted areas of the Dampier Marine Park and Montebello Marine Park are reduced to ALARP and acceptable levels, including protection of Australian Marine Park values (Section 6.9.4). While impacts to Commonwealth Marine Parks are possible in the event of an unplanned hydrocarbon spill, Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of a hydrocarbon spill, as demonstrated in Section 6.8.2 and Section 6.8.3.</p> <p>This EP demonstrates how Woodside will identify and manage all impacts and risks on Australian marine park values (including ecosystem values) to an ALARP and acceptable level and that the activity is not inconsistent with the management plan (Section 6.9.4).</p> <p>Woodside will ensure the DNP is made aware of any incidences within a marine park for the activity, as per the commitment in the Oil Pollution First Strike Plan (Appendix J).</p> <p>No additional measures or controls are required.</p>

Department of Biodiversity, Conservation and Attractions (DBCA)

- Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:
- Consultation Information Sheet publicly available on the Woodside website since August 2021.
 - Consultation information provided to DBCA on 31 August 2021 based on their function, interest, and activities.

<ul style="list-style-type: none"> Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. Woodside has addressed and responded to DBCA over a 22 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> On 31 August 2021, Woodside emailed DBCA advising of the proposed activity (Appendix F, reference 1.2) and provided a Consultation Information Sheet. On 16 September 2021, DBCA emailed Woodside: <ul style="list-style-type: none"> DBCA advised that based on the documentation provided for review and other readily available information, DBCA has no comments in relation to its responsibilities under the Conservation and Land Management Act 1984 and Biodiversity Conservation Act 2016. On 27 January 2023, Woodside emailed DBCA with an update on the proposed activity (Appendix F, reference 4.1) and provided an updated Consultation Information Sheet. On 8 February 2023, DBCA emailed Woodside: <ul style="list-style-type: none"> DBCA advised that based on the documentation provided for review and other readily available information, DBCA has no comments in relation to its responsibilities under the Conservation and Land Management Act 1984 and Biodiversity Conservation Act 2016. 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>DBCA has advised it has no comments on the proposed activity.</p> <p>Whilst feedback has been received, there were no objections or claims.</p>	<p>Woodside acknowledges that DBCA had no comment on the proposed activities.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>The EP demonstrates that the risks and impacts of proposed planned activities within permitted areas of the Montebello Islands MP are reduced to ALARP and acceptable levels. While impacts to State Marine Parks are possible in the event of an unplanned hydrocarbon spill, Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of a hydrocarbon spill, as demonstrated in Section 6.8.2 and Section 6.8.3.</p> <p>No additional measures or controls are required.</p>
Ningaloo Coast World Heritage Advisory Committee (NCWHAC)		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> Consultation Information Sheet publicly available on the Woodside website since August 2021. Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. Consultation information provided to NCWHAC on 27 January 2023 based on their function, interest, and activities. Woodside has sent a follow up email seeking feedback on the proposed activities. 		

<ul style="list-style-type: none"> Woodside has provided NCWHAC with the opportunity to provide feedback over a 5 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> On 27 January 2023, Woodside emailed NCWHAC with an update on the proposed activity (Appendix F, reference 4.11) and provided an updated Consultation Information Sheet. On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.18). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	No additional measures or controls are required.
Commonwealth and State Government Departments or Agencies – Industry		
Department of Industry, Science and Resources (DISR)		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> Consultation Information Sheet publicly available on the Woodside website since August 2021. Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. Consultation information provided to DISR on 27 January 2023 based on their function, interest, and activities. Woodside has sent follow up emails seeking feedback on the proposed activities. Woodside has provided the DISR with the opportunity to provide feedback over a 5 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> On 31 August 2021, Woodside emailed DISR advising of the proposed activity (Appendix F, reference 1.2).and provided a Consultation Information Sheet. On 27 January 2023, Woodside emailed DISR with an update on the proposed activity (Appendix F, reference 4.1).and provided an updated Consultation Information Sheet. On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.1). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate,	No additional measures or controls are required.

	Woodside will apply its Management of Change and Revision process (see Section 7).	
Department of Mines, Industry Regulation and Safety (DMIRS)		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Consultation information provided to DMIRS on 31 August 2021 based on their function, interest, and activities. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Woodside has addressed and responded to DMIRS over a 22 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 31 August 2021, Woodside emailed DMIRS advising of the proposed activity (Appendix F, reference 1.2) and provided a Consultation Information Sheet. • On 24 September 2021, DMIRS responded, acknowledging receipt of the information. DMIRS noted that it did not require further information at that stage and requested pre-start notifications confirming the start date of the proposed activity and a cessation notification upon completion of the activity. • On 27 January 2023, Woodside emailed DMIRS with an update on the proposed activity (Appendix F, reference 4.1) and provided an updated Consultation Information Sheet. • On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.1). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
DMIRS noted that it did not require further information at this stage and requested pre-start notifications confirming the start date of the proposed activity and a cessation notification upon completion of the activity.	Woodside will provide notifications to DMIRS prior to the commencement and at the end of the activity (Table 7-8). Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	Woodside will provide notifications to DMIRS prior to the commencement and at the end of the activity, as referenced at Section 7 in this EP. Woodside considers the measures and controls in the EP are appropriate. No additional measures or controls are required.

Commonwealth Commercial fisheries and representative bodies		
North West Slope and Trawl Fishery		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Consultation information provided to North West Slope and Trawl Fishery on 31 August 2021 based on their function, interest, and activities. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Woodside has sent follow up emails seeking feedback on the proposed activities. • Woodside has provided North West Slope and Trawl Fishery with the opportunity to provide feedback over a 22 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 31 August 2021, Woodside emailed Licence Holders advising of the proposed activity (Appendix F, reference 1.9) and provided a Consultation Information Sheet and fisheries maps (Appendix F, reference 1.22). • On 3 February 2023, Woodside emailed licence holders with an update on the proposed activity (Appendix F, reference 4.34) and provided an updated Consultation Information Sheet and fisheries maps. • On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.11). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	<p>Woodside has provided consultation information to AFMA, DAFF – Fisheries, CFA, ASBTIA, Tuna Australia, WAFIC and individual relevant licence holders.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>Woodside has assessed the potential for interaction with Commonwealth and State managed commercial fisheries in Section 4.9.2 of this EP.</p> <p>Woodside will provide notifications to AFMA, DAFF – Fisheries, DPIRD, WAFIC, CFA, Recfishwest and relevant Fishery Licence Holders that have the potential to be directly impacted by planned activities in the Operational Area (see Table 4-28) prior to the commencement and at the end of the activity, as referenced as PS 1.4 in this EP.</p> <p>No additional measures or controls are required.</p>
Western Deepwater Trawl Fishery		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. 		

<ul style="list-style-type: none"> • Consultation information provided to Western Deepwater Trawl Fishery on 31 August 2021 based on their function, interest, and activities. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Woodside has sent follow up emails seeking feedback on the proposed activities. • Woodside has provided the Western Deepwater Trawl Fishery with the opportunity to provide feedback over a 22 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 31 August 2021, Woodside emailed Licence Holders advising of the proposed activity (Appendix F, reference 1.9) and provided a Consultation Information Sheet and fisheries maps (Appendix F, reference 1.22). • On 3 February 2023, Woodside emailed licence holders with an update on the proposed activity (Appendix F, reference 4.34) and provided an updated Consultation Information Sheet and fisheries maps. • On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.11). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside has provided consultation information to AFMA, DAFF – Fisheries, CFA, ASBTIA, Tuna Australia, WAFIC and individual relevant licence holders. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	Woodside has assessed the potential for interaction with Commonwealth and State managed commercial fisheries in Section 4.9.2 of this EP. Woodside will provide notifications to AFMA, DAFF – Fisheries, DPIRD, WAFIC, CFA, and relevant Fishery Licence Holders that have the potential to be directly impacted by planned activities in the Operational Area (see Table 4-28) prior to the commencement and at the end of the activity, as referenced as PS 1.4 in this EP. No additional measures or controls are required.
Western Tuna and Billfish Fishery		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Consultation information provided to Western Tuna and Billfish Fishery on 31 August 2021 based on their function, interest, and activities. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Woodside has sent follow up emails seeking feedback on the proposed activities. • Woodside has provided the Western Tuna and Billfish Fishery with the opportunity to provide feedback over a 22 month period. 		

<p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> On 31 August 2021, Woodside emailed Licence Holders advising of the proposed activity (Appendix F, reference 1.9) and provided a Consultation Information Sheet and fisheries maps (Appendix F, reference 1.22). On 3 February 2023, Woodside emailed licence holders with an update on the proposed activity (Appendix F, reference 4.35) and provided an updated Consultation Information Sheet and fisheries maps. On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.33). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	<p>Woodside has provided consultation information to AFMA, DAFF – Fisheries, CFA, ASBTIA, Tuna Australia, WAFIC and individual relevant licence holders</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>Woodside has assessed the potential for interaction with Commonwealth and State managed commercial fisheries in Section 4.9.2 of this EP.</p> <p>Woodside will provide notifications to AFMA, DAFF – Fisheries, DPIRD, WAFIC, CFA, Recfishwest and relevant Fishery Licence Holders that have the potential to be directly impacted by planned activities in the Operational Area (see Table 4-28) prior to the commencement and at the end of the activity, as referenced as PS 1.4 in this EP.</p> <p>No additional measures or controls are required.</p>
Commonwealth Fisheries Association (CFA)		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> Consultation Information Sheet publicly available on the Woodside website since August 2021. Consultation information provided to CFA on 31 August 2021 based on their function, interest, and activities. Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. Woodside addressed and responded to CFA over a 22 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> On 31 August 2021, Woodside emailed the CFA advising of the proposed activity (Appendix F, reference 1.14) and provided a Consultation Information Sheet and fisheries maps (Appendix F, reference 1.22 and 1.23). On 3 February 2023, Woodside emailed CFA on the proposed activity (Appendix F reference 4.34) and provided an updated Consultation Information Sheet and fisheries maps. On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.11). On 22 February 2023, CFA emailed Woodside to advise that CFA is not resourced to give feedback on Woodside's EP. 		

<ul style="list-style-type: none"> - CFA requested enquiries were directed to the associations that represent the directly affected fisheries/fishers. - CFA noted that the increasing volume of requests for consultation on EPs from oil and gas and more recently windfarm proposals are beyond the capacity of most associations. - CFA advised Woodside to be prepared to engage those associations on a fee for service basis. • On 15 March 2023, Woodside emailed CFA: <ul style="list-style-type: none"> - Woodside confirmed it has provided consultation information directly to fishery licence holders that it has assessed as 'relevant persons' for the proposed EP, as well as to their fishery representative bodies. - As per Woodside's ongoing consultation approach, feedback continues to be assessed and responded to, as required, through the life of an EP. 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>CFA provided feedback that it is not resourced to give feedback on Woodside's Environmental Plan and that it should consult with fishery license holders directly.</p> <p>Whilst feedback has been received, there were no objections or claims.</p>	<p>Woodside has addressed the CFA's feedback, including confirming it has provided consultation information directly to licence holders it has assessed as 'relevant persons' for the proposed EP as well as their fishery representative bodies.</p> <p>Woodside has provided consultation information to AFMA, DAFF – Fisheries, CFA, ASBTIA, Tuna Australia, WAFIC and individual relevant licence holders.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>Woodside has assessed the potential for interaction with Commonwealth and State managed commercial fisheries in Section 4.9.2 of this EP.</p> <p>Woodside will provide notifications to AFMA, DAFF – Fisheries, DPIRD, WAFIC, CFA, Recfishwest and relevant Fishery Licence Holders that have the potential to be directly impacted by planned activities in the Operational Area (see Table 4-28) prior to the commencement and at the end of the activity, as referenced as PS 1.4 in this EP.</p> <p>No additional measures or controls are required.</p>
Tuna Australia		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Consultation information provided to Tuna Australia on 3 February 2023 based on their function, interest, and activities. • Woodside has addressed and responded to Tuna Australia over a 5 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 3 February 2023, Woodside emailed Tuna Australia on the proposed activity (Appendix F, reference 4.34) and provided an updated Consultation Information Sheet and fisheries maps. 		

- On 3 February 2023, Tuna Australia emailed Woodside to advise that it is unable to review its environmental plan submissions due to resourcing constraints and requested Woodside enter into a service agreement with Tuna Australia.
- On 15 March 2023, Woodside emailed Tuna Australia to advise the following:
 - Woodside advised that the level of feedback provided by an organisation, if any, is at the person or organisation's discretion.
 - Woodside advised it would be happy to meet with Tuna Australia to provide an overview of proposed activities, how Woodside develops its EPs and the extensive controls put in place to reduce impacts to as low as reasonable practical (ALARP) and acceptable levels, and its aim is to provide an efficient and simple way to obtain feedback and assist in the understanding of Woodside's activities.
 - As per Woodside's ongoing consultation approach, feedback continues to be assessed and responded to, as required, through the life of an EP.
- On 15 March 2023, Tuna Australia emailed Woodside:
 - Tuna Australia attached what it described as 'an industry position statement for engaging with energy companies seeking consultation advice from stakeholders on environmental plans and project proposals'. This included:
 - An overview of Tuna Australia's functions, interests and activities as well as the organisation's company objectives.
 - The geographic areas that Tuna Australia represents by membership Statutory Fishing Rights.
 - A recommendation that project proponents also engage with the Australian Southern Bluefin Tuna Industry Association for any proposals in the Southern Bluefin Tuna fishing area.
 - The position that Tuna Australia considers itself a 'relevant person' consistent with NOPSEMA guidelines.
 - A request that Tuna Australia be contacted when any proposed activity has the potential to impact vessel navigation, fishing activities, and/or the conservation of fish resources consistent with the Offshore Petroleum and Greenhouse Gas Storage Act 2006.
 - A request for a map from proponents of the proposed activity to determine if its member interests may be affected on a case-by-case basis.
 - A request that where potential effects exist, there is a need for a service agreement. Tuna Australia advised it can no longer coordinate consultation with offshore energy activities on behalf of Tuna Australia's members without a service agreement in place. Tuna Australia requests proponents execute Tuna Australia's services agreement and provide information in a written succinct manner including estimated boundaries for extent of planned activity impacts (i.e. artificial light, noise, discharges etc) as well as activities within the operational area. This advice will be distributed to members and non-members holding SFRs in the Eastern (114 concession holders) and Western (61 concession holders) Tuna and Billfish Fisheries for comment. Information provided would be relevant to tuna and billfish fisheries in the area that may affect vessel navigation, fishing activities, and/or the conservation of fish resources based on the planned aspects of the activity, and proposed control measures to manage impacts.
 - Tuna Australia noted that it wishes to engage constructively with project proponents for all situations where there is potential for conflict with vessel navigation, access to fishing area and/or gear, and the biology of target fish and baitfish. Advice provided can change annually due to the dynamic nature of its fisheries.
 - Tuna Australia encouraged companies requiring advice from its sector to enter into a consultation services agreement with Tuna Australia to support their applications. Noting that Tuna Australia may be able to provide information on vessel navigation, fishing activities and/or the conservation of fish resources that may be affected that is not publicly available and will be an important input to environmental impact and risk assessment processes.
- On 17 May 2023, Woodside emailed Tuna Australia thanking it for its position statement and:

- Noted the level of feedback provided by an organisation, if any, is at the person or organisation's discretion.
- Woodside does not have an expectation that organisations will provide a report or engage a consultant to engage in consultation or provide feedback on their behalf.
- Woodside is open to suggestions from Tuna Australia as to ways to improve efficiency and simplicity for feedback so that the process is manageable.
- Woodside reiterates it would be happy to meet with Tuna Australia to provide an overview of our proposed activities, how we develop our environment plans and the extensive controls we have in place to reduce impacts to as low as reasonably practical (ALARP) and acceptable level.
- On 17 May 2023, Tuna Australia sent an email to NOPSEMA, and copied in Woodside, regarding Woodside's position on engagement with Tuna Australia. The email stated:
 - When energy companies execute a service agreement with Tuna Australia, this ensures that all Western Tuna and Billfish Fishery (WTBF) and Eastern Tuna and Billfish Fishery concession holders are consulted on environmental plans and responses are provided in a report.
 - Woodside do not have an appreciation of the nature fishing and are more content to receive information to support their environmental plans and proposals free of charge. This is not consistent with their company values.
 - Woodside has failed to recognise the WTBF is a relevant person.
 - WTBF concession holders are very concerned with developments in their fishing zone and have many comments and questions on environmental plans and proposals.
 - Tuna Australia requested that to meet sound consultation principles NOPSEMA stipulate that all environmental plan submissions receive formal advice from Tuna Australia.
- On 26 May 2023, Woodside had a phone call with the Tuna Australia CEO and:
 - Explained that Woodside would like to discuss a path forward following receipt of Tuna Australia's Position Statement across its EP activities, including the activities proposed under this EP.
 - Noted Tuna Australia's correspondence to NOPSEMA and copied to Woodside dated 17 May 2023.
 - Noted Tuna Australia's previous EP consultation feedback that Woodside had responded to with respect to unrelated EPs.
 - Reiterated that Woodside does not expect Tuna Australia to provide a consultation report for each of its EPs and are concerned about this potential misalignment on expectations.
 - Tuna Australia advised it would like to discuss a way forward as woodside suggested and requested Woodside call Tuna on 30 May 2023, which Woodside committed to.
- On 2 June 2023, Woodside made a follow up phone call to Tuna Australia and left a voicemail covering the following:
 - Woodside called Tuna Australia on 2 June 2023 to follow up on phone call on 26 May 2023.
 - Woodside left a message requesting a call back and the opportunity to meet with Tuna Australia to discuss Woodside's portfolio of environment plan activities.
 - Woodside requested the opportunity to discuss options to consult with Tuna Australia and potentially lessen the burden on Tuna Australia for providing feedback on Woodside's EPs.

- Woodside offered the opportunity to take Tuna Australia through the entire EP portfolio, inclusive of decommissioning, so Tuna Australia could better assess the volume of activities.
- Woodside reiterated that there was no expectation for Tuna Australia to provide a consultation report on each individual EP, and potentially there is an opportunity for Woodside and Tuna Australia to work together on a more strategic approach.
- On 6 June 2023, Tuna Australia returned Woodside's call regarding an opportunity to meet to discuss a more strategic approach to consultation.
- On 8 June 2023, Tuna Australia returned Woodside's call and asked Woodside to call back on 14 June 2023.
- On 14 June 2023, Woodside returned Tuna Australia's phone call and left a message for Tuna Australia to call back.
- On 20 June 2023, Woodside and Tuna Australia held a meeting to discuss Tuna Australia's Industry Position Statement:
 - Woodside provided an overview of its activities and explained how recent case law and NOPSEMA guidance had resulted in Woodside undertaking consultation on the widest potential 'EMBA'.
 - Tuna Australia agreed to share with Woodside the name of any of the Offshore Sectors' titleholders that have entered into Tuna Australia's service agreement to date.
 - Tuna Australia also agreed to provide more detail on how Tuna Australia will distribute consultation materials to its membership/licence holders and the format of any report arising from the data collected.
 - Woodside committed to review Tuna Australia's Service Agreement.
- On 26 June 2023, Woodside emailed Tuna Australia following the meeting held on 20 June 2023 and recapped what was discussed.
 - Woodside thanked Tuna Australia for its time and stated it looked forward to continuing work with Tuna Australia.
 - Woodside directed Tuna Australia to contact the Woodside Feedback inbox for any further information.
- On 30 June 2023, Tuna Australia's CEO responded to Woodside's email of 26 June 2023. Tuna Australia:
 - Noted outcomes of the recent case law focussed on stakeholder engagement and ensuring energy companies meet regulatory requirements and NOPSEMA guidelines.
 - Requested Woodside send the recent case law.
 - Reached out to energy companies who have executed a services agreement with Tuna Australia and asked whether Tuna Australia could inform Woodside about their working relationship. Beach Energy confirmed it was happy for Tuna Australia to share its details.
 - Advised how it contacts concession holders and what it provides to them.
 - Provided a Tuna Australia contact who manages engagement with energy companies to progress a service agreement with Tuna Australia.
- On 17 July 2023, Woodside emailed Tuna Australia and confirmed:
 - Woodside's legal team had reviewed the Tuna Australia document and requested some minor changes to be made.
 - Woodside asked Tuna Australia if a marked up version of the Service Agreement would be the simplest way for Tuna Australia to review.
 - Woodside attached a Supplier Questionnaire as part of its due diligence process and asked Tuna Australia to complete the form.

<ul style="list-style-type: none"> • On 18 July 2023, Tuna Australia emailed Woodside and confirmed: <ul style="list-style-type: none"> - Woodside should send a marked up version of the Service Agreement for TA to review. - Tuna Australia would fill out the Supplier Questionnaire and return in the next couple of days. • On 18 July 2023, Woodside emailed Tuna Australia and sent a marked up version of the Service Agreement for Tuna Australia to review. • On 19 July 2023, Tuna Australia emailed Woodside and thanked it for sending through edits to Tuna Australia’s services agreement and commented: <ul style="list-style-type: none"> - Tuna Australia does not want any changes made to Schedule 2 of their Service Agreement and if Woodside has requirements outside of what Tuna Australia provides, then this will need to be discussed, agreed, and costed accordingly. - Tuna Australia would like further details on the Annual service for the Woodside Master Existing document including the rationale for the payment proposed. - Tuna Australia does not agree to a fixed price for the above bodies of work. Tuna Australia wants clarification on what the Annual service entails, and how the fixed priced value was arrived at. - Regarding the fixed fee for delivery of a specific consultation service, Tuna Australia need to remain flexible to clients needs and discuss additional works should they be required. Tuna Australia says it specified in the schedule that it would never proceed with more work or charge more money without approval and this should suffice for Woodside. - Tuna Australia does not agree on the current terms which have been changed in Item 2 of Schedule 1 and says it seeks a two year agreement as per the agreement template. • On 2 August 2023, Woodside emailed Tuna Australia, thanked them for their response re the Service Agreement and advised that Woodside’s legal team will review and Woodside will revert as soon as possible. Woodside asked Tuna Australia to please complete the Supplier Questionnaire which was sent on 17 July 2023. • On 3 August 2023, Tuna Australia replied, apologised for the delay and sent the completed Supplier Questionnaire to Woodside. • On 8 August 2023, Tuna Australia responded in regards to another EP stating that as per its recent discussions with Woodside, Tuna Australia could consult on the EP once it had a services agreement in place. • On 23 August 2023, Tuna Australia emailed Woodside following up on Woodside’s consultation requirements with the tuna longline industry regarding another EP. Tuna Australia asked for clarity on whether Woodside was planning to engage Tuna Australia to consult on behalf of the tuna longline industry on this and other upcoming EPs that Woodside was seeking feedback on. • On 30 August 2023, Woodside emailed Tuna Australia and advised that Tuna Australia’s feedback on the Service Agreement had been discussed with Woodside’s legal team. Woodside asked for clarity on whether Tuna Australia would accept section 15: Ethical Business Practices. Once this had been accepted, Woodside could work through Tuna Australia’s other points. • On 4 September 2023, Tuna Australia emailed Woodside and advised that it had seen these anti bribery and corruption clauses included in the vendor registration process of other energy companies but had not seen it proposed inside an agreement before. Tuna Australia advised it was not against including them in the agreement, but asked if it was the best place for it. 		
Summary of Feedback, Objection or Claim	Woodside Energy’s Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls

<p>Tuna Australia responded, providing Woodside their position statement for engaging with energy companies seeking consultation advice from stakeholders on environmental plans and project proposals.</p> <p>The position statement requests that where there is the potential for the proposed activity to impact Tuna Australia's functions, interests or activities or that of its members, there is a need for a service agreement to be executed.</p> <p>Tuna Australia advised the name of another energy company where a service agreement had been executed.</p> <p>Tuna Australia committed to provide more information on how it would manage consultation distribution and a report under its service agreement.</p> <p>Tuna Australia and Woodside are working towards completing a service agreement.</p> <p>Whilst feedback has been received, there were no objections or claims.</p>	<p>The fishery management area for the Western Tuna and Billfish Fishery, which Tuna Australia represents, overlaps both the Operational Area and EMBA. However, it is considered there is no potential for interaction within these areas as:</p> <ul style="list-style-type: none"> • No fishing effort has occurred within or nearby to the Operational Area, with the nearest fishing effort occurring ~440 km away. • Fishery Status Report 2022 indicates current fishing effort is concentrated south-west of the Operational Area from Exmouth to Augusta (Patterson et al., 2020). • Presence of hydrocarbons in areas used by Western Tuna and Billfish Fishery may occur in the highly unlikely event of a release of marine diesel to the environment as a result of vessel collision (represented by the EMBA under a range of different weather and oceanic conditions). • However, given the distance from the Operational Area (~440 km) where this event may occur, the type of hydrocarbon (with up to 35% evaporating within the first 24 hours) and duration of exposure, no significant impact from a marine diesel spill is predicted. <p>Woodside acknowledges previous feedback received from Tuna Australia with respect to separate EPs. Woodside confirms that it conducts impact and risk assessments for its activities in order to identify and manage environmental impacts and risks, which includes potential interaction with recreational and commercial fishers. To manage potential interactions, Woodside has the following controls in place with regard to the Petroleum Activities Program of the SITI EP:</p> <ul style="list-style-type: none"> • Vessels adhere to regulatory requirements for navigational safety. • Notification to AHS of activities and movements to allow generation of navigation warnings (Maritime Safety Information Notifications (MSIN) and Notice to Mariners (NTM) (including AUSCOAST warnings where relevant). • Establishment of temporary exclusion zones by relevant vessels which are communicated to marine users. • Vessels comply with regulatory requirements for the prevention of vessel collisions and safety and emergency arrangements. 	<p>Woodside has assessed the relevancy of Commonwealth fisheries issues in Section 4.9.2 of this EP.</p> <p>Existing controls adopted to manage potential interactions with commercial fisheries:</p> <ul style="list-style-type: none"> • PS 1.1 – vessels will comply with the Navigation Act and Marine Order 21 • PS 1.3 – notifications to AHO to allow generation of navigation warnings and Notice to Mariners • PS 1.2 – establishment of temporary exclusion zones • PS 1.4 – AFMA, DAFF – Fisheries, DPIRD, WAFIC, CFA, and relevant Fishery Licence Holders that have the potential to be directly impacted by planned activities in the Operational Area will be notified prior to the commencement and at the end of the activity • Existing controls that directly address the points raised in Tuna Australia's Feedback • PS 7.1 and PS 7.2 vessels will comply with Marine orders 95 and 96 • PS 7.4 chemicals will be approved through the Woodside chemical assessment process • PS 3.1 infrastructure will be placed in the planned locations • PS 6.1.1 vessel will comply with EPBC Regulations 2000 – Part 8 Division 8.1 <p>Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on Tuna Australia's functions, interests or activities.</p> <p>No additional measures or controls are required.</p>
--	---	--

	<p>Woodside also notes the following in relation to the points raised in Tuna Australia’s feedback:</p> <ul style="list-style-type: none"> • Routine marine vessel discharges will be managed in accordance with legislative and regulatory requirements (e.g. marine orders). • Project vessels (excluding Pipelay Vessel) will avoid discharging sewage, grey water and food waste within the Montebello Marine Park. • Chemicals will be selected with the lowest practicable environmental impacts and risks subject to technical constraints. • Dry pre-commissioning of Trunkline to be progressed as base-case with FCGT /wet pre-commissioning only carried out as contingency. If required, pre-commissioning procedures developed and followed so that appropriate chemical concentrations are maintained. • Seabed disturbance will be broadly managed by complying with legislative and regulatory requirements (e.g. sea dumping permit), ensuring infrastructure and material is placed on the seabed within the predefined design footprint using positioning technology, and implementation of the water quality monitoring program and Tiered Monitoring and Management Framework to manage water quality associated with Commonwealth dredging, spoil disposal and backfill activities to avoid impacts to benthic communities. • Acoustic emissions from vessels in field will be managed by complying with regulatory requirements (e.g. EPBC Regulations 2000 – Part 8 Division 8.1) and additional measures while operating in the PBW migration BIA during migration seasons (Apr-Jul & Oct-Jan). <p>Woodside has provided consultation information to AFMA, DAFF – Fisheries, CFA, ASBTIA, WAFIC and individual relevant licence holders.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where</p>	
--	--	--

	appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	
State Commercial fisheries and representative bodies		
<i>Mackerel Managed Fishery – Pilbara (Area 2 and 3)</i>		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Consultation information provided to Mackerel Managed Fishery (Area 2 and 3) on 31 August 2021 based on their function, interest, and activities. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Woodside has sent follow up letters seeking feedback on the proposed activities. • Woodside has provided the Mackerel Managed Fishery (Area 2 and 3) with the opportunity to provide feedback over a 22 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 1 September 2021, Woodside mailed letters to Licence Holders advising of the proposed activity (Appendix F, reference 1.10) and provided a Consultation Information Sheet and fisheries map (Appendix F, reference 1.24). • On 3 February 2023, Woodside mailed letters to Licence Holders advising of the proposed activity (Appendix F, reference 4.38) and provided a Consultation Information Sheet and fisheries maps. • On 22 February 2023, Woodside sent a follow up letter (Appendix F, reference 5.8). 		
<i>Summary of Feedback, Objection or Claim</i>	<i>Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response</i>	<i>Environment Plan Controls</i>
No feedback, objections or claims received despite follow up.	<p>Woodside has provided consultation information to DPIRD, WAFIC, and individual relevant licence holders.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>Woodside has assessed the potential for interaction with Commonwealth and State managed commercial fisheries in Section 4.9.2 of this EP.</p> <p>Woodside will provide notifications to AFMA, DAFF – Fisheries, DPIRD, WAFIC, CFA, Recfishwest and relevant Fishery Licence Holders that have the potential to be directly impacted by planned activities in the Operational Area (see Table 4-28) prior to the commencement and at the end of the activity, as referenced as PS 1.4 in this EP.</p> <p>No additional measures or controls are required.</p>

Pilbara Crab Managed Fishery		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Consultation information provided to Pilbara Crab Managed Fishery on 1 September 2021 based on their function, interest, and activities. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Woodside has sent follow up letters seeking feedback on the proposed activities. • Woodside has provided the Pilbara Crab Managed Fishery with the opportunity to provide feedback over a 22 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 1 September 2021, Woodside mailed letters to Licence Holders advising of the proposed activity (Appendix F, reference 1.10) and provided a Consultation Information Sheet and fisheries map (Appendix F, reference 1.26). • On 6 February 2023, Woodside mailed letters to Licence Holders advising of the proposed activity (Appendix F, reference 4.43) and provided a Consultation Information Sheet and fisheries map. • On 22 February 2023, Woodside sent a follow up letter (Appendix F, reference 5.30). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	<p>Woodside has provided consultation information to DPIRD, WAFIC, and individual relevant licence holders.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>Woodside has assessed the potential for interaction with Commonwealth and State managed commercial fisheries in Section 4.9.2 of this EP.</p> <p>Woodside will provide notifications to AFMA, DAFF – Fisheries, DPIRD, WAFIC, CFA, Recfishwest and relevant Fishery Licence Holders that have the potential to be directly impacted by planned activities in the Operational Area (see Table 4-28) prior to the commencement and at the end of the activity, as referenced as PS 1.4 in this EP.</p> <p>No additional measures or controls are required.</p>
Marine Aquarium Managed Fishery		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Consultation information provided to Marine Aquarium Managed Fishery on 1 September 2021 based on their function, interest, and activities. 		

<ul style="list-style-type: none"> Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. Woodside has sent follow up letters seeking feedback on the proposed activities. Woodside has provided the Marine Aquarium Managed Fishery with the opportunity to provide feedback over a 22 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> On 1 September 2021, Woodside mailed letters to Licence Holders advising of the proposed activity (Appendix F, reference 1.10) and provided a Consultation Information Sheet and fisheries map (Appendix F, reference 1.27). On 3 February 2023, Woodside mailed letters to Licence Holders advising of the proposed activity (Appendix F, reference 4.38) and provided a Consultation Information Sheet and fisheries map. On 22 February 2023, Woodside sent a follow up letter (Appendix F, reference 5.8). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow	Woodside has provided consultation information to DPIRD, WAFIC, and individual relevant licence holders. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	Woodside has assessed the potential for interaction with Commonwealth and State managed commercial fisheries in Section 4.9.2 of this EP. Woodside will provide notifications to AFMA, DAFF – Fisheries, DPIRD, WAFIC, CFA, Recfishwest and relevant Fishery Licence Holders that have the potential to be directly impacted by planned activities in the Operational Area (see Table 4-28) prior to the commencement and at the end of the activity, as referenced as PS 1.4 in this EP. No additional measures or controls are required.
Specimen Shell Managed Fishery		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> Consultation Information Sheet publicly available on the Woodside website since August 2021. No feedback, objections or claims received despite follow up.	Woodside has provided consultation information to DPIRD, WAFIC, and individual relevant licence holders. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	Woodside has assessed the potential for interaction with Commonwealth and State managed commercial fisheries in Section 4.9.2 of this EP. Woodside will provide notifications to AFMA, DAFF – Fisheries, DPIRD, WAFIC, CFA, Recfishwest and relevant Fishery Licence Holders that have the potential to be directly impacted by planned activities in the Operational Area (see Table 4-28) prior to the commencement and at the end of the activity, as referenced as PS 1.4 in this EP. No additional measures or controls are required.
Western Australian Fishing Industry Council (WAFIC)		
Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:		

- Consultation Information Sheet publicly available on the Woodside website since August 2021.
- Consultation information provided to WAFIC on 31 August 2021 based on their function, interest, and activities.
- Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback.
- Woodside addressed and responded to WAFIC over a 22 month period.

Summary of information provided and record of consultation:

- On 31 August 2021, Woodside emailed WAFIC advising of the proposed activity (Appendix F, reference 1.7) and provided a Consultation Information Sheet and fisheries maps (Appendix F, reference 1.22 and 1.23).
- On 10 September 2021, WAFIC responded, thanking Woodside for the information and requested the cumulative impact assessment for commercial fishing.
- On 19 October 2021, WAFIC emailed Woodside, asking for additional information on:
 - Dredge volume
 - A map of dredge spoil ground
 - During the pipeline installation, the expected time for the plume associated with seabed disturbance to settle after installation
 - Whether Woodside has considered fish spawning times during the development of the timing of the pipeline installation
 - Whether Woodside has considered the peak fishing times of commercial fishers, based on historical catch and effort data to avoid disturbance to commercial fishing operations
 - WAFIC also noted that notifications to stakeholders during this installation campaign will be very important and is happy to work with Woodside to work through the best approach for communicating with the commercial fishing industry.
- On 28 October 2021, Woodside emailed WAFIC, responding to each of the requests for additional information.
- On 23 November 2021, WAFIC emailed Woodside and asked for confirmation whether any feedback had been received from individual fishers. WAFIC also noted it was referring to the impacts from dredging plume impacts to spawning fish and/or areas closed such as a nursery area.
- On 6 December 2021, Woodside emailed WAFIC, advising it had not received responses from individual fishers and addressing the questions around plume impacts.
- On 3 February 2023, Woodside emailed WAFIC on the proposed activity (Appendix F, reference 4.31) and provided an updated Consultation Information Sheet and fisheries map.
- On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.5).
- On 5 May 2023, Woodside had a phone call with WAFIC to follow up on a number of EPs, including the activities proposed under this EP, and to request any further feedback. Woodside committed to providing WAFIC with a consolidated email outlining all the EPs Woodside is currently consulting WAFIC on for ease of feedback.
- On 5 May 2023, Woodside sent an email to WAFIC providing the status of feedback on a number of EPs, including the activities proposed under this EP. Woodside advised it would soon be submitting the EP for assessment and requested any further feedback.
- On 19 May 2023, Woodside had a phone call with WAFIC to follow up on a number of EPs, including the activities proposed under this EP and to request any feedback.

- On 24 May 2023, WAFIC emailed Woodside to ask whether Woodside was planning to develop and implement a compensation framework Fishers' engagement.
 - WAFIC also suggested a different consulting approach with WAFIC and commercial fishers may need to be adopted as WAFIC had limited resources and other oil and gas proponents utilising WAFIC's fee-for-service model for EPs would be prioritised.
- On 27 June 2023, Woodside responded to WAFIC noting:
 - The Operational Area for the proposed activity was not classified as an area of high commercial fishing activity.
 - Commercial fishing vessels would not be excluded from the entire Operational Area for the total duration of the proposed activities, which will occur in multiple campaigns.
 - An interactive map showing the location of the proposed activities would be available on the Woodside website and would be updated throughout the proposed activities.

Woodside further stated it:

- Recognised rights of marine users and had taken steps to mitigate potential operational impacts on other marine users, including commercial fishing, shipping, and defence and petroleum activities and that it was required to reduce impacts to ALARP as set out in this EP.
 - Would consider claims from commercial fishing licence holders where there is economic loss; damage to fishing equipment, and demonstratable loss of catch but would not reimburse stakeholders for time spent attending an activity planning meeting.
 - Welcomed the opportunity to meet with WAFIC to provide an overview of current and upcoming EPs and would email proposed dates and details.
 - Woodside noted WAFIC had previously provided feedback for a number of other EPs and asked to be advised of any further feedback.
- On 25 July 2023, WAFIC's CEO sent a letter to Woodside's CEO to register significant frustration with regard to Woodside pursuing detailed responses to EPs or Decommissioning Proposals. WAFIC noted:
 - Since start of 2023, it had received more than 60 emails seeking feedback for activities proposed by Woodside;
 - Each email placed significant workload pressures on WAFIC, an organisation without sufficient resources to meet the deadlines required;
 - It had a number of other oil and gas titleholders operating in WA waters seeking similar feedback for their projects;
 - WAFIC requested Woodside to review its current consultation methodology for engagement with WAFIC.
 - On 16 August 2023, Woodside emailed WAFIC and confirmed a meeting for 28 August 2023. Woodside also provided an outline of existing EP consultation and upcoming in the coming weeks which were not relevant to this EP.
 - On 25 August 2023, Woodside's Executive Vice President replied to the letter from WAFIC CEO and noted:
 - Woodside's consultation is designed to ensure that relevant persons are identified and given sufficient information and a reasonable period to make an informed assessment of the possible consequences of the proposed activity
 - Woodside is keen to meet with WAFIC and to ensure Woodside's consultation with WAFIC and the commercial fishing sector achieves this outcome.
 - Woodside thanked WAFIC for sharing concerns and appreciated the opportunity to discuss these matters further and will be in touch to organise a suitable meeting date.
 - On 28 August 2023, Woodside met with WAFIC to discuss consultation on Environment Plans:

- WAFIC noted the high level of consultation currently being experienced and resourcing requirements. It noted it needed to prioritise consultation and had provided guidance to offshore proponents.
- Woodside discussed relevant persons consultation and acknowledged the high level of consultation to meet regulatory requirements and case law.
- WAFIC noted the importance of genuine consultation and building a relationship with the commercial fishing sector.
- Woodside sought to understand the most appropriate way to consult the commercial fishery sector.
- WAFIC and Woodside agreed a more strategic approach to consultation was required, noting the WAFIC fee for service model.
- Woodside recognised the need for WAFIC to be appropriately resourced to consider consultation materials.
- It was noted it is challenging to make assumptions about certain offshore activities, for example considering water depth or distance from shore, to reduce consultation fatigue.
- Pipeline installation, seismic and decommissioning are activities of the most interest to the commercial fishing sector.
- WAFIC noted consultation at the Offshore Project Proposal stage was effective in understanding projects and upcoming work scopes.
- Woodside and WAFIC agreed to identify a more strategic and tailored model to consult the commercial fishery sector.
- Woodside gave a presentation on Environment Plan activities, consultation requirements, the environment that may be affected, and consultation on another EP.
- On 1 September 2023, Woodside phoned WAFIC to discuss the consultation approach and fee-for-service for other Woodside EPs.
 - WAFIC confirmed as per its guideline consultation should occur with licence holders in the operational area, and agreed to distribute consultation materials under fee for service for Woodside EPs.
 - WAFIC confirmed it had sufficient existing information to consult with licence holders.
 - Woodside and WAFIC reiterated plans to develop a longer-term consultation model for future EPs.

Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>WAFIC has provided feedback relating to:</p> <ul style="list-style-type: none"> • Importance and approach for Woodside to undertake notifications during the proposed activities. • WAFIC has requested additional information relating to 	<p>Woodside provided WAFIC with the status of feedback on a number of EPs, including this EP, and advised it would be submitting the EP for assessment and requested any feedback.</p> <p>Woodside has provided consultation information to DPIRD, WAFIC and individual relevant licence holders. <p>Western Rock Lobster Council</p>		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Consultation information provided to Western Rock Lobster Council on 23 February 2023 based on their function, interest, and activities. . • Woodside has addressed and responded to Western Rock Lobster Council over a 5 month period. <p>Summary of information provided and record of consultation:</p>		

<ul style="list-style-type: none"> On 27 February 2023, Western Rock Lobster Council emailed Woodside requesting a map that includes all relevant projects Woodside is undertaking and consultation time frames for cascading to their members. On 1 March 2023, Woodside emailed Western Rock Lobster Council advising of proposed activity (Appendix F, reference 5.51) and provided a Consultation Information Sheet and fisheries map. On 14 March 2023, Woodside sent a follow-up email to Western Rock Lobster Council (Appendix F, reference 5.52). On 20 March 2023, Western Rock Lobster responded, thanking Woodside for their email and requested an extension of 2 weeks on the feedback dates. On 30 March 2023, Woodside emailed Western Rock Lobster Council to confirm an additional two weeks for feedback. On 12 April 2023, Woodside emailed Western Rock Lobster Council to follow up on feedback relating to the proposed activity. On 10 May 2023, Woodside had a phone call with the Western Rock Lobster Council to follow up on feedback relating to a number of EPs, including the activities proposed under this EP. Woodside referred to its email dated 12 April 2023 which referenced the EPs Woodside had provided consultation information to the Western Rock Lobster Council for. The Western Rock Lobster Council advised it would come back to Woodside the same day if it had any feedback. On 11 May 2023, Western Rock Lobster Council emailed Woodside to advise it didn't have any comments on the EPs, including the activities proposed under this EP. On 11 May 2023, Woodside responded to thank the Western Rock Lobster Council for its response and confirmed Woodside will continue to engage the Western Rock Lobster Council with respect to applicable EPs. 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>Western Rock Lobster Council emailed Woodside to request a map of all the activities Woodside is undertaking that it's relevant to and if there are timeframes in relation to each activity.</p> <p>Western Rock Lobster Council confirmed it didn't have any comments on the proposed activities.</p> <p>Whilst feedback has been received, there were no objections of claims.</p>	<p>Western Rock Lobster Council confirmed it didn't have any comments on the proposed activities.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	<p>Woodside has provided consultation information to Recfishwest, Marine Tourism Association of WA, WA Game Fishing Association and individual recreational marine users.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	No additional measures or controls are required.
Pilbara/Kimberley Recreational Marine Users		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> Consultation Information Sheet publicly available on the Woodside website since August 2021. Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. Consultation information provided to Pilbara/Kimberley recreational marine users on 6 February 2023 based on their function, interest, and activities. Woodside has sent a follow up letter seeking feedback on the proposed activities. Woodside has addressed and responded to Pilbara/Kimberley recreational marine users over a 6 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> On 6 February 2023, Woodside mailed letters to Pilbara / Kimberley Recreational Marine Users on the proposed activity (Appendix F, reference 4.44) and provided a Consultation Information Sheet. On 22 February 2023, Woodside sent a follow up letter (Appendix F, reference 5.37). 		

<ul style="list-style-type: none"> The Lombadina Aboriginal Corporation is listed as part of the Pilbara/Kimberley Recreational Marine Users in Table 5.3. On 20 July 2023, Woodside emailed Lombadina advising a meeting would be sought. The same day a text message was sent asking about availability. On 22 July 2023, a second text was sent about setting up a meeting. On 25 July 2023, an email was sent to Lombadina Aboriginal Corporation following up on the SITI EP summary which had been sent the previous week and also providing NOPSEMA guidelines on consultation. A request was also made about if there were other Traditional Custodian groups or individuals who needed to be consulted. On 26 July 2023, Woodside spoke with Lombadina Director Tony Sibosado and provided an explanation about the EMBA. Tony asked if this was the pipeline EP and Woodside confirmed it was and was seeking any feedback. Woodside indicated it was happy to one day meet with all the Directors along with SMEs to explain the EMBA however was seeking feedback on the SCA SITI EP. Tony advised there were no concerns with SCA SITI. 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	<p>Woodside has provided consultation information to Recfishwest, Marine Tourism Association of WA, WA Game Fishing Association and individual recreational marine users.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	No additional measures or controls are required.
Gascoyne Recreational Marine Users		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> Consultation Information Sheet publicly available on the Woodside website since August 2021. Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. Consultation information provided to Gascoyne recreational marine users on 6 February 2023 based on their function, interest, and activities. Woodside has sent follow up email(s) seeking feedback on the proposed activities. Woodside has provided the Gascoyne Recreational Marine Users with the opportunity to provide feedback over a 6 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> On 6 February 2023, Woodside sent a letter to Gascoyne Recreational Marine Users on the proposed activity (Appendix F, reference 4.42) and provided a Consultation Information Sheet. On 22 February 2023, Woodside sent a follow up letter (Appendix F, reference 5.9). 		

Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	<p>Woodside has provided consultation information to Recfishwest, Marine Tourism Association of WA, WA Game Fishing Association and individual recreational marine users.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	No additional measures or controls are required.
Recfishwest		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Consultation information provided to Recfishwest on 31 August 2021 based on their function, interest, and activities. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Woodside has addressed and responded to Recfishwest over a 22 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 31 August 2021, Woodside emailed Recfishwest advising of the proposed activity (Appendix F, reference 1.2) and provided a Consultation Information Sheet. • On 24 November 2021, Recfishwest emailed Woodside to request an informal meeting to discuss timelines, impacts, stakeholder needs, an overview of works on the Burrup and how Recfishwest and their fishing community may be able to 'plug into the bigger picture'. Recfishwest also suggested merit in Woodside providing a briefing to some Recfishwest staff. • On 22 August 2022, Woodside held a meeting with Recfishwest to provide an update on the broader Scarborough project and related Trunkline activities, including the proposed activity under this EP. <ul style="list-style-type: none"> - On the same day, Woodside provided a follow-up copy of the Consultation Information Sheet via email. • On 2 September 2022, Recfishwest emailed correspondence to Woodside containing feedback on the proposed activity. Recfishwest advised that in review of the work planned in the environmental plans for stakeholder consultation, Recfishwest do not object to the steps taken by Woodside to address concerns the recreational fishing sector might have. <ul style="list-style-type: none"> - Additionally, Recfishwest requested they are consulted on any upcoming offshore exploration activities, irrespective of the distance from shore and that all charts are updated, so recreational fishers can locate the areas. - Recfishwest requested to be kept advised of the commencement of the activities so it is able to communicate this to the recreational fishing community. • On 27 January 2023, Woodside emailed Recfishwest advising of the proposed activity (Appendix F, reference 4.4) and provided a Consultation Information Sheet. 		

- On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.12).

Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>Recfishwest has provided feedback and advised that:</p> <ul style="list-style-type: none"> Recfishwest do not object to the steps taken by Woodside to address concerns the recreational fishing sector might have. Recfishwest also requested they are consulted on any upcoming offshore exploration activities, irrespective of the distance from shore and that all charts are updated, so recreational fishers can locate the areas. 	<p>Woodside has responded to Recfishwest's feedback and has confirmed it will keep Recfishwest updated on project updates.</p> <p>Woodside has provided consultation information to Recfishwest, Marine Tourism Association of WA, WA Game Fishing Association and individual recreational marine users.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>Woodside will provide notifications to AFMA, DAFF – Fisheries, DPIRD, WAFIC, CFA, Recfishwest and relevant Fishery Licence Holders that have the potential to be directly impacted by planned activities in the Operational Area (see Table 4-28) prior to the commencement and at the end of the activity, as referenced as PS 1.4 in this EP.</p> <p>Woodside has consulted Recfishwest in the course of preparing this EP. Woodside has assessed the claims or objections raised by Recfishwest. Marine Tourism Association of WA

Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:

- Consultation Information Sheet publicly available on the Woodside website since August 2021.
- Consultation information provided to Marine Tourism of WA on 31 August 2021 based on their function, interest, and activities.
- Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent follow up emails seeking feedback on the proposed activities.
- Woodside has provided the Marine Tourism of WA with the opportunity to provide feedback over a 22 month period.

Summary of information provided and record of consultation:

- On 31 August 2021, Woodside emailed Marine Tourism advising of the proposed activity (Appendix F, reference 1.2) and provided a Consultation Information Sheet.
- On 27 January 2023, Woodside emailed Marine Tourism Association of WA advising of the proposed activity (Appendix F, reference 4.4) and provided a Consultation Information Sheet.
- On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.12).

Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	<p>Woodside has provided consultation information to Recfishwest, Marine Tourism Association of WA, WA Game Fishing Association and individual recreational marine users.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	No additional measures or controls are required.
WA Game Fishing Association		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Consultation information provided to WA Game Fishing Association on 31 August 2021 based on their function, interest, and activities. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Woodside has sent follow up emails seeking feedback on the proposed activities. • Woodside has provided the WA Game Fishing Association with the opportunity to provide feedback over a 22 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 31 August 2021, Woodside emailed the WA Game Fishing Association advising of the proposed activity (Appendix F, reference 1.12) and provided a Consultation Information Sheet. • On 27 January 2023, Woodside emailed the WA Game Fishing Association advising of the proposed activity (Appendix F, reference 4.4) and provided a Consultation Information Sheet. • On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.12). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	<p>Woodside has provided consultation information to Recfishwest, Marine Tourism Association of WA, WA Game Fishing Association and individual recreational marine users.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside</p>	No additional measures or controls are required.

will apply its Management of Change and Revision process (see **Section 7**).

Titleholders and Operators

Chevron Australia/ Osaka Gas Gorgon, Tokyo Gas Gorgon, JERA Gorgon

Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:

- Consultation Information Sheet publicly available on the Woodside website since August 2021.
- Consultation information provided to Chevron on 31 August 2021 based on their function, interest, and activities. .
- Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback.
- Woodside has addressed and responded to Chevron over a 22 month period.

Summary of information provided and record of consultation:

- On 31 August 2021, Woodside emailed Chevron advising of the proposed activity (Appendix F, reference 1.15) and provided a Consultation Information Sheet and Titleholder map (Appendix F, reference 1.15.1).
- On 10 October 2022, Chevron emailed Woodside and provided details of its own proposed activity and asked for details of any activities Woodside plans to undertake which may be affected by Chevron’s activities.
- On 21 November 2022, Woodside discussed Chevron’s email via a phone call. Woodside followed the call with an email and confirmed the SITI teams have a monthly SIMOPS meeting with Chevron with the intent of developing SIMOPS plans; however, there had been no mention of Chevron’s seismic survey.
 - Woodside confirmed once Chevron sends a shapefile of its Seismic Survey Operational Area it would send Chevron back the mapped over SITI Ops Area to understand the overlap.
 - Woodside noted as a way forward it would investigate controls or updates to the EP to cover the activity and discuss as required.
 - Woodside also noted that Chevron would advise on likelihood the activity would slip to Jan-April 2025 and there would be no overlap with current Scarborough schedule.
- On 22 November 2022, Chevron thanked Woodside for the discussion and shared the spatial files for the seismic survey operation area. Chevron noted its project team indicated the overlap in timing of activities should be able to be managed through SIMOPS plans without any issues. Chevron shared it had also suggested that the Wheatstone 4D MSS is raised in the Chevron/Woodside monthly SIMOPS meeting to see if they can talk through any specifics.
- On 29 November 2022, Woodside shared with Chevron a figure which shows Woodside’s overlapping operational areas, as well as overlap with the PBW Migration BIA and Montebello Marine Park Multiple Use Zone.
- On 1 December 2022, Chevron thanked Woodside for its email.
- On 27 January 2023, Woodside emailed Chevron advising of the proposed activity (Appendix F, reference 4.5) and provided a Consultation Information Sheet. Woodside requested that Chevron forward the consultation information to Chevron’s Joint Venture partners Osaka Gas Gorgon, Tokyo Gas Gorgon and JERA Gorgon for feedback.

- On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.13)
- On 22 March 2023, Chevron emailed Woodside:
 - Chevron advised it was actively reviewing a list of 10 of Woodside's EP submissions.
 - Chevron advised the current forecast is for the list to be completed by mid-April at the latest, although it has prioritised a list of five EPs to be completed sooner.
 - Chevron requested for Woodside to advise if there is a particular EP that is of higher urgency so that it can prioritise its review accordingly. Once this initial backlog is clear Chevron anticipates being in a position to respond within 30 days.
 - Chevron requested to assist in its review of the potential effect on its interests and activities, could Woodside please provide GIS shape files for the EPs listed (including this proposed activity).
- On 29 March 2023, Chevron emailed Woodside to advise it had reviewed the consultation information and to request information on the following:
 - Chevron's Janso-lo Compression Project team has raised a query on the potential pipeline routing in proximity of Chevrons assets and requested the previously requested shapfiles for the pipeline route be provided. They also asked for an appropriate focal point for the Chevron team to liaise with on the technical detail.
 - Chevron also raised a general comment relating to a number of Woodside activities:
 - If the work plan is executed during the cyclone season, Woodside is to provide cyclone anchor configuration, as well as mooring design, site specific geophysical and geotechnical data, anchor analysis, risk mitigations to inform Chevron Australia of the potential risks to our assets within the affected leases.
- On 3 April 2023, Woodside emailed Chevron:
 - Woodside provided GIS shapefiles for a list of 10 Woodside EPs, including this proposed activity.
 - Woodside advised it would respond to Chevron's feedback dated 29 March 2023 separately.
- On 6 April 2023, Woodside emailed Chevron:
 - Woodside re-attached the GIS shapefiles provided on 3 April 2023
 - Woodside provided the focal point for the Chevron team to liaise with on the technical detail.
 - Woodside advised the only Scarborough activity that may involve mooring is the drilling and completions scope which has an option in the Scarborough Drilling and Completions Environment Plan (D&C EP) for a moored MODU. This is contingent – base case is the use of DP MODU. The D&C operational area is ~123 km from the any of Chevron's assets (Janzs) and therefore there are no credible risks to Chevron assets.
 - Subsequent phone calls and discussions in relation to potential concurrent activities between Chevron and Woodside have taken place and will continue to occur as part of ongoing SIMOPS meetings and implementation of EP Controls .
- On 16 June 2023, Chevron emailed Woodside with regards to Chevron's previous feedback on this EP noting that no further responses had been received from Woodside and asked for the information requested, or for a timeline.
- On 22 June 2023, Woodside emailed Chevron a copy of the response Woodside emailed to Chevron on 6 April 2023 in response to Chevron's comments.
- On 4 July 2023, Woodside commenced discussions with Chevron with regards to the SITI EP OMR requirement for an offset distance between the Trunkline installation vessel and seismic vessel
- On 13 July 2023, Woodside emailed Chevron information about control opportunities to address the WEL SITI EP OMR.

- On 13 July 2023, Chevron emailed Woodside advising they would respond shortly and requesting the modelling report.
- On 14 July 2023, Woodside emailed Chevron stating it had not released the noise modelling report to other stakeholders and asking if further information was required to develop behavioural response onset limits.
- On 14 July 2023, Chevron emailed Woodside its position with reason to support including:
 - Pygmy Blue Whale migration periods.
 - Woodside's request for offset distances.
 - Proposed OMR response.
 - The Wheatstone 4D MSS distance to behavioural response threshold and the Castorone distance to behavioural response threshold.
 - Further work Chevron may look to undertake
- On 19 July 2023, Woodside emailed Chevron a response to its previous email.
- On 25 July 2023, Woodside emailed Chevron following a meeting around noise control and ongoing concerns around the Castorone model validation study. Woodside provided further technical information on updated controls around seismic noise.
- On 26 July 2023, Chevron responded to Woodside thanking them for the information and stating they would consider and respond soon.
- On 26 July 2023, Woodside responded to Chevron reiterating the use of the ongoing consultation process for feedback received while EPs are under assessment or post acceptance and the existence of current Chevron / Woodside interface forums where concurrent activities are discussed.
- On 26 July 2023, Chevron emailed Woodside in response to Woodside's email from 25 July stating:
 - Wheatstone 4D MSS does not consider January as a peak temporal sensitivity for Pygmy Blue whale southern migration in the Montebello region
 - Chevron's position is concurrent seismic and pipelay activities are ALARP and Acceptable if they are timed to occur outside the peak PBW migratory period
 - Chevron notes Woodsides response is inconsistent with the previously proposed correspondence by Chevron such as the proposed control has failed to consider the relevant directivity and site-specific nature of sound propagation, Woodside are not willing to share the modelling used to inform how this control will be derived and Woodside no not intend to develop a collaborative Chevron WHS 4D adaptive management plan (or similar)
 - The proposed control significantly limits the flexibility of managing and operating both activities concurrently and therefore is not considered reasonably practicable
 - Chevron has timed the Wheatstone 4D MSS to commence in January and therefore avoid the peak Pygmy Blue Whale migration periods
 - Any potential operational standby associated with meeting the requirement of Woodsides proposed control as the potential for the Wheatstone 4D MSS to be pushed out into the April pygmy blue whale migration
 - Woodside's proposed control is outside the peak PBW period and largely outside the defined migratory BIA for PBW
 - Chevron proposed updates to the noise control originally sent through by Woodside
- On 27 July 2023, Woodside emailed Chevron thanking them for the feedback, discussing changes to the control wording and addressing Chevron's other claims.
- Between 11 September and 2 October 2023, Woodside and Chevron liaised on cumulative impact potential between the SITI activities and the Wheatstone 4D MSS.

<ul style="list-style-type: none"> On 4 October 2023, Chevron emailed Woodside advising that Wheatstone 4D Marine seismic survey had been cancelled for the 2023/24 season and would be deferred to a later date, most likely the next acquisition season of 2024/25. The decision was made due to conflicting marine activities during the acquisition period and was confounded by uncertainty over various pending EP considerations. Chevron noted it would inform NOPSEMA about this that day. 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>Chevron has provided feedback on the proposed activity relating to:</p> <ul style="list-style-type: none"> Timing of activities Proximity of the pipeline route from Chevron's assets Ongoing technical discussion regarding the activity at the regular Chevron/Woodside SIMOPS meeting. <p>Chevron has requested additional information relating to:</p> <ul style="list-style-type: none"> GIS shapefiles for the proposed activity Contact details for a technical contact from Woodside If the work plan is executed during the cyclone season, Woodside is to provide cyclone anchor configuration, as well as mooring design, site specific geophysical and geotechnical data, anchor analysis, risk mitigations to inform Chevron Australia of the potential risks to its assets within the affected leases Its position on its upcoming activities and background on 	<p>Woodside has addressed Chevron's feedback and provided GIS shapefiles and a response relating to its requests regarding activity timing, pipeline route and ongoing technical discussions for the proposed activities. Woodside has responded to Chevron's request regarding cyclone anchoring and advised of mooring activities relating to a separate Scarborough EP as the proposed activity under this EP does not involve mooring.</p> <p>Ongoing technical discussions relating to SIMOPS between Woodside and Chevron activities will continue to occur in regular interface meetings.</p> <p>Based on the decision by Chevron to cancel the Wheatstone 4D MSS activity for 2023/2024 season no further engagements with Chevron are planned at this time.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>No additional measures or controls are required.</p>

<p>whales, offset distances and behavioural response thresholds</p> <ul style="list-style-type: none"> • Request for the SITI EP Noise Modelling report • Chevron requested Woodside's collaborative support to ensure any agreed operational mitigation measures are underpinned by robust science • Chevron communicated to Woodside it was cancelling the Wheatstone 4D MSS for the 23/24 acquisition season. 		
Santos		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Consultation information provided to Santos on 31 August 2021 based on their function, interest, and activities. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Woodside has sent follow up emails seeking feedback on the proposed activities. • Woodside has provided Santos with the opportunity to provide feedback over a 22 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 31 August 2021, Woodside emailed Santos advising of the proposed activity (Appendix F, reference 1.15) and provided a Consultation Information Sheet and Titleholder map (Appendix F, reference 1.15.1). • On 27 January 2023, Woodside emailed Santos advising of the proposed activity (Appendix F, reference 4.6) and provided a Consultation Information Sheet. • On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.14). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside	No additional measures or controls are required.

	will apply its Management of Change and Revision process (see Section 7).	
Eni Australia		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Consultation information provided to ENI Australia on 27 January 2023 based on their function, interest, and activities. • Woodside has addressed and responded to ENI over a 6 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 27 January 2023, Woodside emailed ENI Australia advising of the proposed activity (Appendix F, reference 4.8) and provided an updated Consultation Information Sheet. • On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.20). • On 22 February 2023 ENI Australia emailed Woodside advising it has no comments and that it requested to remain updated on the proposed activity. • On 23 February 2023, Woodside confirmed Woodside will provide ENI with commencement and cessation of activity notifications relating to the proposed activities. 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
Eni Australia has no comments but requested to be updated on the proposed activity.	<p>Eni Australia has advised it has no comments on the proposed activity. Woodside will provide commencement and cessation of activity notifications relating to the proposed activities.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>Woodside has consulted Eni Australia in the course of preparing this EP. Woodside has assessed the claims or objections raised by Eni Australia. An additional measure was put in place. Woodside will notify Eni Australia prior to the commencement and at the end of the activity, as referenced as PS 1.4 in the EP (also refer to Table 7-8 in the EP)</p> <p>Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on Eni Australia's functions, interests or activities.</p>
Western Gas		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p>		

<ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Consultation information provided to Western Gas on 31 August 2021 based on their function, interest, and activities. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Woodside has sent follow up emails seeking feedback on the proposed activities. • Woodside has provided Western Gas with the opportunity to provide feedback over a 22 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 31 August 2021, Woodside emailed Western Gas advising of the proposed activity (Appendix F, reference 1.15) and provided a Consultation Information Sheet and Titleholder map (Appendix F, reference 1.15.1). • On 27 January 2023, Woodside emailed Western Gas advising of the proposed activity (Appendix F, reference 4.6) and provided a Consultation Information Sheet. • On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.14). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	No additional measures or controls are required.
Vermilion Oil & Gas		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Consultation information provided to Vermilion Oil & Gas on 31 August 2021 based on their function, interest, and activities. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Woodside has addressed and responded to Vermilion Oil & Gas over a 22 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 31 August 2021, Woodside emailed Vermilion Oil & Gas advising of the proposed activity (Appendix F, reference 1.15) and provided a Consultation Information Sheet and Titleholder map (Appendix F, reference 1.15.1). • On 5 October 2021, Vermilion responded, noting it did not have issue with the current plan. 		

<ul style="list-style-type: none"> On 27 January 2023, Woodside emailed Vermilion Oil & Gas advising of the proposed activity (Appendix F, reference 4.7) and provided a Consultation Information Sheet. On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.19). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
Whilst feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on Vermilion Oil & Gas's functions, interests or activities. No additional measures or controls are required.
Jadestone Energy		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> Consultation Information Sheet publicly available on the Woodside website since August 2021. Consultation information provided to Jadestone Energy on 31 August 2021 based on their function, interest, and activities. Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. Woodside has sent follow up emails seeking feedback on the proposed activities. Woodside has provided Jadestone Energy with the opportunity to provide feedback over a 22 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> On 31 August 2021, Woodside emailed Jadestone Energy advising of the proposed activity (Appendix F, reference 1.15) and provided a Consultation Information Sheet and Titleholder map (Appendix F, reference 1.15.1). On 27 January 2023, Woodside emailed Jadestone Energy advising of the proposed activity (Appendix F, reference 4.7) and provided a Consultation Information Sheet. On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.19). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside	No additional measures or controls are required.

	will apply its Management of Change and Revision process (see Section 7).	
KUFPEC		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Consultation information provided to KUFPEC on 31 August 2021 based on their function, interest, and activities. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Woodside has sent follow up emails seeking feedback on the proposed activities. • Woodside has provided the KUFPEC with the opportunity to provide feedback over a 22 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 31 August 2021, Woodside emailed KUFPEC advising of the proposed activity (Appendix F, reference 1.15) and provided a Consultation Information Sheet and Titleholder map (Appendix F, reference 1.15.1). • On 27 January 2023, Woodside emailed KUFPEC advising of the proposed activity (Appendix F, reference 4.6) and provided a Consultation Information Sheet. Woodside welcomed feedback on the proposed activity • On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.14). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	No additional measures or controls are required.
Coastal Oil and Gas		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Consultation information provided to Coastal Oil and Gas on 11 November 2022 based on their function, interest, and activities. 		

<ul style="list-style-type: none"> Woodside has sent follow up emails seeking feedback on the proposed activities. Woodside has provided Coastal Oil and Gas with the opportunity to provide feedback over a 8 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> On 11 November 2022, Woodside emailed Coastal Oil and Gas advising of the proposed activity (Appendix F, reference 2.16) and provided a Consultation Information Sheet and Titleholder map (Appendix F, reference 1.18). On 27 January 2023, Woodside emailed Coastal Oil and Gas advising of the proposed activity (Appendix F, reference 4.7) and provided a Consultation Information Sheet. Woodside welcomed feedback on the proposed activity. On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.19). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. No additional measures or controls are required.
Exxon Mobil Australia		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Consultation information provided to Exxon Mobil Australia on 27 January 2023 based on their function, interest, and activities. • Woodside has sent a follow up email seeking feedback on the proposed activities. 		

<ul style="list-style-type: none"> Woodside has provided Exxon Mobil Australia with the opportunity to provide feedback over a 6 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> On 27 January 2023, Woodside emailed Exxon Mobil advising of the proposed activity (Appendix F, reference 4.6) and provided a Consultation Information Sheet. Woodside welcomed feedback on the proposed activity. On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.14). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	No additional measures or controls are required.
Shell Australia		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> Consultation Information Sheet publicly available on the Woodside website since August 2021. Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. Consultation information provided to Shell Australia on 27 January 2023 based on their function, interest, and activities. Woodside has addressed and responded to Shell Australia over a 6 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> On 27 January 2023, Woodside emailed Shell Australia advising of the proposed activity (Appendix F, reference 4.6) and provided an updated Consultation Information Sheet. On 7 February 2023, Shell emailed advising it has no comments on the proposed activity. 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>Shell has advised it has no comments on the proposed activity.</p> <p>Whilst feedback has been received, there were no objections or claims.</p>	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on Shell Australia's functions, interests or activities.

Finder Energy		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Consultation information provided to Finder Energy on 27 January 2023 based on their function, interest, and activities. • Woodside has sent a follow up email seeking feedback on the proposed activities. • Woodside has provided Finder Energy with the opportunity to provide feedback over a 6 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 27 January 2023, Woodside emailed Finder Energy advising of the proposed activity (Appendix F, reference 4.6) and provided an updated Consultation Information Sheet. • On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.14). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.13).	No additional measures or controls are required.
OMV Australia / Sapura OMV Upstream (WA)		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Consultation information provided to OMV Australia / Sapura OMV Upstream (WA) on 27 January 2023 based on their function, interest, and activities. • Woodside has sent a follow up email seeking feedback on the proposed activities. • Woodside has provided OMV Australia / Sapura OMV Upstream (WA) with the opportunity to provide feedback over a 6 month period. 		

<p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> On 27 January 2023, Woodside emailed OMV Australia / Sapura OMV Upstream (WA) advising of the proposed activity (Appendix F, reference 4.6) and provided an updated Consultation Information Sheet. On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.14). 		
<p>Summary of Feedback, Objection or Claim</p>	<p>Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response</p>	<p>Environment Plan Controls</p>
<p>No feedback, objections or claims received despite follow up.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>No additional measures or controls are required.</p>
<p>Lightmark Enterprises</p>		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> Consultation Information Sheet publicly available on the Woodside website since August 2021. Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. Consultation information provided to Lightmark Enterprises on 27 January 2023 based on their function, interest, and activities. Woodside has sent a follow up email seeking feedback on the proposed activities. Woodside has provided Lightmark Enterprises with the opportunity to provide feedback over a 6 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> On 27 January 2023, Woodside emailed Lightmark Enterprises advising of the proposed activity (Appendix F, reference 4.10) and provided an updated Consultation Information Sheet. On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.21). 		
<p>Summary of Feedback, Objection or Claim</p>	<p>Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response</p>	<p>Environment Plan Controls</p>
<p>No feedback, objections or claims received despite follow up.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>No additional measures or controls are required.</p>

INPEX Alpha		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Consultation information provided to INPEX Alpha on 27 January 2023 based on their function, interest, and activities. • Woodside has sent a follow up email seeking feedback on the proposed activities. • Woodside has provided the INPEX Alpha with the opportunity to provide feedback over a 6 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 27 January 2023, Woodside emailed INPEX advising of the proposed activity (Appendix F, reference 4.9) and provided an updated Consultation Information Sheet. • On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.38). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	No additional measures or controls are required.
JX Nippon Oil & Gas Exploration Corporation		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Consultation information provided to JX Nippon on 27 January 2023 based on their function, interest, and activities. • Woodside has addressed and responded to JX Nippon over a 6 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 27 January 2023, Woodside emailed JX Nippon advising of the proposed activity (Appendix F, reference 4.8) and provided an updated Consultation Information Sheet. 		

<ul style="list-style-type: none"> • On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.20). <ul style="list-style-type: none"> - Woodside also emailed JX Nippon via its website to obtain more up to date contact details for providing the EP Consultation Information. • On 23 February 2023, Woodside also sent a letter to JX Nippon advising of the proposed activity (Appendix F, reference 5.39) <ul style="list-style-type: none"> - Woodside also sent an email advising of the proposed activity (Appendix F, reference 5.40). • On 24 February 2023, JX Nippon emailed Woodside seeking confirmation of the location and topic of the activity so as to obtain the correct contact. • On 24 February 2023, Woodside emailed JX Nippon to advise on the location of the specific proposed activity and resent the consultation information. • On 24 February 2023 JX Nippon emailed Woodside and copied in the appropriate contact for reviewing the consultation information. • On 28 February 2023, Woodside emailed JX Nippon to advise it has updated its stakeholder distribution list. • On 10 March 2023, Woodside followed up with JX Nippon via email (Appendix F, reference 5.49). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>JX Nippon emailed Woodside seeking confirmation of the location and topic of the activity so as to obtain the correct contact.</p> <p>Whilst feedback has been received, there were no objections or claims.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>No additional measures or controls are required.</p>
BP Developments Australia (BP)		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Consultation information provided to BP on 27 January 2023 based on their function, interest, and activities. • Woodside has sent a follow up email seeking feedback on the proposed activities. • Woodside has provided BP with the opportunity to provide feedback over a 6 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 27 January 2023, Woodside emailed BP advising of the proposed activity (Appendix F, reference 4.8) and provided an updated Consultation Information Sheet. • On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.20). 		

Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	No additional measures or controls are required.
Carnarvon Energy		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Consultation information provided to Carnarvon Energy on 27 January 2023 based on their function, interest, and activities. • Woodside has sent a follow up email seeking feedback on the proposed activities. • Woodside has provided Carnarvon Energy with the opportunity to provide feedback over a 6 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 27 January 2023, Woodside emailed Carnarvon Energy advising of the proposed activity (Appendix F, reference 1.79) and provided an updated Consultation Information Sheet. • On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.20). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	No additional measures or controls are required.
PE Wheatstone (PEW)		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. 		

<ul style="list-style-type: none"> Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. Consultation information provided to PEW on 27 January 2023 based on their function, interest, and activities. Woodside has sent a follow up email seeking feedback on the proposed activities. Woodside has provided the PEW with the opportunity to provide feedback over a 6 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> On 27 January 2023, Woodside emailed PEW advising of the proposed activity (Appendix F, reference 4.8) and provided an updated Consultation Information Sheet On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.20). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.13).	No additional measures or controls are required.
Kyushu Electric Wheatstone (KEW)		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> Consultation Information Sheet publicly available on the Woodside website since August 2021. Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. Consultation information provided to KEW on 27 January 2023 based on their function, interest, and activities. Woodside has sent a follow up email seeking feedback on the proposed activities. Woodside has provided KEW with the opportunity to provide feedback over a 6 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> On 27 January 2023, Woodside emailed KEW advising of the proposed activity (Appendix F, reference 1.79) and provided an updated Consultation Information Sheet On 22 February 2023, Woodside sent a follow up email Appendix F, reference 5.20). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been	No additional measures or controls are required.

	accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	
Fugro Exploration		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Consultation information provided to Fugro Exploration on 27 January 2023 based on their function, interest, and activities. • Woodside has sent a follow up email seeking feedback on the proposed activities. • Woodside has provided the Fugro Exploration with the opportunity to provide feedback over a 6 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 27 January 2023, Woodside emailed Fugro Exploration advising of the proposed activity (Appendix F, reference 4.8) and provided an updated Consultation Information Sheet. • On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.20). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	No additional measures or controls are required.
Peak Industry Representative bodies		
Australian Petroleum Production & Exploration Association (APPEA)		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Consultation information provided to APPEA on 31 August 2021 based on their function, interest, and activities. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. 		

<ul style="list-style-type: none"> Woodside has sent follow up emails seeking feedback on the proposed activities. Woodside has provided the APPEA with the opportunity to provide feedback over a 23 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> On 31 August 2021, Woodside emailed APPEA advising of the proposed activity (Appendix F, reference 1.2) and provided a Consultation Information Sheet. On 27 January 2023, Woodside emailed APPEA advising of the proposed activity (Appendix F, reference 4.1) and provided an updated Consultation Information Sheet. On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.1). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	No additional measures or controls are required.
Traditional Custodians		
Karajarri Traditional Lands Association (KTLA)		
<p>KTKA is established under the Native Title Act 1993 by the Karajarri people to represent the Karajarri people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.</p> <p>Woodside has discharged its obligations for consultation under Regulation 11A(1) and consultation with KTLA for the purpose of 11A(1) is complete. Sufficient information and a reasonable period have been provided, as described in Section 5 of the EP. Specifically:</p> <p>Sufficient Information:</p> <ul style="list-style-type: none"> Woodside sought direction on KTLA's preferred method of consultation. Woodside has offered to hold meetings at the location and time of KTLA 's choosing, with KTLA nominated representatives (including face-to-face meetings with the Board). These meetings did not occur due to a lack of response to Woodside's requests. As sufficient information and a reasonable period have been provided (see below), any meetings would be considered as ongoing engagement post regulation 11A consultation. Provided Consultation Information Sheets and Consultation Summary Sheets developed by Indigenous staff to KTLA. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format. Confirmed the purpose of consultation and set out in detail what is being sought through consultation. Asked for the consultation and information sheets to be distributed to members and individuals. Provided NOPSEMA's guidelines and brochure on consultation. Advised that KTLA can request that particular information provided in the consultation not be published (to align with 11A(2)(4)) <p>Reasonable Period:</p>		

- Woodside published advertisements in national, state, and relevant local newspapers including The Australian, The West Australian, Pilbara News (October 2022 and January 2023), Midwest Times, Northwest Telegraph and Geraldton Guardian (January 2023) advising of the proposed activities and requesting comments or feedback.
- Woodside commenced consultation with KTLA in January 2023, providing a reasonable opportunity for input since that time.

Woodside asked KTLA if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside engages in ongoing consultation, beyond that required by Regulation 11A, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15 of the EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on KTLA functions, interests or activities.

Summary of information provided and record of consultation:

- **(1)** On 23 January 2023, Woodside emailed KTLA advising of the proposed activity (Appendix F, reference 3.12) and provided a simplified Consultation Information Sheet (including a link to the detailed information sheet on Woodside's website) as well as a summary overview fact sheet. The email requested information on the interests that KTLA and its members may have within the EMBA, information on how KTLA would like to engage, and requested that KTLA provide information to members. No response was received.
- **(1)** On 27 January 2023, Woodside emailed KTLA following up on the 23 January email and voice messages left on answering machine seeking confirmation information received and whether KTLA require further information. No response was received.
- **(1)** On 24 March 2023, Woodside emailed KTLA following up on the information sent through in relation to the proposed activity and seeking feedback, offering in person discussions at any time suitable to the organisation. No response was received.
- **(1)** On 18 April 2023, Woodside emailed KTLA following up on the information sent through in relation to the proposed activity and seeking feedback, again offering discussion at any suitable time including travelling to their office in person if desired. No response was received.
- **(1)** On 19 April 2023, Woodside attempted to contact KTLA via the Karajarri Traditional Lands Association Facebook page.
- On 19 April 2023, Woodside made contact with KTLA via phone.
- **(1 & 2)** On 19 April 2023, Woodside emailed KTLA to follow up on a phone call (earlier on 19 April; 2023) and proposed a face-to-face meeting with the Board on 1 May 2023, noting that they would be guided by the Board. Woodside requested submissions of a budget to meet KTLA's meeting costs. No response was received.
- **(1 & 2)** On 28 April 2023, Woodside emailed KTLA including the email chain demonstrating efforts to engage and notifying KTLA that the next step is for the EP for the proposed activity to be submitted to NOPSEMA for technical assessment. It stated that the EP submission is imminent and requested any priority feedback as a priority to reflect in this submission, noting that feedback is also welcome over the life of the EP.
- **(2)** On 2 May 2023, a Woodside representative visited the KTLA Kimberley office and met the KTLA project manager to discuss the information provided on 24 February 2023, KTLA Legal representative joined the meeting.
 - KTLA representative said the legal representative would draft a letter requesting funds to enable KTLA to hold a meeting and seek external advice. Woodside agreed in principle to providing funds.
 - To date, no request has been received
- **(1)** On 7 June 2023, Woodside emailed KTLA inviting them to community information drop-in sessions and requesting they inform members or any others who may want to understand Woodside activities relating to this and other EP's.

<ul style="list-style-type: none"> On 18 July 2023, Woodside emailed KTLA NOPSEMA’s Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information. This email also reiterated Woodside’s request that KTLA advise of any other Traditional Custodian groups or individuals with whom Woodside should consult. No response was received (1) On 26 July 2023, Woodside emailed KTLA Woodside’s planned Program of Ongoing Engagement with Traditional Custodians. (1) On 18 September 2023, Woodside emailed KTLA advising of the planned start date for the activity, and once again requesting if KTLA was aware of any other people with whom Woodside should consult, and if there was any information KTLA wished to provide on cultural values. The email requested that information be distributed to members or individuals who may be interested. It requested this information prior to 02 October 2023. The Summary Information Sheet for this activity was attached (Appendix F, Reference 5.70). The email included links to NOPSEMA brochures on consultation and described the purpose of consultation. No response was received to this email. 		
Summary of Feedback, Objection or Claim	Woodside Energy’s Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>(1) KTLA have not responded to any Woodside communications despite follow up, have not provided feedback, objections, or claims to date in response to the information provided since consultation began in January 2023.</p> <p>(2) KTLA indicated a request for funding for consultation would be submitted to Woodside, but to date this request has not been received.</p>	<p>(1) Woodside demonstrated reasonable efforts to engage in genuine two-way dialogue. Woodside has provided sufficient information to allow for an informed assessment of the possible impacts and risks of the activity on functions, interests or activities and a reasonable period of time to consult. KTLA as had a reasonable opportunity to participate in consultation. Between 23 January and October 2023, there has been an exchange of 14 emails, 2 phone calls, attempted contact via Facebook, one informal discussion and an invitation to a community consultation session relating to the activity. KTLA has not provided feedback in response to these attempts. The details of these engagements are described in the consultation summary above. Relevant persons are not obligated to respond to a titleholder’s request to participate in the consultation process. A titleholder is not required to wait indefinitely for a response where sufficient information and reasonable period of time has been afforded to the relevant person.</p> <p>(2) Woodside supports ongoing engagement post regulation 11A consultation. On 19 April 2023 and 2 May 2023, KTLA said they would seek funding support from Woodside and were developing paperwork/proposal for sending to Woodside. Woodside re-iterated that they supported funding requests and re-stated that KTLA and Woodside were able to consult throughout the life of the EP. Since May 2023, KTLA has not progressed with any funding requests or other proposals. KTLA has had reasonable</p>	<p>(1) Existing controls considered sufficient, as described in Section 6.</p> <p>(2) Woodside is implementing a program to actively support Traditional Custodians’ capacity for ongoing engagement and consultation on environmental plans referenced as PS 16.2.1 in this EP. This includes addressing KTLA’s resourcing issue for ongoing consultation via a Framework Agreement.</p>

	<p>time since May (5 months) to progress this matter. Woodside has assessed the Program of Ongoing Engagement with Traditional Custodians will support ongoing consultation with KTLA and address appropriate support for resourcing, separate from consultation under Reg 11A for this EP which is closed. Whilst not raised by KTLA, Woodside does not consider KTLA's funding request as a pre-requisite for consultation under regulation 11A. Sufficient information to allow informed assessment has already been provided by other means, including Consultation Information Sheets and a Summary Information Sheet developed by Indigenous staff members. Woodside will develop and forward a draft Framework Agreement for KTLA's consideration within the next 2 months. The Framework Agreement is an effective mechanism for social investment opportunities.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15).</p>	
--	--	--

Nyangumarta Karajarri Aboriginal Corporation (NKAC)
 NKAC is established under the Native Title Act 1993 by the Nyangumarta and Karajarri people to represent the Nyangumarta and Karajarri people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside has discharged its obligations for consultation under Regulation 11A(1) and consultation with NKAC for the purpose of 11A(1) is complete. Sufficient information and a reasonable period have been provided, as described in Section 5 of the EP. Specifically:

- **Sufficient Information:**
 - Woodside sought direction on NKAC's preferred method of consultation.. Woodside has offered to locate meetings at the location of NKAC 's choosing, with NKAC nominated representatives (including face-to-face meetings with the Board). These meetings did not occur due to a lack of response to Woodside's requests. As sufficient information and a reasonable period have been provided (see below), any meetings would be considered as ongoing engagement post regulation 11A consultation.
 - Provided Consultation Information Sheets and Consultation Summary Sheets developed by Indigenous staff to NKAC. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format.
 - Confirmed the purpose of consultation and set out in detail what is being sought through consultation.

- Asked for the consultation and information sheets to be distributed to members and individuals.
- Provided NOPSEMA's guidelines and brochure on consultation.
- Advised that NWAC can request that particular information provided in the consultation not be published (to align with 11A(2)(4))
- **Reasonable Period:**
 - Woodside published advertisements in national, state, and relevant local newspapers including The Australian, The West Australian, Pilbara News (October 2022 and January 2023), Midwest Times, Northwest Telegraph and Geraldton Guardian (January 2023) advising of the proposed activities and requesting comments or feedback.
 - Woodside commenced consultation with NKAC in January 2023, providing a reasonable opportunity for input since that time.

Woodside asked NKAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside engages in ongoing consultation, beyond that required by Regulation 11A, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15 of the EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on NKAC functions, interests or activities.

Summary of information provided and record of consultation:

The Nyangumarta Karajarri Aboriginal Corporation's nominated contact representative as listed under the Office of the Registrar of Indigenous Corporations, and the General Report 2021 published 25 May 2022, is the Kimberley Land Council with listed email address. Woodside therefore directs correspondence through this channel in accordance with NKAC preference.

- **(1)** On 23 January 2023, Woodside emailed NKAC (via their representative KLC (Kimberley Land Council)) advising of the proposed activity (Appendix F, reference 3.15) and provided a simplified Consultation Information Sheet (including a link to the detailed information sheet on Woodside's website) as well as a summary overview fact sheet. The email requested information on the interests that NKAC and its members may have within the EMBA, information on how NKAC would like to engage, and requested that NKAC provide information to members as required. No response was received.
- **(1)** On 27 January 2023, Woodside emailed KLC/NKAC following up on email of 23 January 2023 and voice message, seeking to confirm they had received information and seeking to understand whether the group would like to discuss the information in further details.
- On 30 January 2023, KLC emailed Woodside to advise that the information had been forwarded to NKAC Directors for their consideration and that Woodside would be contacted by the Directors at their convenience.
- On 24 February 2023, KLC advised via phone that the information had been forwarded to NKAC Directors for their consideration.
- **(1)** On 24 March 2023, Woodside emailed KLC/NKAC following up on the information sent through in relation to the proposed activity and seeking feedback offering in person discussions at any time suitable to the organisation.
- On 24 March, KLC emailed Woodside to advise that they had forwarded the email to the Directors for their consideration.
- On 24 March 2023, Woodside emailed KLC thanking them for their assistance.
- **(1)** On 18 April 2023, Woodside emailed KLC/NKAC following up on the information sent through in relation to the proposed activity and seeking feedback, noting that Woodside had not yet been contacted by Directors.
- On 18 April 2023, the KLC representative emailed Woodside to advise that they had once more passed on the information and had discharged their duties as contact person, and it was up to NKAC Directors to manage consultation from here.

<ul style="list-style-type: none"> • (1) On 28 April 2023, Woodside emailed KLC/NKAC including the email chain demonstrating efforts to engage and notifying that the next step is for the EP for the proposed activity to be submitted to NOPSEMA for technical assessment. It stated that the EP submission is imminent and requested any priority feedback as a priority to reflect in this submission, noting that feedback is also welcome over the life of the EP. No response was received • (1) On 24 July 2023, Woodside emailed KLC/NKAC NOPSEMA’s Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information. This email also reiterated Woodside’s request that KLC/NKAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult. • (1) On 25 July 2023, KLC emailed Woodside confirming they had passed on the email received from Woodside to NKAC. • (1) On 26 July 2023, Woodside emailed KLC/NKAC Woodside’s planned Program of Ongoing Engagement with Traditional Custodians. • (1) On 18 September 2023, Woodside emailed KLC/NKAC advising of the planned start date for the activity, and once again requesting if KLC/NKAC was aware of any other people with whom Woodside should consult, and if there was any information KLC/NKAC wished to provide on cultural values. The email requested that information be distributed to members or individuals who may be interested. It requested this information prior to 28 September 2023. The Summary Information Sheet for this activity was attached (Appendix F, Reference 5.68). The email included links to NOPSEMA brochures on consultation and described the purpose of consultation. No response was received to this email. No response was received. 		
Summary of Feedback, Objection or Claim	Woodside Energy’s Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>(1) NKAC have not responded to any Woodside communications despite follow up, have not provided feedback, objections, or claims to date in response to the information provided since consultation began in January 2023.</p>	<p>(1) Woodside demonstrated reasonable efforts to engage in genuine two-way dialogue. Woodside has provided sufficient information to allow for an informed assessment of the possible impacts and risks of the activity on functions, interests or activities and a reasonable period of time to consult. NKAC has had a reasonable opportunity to participate in consultation. Between 23 January 2023 and October 2023 there has been an exchange of 13 emails and a phone call. Details of these engagements are described in the consultation summary above. NKAC has not provided feedback in response to these attempts. Relevant persons are not obligated to respond to a titleholder’s request to participate in the consultation process. A titleholder is not required to wait indefinitely for a response where sufficient information and reasonable period of time has been afforded to the relevant person. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15).</p>	<p>(1) Existing controls considered sufficient, as described in Section 6.</p> <p>Woodside is implementing a program to actively support Traditional Custodians’ capacity for ongoing engagement and consultation on environmental plans referenced as PS 16.2.1 in this EP.</p>

Nyangumarta Warrarn Aboriginal Corporation (NWAC)		
NWAC is established under the Native Title Act 1993 by the Nyangumarta people to represent the Nyangumarta people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.		
Woodside has discharged its obligations for consultation under Regulation 11A(1) and consultation with NWAC for the purpose of 11A(1) is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:		
<ul style="list-style-type: none">• Sufficient Information:<ul style="list-style-type: none">- Woodside Sought direction on NWAC's preferred method of consultation. Woodside has offered to locate meetings at the location of NWAC 's choosing, with NWAC nominated representatives (including face-to-face meetings with the Board). These meetings did not occur due to a lack of response to Woodside's requests. As sufficient information and a reasonable period have been provided (see below), any meetings would be considered as ongoing engagement post regulation 11A consultation.- Provided Consultation Information Sheets and Consultation Summary Sheets developed by Indigenous staff to NWAC. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format.- Confirmed the purpose of consultation and set out in detail what is being sought through consultation.- Asked for the consultation and information sheets to be distributed to members and individuals.- Provided NOPSEMA's guidelines and brochure on consultation.- Advised that NWAC can request that particular information provided in the consultation not be published (to align with 11A(2)(4))• Reasonable Period:<ul style="list-style-type: none">- Woodside published advertisements in national, state, and relevant local newspapers including The Australian, The West Australian, Pilbara News (October 2022 and January 2023), Midwest Times, Northwest Telegraph and Geraldton Guardian (January 2023) advising of the proposed activities and requesting comments or feedback.- Woodside commenced consultation with NWAC in January 2023, providing a reasonable opportunity for input since that time.		
Woodside asked NWAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.		
Woodside engages in ongoing consultation, beyond that required by Regulation 11A, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15 of the EP).		
Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on NWAC functions, interests or activities.		
Summary of information provided and record of consultation:		
<ul style="list-style-type: none">• On 23 January 2023, Woodside emailed NWAC advising of the proposed activity (Appendix F reference 3.9) and provided a simplified Consultation Information Sheet (including a link to the detailed information sheet on Woodside's website) as well as a summary overview fact sheet.		

- The email requested information on the interests that NWAC and its members may have within the EMBA, information on how NWAC would like to engage, and requested that NWAC provide information to members as required.
- On 27 January 2023, Woodside emailed NWAC following up on email of 23 January 2023 to confirm they had received information and seeking to make further contact. Woodside offered a telephone conversation or an in-person discussion.
- (1) On 24 March 2023, Woodside emailed NWAC following up on previous emails and seeking to make further contact, again offering a mobile phone number, and inviting a discussion. No response was received
- (1) On 18 April 2023, Woodside left a voice mail with and emailed Yamatji Marlpa Aboriginal Corporation (YMAC), asking whether they had an alternate contact for NWAC. No response was received.
- (1) On 28 April 2023, Woodside emailed NWAC included the email chain demonstrating efforts to engage and notifying that the next step was for the EP for the proposed activity to be submitted to NOPSEMA for technical assessment.
 - It stated that the EP submission is imminent and requested any feedback as a priority to reflect in this submission, noting that feedback was also welcome over the life of the EP.
- (1) On 18 July 2023, Woodside emailed NWAC NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information. This email also reiterated Woodside's request that NWAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult. No response was received.
- (1) On 26 July 2023, Woodside emailed NWAC Woodside's planned Program of Ongoing Engagement with Traditional Custodians.
- (1) On 18 September 2023, Woodside emailed NWAC advising of the planned start date for the activity, and once again requesting if NWAC were aware of any other people with whom Woodside should consult, and if there was any information NWAC wished to provide on cultural values. The email requested that information be distributed to members or individuals who may be interested. It requested this information prior to 28 September 2023, but reiterated that Woodside will take feedback after the commencement of the activity as part of ongoing consultation. The Summary Information Sheet for this activity was attached (Appendix F, Reference 5.69). The email included links to NOPSEMA brochures on consultation and described the purpose of consultation.
 - (1) On 6 October 2023, Woodside phoned YMAC to ensure contact details were correct and whether YMAC would be able to assist with strategy to enable response from NWAC, YMAC were not able to assist.
 - (1) On 9 October 2023, Woodside attended the NWAC offices in Broome to talk through information and arrange a meeting with the Board. No one was in attendance at the office.
 - (1) On 11 October 2023, Woodside emailed NWAC requesting to be contacted by the General Manager, indicated that Woodside is keen to meet with the Board and members to provide updates on activities.
 - (1) On 11 October 2023, Woodside texted the NWAC contact to requests a meeting to talk through activities and plan to hear from the NWAC Board. Woodside received a response that the contact person for NWAC make would contact the following day. No further contact was received.
 - (1) On 12 October 2023, Woodside attended the NWAC office, no one was in attendance.

---	---	--

Wanparta Aboriginal Corporation

Wanparta is established under the Native Title Act 1993 by the Ngarla people to represent the Ngarla people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside has discharged its obligations for consultation under Regulation 11A(1) and consultation with Wanparta for the purpose of 11A(1) is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

- Sufficient Information:
 - Woodside Sought direction on Wanparta's preferred method of consultation. This resulted in a face-to-face meeting being coordinated at location of Wanparta 's choosing, with Wanparta nominated representatives This meeting included Woodside presenting information in a format and style that was readily accessible and appropriate. Provided Consultation Information Sheet and Consultation Summary Sheets developed by Indigenous staff to Wanparta. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format.
 - Articulated planned and unplanned environmental risks and impacts, with proposed controls.
 - Confirmed the purpose of consultation and set out in detail what is being sought through consultation.
 - Asked for the consultation and information sheets to be distributed to members and individuals.

- Woodside has provided NOPSEMA's Brochure "Consultation on offshore petroleum environment plans" and Guideline "Guideline: Consultation in the course of preparing an environment plan"
- Provided response to questions asked about the activity through consultation. Through these questions, WAC have displayed an understanding of the activities under this Environment Plan as well as the broader Scarborough Project.
- Advised that Wanparta can request that particular information provided in the consultation not be published (to align with 11A(2)(4))
- Reasonable Period:
 - Woodside published advertisements in national, state, and relevant local newspapers including The Australian, The West Australian, Pilbara News (October 2022 and January 2023), Midwest Times, Northwest Telegraph and Geraldton Guardian (January 2023) advising of the proposed activities and requesting comments or feedback.
 - Woodside commenced consultation with Wanparta in January 2023. Woodside has addressed and responded to Wanparta over 9 months, demonstrating a "reasonable period" of consultation.

Woodside asked Wanparta if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside has provided a reasonable opportunity for input since January 2023 and a genuine two-way dialogue has occurred via meetings and written exchanges to further understand the environment in which the activity will take place. Wanparta has engaged with the detail of the activity asking related questions. The details of these engagements are described in the consultation summary below.

Woodside engages in ongoing consultation, beyond that required by Regulation 11A, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15 of the EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on Wanparta functions, interests or activities.

Summary of information provided and record of consultation:

- On 23 January 2023, Woodside emailed Wanparta Aboriginal Corporation (Wanparta) advising of the proposed activity (Appendix F, reference 3.10) and provided a simplified Consultation Information Sheet (including a link to the detailed information sheet on Woodside's website) as well as a summary overview fact sheet.
 - The email requested information on the interests that Wanparta and its members may have within the EMBA, information on how Wanparta would like to engage, and requested that Wanparta provide information to members as required.
- On 27 January 2023, Woodside emailed Wanparta following up on the email of 23 January 2023 to confirm they had received information and seeking to make further contact, offering to connect via phone or an in-person meeting if desired.
- On 31 January 2023, Wanparta responded to acknowledge receipt of material and informed that it was passed on to Directors who will advise whether any further engagement is required.
- On 31 January 2023, Woodside emailed the Wanparta contact person and thanked them for their assistance.
- On 24 February 2023, Woodside emailed the Wanparta contact person (Appendix F, reference 5.42) asking for feedback on the information already provided regarding Scarborough activities and providing additional information on other decommissioning and drilling activities and requesting feedback. Woodside again requested information on the interests that Wanparta and its members may have within the EMBA, information on how Wanparta would like to engage, and requested that Wanparta provide information to other individuals as required. Woodside also asked if anything further could be done to facilitate consultation.
- On 2 March 2023, Wanparta emailed Woodside to state that all information had been received and passed onto Directors for comment.
- On 24 March 2023, Woodside emailed Wanparta asking whether the Directors had any questions or would like to have further discussions. An offer of phone discussion, online or in person meeting was made.

- On 27 March 2023, Wanparta contacted Woodside via email to clarify that the Directors had not provided any questions or feedback.
- On 18 April 2023, Woodside emailed Wanparta following up on previous emails and seeking to make further contact, again asking for advice on how Wanparta would like to engage.
- On 28 April 2023, Woodside emailed Wanparta including the email chain demonstrating efforts to engage and notifying that the next step is for the EP for the proposed activity to be submitted to NOPSEMA for technical assessment.
 - It stated that the EP submission is imminent and requested any feedback as a priority to reflect in this submission, noting that feedback is also welcome over the life of the EP.
- On 6 July 2023, Woodside emailed Wanparta following up on other EPs and noting that Woodside would like to provide a complete overview of all planned activities to the Board and members. Woodside wrote that it wanted to understand the impact on interests/activities and cultural values, and to hear any concerns.
- On 18 July 2023, Woodside emailed Wanparta NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information. This email also reiterated Woodside's request that Wanparta advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 21 July 2023, Wanparta emailed Woodside noting they were planning two Board meetings in order to hear from the multiple proponents that have identified Wanparta as Relevant Persons and inviting Woodside to present at one of these meetings.
- On 24 July 2023, Woodside emailed Wanparta seeking to understand whether Wanparta would like a complete overview of relevant activities which would include this EP.
- On 24 July 2023, Wanparta emailed Woodside confirming they would like a complete overview of all activities which would include this EP at a meeting on 31 August 2023.
- On 25 July 2023, Woodside emailed Wanparta accepting the proposed date and proposing a longer time on the agenda.
- On 26 July 2023, Woodside emailed Wanparta Woodside's planned Program of Ongoing Engagement with Traditional Custodians and confirming Woodside's preference to attend the 31 August 2023 Board meeting.
- **(1, 2, 3 & 4)** On 31 August 2023, Woodside met with Wanparta Board and members in South Hedland, Woodside:
 - Described the EP framework, referring to the Offshore Petroleum and Greenhouse Gas Storage Act (Environment) Regulations, NOPSEMA's role as regulator and general contents of EPs.
 - Displayed a map of activities open for feedback to be discussed in the meeting and provided a list of other upcoming activities which will be open for consultation in 2023/24.
- Woodside provided an overview of the broader Scarborough Project and overview of activities.
 - Described each proposed activity, (including Seismic Survey, Drilling and Completions, Seabed Intervention and Trunkline Installation and Subsea Infrastructure Installation) and a summary of both planned and unplanned impacts and associated controls. This included the use of a video to show the pipelay which was designed for public audience.
 - Described the types of vessels involved.
 - Described the planned impacts and respective controls of the above activities including: the presence of vessels, seabed disturbance, underwater noise, discharge from vessels, emissions to air and external lighting.
 - Described planned and unplanned environmental risks and impacts in accordance with tables provided in the Information Sheets for the activities, emphasising that unplanned risks are not expected to occur and are unlikely.

- Displayed and spoke to the EMBA for each proposed activity, and the individual worst-case loss of containment scenarios identified, noting that they are all diesel fuel releases which would only be caused by vessel collisions.
- Stated that Woodside wanted to understand how the functions, activities, or interests of Wanparta and the people it represents may be impacted by any of those activities.
- Specifically asked the following:
 - How could these activities impact your cultural values, interests, and activities - does protecting the environment do enough to protect your cultural values?
 - What are your concerns about the proposed activities and what do you think we should do about them?
 - Is there anything you would like included in the EPs before submission?
 - Is there anyone else Woodside should consult with about the activities?
- Advised that Woodside will continue to take feedback from Wanparta for the life of the EP.
- Provided personal contact details for further feedback. Woodside provided NOPSEMA's contact details, should Wanparta desire to provide feedback directly to the regulator.
- At the 31 August 2023 meeting Wanparta asked/noted:
 - **(1)** What chemicals in the water may be discharged during commissioning.
 - Woodside responded that biocide, oxygen scavenger and corrosion inhibitor, have low concentrations. They are carefully regulated to make sure they don't persist in the environment.
 - **(2)** Wanparta stated that water is extremely important to Ngarla people, and they feel a responsibility to look after the ocean and lore. They noted the spiny bream, octopus, stingray and kestrel as totemic species
 - **(4)** Wanparta would like to discuss a program of support for rangers with Woodside.
 - Woodside responded that they would come back to Wanparta with regards to training and future support for a Ranger Program.
 - **(4)** Wanparta would like to engage in an annual meeting with Woodside.
 - **(3 & 4)** Wanparta broke for a closed session, when asked if there were any stories that could be told, on return the Wanparta through their lawyer gave verbal support for this EP activity and said they are keen to continue a relationship with Woodside.
- On 14 September 2023, Woodside emailed Wanparta following up on previous consultation and information discussed at the 31 August 2023 meeting. Woodside advised of the planned start date for the activity, and once again requested if Wanparta was aware of any other people with whom Woodside should consult, and if there was any information Wanparta wished to provide on cultural values. The email requested that information be distributed to members or individuals who may be interested. It requested this information prior to 28 September 2023, but reiterated that Woodside will take feedback after the commencement of the activity as part of ongoing consultation. The Summary Information Sheet for this activity was attached (Appendix F, reference 5.71). No response was received to this email.
- sent through an environment plan and activity dates for this EP, asking Wanparta for any further feedback. The email also contained within NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information. This email also reiterated Woodside's request that Wanparta advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 14 September 2023, Wanparta thanked Woodside and confirmed receipt of emails.
- On 4 October 2023, Woodside phoned Wanparta, to check in generally and inform about upcoming Eps. A discussion was had around, Wanparta Rangers, a tour of Karratha Gas Plant and School kids visit to Perth Office.
- On 4 October 2023, Woodside emailed Wanparta following up with a summary of the previous phone call. The outcomes of the phone discussion were:
 - **(4)** Wanparta's interest in a Wanparta Ranger program and EP funding.
 - **(4)** Wanparta's interest in a Karratha Gas Plant visit, as well as possible school visits and Perth Office visits.

<ul style="list-style-type: none"> - Wanparta's request for updates on EPs unrelated to this one. - (4) Woodside's query into Wanparta's thoughts on a formal authorisation/consent/endorsement process regarding future EPs. • On 6 October 2023, Wanparta emailed Woodside thanking Woodside for the 4 October email and summary of discussion had and stating that Wanparta will bring all the 4 October 2023 items to the Board for further consideration and will revert shortly after. 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>(1) During face-to-face engagement, related to this activity and others Wanparta requested further information on topics related to this proposed activity which was responded to during the meeting:</p> <ul style="list-style-type: none"> • What chemicals in the water may be discharged during commissioning. • the importance of water was emphasised by the group. <p>(2) Wanparta stated that water and the ocean is extremely important to them, and they have a responsibility to look after ocean and lore. They noted the bream, octopus, stingray and kestrel as totemic species</p> <p>(3) At the 31 August 2023 meeting, Wanparta expressed support for the EP, Wanparta said they had no concerns regarding the activity for now and wanted to be kept updated on any changes.</p> <p>(4) Wanparta expressed interest in a range of social investment opportunities including a ranger program. Wanparta stated their</p>	<p>(1) Woodside responded to Wanparta's requests for further information during face-to-face engagements, and no further information was requested on these topics.</p> <p>(2) Woodside assessed Wanparta's interest in water and the species described to represent potential cultural values</p> <p>(3) Wanparta is supportive of this EP submission. Any future feedback may be provided in ongoing consultation throughout the life of the EP.</p> <p>(4) Woodside is continuing to work with Wanparta regarding social investment opportunities. Separate from consultation under Reg 11A, Woodside has commenced discussion with Wanparta about a framework agreement for ongoing engagement. Wanparta will discuss the proposal with their Board during an October meeting, Woodside will follow up on a response and seek to reach a Framework Agreement during 2023. The Framework Agreement is an effective mechanism for social investment opportunities, including for the ranger program. Sufficient information to allow informed assessment has already been provided by other means, including summary sheets developed by Indigenous staff, a face-to-face meeting with appropriate material (pictures, maps, video) and project attendance allowing opportunity to ask questions and seek further understanding.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate,</p>	<p>(1) Existing controls considered sufficient, as described in Section 6.</p> <p>(2) Woodside updated Section 4.9 to record WAC's interests and potential cultural values and assessed potential impact on these, including controls, in section 6.10.</p> <p>(3) Not required.</p> <p>(4) Woodside is implementing a program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on environmental plans referenced as PS 16.2.1 in this EP. This includes continued engagement through a proposed Framework Agreement which will be applied to ongoing consultation.</p>

<p>interest in ongoing engagement with Woodside.</p>	<p>Woodside will apply its Management of Change and Revision process (see Section 7.15).</p>	
<p>Kariyarra Aboriginal Corporation Kariyarra is established under the Native Title Act 1993 by Kariyarra people to represent the Kariyarra people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.</p>		
<p>Woodside has discharged its obligations for consultation under Regulation 11A(1) and consultation with Kariyarra for the purpose of 11A(1) is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:</p> <p>Sufficient Information:</p> <ul style="list-style-type: none"> • Woodside sought direction on Kariyarra’s preferred method of consultation. - **(1)** On 23 January 2023, Woodside emailed the Kariyarra Aboriginal Corporation advising of the proposed activity (Appendix F, reference 3.11) and provided a simplified Consultation Information Sheet (including a link to the detailed information sheet on Woodside's website) as well as a summary overview fact sheet.
 - The email requested information on the interests that Kariyarra and its members may have within the EMBA, information on how Kariyarra would like to engage, and requested that Kariyarra provide information to other individuals as required.
- On 23 January 2023 Woodside sent an email to an alternative address for the Kariyarra Aboriginal Corporation and provided a simplified Consultation Information Sheet (including a link to the detailed information sheet on Woodside's website) as well as a summary overview fact sheet.
 - The email requested information on the interests that Kariyarra and its members may have within the EMBA, information on how Kariyarra would like to engage, and requested that Kariyarra provide information to other individuals as required.
- On 24 January 2023, the Kariyarra Relationship Support Manager provided contact details for the Chief Executive Officer.
- On 24 January 2023, Woodside emailed the Kariyarra Relationship Support Manager and thanked them for their assistance.
- **(1)** On 24 January 2023, Woodside emailed the Kariyarra CEO advising of the proposed activity and provided a simplified Consultation Information Sheet (including a link to the detailed information sheet on Woodside's website) as well as a summary overview fact sheet (Appendix F, reference 3.13).
 - The email requested information on the interests that Kariyarra and its members may have within the EMBA, information on how Kariyarra would like to engage, and requested that Kariyarra provide information to other individuals as required. No response was received.
- **(1)** On 24 March 2023, Woodside emailed the Kariyarra CEO asking whether any questions have arisen, and offering the opportunity to provide further detail to CEO or board if it is of interest. No response was received.
- On 18 April 2023, Woodside emailed the Kariyarra CEO following up on previous emails and seeking to make further contact. An offer of an online or in-person meeting was made. No response was received.
- **(1)** On 28 April 2023, Woodside emailed Kariyarra including the email chain demonstrating efforts to engage and notifying that the next step is for the EP for the proposed activity to be submitted to NOPSEMA for technical assessment.
 - It stated that the EP submission is imminent and requested any priority feedback as a priority to reflect in this submission, noting that feedback is also welcome over the life of the EP. No response was received.
- **(1)** On 2 May 2023 Woodside phone KAC and left a message for a return call to discuss EP, no return call was received.
- **(1)** On 3 May 2023 Woodside phoned KAC and left a message for a return call to discuss EP, no return call was received.
- **(1)** On 9 May 2023, Woodside drove to South Hedland Office of KAC in an attempt to meet with the CEO. The CEO was unavailable, Woodside left contact details and proposed meeting times.
- **(1)** On 10 May 2023, Woodside spoke to the KAC CEO and asked for a meeting whilst still in South Hedland. Woodside advised that the submission of the EP was imminent, and that Woodside wished to consult and was continuing to seek KAC's feedback. The CEO advised he had a full calendar and no time to meet however would try to respond as soon as time permitted and asked when the EPs were due for submission.
- **(1)** On 12 May 2023, Woodside emailed KAC to confirm telephone conversation of 10 May and to advise that the EPs are due for submission in the following two weeks.
- On 6 July 2023, Woodside followed by phone regarding the two EPs provided to KAC on 20 June 2023 and advising Woodside would be happy to meet or consult with KAC and provide a complete overview of planned activities.
- **(1)** On 18 July 2023, Woodside emailed KAC NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information. This email also reiterated Woodside's request that KAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.

- **(1)** On 26 July 2023, Woodside emailed Kariyarra Woodside's planned Program of Ongoing Engagement with Traditional Custodians.
- On 31 August 2023, KAC emailed Woodside apologising for not responding sooner and noting that KAC were seeking legal advice on matters.
- On 31 August 2023, Woodside emailed KAC acknowledging their response.
- **(4)** On 31 August 2023, KAC (via legal representative) emailed requesting information about another activity, indicating they required costs to be met for KAC to be engaged in consultations with Woodside.
- **(4)** On 10 September 2023, Woodside emailed KAC (via legal representative) indicating they were awaiting internal advice about funding. Woodside confirmed that they have been covering cost of consultation with other Aboriginal Corporation Board meetings.
- **(4)** On 10 September 2023, KAC emailed Woodside informing that further consultation could move forward with appropriate funding.
- **(4)** On 13 September 2023, KAC (via legal representative) emailed requesting a response to funding as soon as possible to enable attendance at a meeting with some KAC members.
- **(4)** On 13 September 2023, KAC (via legal representative) emailed Woodside requesting confirmation that consultation costs would be covered by Woodside. KAC also advised that the Kariyarra have sea rights referenced in their native title evidence. The KAC lawyer affirmed that further consultation will be required now that KAC has a legal advisor.
- **(4)** On 13 September 2023, Woodside emailed KAC (via legal representative) with information on another Scarborough EP and noting that Woodside in principle agreed to the request for funding, however would require reasonable quotes from KAC to provide a formal a response. Woodside committed to following up and confirming that Woodside are looking for positive engagement with KAC.
- **(1)** On 13 September 2023, KAC (via legal representative) emailed Woodside requesting a copy of the information sheet for another Scarborough EP previously provided by Woodside to KAC.
- **(1)** On 18 September 2023, Woodside emailed KAC advising of the planned start date for the activity, and once again requesting if KAC was aware of any other people with whom Woodside should consult, and if there was any information KAC wished to provide on cultural values. The email requested that information be distributed to members or individuals who may be interested. It requested this information prior to 02 October 2023, but reiterated that Woodside would take feedback after the commencement of the activity as part of ongoing consultation. The Summary Information Sheet for this activity was attached (Appendix F, reference 5.67).
- **(2, 3 & 4)** On 22 September 2023, KAC (via legal representative) emailed Woodside attaching a letter and Woodside policy documents. The letter set out the following:
 - Requesting that a meeting with KAC at a suitable time with an agreed Agenda be arranged, including preparation of "co-management agreement".
 - **(4)** An Agreement which provides the most effective tool for the effective and ongoing consultation by Woodside with KAC.
 - **(2)** Noting that KAC asserted sea rights in their native title claim. (*Note: Native title was found not to exist in the sea in the KAC determination found by the Federal Court*).
 - **(2)** An agreed budget to fund (among other things) preparation of Agreement, meetings and specialist advice.
 - Contact protocols going forward.
- **(2)** On 28 September 2023, KAC (via legal representative) emailed Woodside a funding request for fees and disbursements, however did not provide a reasonable basis for this quote.

Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>(1) Woodside and KAC have engaged in a two-way dialogue, but KAC has not provided feedback, objections to date or claims in response to the information provided since consultation began in January 2023.</p> <p>(2) KAC has requested funding to hold meetings, prepare an agreement and fund expertise as required by KAC.</p> <p>(3) KAC has asserted sea rights over their native title claim area</p> <p>(4) KAC have noted that they will engage in ongoing consultation on matters with Woodside through an Engagement Protocol.</p>	<p>(1) Woodside demonstrated reasonable efforts to engage in genuine two-way dialogue. Woodside has provided sufficient information to allow for an informed assessment of the possible impacts and risks of the activity on functions, interests or activities and a reasonable period of time to consult. KAC as had a reasonable opportunity to participate in consultation. Between 23 January and 31 August 2023, when KAC informed Woodside they had sought legal advice. To that date there has been an exchange of 14 emails, 2 phone calls, 2 drop ins at the KAC office. The details of these engagements are described in the consultation summary above. KAC has not provided feedback in response to these attempts. Relevant persons are not obligated to respond to a titleholder's request to participate in the consultation process. A titleholder is not required to wait indefinitely for a response where sufficient information and reasonable period of time has been afforded to the relevant person.</p> <p>(2) Woodside has communicated on several occasions that it will support reasonable funding requests. Woodside is currently assessing the funding proposal that KAC have put forward and will provide financial resourcing if a reasonable basis for quote is received, however notes that it was received 9 months after feedback was requested. Woodside considers KAC's request for funding was not a pre-requisite for consultation under regulation 11A to occur. Similarly, Woodside notes that retaining a legal advisor is not pre-requisite for consultation to occur.</p> <p>(3) Woodside has noted KAC's assertion of sea rights over their native title claim</p> <p>(4) Woodside has assessed the Program of Ongoing Engagement with Traditional Custodians will support ongoing consultation with KAC and address appropriate support for resourcing, separate from consultation under</p>	<p>(1) Existing controls considered sufficient, as described in Section 6.</p> <p>(2) & (4) Woodside is implementing a program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on environmental plans referenced as PS 16.2.1 in this EP. This includes continued engagement through a proposed Framework Agreement which will be applied to ongoing consultation.</p> <p>(3) Woodside updated Section 4.9to record WAC's interests and potential cultural values and assessed potential impact on these, including controls, in section 6.10</p>

	<p>Reg 11A. Sufficient information to allow informed assessment has already been provided by other means, including Consultation Information Sheets and a Summary Information Sheet developed by Indigenous staff members. Woodside will propose to develop the first draft of a Framework Agreement for KAC's consideration within the next 2 months.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15).</p>	
--	---	--

Ngarluma Aboriginal Corporation (NAC)

NAC is established under the Native Title Act 1993 by the Ngarluma people to represent the Ngarluma people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside has discharged its obligations for consultation under Regulation 11A(1) and consultation with NAC for the purpose of 11A(1) is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

- Sufficient Information:
 - Woodside Sought direction on NAC's preferred method of consultation. This resulted in a face-to-face meeting being coordinated at the location of NAC's choosing, with NAC nominated representatives. This meeting included Woodside presenting information in a format and style that was readily accessible and appropriate.
 - Provided Consultation Information Sheets and Consultation Summary Sheets developed by Indigenous staff to NAC. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format
 - Articulated planned and unplanned environmental risks and impacts, with proposed controls.
 - Set out in detail what was being sought through consultation.
 - Asked for the consultation and information sheets to be distributed to members and individuals.
 - Woodside has provided NOPSEMA's Brochure "Consultation on offshore petroleum environment plans" and Guideline "Guideline: Consultation in the course of preparing an environment plan Provided response to questions asked about the activity through consultation. Through these questions, NAC have displayed an understanding of the activities under this Environment Plan as well as the broader Scarborough Project.
 - Advised that NAC can request that particular information provided in the consultation not be published (to align with 11A(2)(4))
- Reasonable Period:

- Woodside published advertisements in national, state, and relevant local newspapers including The Australian, The West Australian, Pilbara News (October 2022 and January 2023), Midwest Times, Northwest Telegraph and Geraldton Guardian (January 2023) advising of the proposed activities and requesting comments or feedback.
- Consultation information provided to NAC on 20 January 2023 based on their function, interest, and activities.
- Woodside commenced consultation with NAC in January 2023. Woodside has addressed and responded to NAC over 9 months, demonstrating a “reasonable period” of consultation.

Woodside asked NAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside has provided a reasonable opportunity for input since January 2023 and a genuine two-way dialogue has occurred via a meeting and written exchanges to further understand the environment in which the activity will take place. NAC has engaged with the detail of the activity asking related questions. The details of these engagements are described in the consultation summary below.

Woodside engages in ongoing consultation, beyond that required by Regulation 11A, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15 of the EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on NAC’s functions, interests or activities.

Summary of information provided and record of consultation:

Summary of broader Scarborough Project engagement and Ethnographic Survey:

- On 1 May 2019, cultural authorities nominated by NAC attended an ethnographic survey in conjunction with other Ngarda Ngarli People (the Traditional Custodians of Murujuga, comprising the Ngarluma, Mardudhunera, Wong-Goo-Tt-Oo, Yaburara and Yindjibarndi people) and both male and female heritage consultants consistent with industry standard practice:
- While this survey was conducted nominally for the Scarborough project’s development footprint, a landscape-scale approach was undertaken particularly given the limited knowledge of the submerged landscape. This survey found no ethnographic values within the Operational Area or EMBA.
- Participants contributed to the findings and recommendations of Mott 2019 which included:
 - Onshore heritage sites were identified, beyond the Operational Area and EMBA of this EP.
 - No known sites or values were identified beyond the low water mark, but the potential for cultural values to exist was identified as requiring further research.
 - Recommendation to keep Traditional Custodians informed including through existing quarterly meetings (see below)
 - Recommendation to engage with researchers on options to identify submerged heritage.
 - Recommendation for cultural awareness training for contractors
 - Recommendations for the management of onshore heritage sites beyond the Operational Area and EMBA of this EP
- Following the recommendations of Mott 2019, Woodside conducted further work to identify submerged heritage values (refer to Section 4.9.1), kept NAC informed of the progress of the Scarborough project through quarterly meetings (see below), and where appropriate ensure employees and contractors have completed cultural awareness training through MAC.
- Woodside also took steps in consultation with NAC to appropriately manage onshore heritage sites beyond the Operational Area and EMBA of this EP.
- On 20 January 2023, Woodside emailed NAC advising of the proposed activity (Appendix F, reference 3.6) and provided a simplified Consultation Information Sheet (including a link to the detailed information sheet on Woodside’s website) as well as a summary overview fact sheet. Woodside made clear it was prepared to consult in the manner and location preferred by NAC and resource the meeting appropriately. Woodside requested that the information be forwarded to NAC members as required.
- On 26 January 2023, Woodside and NAC representatives met to discuss the proposed activity in more detail.

- On 3 February 2023, Woodside and NAC representatives met in Roebourne to discuss how best to consult on the proposed activity.
- On 17 February 2023, Woodside spoke with NAC representatives to discuss the proposed activity and to plan further engagement on a range of Woodside EPs. NAC representatives stated there would be opportunity at the NAC March Board meeting for further engagement.
- On 24 February 2023, Woodside sent a follow up email on a range of Woodside EPs, including the proposed activity and following on from the 17 February 2023 meeting (Appendix F, reference 5.43). Woodside noted it is seeking NAC's feedback as soon as possible on the proposed activity. Woodside made it clear it was prepared to consult in the manner and location preferred by NAC and resource the meeting appropriately.
- On 24 February 2023, NAC emailed Woodside to acknowledge receipt of Woodside's emails noting that it was yet to attend to the emails and would do so following the w/c 27 February 2023.
- On 9 March 2023, Woodside emailed NAC and left a phone message to follow up on the email received 24 February 2023. Woodside advised it was seeking opportunity for Woodside to present to the NAC board with an EP overview and if there has been any progress in terms of securing a preferred day and timeslot.
- On 9 March 2023, NAC emailed Woodside to advise that the contact at NAC was unavailable to meet on 30 March 2023.
- On 9 March 2023, Woodside emailed NAC:
 - Woodside advised that during a previous meeting, NAC had advised its next board meeting would be held on 29 and 30 March 2023 and that Woodside would potentially be assigned time on the agenda to present to the NAC Board on either one of those days.
 - Woodside advised that this is an important opportunity to ensure that NAC board have the opportunity to provide feedback on the Environmental Plans and note if they have interests in the environment that may be affected (EMBA).
 - Woodside welcomed the suggestion of alternative days/times or ways that it can provide an overview to NAC the board.
- On 10 March 2023, NAC emailed Woodside to advise that its March Board Meeting was full with overflows from January and February and at this stage would need to leave the Environmental Plan consultation until the April meeting.
- On 14 March 2023, Woodside emailed NAC to request the dates for the April board meeting and to confirm what time Woodside might be allocated to present at NAC's earliest convenience.
- On 14 March 2023, NAC emailed Woodside to advise that the Board meeting is tentatively set for 29th April 2023. NAC advised this needed to be confirmed with its Board before it could commit to a time or date.
- On 17 April, Woodside emailed NAC noting there had been no confirmation of an April meeting and seeking advice on whether NAC had feedback in relation to the proposed activities. The email explained Woodside's plan to submit the EP and was seeking pre-submission feedback, noting that feedback could be provided for the life of the EP. Woodside sought an email supporting the approach and looked forward to meeting in future.
- On 20 April 2023, NAC emailed Woodside acknowledging receipt of the materials and asked questions of an unrelated EP.
- On 20 April 2023, NAC emailed Woodside noting that the next board meeting would be 26 April 2023 and asking if Woodside still would like to attend.
- On 20 April 2023, Woodside emailed NAC confirming that Woodside would appreciate time to present at the Board meeting.
- On 20 April 2023, NAC emailed Woodside requesting any documentation for the board meeting packs.
- On 21 April 2023, NAC advised that there was no time for Woodside on the April agenda, but time would be set aside for May, with a tentative date of 17 May 2023.
- On April 21 2023, Woodside thanked NAC for their response.
- On 26 April 2023, Woodside emailed NAC with an information sheet on another activity and responded to some queries about spill response which generated from a phone discussion and NAC's email of 20 April 2023.
- On 28 April 2023, Woodside emailed NAC advising that the next step was for the EP to be submitted but no feedback had been received to date. The email stated that before Woodside submits, Woodside sought to understand whether there were any issues or concerns with the proposed activities that needed to be reflected in the EP.
- **(2)** On 10 May 2023, NAC replied to Woodside stating that they were supportive of submission of the EP and looked forward to ongoing consultation.

- On 12 May 2023, NAC emailed Woodside to notify that Woodside had been allocated a one-hour window in the NAC Board Meeting on 17 May 2023.
- On 17 May 2023, Woodside presented to the NAC Board of Directors in Karratha:
 - Woodside opened the meeting with introductions.
 - Woodside thanked the Ngarluma Aboriginal Corporation (NAC) for inviting Woodside Energy to speak with them and provided Acknowledgement of Country
 - Woodside talked through the agenda and reasons for consultation.
 - Woodside introduced the regulations it needs to comply with and the role of NOPSEMA.
 - Woodside explained that many of its activities could impact Ngarluma Country in the highly unlikely event of an oil spill, and some activities like Scarborough could have a more direct impact.
 - Woodside referred to an example EMBA and described how it is comprised of many replicates of a single spill.
 - Woodside explained that it is consulting with many people up and down the coastline including multiple Aboriginal Corporations
 - Woodside proposed what consultation outcomes it would like to meet with NAC, including understanding:
 - How the activities could impact cultural values, functions, interests, or activities
 - Whether protecting the environment is enough to protect these things
 - What NAC's concerns are about the proposed activities and what NAC thinks we should do about it?
 - If there's anything NAC would like included in EPs
 - Woodside noted that feedback would be welcomed throughout the life of all Environment Plans
 - Woodside provided a high-level overview of the Scarborough project.
 - Woodside provided an overview of each proposed Scarborough activity (including Seismic Survey, Drilling and Completions, Seabed Intervention and Trunkline Installation and Subsea Infrastructure Installation) and a summary of both planned and unplanned impacts and associated controls. This included the use of a video to show the pipelay which was designed for public audience.
 - **(1)** NAC asked when these activities were proposed to happen, Woodside responded later this year pending government approvals.
 - Woodside described the Scarborough seabed intervention and trunkline installation activities including describing vessels involved, seabed preparation, pipelay and post lay activities.
 - NAC asked a question regarding Native Title which was addressed. The proposed trunkline route does not pass through Ngarluma Native Title area.
 - **(1)** NAC asked whether the pipe would be covered over, Woodside responded that in some areas it is laid in a trench and backfilled, and in other areas it may have rock covering. The majority is left uncovered.
 - Woodside asked if there was any further feedback or questions about these activities, none were received.
 - Woodside described the planned and unplanned environmental impacts and risks of the activities described in the meeting and proposed controls, in accordance with the Information Sheets
 - Woodside asked whether there were any questions on the environmental risks and impacts, none were received.
 - Woodside noted that any questions or considerations could be directed through Woodside, or the Quarterly Heritage Meetings which NAC has a standing invite to, noting that those meeting were also an opportunity to discuss job opportunities and other matters.
 - Woodside left hard copies of Information Sheets and Plain Language Summaries for each discussed activity with NAC attendees.
- On 18 July 2023, Woodside emailed NAC NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information. This email also reiterated Woodside's request that NAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult. No response was received to this email.
- On 26 July 2023, Woodside emailed NAC Woodside's planned Program of Ongoing Engagement with Traditional Custodians.
- On 2 August 2023, Woodside emailed NAC regarding the acceptance of a different Scarborough EP, asking for information in accordance with conditions of acceptance of the EP. It specifically asked whether NAC was aware of any people, who in accordance with Indigenous tradition, may have spiritual or cultural

connections to the environment that may be affected by the activity that have not yet been afforded the opportunity to provide information. The email also contained links to information on NOPSEMA's publications on EP consultation and its purpose. It also made clear that any gender restricted, or culturally sensitive information would be managed carefully and appropriately. An offer of support to participate in consultation was made.

- On 9 August 2023, Woodside emailed NAC again seeking feedback and information relating to the accepted Scarborough EP, stating the conditions of acceptance:
 - if NAC were aware of any people, who in accordance with Indigenous tradition, may have spiritual and cultural connections to the environment that may be affected by the activity that have not yet been afforded the opportunity to provide information that may inform the management of the activity; and
 - if there was any information, they wished wish to provide on cultural features and/or heritage values.
 - the email gave the planned commencement of activity under that EP and stated that if no feedback had been received by COB on the day prior, it would be taken to mean no information was desired to be given prior to commencement.
 - the email also described the purpose of consultation.
- On 10 August 2023, NAC emailed Woodside to express limited capacity and notify an alternate contact who would be handling EP consultation.
- On 10 August 2023, Woodside emailed NAC apologising for the influx of emails and confirming contact details.
- On 11 August 2023, Woodside held a web meeting with NAC to discuss plans for consultation. NAC requested a list of EPs for which Woodside would seek input from NAC. NAC indicated that it would establish a Working Group which would hold bi-monthly engagements with Woodside. It also noted ongoing capacity issues.
- On 16 Aug 2023, Woodside emailed NAC seeking to re-establish a regular meeting cadence and proposing to commence in the following week.
- On 15 September 2023, Woodside emailed NAC acknowledging the previous email, advising of the planned start date for the activity, and once again requesting if NAC was aware of any other people with whom Woodside should consult, and if there was any information NAC wished to provide on cultural values. The email requested that information be distributed to members or individuals who may be interested. It requested this information prior to 28 September 2023, but reiterated that Woodside would take feedback after the commencement of the activity as part of ongoing consultation. The Summary Information Sheet for this activity was attached (Appendix F, reference 5.57).
- **(3)** On 18 September 2023, NAC emailed Woodside proposing:
 - establishment of Joint Working Group.
 - Woodside to provide draft agreement.
 - Working group meeting commence in October with monthly meetings.
 - Noting arrangements would cover future scope of consultations with NAC.
 - On 28 September 2023, NAC representative emailed Woodside requesting a phone discussion about consultations with NAC.
- **(3)** On 28 September 2023, Woodside had a phone discussion with NAC representative, they were following up on Woodside consultation requests and wished to progress a consultation meeting with NAC Working Group in October. They requested Woodside:
 - Propose date/s to meet.
 - Confirm they would cover cost.
 - Provide any relevant information prior to the meeting.
 - Advise which Eps Woodside would like to consult with NAC on.
 - Woodside agreed to follow up on the above and looked forward to meeting with the Working Group in October.

- On 10 October 2023, Woodside emailed NAC in response to their email of 18 September 2023, in principle supporting NAC’s proposal for ongoing consultation through a Working Group. Woodside requested meeting dates and confirmed that Woodside would provide a first draft of the agreement.

Quarterly Heritage Meetings:

- Woodside convenes a quarterly meeting of Traditional Custodian representatives from the Representative Aboriginal Corporations involved in historical native title claims over the Burrup Peninsula, including NAC. Individual attendees are nominated by their representative Aboriginal Corporations. These meetings are summarised separately in this table.
- NAC did not nominate attendees to quarterly meetings in 2021 or the first half of 2022 but were provided with copies of the slides used which included overviews of the Scarborough Project.

Summary of Feedback, Objection or Claim	Woodside Energy’s Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>(1) During face-to-face engagements related to this activity and others, NAC asked:</p> <ul style="list-style-type: none"> When the activities were proposed to commence. Whether the pipeline is covered over. <p>(2) NAC emailed Woodside on 10 May 2023, supporting submission of this EP and looking forward to ongoing consultation.</p> <p>(3) NAC proposed establishing a Joint Working Group to engage in meetings with Woodside for ongoing consultation. NAC noted they have capacity issues and require resourcing to cover costs of meeting.</p>	<p>(1) Woodside responded to NAC requests for further information during face-to-face engagements, and no further information was requested on these topics.</p> <p>(2) NAC is supportive of this EP submission.</p> <p>(3) Separate from consultation under Reg 11A, Woodside will establish an agreement with NAC to work with the NAC Working Group. The agreement and Working Group would be used to frame ongoing consultation during the life of the EP. Sufficient information to allow informed assessment has already been provided by other means, including summary sheets developed by Indigenous staff, a face-to-face meeting with appropriate material (pictures, maps, video) and project attendance allowing opportunity to ask questions and seek further understanding.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15).</p>	<p>(1) Existing controls considered sufficient as described in Section 6.</p> <p>(2) Not required</p> <p>(3) Woodside is implementing a program to actively support Traditional Custodians’ capacity for ongoing engagement and consultation on environmental plans referenced as PS 16.2.1 in this EP. This includes continued engagement through the proposed Framework Agreement which will be applied to ongoing consultation.</p>

Murujuga Aboriginal Corporation (MAC)

MAC is established under the Burrup and Maitland Industrial Estates Agreement and is the representative body for the Traditional Custodians for Murujuga being the Ngarluma, the Mardudhunera, the Yaburara, the Yindjibarndi, and the Wong-Goo-Tt-Oo peoples (collectively Ngarda-Ngarli). MAC is the cultural authority for Murujuga and is responsible for the management and protection of its cultural values.

Woodside has discharged its obligations for consultation under Regulation 11A(1) and consultation with MAC for the purpose of 11A(1) is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information:

- Woodside Sought direction on MAC's preferred method of consultation. This resulted in face-to-face meetings being coordinated at the location of MAC's choosing, with MAC nominated representatives. These meetings included Woodside presenting information in a format and style that was readily accessible and appropriate Provided Consultation Information Sheets and Consultation Summary Sheets developed by Indigenous staff to MAC. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format
- Articulated planned and unplanned environmental risks and impacts, with proposed controls.
- Set out in detail what was being sought through consultation.
- Asked for the consultation and information sheets to be distributed to members and individuals.
- Woodside has provided NOPSEMA's Brochure "Consultation on offshore petroleum environment plans" and Guideline "Guideline: Consultation in the course of preparing an environment plan
- Provided response to questions asked about the activity through consultation. Through these questions, MAC have displayed an understanding of the activities under this Environment Plan as well as the broader Scarborough Project.
- Advised that MAC can request that particular information provided in the consultation not be published (to align with 11A(2)(4))

Reasonable Period:

- Woodside published advertisements in national, state, and relevant local newspapers including The Australian, The West Australian, Pilbara News (October 2022 and January 2023), Midwest Times, Northwest Telegraph and Geraldton Guardian (January 2023) advising of the proposed activities and requesting comments or feedback.
- Woodside first met with MAC to discuss the activity in August 2020
- Consultation information provided to MAC on 20 January 2023 based on their function, interest, and activities.
- Woodside has addressed and responded to MAC over three years, demonstrating a "reasonable period" of consultation.

Woodside asked MAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside has provided a reasonable opportunity for input since January 2023 and a genuine two-way dialogue has occurred via meetings and written exchanges to further understand the environment in which the activity will take place. MAC has engaged with the detail of the activity asking related questions. The details of these engagements are described in the consultation summary below.

Woodside engages in ongoing consultation, beyond that required by Regulation 11A, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15 of the EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on MAC's functions, interests or activities.

Summary of information provided and record of consultation:

Historical Engagement

Woodside has been consulting with MAC on the Scarborough project area generally since 2018, including over the area for which this EP relates. Below is evidence of the ongoing consultation.

- 12 June 2018 - Meeting: Woodside provided a briefing on several projects including Scarborough.
- 11 September 2018 - Meeting: Woodside provided a briefing on Scarborough's approvals pathway, schedule, and proposed engagement approach.
- 12 December 2018 - Meeting: Woodside provided a briefing on Scarborough's construction footprint and future engagement.
- On 1 May 2019, cultural authorities nominated by MAC attended an ethnographic survey in conjunction with other Ngarda Ngarli People (the traditional custodians of Murujuga, comprising the Ngarluma, Mardudhunera, Wong-Goo-Tt-Oo, Yaburara and Yindjibarndi people) and both male and female heritage consultants consistent with industry standard practice.
- While this survey was conducted nominally for the Scarborough project's development footprint, a landscape-scale approach was undertaken particularly given the limited knowledge of the submerged landscape. This survey found no ethnographic values within the Operational Area or EMBA.
- Participants contributed to the findings and recommendations of Mott 2019 (which is publicly available) which included:
 - Onshore heritage sites were identified, beyond the Operational Area or EMBA of this EP.
 - No known sites or values were identified beyond the low water mark, but the potential for cultural values to exist was identified as requiring further research.
 - Recommendation to keep Traditional Custodians informed of the project.
 - Recommendation to engage with researchers on options to identify submerged heritage.
 - Recommendation for cultural awareness training for contractors.
 - Recommendations for the management of onshore heritage sites beyond the Operational Area or EMBA of this EP.
- Following the recommendations of Mott 2019, Woodside conducted further work to identify submerged heritage values (refer to Section 4.9.1), kept MAC informed of the progress of the Scarborough project, and where appropriate ensured employees and contractors have completed cultural awareness training through MAC.
- On 10 September 2019, MAC issued a letter to Woodside with formal comment on Dredging and Spoil Disposal Management Plan (DSDMP) (Revision 0) and request for meeting.
- On 11 October 2019, Woodside provided written response to MAC's comments on the DSDMP raised in the 10 September 2019 letter, along with the copy of the revised DSDMP (Revision 1) incorporating changes made in response to these comments.
- On 15 October 2019, Woodside met with MAC and discussed comments raised on the DSDMP.
- On 6 November 2019, Woodside provided written response to MAC's comments on the DSDMP raised in a briefing note, along with the copy of the revised DSDMP (Revision 2) incorporating changes made in response to these comments.
- On 2 December 2019, MAC provided additional comments in response to the 6 November 2019 letter.
- On 6 December 2019, Woodside provided tabulated responses to MAC's comments raised after the 15 October 2019 meeting.
- On 7 January 2020, Woodside emailed MAC with a letter formally requesting a series of engagements to resolve outstanding concerns.
- On 10 January 2020, MAC emailed Woodside informing that MAC supports the proposed approach and is available to meet from mid-January 2020, requesting an agenda.
- On 14 January 2020, Woodside emailed MAC proposing that for the first meeting, agenda should be identifying key issues for both parties and agreeing way forward. Woodside informed MAC that beyond the first meeting, Woodside's aim is to finalise the DSDMP and CHMP in consultation with MAC and guided by MAC's concerns as outlined in previous correspondence.

- On 17 January 2020, MAC requested additional information from Woodside in the form of an 'information package'. Woodside delivered the component of this information package relate to the DSDMP.
- On 27 March 2020, MAC issued a report to Woodside with feedback across three issues including review and MAC response to updated DSDMP (Rev 2 – submitted to EPA.).
- On 10 July 2020, Woodside presented to MAC a proposed DSDMP engagement roadmap, update on the project, and discussed impact assessment approach for sediment related impacts including modelling and tiered monitoring and management framework.
- On 14 August 2020, Woodside issued MAC a detailed written response to comments on Rev 2 of the DSDMP received 27 March 2020.
- On 25 August 2020, Woodside CEO and MAC Board met in person at the MAC office on Murujuga about several issues including high-level summary of Scarborough project.
 - MAC members expressed a positive opinion of Woodside and a desire to work together in partnership to achieve future ambitions.
- On 2 October 2020, Woodside email MAC to request advice on progressing a Scarborough ethnographic survey, to be completed by MAC with a final report provided to Woodside.
- On 5 October 2020, MAC called Woodside to discuss way forward with the proposed Scarborough ethnographic survey.
- On 6 October 2020, Woodside emailed MAC to confirm arrangements and request an updated quote.
- On 8 October 2020, Woodside finalised the requested scope of works for the ethnographic survey to identify heritage values known to exist in the nearshore or offshore footprints of the Scarborough project or surrounding seascape.
- From 20-22 October 2020 members of MAC's Circle of Elders participated in an on-country ethnographic survey with both male and female heritage consultants, consistent with industry standard practice. The heritage consultants were selected by MAC, who also coordinated the survey and guided the consultations. The resulting report is owned by MAC and was approved by the Circle of Elders prior to being provided to Woodside. This survey included the entire Scarborough Project development area, including the Operational Area for this EP. This survey was undertaken at a landscape level. Due to the distance of the Operational Area from onshore and coastal areas where the participants are known to hold rights and interests it was not practical to limit the scope of this assessment to a defined boundary. Additionally, in areas of open water beyond the Ancient Landscape that would have been occupied by ancestral people, the relevant values are not expected to have clearly defined or discrete distributions. Therefore, participants were provided with a map of the Scarborough development and asked to identify any values in the surrounding landscape. Consistent with the understanding that cultural values cannot be extrapolated over long distances offshore beyond any native title claims, determinations or ILUAs, no cultural values were identified in the Operational Area or EMBA (McDonald and Phillips 2021). Recommendations of the report related to onshore, nearshore islands and the Ancient Landscape outside the Operational Area of this EP.
- On 11 December 2020, Woodside provided a full-day presentation on Scarborough construction methodology, including seabed intervention techniques to MAC. MAC nominated their consultants to attend this meeting. No feedback was received on the proposed activity during presentation.
 - At the same meeting, discussed the seabed intervention and shore crossing works addressed in the DSDMP.
- On 2 February 2021, Woodside met with MAC and presented and discussed: seabed intervention and shore crossing scope; and revised sediment dispersal modelling.
- On 16 February 2021, Woodside met with MAC and presented and discussed: nearshore activities; benthic communities and habitat mapping; sediment dispersion modelling; ecological zones and coral compositions; modelling thresholds and outcomes; environment quality guidelines.
- On 25 February 2021, Woodside met with MAC and provided a fly-through of the trunkline corridor using GIS data and modelling layers. There was also a presentation and discussion about baseline water quality data and tiered monitoring and management framework.
- On 10 March 2021 Woodside provided an overview of the Scarborough project to MAC's CEO. No feedback was received on the proposed activity.
- On 19 and 20 May 2021 Woodside provided an overview of the Scarborough project to MAC's Circle of Elders. No feedback was received on the proposed activity.
- On 22 June 2021, MAC provided a report (McDonald and Phillips 2021) on the ethnographic survey to Woodside. MAC has not consented to Woodside sharing this report. It contained the following recommendations:

- That further ethnographic survey (“Phase II”) is conducted.
- That bathymetric mapping and other information is provided to MAC.
- That MAC and Woodside continue to consult on heritage management.
- That an onshore heritage site, outside the Operational Area, be registered by MAC.
- The report did not identify any sites within the Operational Area or EMBA.
- On 7 July 2021 a meeting was held with a presentation and discussion about submerged heritage assessments completed to date and mitigations proposed.
- On 13 July 2021 and 20 July 2021 Woodside met with MAC to discuss the scope of the Phase II survey. Woodside re-committed support for this work on the condition that MAC considered it necessary.
- On 23 July 2021, at a meeting, Woodside provided further information and discussion about seabed intervention scope and use of spoil grounds to be included in Revision 3 of the DSDMP.
- On 30 July 2021, at a meeting with MAC, Woodside provided further information and discussion about water quality monitoring sites – Woodside and MAC discussed the location and number of water quality sites for the monitoring program; protection of marine fauna; and how other matters raised by MAC will be addressed in DSDMP Revision 3.

Ensuring Sufficient Information and Reasonable Period

- On 31 August 2021, Woodside emailed MAC advising of the proposed activity (Appendix F, reference 1.17) and provided a Consultation Information Sheet.
- Woodside proposed an additional meeting with MAC in late November 2021 to discuss this EP. MAC was unable to facilitate a meeting within the requested timeframe.
- On 5 October 2021, at MAC’s request, Woodside provided a condensed presentation on seabed intervention techniques to MAC’s submerged heritage consultant. No feedback was received on proposed activity during presentation.
- On 11 November 2021 –MAC provided Woodside a presentation/position about intangible heritage values. This report included a summary of the cultural and spiritual values of the marine environment to be considered in the DSDMP.
- On 15 December 2021 -Woodside met with MAC Board and Circle of Elders to provide a project overview.
- **(3)** On 9 January 2022 Woodside sent a letter to MAC clarifying roles, composition, funding and milestones around the Heritage Management Committee.
- **(1 & 2)** On 2 February 2022, Woodside proposed to MAC the establishment of a Heritage Management Committee (HMC) whose role would be to consider the necessary mitigation measures required to address any new heritage information arising following certain milestones related to the Scarborough Project and advise Woodside where any additional mitigation measures are recommended and of any other actions MAC or Woodside should consider.
- Woodside met with MAC representatives on 10 February 2022:
 - The history of Woodside and MAC engagement regarding Scarborough project and the proposed activity was discussed.
 - Woodside presented a pack summarising the project and the proposed activity.
 - Detailed information regarding seabed intervention and pipeline construction was provided.
 - A summary of cultural heritage management was provided, including potential impacts and proposed controls.
 - It was agreed that Woodside would provide proposed EP wording to MAC.
 - On 10 February 2022, Woodside met with MAC to discuss Scarborough trunkline construction activities and the links to associated approvals including the State, and Commonwealth Environment Plans and the DSDMP and CHMP.
 - A presentation pack prepared for the MAC Circle of Elders detailing Scarborough Project trunkline construction activities and associated environmental and cultural heritage management measures was reviewed.
 - Several actions were agreed to assist in finalising the Environment Plans, DSDMP and associated CoE presentation pack.
- On 25 February 2022 an all-day meeting was held between MAC and Woodside on heritage management and on 28 February 2022 an email of action items from meeting held on 25 February was sent to MAC.

- Woodside met with MAC representatives on 25 March 2022:
 - Opportunities for MAC commercial participation in the activity were discussed, including for MAC Marine Fauna Observers
 - Further discussion of activities outside the scope of the EP was held.
- On 30 March 2022, Woodside emailed MAC to confirm MAC's three areas of concern regarding the activities of this EP in Commonwealth waters, as follows:
 - Indirect impacts as a result of the broader Scarborough Project (i.e., potential impacts to Murujuga from onshore emissions associated with processing Scarborough gas).
 - Uncertainty over the results of further ethnographic surveys
 - Cultural heritage management approach of the project, particularly regarding submerged heritage
- On 1 April 2022, MAC emailed Woodside thanking for the email on 30 March 2022 and committing to responding in the next week.
- On 6 April 2022, Woodside emailed MAC requesting a response so that it could begin actioning.
- On 6 April 2022, MAC sent an email confirming that this reflected the three major outstanding issues at a high level, but requesting greater clarity on how this EP would be updated to reflect MAC's concerns. The email also queried whether Woodside had contracted an underwater archaeologist and proposed an action list for the Senior Corporate Affairs Adviser - Heritage.
- On 6 April 2022, Woodside emailed MAC to propose that the following wording be incorporated into this EP and asked for confirmation that these points captured the matters of concern to MAC.
 - The purpose of the Petroleum Activities program is to install the Scarborough trunkline over a route of about 400km, in Commonwealth waters. The Scarborough SITI EP assesses both direct and indirect impacts and risks associated with the proposed Petroleum Activities Program, having regard to the nature and scale of the proposed Petroleum Activities Program. The extraction of Scarborough gas for onshore processing is not included in the Petroleum Activities Program for this EP. Therefore, indirect impacts and risks arising from the onshore processing of Scarborough gas are not considered indirect impacts/risks of this Petroleum Activities Program but will be evaluated in future Scarborough EPs as appropriate.
 - The completed ethnographic surveys, which align with industry practice, have not identified any heritage risks. Woodside remains committed to the further ethnographic surveys planned for the Scarborough project which go beyond industry standards and is ready to progress these at MAC's earliest availability. The results of these surveys will be addressed through the Heritage Management Committee proposed below.
 - Woodside has accepted MAC's recommendation to supplement existing heritage works completed with a review of Side Scan Sonar data for the outer shelf area by an underwater archaeologist, expert advice on further works and the development of significance, impact, and mitigation assessments. New information arising from this work after relevant approvals are received will be presented to a Heritage Management Committee with representatives from MAC, Woodside, and relevant experts to formulate recommendations to the project.
- On 8 April 2022, Woodside called and emailed MAC to enquire whether MAC had any feedback on the proposed Environment Plan amendments.
- On 8 April 2022, MAC emailed stating that their position is that all feedback provided during the consultation process to date is expected to be incorporated.
- On 27 April 2022, Woodside presented to the MAC Board on the Scarborough projects. MAC Board raised concerns about the appropriateness of the Phase II ethnographic survey.
- On 29 April 2022, Woodside emailed MAC a copy of updates made to the EP as a result of recent consultation, including new Environmental Performance Outcomes, Standards and Measurement Criteria, and suggesting that additional feedback be directed to NOPSEMA.
- MAC wrote a letter to NOPSEMA, dated 9 May 2022, reiterating their concern that the EP does not account for indirect impacts as a result of the broader Scarborough Project (e.g., potential impacts to Murujuga from onshore emissions associated with processing Scarborough gas). NOPSEMA provided this letter to Woodside on 30 May 2022.
- In a follow up to the 27 April 2022 meeting, on 11 May 2022, Woodside provided a letter to MAC requesting advice as to whether the Phase II survey was still supported by MAC.

- **(3)** On 15 June 2022 Woodside held a meeting with MAC to discuss the scope, purpose, and composition of the Heritage Management Committee (HMC). MAC committed to providing feedback on the HMC in writing.
- On 28 June 2022 MAC provided a letter to Woodside reconfirming their commitment to carry out the Phase II survey.
- Woodside remains committed to supporting MAC to conduct the Phase II works at the earliest date convenient to MAC and their preferred consultant but will also respect any decision by MAC not to proceed.
- Woodside believes it has taken all reasonable steps to progress this work and is committed to support this additional ethnographic survey work to be undertaken, subject to MAC undertaking the works.
- Available bathymetric and other geophysical data is depicted in UWA 2021 and was provided to MAC on 18 May 2021 after the survey but prior to receiving McDonald and Phillips 2021. On 31 August 2021, Woodside sent an email to MAC advising of plans to submit this EP, that Consultation regarding this matter forms part of the consultation between Woodside and MAC agreed in the 2 June 2021 letter, and seeking feedback.
- **(2)** On 20 September 2022 Woodside sent an email to MAC seeking permission to share ethnographic survey results with NOPSEMA.
- On 28 September, Woodside phoned MAC as a follow up to seek permission to share ethnographic survey results with NOPSEMA.
- On 5 October 2022, Woodside emailed MAC seeking feedback on Heritage Management Committee.
- On 7 October 2022 MAC provided a response to the HMC proposed by Woodside on 2 February 2022, including a number of suggested changes:
 - That recommendations of the HMC need not be unanimous,
 - That the HMC include MAC staff in addition to MAC Board, executive and Circle of Elders,
 - Developments in regard to the World Heritage listing of the Murujuga Cultural Landscape not trigger any meeting of the HMC, and
 - Regarding the funding structure of the HMC.
- On 11 October 2022, Woodside emailed MAC seeking permission to share ethnographic survey results with NOPSEMA.
- On 18 October 2022, Woodside emails MAC seeking permission to share ethnographic survey results with NOPSEMA.
- On 3 November 2022, Woodside placed a phone call with MAC regarding the Scarborough Ethnographic Survey (McDonald and Phillips 2021).
- On 14 November 2022, MAC provided correspondence (marked private & confidential) in response to Woodside's phone call on 3 November 2022. The correspondence did not provide any new information relating to impacts and risks for the proposed activity.
- On 17 November 2022, Woodside provided a letter to MAC regarding the selection of the trunkline route.
- On 17 January 2023, at MAC's request Woodside re-provided a copy of Nutley 2022 to MAC along with Woodside's proposed responses to the results.
- **(3)** On 9 January 2023, Woodside responded to MAC's feedback on the HMC proposal, agreeing to most proposed changes and seeking clarity on some administrative matters.
- On 19 January 2023 Woodside re-provided a copy of all heritage reports for the Scarborough project to MAC. This has not been provided in Sensitive Information as it contains information which MAC has not authorised Woodside to share with NOPSEMA.
- On 20 January 2023, Woodside emailed MAC again formally advising of the proposed activity and provided a simplified Consultation Information Sheet (including a link to the detailed information sheet on Woodside's website) as well as a summary overview fact sheet (Appendix F reference 3.5). Woodside also outlined:
 - In preparation for this work, Woodside has undertaken an assessment to identify potential impacts and risks to the marine environment arising from both planned and unplanned activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).
 - Woodside is seeking to understand the nature of the interests that Murujuga Aboriginal Corporation (MAC) and its members may have in the 'Environment that May Be Affected' (EMBA) by this activity. The EMBA is the total area over which unplanned events could have environmental impacts, as set out in the Summary Information sheet that was attached.
 - Woodside advised that it understands that it will be attending the MAC board meeting on 24 January 2023 to discuss this and information relating to a separate Woodside activity.

- Woodside advised it would be pleased to speak with MAC members in addition to the MAC Board / office holders.
- **(5)** On 25 January 2023, Woodside presented to the MAC Board on the status of the proposed activity. The meeting included the following topics relating to the proposed activity and the broader Scarborough Project:
 - EMBA map explained and left with MAC for information.
 - Plain English fact sheets provided
 - MAC reiterated role of Board v Circle of Elders in consultation processes.
 - Local content outcomes continue to be a priority for MAC and its members.
- Woodside was scheduled to meet with MAC on 16 February, but due to last minute unavailability of the MAC consultant, the meeting was postponed until 20 February 2023. While awaiting the postponed meeting, Woodside proceeded to meet with MAC's CEO to discuss the project including the proposed activity. No feedback was received.
- **(2)** On 20 February 2023, Woodside presented to the MAC CEO and consultant to discuss the project including the proposed activity. The meeting focused on scope and results of an ethnographic survey conducted in 2020, in context of the proposed activity and the broader Scarborough Project.
- On 24 February 2023, Woodside sent a follow up email on a range of Woodside EPs, including the proposed activity and following on from the 20 February 2023 meeting (Appendix F, reference 5.47). Woodside noted it is seeking MAC's feedback as soon as possible on the proposed activity.
- On 7 March 2023, Woodside spoke with MAC to follow up on the material provided and sought meetings with the Board and Circle of Elders if required.
- On 30 March 2023, Woodside spoke with MAC and followed up on the material provided.
- On 3 April 2023, MAC emailed Woodside asking for a list of outstanding issues that Woodside would like to progress.
- On 5 April 2023, Woodside responded to MAC via email attaching a letter with a list of open topics, which included the request for feedback on the proposed activity. Woodside requested advice from MAC on:
 - How the activity could impact cultural values
 - If MAC proposes anything to be included in the EP prior to submission.
 - If MAC would like a meeting to discuss the activity
 - Whether MAC does not intend to provide advice prior to EP submission.
- On 12 April 2023, Woodside spoke with MAC regarding several topics including feedback on the proposed activity. MAC responded that their Board of Directors are meeting soon, and that Woodside can expect a forward plan on EP consultation.
- **(1)** On 22 June 2023, Woodside met with the MAC Board and Circle of Elders:
 - Woodside described the Environment Plan framework, referring to the offshore Petroleum and Greenhouse Gas Storage Act (Environment) Regulations. NOPSEMA's role as regulator and general contents of Environment Plans.
 - Woodside encouraged MAC to raise anything which they felt was missing in the information provided during the meeting.
 - Woodside displayed a map of activities open for feedback to be discussed in the meeting and provided a list of other upcoming activities which will be open for consultation in 2023.
 - Woodside provided an overview of the broader Scarborough Project.
 - Woodside provided an overview of each proposed Scarborough activity (including Seismic Survey, Drilling and Completions, Seabed Intervention and Trunkline installation and Subsea infrastructure installation) and a summary of both planned and unplanned impacts and associated controls. This included the use of the video to show the pipelay which was designed for public audience.
 - **(4)** MAC asked whether the installed infrastructure would be moved in a cyclone. Woodside confirmed that the infrastructure will be permanently moored in place.

- Woodside described planned and unplanned environmental risks and impacts in accordance with tables provided in the information sheets for the activity emphasising that unplanned risks are not expected to occur and are unlikely.
- The EMBA for each proposed Scarborough activity was displayed, and the individual worst-case loss of containment scenarios identified knowing that they are all diesel fuel releases which would only be caused by vessel collisions.
- On 18 July 2023, Woodside emailed MAC NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information. This email also reiterated Woodside's request that MAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- **(6)** On 21 July 2023, MAC emailed a letter to Woodside. The letter confirmed that MAC have no concerns at this time with regards to the SITI EP. MAC confirmed their desire for ongoing engagement and appreciated Woodside's commitment to this.
- On 26 July 2023, Woodside emailed MAC Woodside's planned Program of Ongoing Engagement with Traditional Custodians.
- On 2 August 2023, Woodside emailed MAC regarding the acceptance of a different Scarborough EP, asking for information in accordance with conditions of acceptance of the EP. It specifically asked whether MAC is aware of any people, who in accordance with Indigenous tradition, may have spiritual or cultural connections to the environment that may be affected by the activity that have not yet been afforded the opportunity to provide information. The email also contained links to information on NOPSEMA's publications on EP consultation and its purpose. It also made clear that any gender restricted, or culturally sensitive information would be managed carefully and appropriately. An offer of support to participate in consultation was made.
- On 7 August 2023, Woodside emailed MAC with the weekly update on this activity.
- On 9 August 2023, Woodside emailed MAC again seeking feedback and information relating to an accepted Scarborough EP, stating the conditions of acceptance:
 - if they were aware of any people, who in accordance with Indigenous tradition, may have spiritual and cultural connections to the environment that may be affected by the activity that have not yet been afforded the opportunity to provide information that may inform the management of the activity; and
 - if there was any information you wish to provide on cultural features and/or heritage values
 - the email gave the planned commencement of activity under that EP and stated that if no feedback had been received by COB on the day prior, it would be taken to mean no information was desired to be given prior to commencement.
 - the email also described the purpose of consultation.
- On 14 August 2023, Woodside emailed MAC with the weekly update on this activity.
- On 21 August 2023, Woodside emailed MAC with the weekly update on this activity.
- On 21 August 2023, Woodside emailed MAC seeking MAC's cultural clarifications about information in relation to Songlines, Elder status and whether cultural information about Murujuga can be held by individuals and not known to others.
- On 28 August 2023, Woodside emailed MAC with the weekly update on this activity.
- On 1 September 2023, MAC emailed a letter to Woodside noting the following:
 - In response to Woodside's email of 21 August, MAC consulted with women appointed to their Circle of Elders
 - MAC is comfortable that the women in the Circle of Elders are the right people to be consulted about these matters.
 - MAC notes that it would be extremely unusual for knowledge to be held by an individual without surrounding groups knowing about it.
 - The Circle of elders themselves represent the Ngarda-Ngarli; the collective term for the Traditional Custodians who look after Murujuga Country.
- On 11 September 2023, Woodside emailed MAC with the weekly update on this activity.
- On 15 September 2023, Woodside emailed MAC advising of the planned start date for the activity, and once again requesting if MAC is aware of any other people with whom Woodside should consult, if there is any information MAC wish to provide on cultural features and/or heritage values. The email requested that

information be distributed to members or individuals who may be interested. It requested this information prior to 28 September 2023, but reiterated that Woodside will take feedback after the commencement of the activity as part of ongoing consultation. The Summary Information Sheet for this activity was attached. No response was received to this email.

- On 19 September 2023, Woodside emailed MAC with the weekly update on this activity.
- On 4 October 2023, Woodside phoned MAC to discuss the cultural appropriateness of a proposed visit to Rosemary Island, requested by a self-identifying Traditional Custodian. Woodside was advised not to undertake the trip due to cultural safety concerns.
- On 4 October 2023, MAC emailed Woodside thanking them for the call and informing Woodside that it is MAC’s expectation that Woodside continues to request advice regarding cultural safety prior to such trips being undertaken.
- On 4 October 2023, Woodside emailed MAC thanking them for their advice, confirming the trip had been cancelled and that Woodside would continue to seek MAC’s advice on similar matters in future.

Ongoing Relationship Building

Woodside will continue to pursue an ongoing two-way relationship with MAC focused on future opportunities to work together.

Summary of Feedback, Objection or Claim	Woodside Energy’s Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>(1) MAC have provided significant valuable input into the management of known and potential cultural and heritage values in the broader Scarborough Project footprint. During face-to-face engagements related to this activity and others, MAC requested further information on topics related to this proposed activity which were responded to in correspondence and during the meetings:</p> <p>This EP does not account for indirect impacts as a result of the broader Scarborough Project (e.g., potential impacts to Murujuga from onshore emissions associated with processing Scarborough gas).</p>	<p>(1) Woodside responded to MAC’s request for further information during face-to-face engagement, and in writing, no further information was requested on these topics.</p> <p>The EP assesses both direct and indirect impacts and risks associated with the proposed Petroleum Activities Program, having regard to the nature and scale of the proposed Petroleum Activities Program. The extraction of Scarborough gas for onshore processing is not included in the Petroleum Activities Program for this EP. Therefore, indirect impacts and risks arising from the onshore processing of Scarborough gas are not considered indirect impacts/risks of this Petroleum Activities Program but will be evaluated in future Scarborough EPs as appropriate.</p> <p>(2) The completed ethnographic surveys, which align with industry practice, have not identified any heritage risks. Woodside remains committed to the further ethnographic surveys planned for the Scarborough project which go beyond industry standards and is ready to progress these at MAC’s earliest availability. The results of these surveys will be addressed through the Heritage Management Committee.</p>	<p>(1) Existing controls considered sufficient as described in Section 6. Woodside recognises that whales and other species of totemic importance need to be protected, including their populations and migration patterns (Section 4.9). As assessed in Section 6, Woodside considers that when the impacts and risks to marine species, including potential totemic species, have been reduced to ALARP and an acceptable level in offshore areas, the potential impacts and risks to cultural values associated with coastal Indigenous connection with, or traditional uses of marine species and associated ecosystems in nearshore coastal waters are also reduced to ALARP and an acceptable level.</p> <p>(2) & (3) Woodside and MAC have established the Heritage Management Committee (PS 16.7.1). Recommendations of the HMC will be implemented where they (independently or in conjunction with other actions) lower the risk of impacts to heritage to ALARP (PS 16.8.2). New heritage information, where applicable to this proposed activity, will be addressed as part of ongoing consultation (Table 7.15).</p> <p>(4) Not required (5) (5) Not required. (6) Not required</p>

<p>(2) Uncertainty over the results of further ethnographic surveys, as new heritage values identified may require further mitigations.</p> <p>(3) MAC's input has helped shape the structure and operation of the HMC described in 7.5 including their advice:</p> <ul style="list-style-type: none"> a. That recommendations of the HMC need not be unanimous, b. That the HMC include MAC staff in addition to MAC Board, executive and Circle of Elders, and c. That developments in regard to the World Heritage listing of the Murujuga Cultural Landscape does not trigger any meeting of the HMC. <p>(4) Queried whether the installed infrastructure would be moved in a cyclone.</p> <p>(5) MAC directed that consultation be undertaken with both the board and the Circle of Elders, which was implemented.</p> <p>(6) On 21 July 2023, MAC sent a letter to Woodside acknowledging the consultation on 22nd June and stating they had no concerns with this EP at this time.</p>	<p>(3) Woodside has agreed to the matters advised by MAC regarding the HMC with regards to the requirement for unanimous recommendations, membership of the HMC and the appropriate triggers for HMC meetings.</p> <p>(4) Responded within the meeting.</p> <p>(5) Woodside continues to engage with MAC on the Scarborough project generally and has committed to ongoing consultation (post regulation 11A consultation) with MAC Board and Elders.</p> <p>(6) MAC is supportive of this EP submission.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15).</p>	
---	--	--

Wirrawandi Aboriginal Corporation (WAC)

WAC is established under the Native Title Act 1993 by the Mardudhunera and Yaburara people to represent the Mardudhunera and Yaburara people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside has discharged its obligations for consultation under Regulation 11A(1) and consultation with WAC for the purpose of 11A(1) is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

- Sufficient Information:
 - Woodside Sought direction on WAC's preferred method of consultation. This resulted in two face-to-face meetings being coordinated at the location of WAC's choosing, with WAC nominated representatives. These meetings included Woodside presenting information in a format and style that was readily accessible and appropriate. Provided Consultation Information Sheets and Consultation Summary Sheets developed by Indigenous staff to WAC. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format
- Articulated planned and unplanned environmental risks and impacts, with proposed controls.
- Set out in detail what was being sought through consultation.
- Asked for the consultation and information sheets to be distributed to members and individuals.
- Woodside has provided NOPSEMA's Brochure "Consultation on offshore petroleum environment plans" and Guideline "Guideline: Consultation in the course of preparing an environment plan Provided response to questions asked about the activity through consultation. Through these questions, WAC have displayed an understanding of the activities under this Environment Plan as well as the broader Scarborough Project.
- Advised that WAC could request the particular information provided in the consultation not be published (to align with 11A(2)(4))

Reasonable Period:

- Woodside published advertisements in national, state, and relevant local newspapers including The Australian, The West Australian, Pilbara News (October 2022 and January 2023), Midwest Times, Northwest Telegraph and Geraldton Guardian (January 2023) advising of the proposed activities and requesting comments or feedback.
- Consultation information provided to WAC on 20 January 2023 based on their function, interest, and activities.
- Woodside has addressed and responded to WAC over 9 months, demonstrating a "reasonable period" of consultation.

Woodside asked WAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside has provided a reasonable opportunity for input since January 2023 and a genuine two-way dialogue has occurred via meetings and written exchanges to further understand the environment in which the activity will take place. WAC has engaged with the detail of the activity asking related questions. The details of these engagements are described in the consultation summary below.

Woodside engages in ongoing consultation, beyond that required by Regulation 11A, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15 of the EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on WAC's functions, interests or activities.

Summary of information provided and record of consultation:

Historical Relationship

- On 1 May 2019, cultural authorities nominated by WAC attended an ethnographic survey in conjunction with other Ngarla Ngarli People (the traditional custodians of Murujuga, comprising the Ngarluma, Mardudhunera, Wong-Goo-Tt-Oo, Yaburara and Yindjibarndi people) and both male and female heritage consultants consistent with industry standard practice:
 - While this survey was conducted nominally for the Scarborough project's development footprint, a landscape-scale approach was undertaken particularly given the limited knowledge of the submerged landscape. This survey found no ethnographic values within the Operational Area or EMBA.
 - Participants contributed to the findings and recommendations of Mott 2019 which included:
 - Onshore heritage sites were identified, beyond the Operational Area and EMBA of this EP.
 - No known sites or values were identified beyond the low water mark, but the potential for cultural values to exist was identified as requiring further research.
 - Recommendation to keep Traditional Custodians informed including through existing quarterly meetings (see below).
 - Recommendation to engage with researchers on options to identify submerged heritage.
 - Recommendation for cultural awareness training for contractors.
 - Recommendations for the management of onshore heritage sites beyond the Operational Area and EMBA of this EP.
 - Following the recommendations of Mott 2019, Woodside conducted further work to identify submerged heritage values (refer to Section 4.9.1), kept WAC informed of the progress of the Scarborough project through quarterly meetings (see below), and where appropriate ensured employees and contractors had completed cultural awareness training through MAC.
 - Woodside also took steps in consultation with WAC to appropriately manage onshore heritage sites beyond the Operational Area and EMBA of this EP.

Ensuring Sufficient Information and Reasonable Period

- On 20 January 2023, Woodside emailed WAC advising of the proposed activity (Appendix F, reference 3.8) and provided a simplified Consultation Information Sheet (including a link to the detailed information sheet on Woodside's website) as well as a summary overview fact sheet. The email requested information on the interests that WAC and its members may have within the EMBA, information on how WAC would like to engage, and requested that WAC provide information to members as required.
- On 27 January 2023 Woodside placed a phone call and emailed WAC to follow up on the information provided and information sought.
 - Woodside noted the upcoming opportunity to meet with WAC on 21 February while it was in Karratha and would send a proposed time to meet to discuss the information Woodside has provided on several Woodside activities and EMBA's including this proposed activity.
 - Woodside requested it would like to gain an understanding on the best way to progress if WAC Board wished to have further discussions in relation to this information and also on how they preferred Woodside to engage for any future information shares.
- On 21 February 2023, Woodside spoke with WAC to discuss the proposed activity and plan a consultation meeting.
- On 24 February 2023, Woodside sent a follow up email on a range of Woodside EPs, including the proposed activity following on from the 21 February 2023 meeting (Appendix F, reference 5.44). Woodside noted it is seeking WAC's feedback as soon as possible on the proposed activity. Woodside also requested confirmation of the opportunity to meet with the WAC Board when they are next due to meet in Perth in March.
- On 24 February 2023, WAC emailed Woodside:
 - WAC acknowledged receiving the EP information and that a meeting had been proposed for the Elders and Directors in March 2023, but that the meeting was still yet to be finalised.
 - Further details and associated costs will be discussed once the meeting has been confirmed, in discussion with Woodside.

- On 7 March 2023, WAC emailed Woodside to advise a draft agenda had been set and Woodside had been allotted Thursday 23 March 2023 for presentation.
- On 7 March 2023, Woodside emailed WAC welcoming the opportunity and advised it was looking forward to receiving further information in relation to timing and location.
- On 8 March 2023, WAC agreed by phone to meet with Woodside and a full meeting of the Board and Elders on 23 March 2023 in Perth
- On 9 March 2023, Robe River Kuruma Aboriginal Corporation (RRKAC) emailed Woodside (and copied in CEO of WAC) advising that it has discussed the proposed activity with the Robe River Kuruma Heritage Advisory Committee and they had recommended that the interests of Robe River Kuruma people are best served through the joint Heritage Advisory Committee that is required under Yaburara Mardudhunera and Kuruma Marthudunera Indigenous Land Use Agreement. RRKAC also suggested that WAC is required to facilitate this Committee and noted there is an emerging need to deal with other proponent matters, so there is an opportunity to link the engagement from a meeting efficiency perspective. Since the separate meeting with WAC had already been arranged, Woodside decided to proceed with both meetings.
- On 15 March 2023, Woodside emailed WAC to follow up on details relating to the meeting of the WAC Board and Elders on 23 March 2023 in Perth.
- On 15 March 2023, WAC emailed Woodside:
 - WAC advised that the 23 March 2023 meeting has been scheduled and arranged.
 - WAC advised that as discussed previously the intention was to present to WAC Directors and Elders on information which requires WAC feedback.
- On 16 March 2023, WAC emailed Woodside confirming room booking for meeting and requested confirmation of attendees.
- On 17 March 2023, Woodside emailed WAC advising there would be relevant representation at the meeting to provide EP information as requested and that the broader community activity for awareness would be covered.
- **(1 & 2)** On 23 March 2023, Woodside presented to a meeting of the WAC Board and Elders in Perth, Woodside:
 - Described the Environment Plan framework, referring to the Offshore Petroleum and Greenhouse Gas Storage Act (Environment) Regulations, NOPSEMA's role as regulator and general contents of Environment Plans.
 - Encouraged WAC to raise anything which they felt was missing in the information provided during the meeting, or any issues or concerns
 - Displayed a map of activities open for feedback to be discussed in the meeting and provided a list of other upcoming activities which will be open for consultation in 2023.
 - Provided an overview of the broader Scarborough Project and overview of activities.
 - Woodside provided an overview of each proposed Scarborough activity (including Seismic Survey, Drilling and Completions, Seabed Intervention and Trunkline Installation and Subsea Infrastructure Installation) and a summary of both planned and unplanned impacts and associated controls. This included the use of a video to show the pipelay which was designed for public audience.
 - Described the proposed activity, noting trunkline location, size, depth, and length.
 - Described the types of vessels involved.
 - Described planned and unplanned environmental risks and impacts in accordance with tables provided in the Information Sheets for the activities, emphasising that unplanned risks are not expected to occur and are unlikely.
 - Displayed and spoke to the EMBA for each proposed Scarborough activity, and the individual worst-case loss of containment scenarios identified, noting that they are all diesel fuel releases which would only be caused by vessel collisions.
 - Stated that Woodside wanted to understand how the functions, activities or interests of WAC and the people it represents may be impacted by any of those activities.
 - Specifically asked the following:
 - How could these activities impact your cultural values, interests, and activities - does protecting the environment do enough to protect your cultural values?
 - What are your concerns about the proposed activities and what do you think we should do about them?

- Is there anything you would like included in the EPs before submission?
 - Is there anyone else Woodside should consult with about the activities?
- Advised that Woodside will continue to take feedback from WAC for the life of the EP.
- Provided personal contact details for further feedback. Woodside provided NOPSEMA contact details, should WAC desire to provide feedback directly to the regulator.
- At the 23 March meeting:
 - **(1)** WAC asked for clarification that the proposed trunkline will be placed adjacent to the existing Pluto trunkline and bring gas to the Pluto gas plant, Woodside confirmed this.
 - **(1)** WAC asked what kinds of incidents could occur during the proposed activity, Woodside responded that major incidents could be a diesel spill.
 - **(1)** WAC asked where underwater heritage has been found, Woodside referred to a map to show where the known sites are relative to the trunkline route.
 - **(1)** WAC asked how the EMBA influences consultation, Woodside responded that the EMBA has always been understood but it is now being used to identify people who may have an interest in the activity.
 - **(1)** WAC asked whether activities cease during whale migration, Woodside responded they don't stop but use controls like pausing if there is whale activity within the area.
 - WAC asked about potential noise impact on whale communication. Woodside responded that controls have been put in place to try to avoid it.
 - **(1)** WAC asked whether a diesel spill would only be on the surface, Woodside responded that there will be a slick, but the diesel would go into the water column.
 - **(1)** WAC asked how long diesel stays in the environment, Woodside responded that the majority disappear within two days.
 - **(1)** WAC asked how quickly the response to a spill is, Woodside responded that they would already be on location.
 - **(1)** WAC asked whether the turtle monitoring program is still in place, Woodside responded that it is.
 - Woodside noted this concluded the Scarborough section of the meeting and called for any further questions or feedback None were received.
 - WAC stated that this kind of information sharing is important, and that Woodside's time is appreciated. WAC asked whether this type of information is broadly available to the community, Woodside responded that there are several open community sessions available in the region where it could be discussed [referring to ongoing quarterly heritage update meetings to which WAC are invited].
 - WAC indicated that since they are engaging with several energy industry operators, they would consider the information provided and discuss internally before any further response.
 - Woodside provided contact details for further feedback
 - Woodside provided NOPSEMA contact details, should WAC desire to provide feedback directly to the regulator
- On 3 May 2023, Woodside emailed a letter to WAC regarding the meeting with the joint Robe River Kuruma and Wirrawandi Joint Heritage Advisory Committee (HAC) on 31 March (see March 31, 2023, meeting in Robe River Kuruma relevant person table entry) (Appendix F, reference 5.54).
- On 3 May 2023, Woodside emailed a letter to WAC regarding the meeting with WAC Directors and Elders on 23 March (Appendix F, reference 5.53):
 - Woodside thanked WAC for the meeting and their careful consideration of the matters.
 - Woodside acknowledged that WAC has interests in the EMBA and noted that we want to ensure impacts are as minimal as reasonably practicable.
 - A high-level overview of presented topics was provided.
 - Woodside provided responses to questions noted from the meeting, none of which were related to the proposed activity.
 - Woodside notified that the feedback and the letter will be included in Environment Plans that will be submitted to NOPSEMA.
- On 18 July 2023, Woodside emailed WAC NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information. This email also reiterated Woodside's request that WAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.

- On 26 July 2023, Woodside emailed WAC Woodside's planned Program of Ongoing Engagement with Traditional Custodians.
- On 2 August 2023, Woodside emailed WAC regarding the acceptance of a different Scarborough EP, asking for information in accordance with conditions of acceptance of the EP. It specifically asked whether WAC is aware of any people, who in accordance with Indigenous tradition, may have spiritual or cultural connections to the environment that may be affected by the activity that have not yet been afforded the opportunity to provide information. The email also contained links to information on NOPSEMA's publications on EP consultation and its purpose. It also made clear that any gender restricted, or culturally sensitive information would be managed carefully and appropriately. An offer of support to participate in consultation was made.
- On 3 August 2023, WAC emailed Woodside requesting a map of relevant Commonwealth and State EMBA's.
- On 9 August 2023, Woodside emailed WAC again seeking feedback and information relating to the accepted Scarborough EP, stating the conditions of acceptance:
 - If they were aware of any people, who in accordance with Indigenous tradition, may have spiritual and cultural connections to the environment that may be affected by the activity that had not yet been afforded the opportunity to provide information that may inform the management of the activity; and
 - If there was any information they wished to provide on cultural features and/or heritage values.

The email gave the planned commencement of activity under that EP and stated that if no feedback had been received by COB on the day prior, it would be taken to mean no information was desired to be given prior to commencement. The email described the purpose of consultation.
- On 10 August 2023, Woodside emailed WAC providing a list (as requested by WAC) of current and pending EP's.
- On 10 August 2023, WAC emailed Woodside with thanks for the information and with a general query about EMBA's.
- On 15 August 2023, Woodside emailed WAC providing an explanation of the query in relation to EMBA's and EMBA development.
- On 15 August 2023, WAC emailed Woodside with thanks for the clarification and noting they would provide a formal response shortly.
- **(3)** On 31 August 2023, WAC emailed a letter to Woodside proposing a framework agreement to provide a streamlined, formalised approach to consultation between WAC and Woodside.
- On 11 September 2023, WAC emailed Woodside with a copy of the letter of 31 August, and advising that WAC does not object to Woodside progressing environment plans for the activities outlined on the proviso that Woodside and WAC enter into a framework agreement to provide for ongoing meaningful consultation with WAC and YM members in relation to activities the subject of EPs, as outlined in the attached letter on terms suitable to both parties within a reasonable period (nominally within the next 2-3 months).
- **(3)** On 12 September 2023, Woodside emailed WAC confirming receipt of the email of 11 September.
- On 18 September 2023, Woodside emailed WAC acknowledging the previous email, advising of the planned start date for the activity, and once again requesting if WAC is aware of any other people with whom Woodside should consult, and if there is any information WAC wish to provide on cultural values. The email requested that information be distributed to members or individuals who may be interested. It requested this information prior to 28 September 2023, but reiterated that Woodside will take feedback after the commencement of the activity as part of ongoing consultation. The Summary Information Sheet for this activity was attached (Appendix F, reference 5.58). No response was received to this email.

Quarterly Heritage Meetings:

- Woodside convenes a quarterly meeting of Traditional Custodian representatives from the Representative Aboriginal Corporations involved in historical native title claims over the Burrup Peninsula, including WAC. Individual attendees are nominated by their representative Aboriginal Corporations. These meetings are summarised separately in this table.
- Copies of slides are made available to representative Aboriginal Corporations for the general awareness of members who were not able to attend individual meetings.

Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>(1) During face-to-face engagements related to this activity and others, the WAC requested further information on topics related to this proposed activity which was responded to during the meeting:</p> <ul style="list-style-type: none"> • Emergency preparedness • The relevance of the EMBA to consultation • Whether activities stop during whale migration. • Potential impact of noise on whale communication. • Whether a diesel spill would only be on the surface. • How long diesel stays in the environment. • What happens if something is dropped into the ocean. • How soon is a spill responded to. • Whether the turtle monitoring program is still in place. • How the EMBA influences consultation. <p>(2) WAC expressed a general interest in whales and turtles. Woodside discussed controls protecting whales from an ecological perspective during meetings in which they were raised, no further feedback or comment was received on these topics.</p>	<p>(1) Woodside responded to WAC's requests for further information during face-to-face engagements, and no further information was requested on these topics.</p> <p>(2) Woodside noted WAC's interest in whales and turtles</p> <p>(3) Separate from consultation under Reg 11A, Woodside will establish a framework agreement with WAC. The agreement would be used to frame ongoing consultation. Sufficient information to allow informed assessment has already been provided by other means, including summary sheets developed by Indigenous staff, a face-to-face meeting with appropriate material (pictures, maps, video) and project attendance allowing opportunity to ask questions and seek further understanding.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15).</p>	<p>(1) Existing controls considered sufficient, as described in Section 6.</p> <p>(2) Woodside updated Section 4.9 to record WAC's interests and potential cultural values and assessed potential impact on these, including controls, in section 6.10.</p> <p>(3) Woodside is implementing a program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on environment plans referenced as PS 16.2.1 in this EP. This includes continued engagement regarding WAC's proposed Framework Agreement which will be applied to ongoing consultation. This is described further in the Program of Ongoing Engagement with Traditional Custodians, Appendix L.</p>

<p>(3) WAC expressed that it does not object to Woodside progressing Scarborough Project EPs (including this activity) on the proviso that Woodside and WAC enter into a framework agreement to provide for ongoing meaningful consultation a desire for ongoing engagement and partnership through a Framework Agreement.</p>		
--	--	--

Yinggarda Aboriginal Corporation (YAC)

YAC is established under the Native Title Act 1993 by the Yinggarda people to represent the Yinggarda people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside has discharged its obligations for consultation under Regulation 11A(1) and consultation with YAC for the purpose of 11A(1) is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information:

- Woodside Sought direction on YAC's preferred method of consultation. This resulted in face-to-face meetings being coordinated at the location of YAC's choosing, with YAC nominated representatives. These meetings included Woodside presenting information in a format and style that was readily accessible and appropriate.
- Provided Consultation Information Sheets and Consultation Summary Sheets developed by Indigenous staff to YAC. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format
- Articulated planned and unplanned environmental risks and impacts, with proposed controls.
- Set out in detail what was being sought through consultation.
- Asked for the consultation and information sheets to be distributed to members and individuals.
- Woodside has provided NOPSEMA's Brochure "Consultation on offshore petroleum environment plans" and Guideline "Guideline: Consultation in the course of preparing an environment plan Provided response to questions asked about the activity through consultation. Through these questions, YAC have displayed an understanding of the activities under this Environment Plan as well as the broader Scarborough Project.
- Advised that YAC could request the particular information provided in the consultation not be published (to align with 11A(2)(4))

Reasonable Period:

- Woodside published advertisements in national, state, and relevant local newspapers including The Australian, The West Australian, Pilbara News (October 2022 and January 2023), Midwest Times, Northwest Telegraph and Geraldton Guardian (January 2023) advising of the proposed activities and requesting comments or feedback.
- Consultation information provided to YAC on 20 January 2023 based on their function, interest, and activities.

- Woodside has addressed and responded to YAC over 9 months, demonstrating a “reasonable period” of consultation.

Woodside asked YAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside has provided a reasonable opportunity for input since February 2023 and a genuine two-way dialogue has occurred via meetings and written exchanges to further understand the environment in which the activity will take place. YAC has engaged with the detail of the activity asking related questions. The details of these engagements are described in the consultation summary below.

Woodside engages in ongoing consultation, beyond that required by Regulation 11A, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15 of the EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on YAC’s functions, interests or activities.

Summary of information provided and record of consultation:

YMAC is the Native Title Representative Body (NTRB) for the Yamatji and Pilbara region which includes YAC. NTRBs exist to provide assistance to native title claimants and holders in regard to their native title rights. No native title has been recognised over the Project Area, however YMAC is identified in the North-west Marine Parks Network Management Plan as the contact for identifying cultural values in nearby Australian Marine Parks.

- On 7 July 2022, Woodside met with YMAC to request advice on the appropriate cultural authorities for the Scarborough project area, including but not limited to the scope of this EP and nearby marine parks.
 - Woodside described the Scarborough Project and its footprint and gave an overview of indigenous parties consulted.
 - Woodside noted that YMAC was identified in the North-west Marine Parks Network Management Plan as the contact for identifying cultural values in nearby Australian Marine Parks. Woodside sought to understand if the cultural values of the nearby Gascoyne Marine Park may extend into the offshore Scarborough project areas.
 - Woodside requested advice on how best (in addition to work completed) to identify any cultural values in the Marine Parks and in the broader project footprint.
 - YMAC requested Woodside provide the relevant detailed information relating to the location and extent of the project.
 - YMAC directed Woodside that consultation related to Scarborough Project would be best directed to Murujuga Aboriginal Corporation and Ngarluma Aboriginal Corporation
 - YMAC did not direct Woodside to engage with YAC, however YAC was identified as a relevant person under methodology outlined in Section 5 and YMAC is listed as YAC’s preferred contact on the ORIC website and is therefore Woodside’s primary contact when engaging YAC.
- On 19 July 2022, YMAC responded to Woodside and stated the area Woodside has identified requires correspondence directed to Murujuga Aboriginal Corporation (MAC) and Ngarluma Aboriginal Corporation (NAC). No reference was made at that stage about consulting with YAC. YAC was identified through Woodside’s own methodology.
- On 10 January 2023, Woodside emailed YAC/YMAC requesting to consult with YAC about work being planned for the Scarborough project, including a link to the NOPSEMA guidelines and advising that woodside would be sending further information on the project.
- On 20 January 2023, Woodside emailed YAC via the representative body Yamatji Marlpa Aboriginal Corporation (YMAC) advising of the proposed activity (Appendix F, reference 3.1) and provided a simplified Consultation Information Sheet (including a link to the detailed information sheet on Woodside’s website) as well as a summary overview fact sheet. The email requested information on the interests that YAC and its members may have within the EMBA, information on how YAC would like to be consulted and to engage, and request that YAC provide information to members as required.
- On 22 January 2023, YAC/YMAC emailed Woodside to advise it will contact Woodside once the consultation material had been reviewed.

- On 6 February 2023, Woodside called YAC/YMAC to follow up. YAC/YMAC said they would send an email that day inviting Woodside to meet with the group.
- On 22 February 2023, Woodside sent a follow up email on a range of Woodside EPs, including the proposed activity and information sought. Woodside noted it is seeking YAC's feedback as soon as possible on the proposed activity. Woodside stated that it would be grateful to meet with YAC at the earliest convenience at location of YAC's preference, providing budget and resources.
- On 24 February 2023, Woodside followed up with YAC/YMAC via phone call. YAC/YMAC advised it will send an email on 24 February to discuss an invitation for Woodside to meet with YAC Board.
- On 17 March 2023, Woodside met with YAC's legal representatives to discuss consultation on the Scarborough Project, preferred method and locality of consultation meetings, and to note that they will assist groups with funding to hold meetings on an agreed basis.
- On 20 March 2023, Woodside emailed YMAC to follow up the discussed invitation for a face-to-face meeting with its Board of Directors and offered a phone discussion if YAC had any questions on the activities in the meantime.
- On 23 March 2023, YMAC responded and proposed a meeting on 3 May 2023 in Carnarvon or online and provided an estimated of its proposed costs. The invitation was accepted, and arrangements made for a pre-meeting with YMAC to coordinate details.
- On 23 March 2023, Woodside emailed YAC via YMAC to confirm a preference for a face-to-face meeting and request a budget proposal.
- On 24 March 2023, the YMAC lawyer emailed to arrange a pre-meet conversation on 30 April 2023.
- On 24 March 2023, Woodside emailed to confirm the pre-meet conversation.
- On 27 March 2023, the YMAC lawyer emailed Woodside to confirm meeting details.
- On 30 March 2023, the YMAC lawyer emailed to cancel the pre-meet conversation.
- On 18 April 2023, Woodside emailed YMAC/YAC following up with information offered at the meeting of 13 March 2023; management of emissions, organisations that may provide independent expertise and re-iterating they would like to meet with YAC.
- On 27 April 2023, Woodside emailed the YMAC lawyer to confirm timing and location for the face-to-face meeting on 3 May 2023, but the email bounced back requesting correspondence be forwarded to an alternate contact in YMAC.
- On 27 April 2023, Woodside forwarded the email seeking to confirm time and location for the planned meeting to the alternate contact in YMAC.
- On 27 April 2023, YMAC confirmed by email and phone call that they no longer represented Yinggarda Aboriginal Corporation and that the meeting on 3 May 2023 had been cancelled. They informed Woodside that Gumula Aboriginal Corporation is now representing YAC and YMAC is in the process of hand over, including correspondence with Woodside.
- On 27 April, Woodside acknowledged YMAC email re Gumula Aboriginal Corporation transition to new service provider.
- On 28 April 2023, Woodside attempted to call Gumula Aboriginal Corporation and left a voicemail to establish connection, no response was received.
- On 28 April, Woodside emailed Gumula Aboriginal Corporation to establish contact and inform them of the prior context. Woodside stated that it is still interested in meeting with the YAC board if they were interested, no response was received.
- On 8 May, Woodside phoned Gumula Aboriginal Corporation to follow up the email, explaining that it was seeking to consult Yinggarda on the proposed activity and noted that a planned meeting had been cancelled. Gumula Aboriginal Corporation indicated that the email address previously contacted was correct and indicated that it would call back. No return call was received.

- On 1 June 2023, Woodside emailed and phoned Gumala Aboriginal Corporation to speak with someone about consulting YAC on EPs. Reception said they would have a member of the governance team call back.
 - On 15 June 2023, Gumala Aboriginal Corporation emailed woodside proposing attendance at a YAC Board meeting on 6 July for one hour to discuss EPs.
 - On 19 June 2023, Woodside emailed Gumala Aboriginal Corporation accepting the invitation to attend the Board meeting, requesting a half day meeting with the board to allow YAC to ask questions and have time to consider information.
 - On 21 June 2023, Gumala Aboriginal Corporation emailed Woodside inviting attendance at a half day Board meeting to discuss other EP matters.
 - On 21 June 2023, Woodside emailed Gumala Aboriginal Corporation accepting the invite to attend the Board meeting of 5 July 2023 for a half day.
 - **(1)** On 5 July 2023, Woodside presented to the YAC about several EPs including this EP. At the meeting Woodside:
 - Described the Environment Plan framework, referring to the Offshore Petroleum and Greenhouse Gas Storage Act (Environment) Regulations, NOPSEMA's role as regulator and general contents of Environment Plans.
 - Displayed a map of activities open for feedback to be discussed in the meeting and provided a list of other upcoming activities which will be open for consultation in 2023.
 - Provided an overview of the broader Scarborough Project and overview of activities.
 - Woodside provided an overview of each proposed Scarborough activity (including Seismic Survey, Drilling and Completions, Seabed Intervention and Trunkline Installation and Subsea Infrastructure Installation) and a summary of both planned and unplanned impacts and associated controls. This included the use of a video to show the pipelay which was designed for public audience.
 - Described the proposed activity, noting trunkline location, size, depth, and length.
 - Described the types of vessels involved.
 - Described planned and unplanned environmental risks and impacts in accordance with tables provided in the Information Sheets for the activities, emphasising that unplanned risks are not expected to occur and are unlikely.
 - Displayed and spoke to the EMBA for each proposed Scarborough activity, and the individual worst-case loss of containment scenarios identified, noting that they are all diesel fuel releases which would only be caused by vessel collisions.
 - Stated that Woodside wanted to understand how the functions, activities or interests of YAC and the people it represents may be impacted by any of those activities.
 - Specifically asked the following:
 - How could these activities impact your cultural values, interests, and activities – does protecting the environment do enough to protect your cultural values?
 - What are your concerns about the proposed activities and what do you think we should do about them?
 - Is there anything you would like included in the EPs before submission?
 - Is there anyone else Woodside should consult with about the activities?
- Advised that Woodside will continue to take feedback from YAC for the life of the EP.
- Provided personal contact details for further feedback. Woodside provided NOPSEMA contact details, should YAC desire to provide feedback directly to the regulator.
- **(1)** At the 5 July meeting YAC made particular mention of the following:

- **(1)** YAC expressed sadness at the potential for environmental impact.
 - Response: Woodside explained that the potential impact from the unplanned activities is very low. For example, Woodside has been operating in the region for over 30 years and has not had a serious unplanned environmental event in that time. Importantly, if there is an unplanned event, the entire EMBA as shown on the maps will not be impacted. The area of the EMBA will be somewhere within the mapped area depending on factors such as wind, current and tide.
 - **(1,2)** YAC stated plants, animals and the environment are inexorably linked to their culture and asked: whether Woodside has undertaken environmental studies and whether these studies ongoing; and
 - what environmental monitoring happens after the EPs are approved.
 - Response: Woodside has undertaken numerous environmental studies that form part of the EPs and has an ongoing commitment to environmental studies and research, some of which are set out on Woodside's website.
 - Environmental monitoring is an ongoing activity, and the nature and timing of environmental monitoring depends on the nature, possible consequences, and likelihood of the environmental risks. Importantly, Woodside commits to ongoing consultation with YAC and will be able to take feedback if any new information in relation to risks comes to light.
 - **(1)** YAC suggested that ranger programs could assist with environmental management and monitoring, and that YAC would likely write to Woodside about this suggestion and generally to discuss how YAC can be involved with / benefit from Woodside's activities.
 - Response: Woodside looks forward to discussing these opportunities with YAC further as part of our ongoing engagement. Woodside commits to ongoing consultation about the EPs and to building the relationship with YAC.
 - **(2)** YAC expressed concern about potential impacts to potential impact patterns of whales, and potential collisions. Woodside responded by explaining controls which would be in place to minimise impacts and risks to whales, and no further information was requested.
 - **(2)** YAC expressed that seagrass, mullet and Dugong in Shark Bay are important resources. Woodside explained that the only potential impact to Shark Bay is via a highly unlikely hydrocarbon spill and the controls in place
- On 17 July, Woodside emailed YAC a letter summarising the 5 July meeting.
 - On 19 July 2023, Woodside emailed YAC NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information. This email also reiterated Woodside's request that YAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
 - On 19 July 2023, YAC emailed Woodside acknowledging receipt of Woodside's email of 19 July.
 - On 26 July 2023, Woodside emailed YAC Woodside's planned Program of Ongoing Engagement with Traditional Custodians.
 - On 2 August 2023, YAC lawyer emailed Woodside to indicate that they had been placed on a retainer by YAC to advise on NOPSEMA matters.
 - On 3 August 2023, Woodside emailed YAC regarding the acceptance of a different Scarborough EP, asking for information in accordance with conditions of acceptance of the EP. It specifically asked whether YAC is aware of any people, who in accordance with Indigenous tradition, may have spiritual or cultural connections to the environment that may be affected by the activity that have not yet been afforded the opportunity to provide information. The email also contained links to information on NOPSEMA's publications on EP consultation and its purpose. It also made clear that any gender restricted, or culturally sensitive information would be managed carefully and appropriately. An offer of support to participate in consultation was made.
 - On 4 August, YAC emailed Woodside noting that:
 - YAC was willing to formally engage with Woodside on future NOPSEMA consultation.
 - **(3)** Woodside was invited to submit a consultation agreement for YAC's consideration and invited to lay out desired content within the agreement.
 - Resourcing was required by Woodside to facilitate the consultation.
 - On 9 August 2023, Woodside emailed YAC again seeking feedback and information relating to the accepted Scarborough EP, stating the conditions of acceptance:

- if YAC was aware of any people, who in accordance with Indigenous tradition, may have spiritual and cultural connections to the environment that may be affected by the activity that have not yet been afforded the opportunity to provide information that may inform the management of the activity; and
- if there is any information YAC wish to provide on cultural features and/or heritage values
- The email noted the planned commencement of activity under that EP and stated that if no feedback had been received by COB on the day prior, it would be taken to mean no information was desired to be given prior to commencement. The email described the purpose of consultation.
- On 10 August 2023, YAC emailed Woodside, noting that:
 - Woodside had provided a considerable volume of videos, complex materials, and presentations to the YAC board since 1 July 2023, covering multiple proposed activities. The YAC board is seeking advice about different documents and considering cultural and spiritual impacts of proposed activities.
 - The YAC board had not yet concluded its investigations and provide feedback, and if Woodside has advanced plans with NOPSEMA it has different view of the role and capacity of TOs in the process as clarified by Santos v Tipakalippa.
 - Requesting appropriate resources and time for YAC board to allow them to form a considered view, as requested on 4 August.
 - YAC board intends to raise matters at a community meeting in Carnarvon in September, including Aboriginal community members who are not YAC members.
- On 11 August 2023, YAC emailed Woodside confirming formal resolution by the Board to retain their lawyer (Banks-Smith & Assoc (BSA)) to engage on NOPSEMA matters, providing a copy of the Board Resolution.
- On 11 August 2023, Woodside emailed YAC via their lawyer acknowledging the request for a draft consultation agreement, noting it would be attended to within a week or so and confirming the process for onboarding to receive payments.
- On 14 August 2023, YAC via their lawyer emailed Woodside stating that it looked forward to receiving the consultation agreement for consideration and agreeing arrangements for provision of resourcing.
- **(3)** On 13 September 2023, YAC via BSA responded to Woodside advising that in the absence of a draft consultation agreement they were unable to respond in substance to the matters raised.
- On 14 September 2023, Woodside emailed YAC via BSA advising of the planned start date for the activity, and once again requesting if YAC was aware of any other people with whom Woodside should consult, and if there was any information YAC wish to provide on cultural values. The email requested that information be distributed to members or individuals who may be interested. It requested this information prior to 28 September 2023, but reiterated that Woodside would take feedback after the commencement of the activity as part of ongoing consultation. The Summary Information Sheet for this activity was and reiterating that Woodside will take feedback after the commencement of the activity as part of ongoing consultation. The Summary Information Sheet for this activity was attached (Appendix F, reference 5.59). No response was received to this email.
- **(3)** On 14 September 2023, Woodside emailed YAC via BSA with a proposed consultation framework.
- **(3)** On 14 September 2023, YAC via BSA confirmed receipt of the consultation framework and advised they would seek direction from the YAC board.

Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
(1) During face-to-face engagements related to this activity and others YAC requested further information on topics related to	(1) Woodside responded to YAC's requests for further information during face-to-face engagements, and no further information was requested on these topics.	(1) Existing controls considered sufficient, as described in Section 6.

<p>this proposed activity which was responded to during the meeting:</p> <ul style="list-style-type: none"> - Whether Woodside has undertaken environmental studies and whether these studies are ongoing. <p>YAC also expressed the following:</p> <ul style="list-style-type: none"> - Sadness at the potential for environmental impact - Ranger programs could assist with environmental management and monitoring. - Expressed concern about potential impacts to potential impact patterns of whales, and potential collisions. <p>(2) YAC expressed a general interest in whales, and generally plants, animals and the environment. Woodside discussed controls protecting these aspects from an ecological perspective during meetings in which they were raised, no further feedback or comment was received on these topics</p> <p>(3) YAC desires a consultation agreement with Woodside, and stated that they are unable to respond substantially. Woodside has provided a draft Consultation Framework Agreement which includes suggested timeframes to settle the agreement and timeframes for ongoing consultation with the Board.</p>	<p>(2) Woodside noted YAC's interest in whales, and seagrass, dugongs and mullet in Shark Bay. Environmental sensitivities that YAC noted as having particular interest within Shark Bay are not predicted to be impacted by the worst-case credible scenario, as shown in Figure 4-14 and Table 6-17</p> <p>(3) Separate from consultation under Reg 11A, Woodside will establish a framework agreement with YAC. The agreement would be used to frame ongoing consultation. Woodside does not consider YAC's request for a consultation agreement as a pre-requisite for consultation under regulation 11A. Sufficient information to allow informed assessment has already been provided by other means, including summary sheets developed by Indigenous staff, a face-to-face meeting with appropriate material (pictures, maps, video) and project attendance allowing opportunity to ask questions and seek further understanding. YAC has already provided information on their interests, which Woodside has noted (see 2). Woodside has also provided a reasonable period and opportunity for consultation (9 months).</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15).</p>	<p>(2) Woodside updated Section 4.9 to record YAC's interests and potential cultural values and assessed potential impact on these, including controls, in section 6.10.</p> <p>(3) Woodside is implementing a program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on environment plans, referenced as PS 16.2.1 in this EP. This includes the proposed Framework Agreement which will be applied to ongoing consultation. This is described further in the Program of Ongoing Engagement with Traditional Custodians, Appendix L.</p>
--	--	--

Yindjibarndi Aboriginal Corporation

YAC is established under the Native Title Act 1993 by the Yindjibarndi people to represent the Yindjibarndi people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside has discharged its obligations for consultation under Regulation 11A(1) and consultation with Yindjibarndi for the purpose of 11A(1) is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

• Sufficient Information:

- Provided Consultation Information Sheet and Consultation Summary Sheets to developed by Indigenous staff Yindjibarndi. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format.
- Articulated planned and unplanned environmental risks and impacts, with proposed controls.
- Confirmed the purpose of consultation and set out in detail what was being sought through consultation.
- Suggested that information and request for feedback be distributed to members as required

Reasonable Period:

- Woodside published advertisements in national, state, and relevant local newspapers including The Australian, The West Australian, Pilbara News (October 2022 and January 2023), Midwest Times, Northwest Telegraph and Geraldton Guardian (January 2023) advising of the proposed activities and requesting comments or feedback.
- Consultation information provided to Yindjibarndi on 20 January 2023 based on their function, interest, and activities.
- Woodside has addressed and responded to Yindjibarndi over 9 months, demonstrating a “reasonable period” of consultation.

Woodside asked YAC it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside engages in ongoing consultation, beyond that required by Regulation 11A, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15 of the EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on Yindjibarndi functions, interests, or activities.

Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:

Summary of information provided and record of consultation:

- On 20 January 2023, Woodside emailed Yindjibarndi advising of the proposed activity (Appendix F, reference 3.4) and provided a simplified Consultation Information Sheet (including a link to the detailed information sheet on Woodside’s website) as well as a summary overview fact sheet. The email requested information on the interests that Yindjibarndi and its members may have within the EMBA, information on how Yindjibarndi would like to engage, and requested that Yindjibarndi provide information to members as required.
- On 24 February 2023, Woodside sent a follow up email on a range of Woodside EPs, including the proposed activity (Appendix F, reference 5.45) and information sought.

<ul style="list-style-type: none"> • (1) & (2) On 26 February 2023, Yindjibarndi emailed Woodside. Yindjibarndi advised that it will not be providing any comment on the proposed activity broader Scarborough Project and noted it respected the traditional owners whose land and sea lies adjacent to, and within the precinct of, the projects, and will leave any comment and advice to be provided by them. • On 28 February 2023, Woodside emailed Yindjibarndi to thank them and noted the response. • On 7 July 2023, Woodside called Yindjibarndi who reiterated that it would prefer that comments come from coastal Aboriginal Corporations and not themselves. • On 18 July 2023, Woodside emailed Yindjibarndi NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information. This email also reiterated Woodside's request that Yindjibarndi advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult. No response was received to this email. • On 26 July 2023, Woodside emailed Yindjibarndi Woodside's planned Program of Ongoing Engagement with Traditional Custodians. • (3) On 1 August 2023, Yindjibarndi emailed Woodside in response to the Program of Ongoing Engagement from Woodside and asking that Oil and Gas matters relating to Yindjibarndi be directed to NYFL 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>(1) Yindjibarndi has provided a response and advised that it will not be providing any comment on the proposed activity.</p> <p>(2) Yindjibarndi expressed that they would prefer that traditional owner groups with land and sea adjacent to and within the precinct of the projects provide comment.</p> <p>(3) Yindjibarndi has instructed Woodside that it will be represented by NYFL in ongoing discussion about EP's.</p>	<p>(1) Woodside accepts Yindjibarndi's response.</p> <p>(2) Woodside agrees and respects Yindjibarndi's position that traditional owners whose land and sea are adjacent to or within the precinct of the projects should be able to provide comment.</p> <p>(3) Woodside will engage with NYFL on behalf of Yindjibarndi for ongoing consultation related to this activity, separate from consultation under Reg 11A.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15).</p>	<p>(4) Not required. (5) Not required. (6) Future correspondence will be sent through NYFL.</p> <p>Woodside has implemented a program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on environment plans for the purpose of avoiding impacts to cultural heritage values, referenced as PS 16.2.1 in this EP.</p>

Buurabalayji Thalanyji Aboriginal Corporation (BTAC)

BTAC is established under the Native Title Act 1993 by the Thalanyji people to represent the Thalanyji people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside has consulted under Regulation 11A with BTAC by providing sufficient information, a reasonable period of time and opportunity for BTAC to make an informed assessment of the possible consequences of the activities on functions, interests or activities. Woodside has addressed each objection or claim made by BTAC. Woodside has included cultural values and controls relevant to Woodside's understanding of BTAC's functions, interests and activities in its environment plan and in response to topics raised during consultation by BTAC.

As demonstrated in the summary below and consultation record that follows, consultation with BTAC complies with Regulation 11A and is complete.

Summary

Sufficient Information:

- Woodside sought direction on BTAC's preferred method of consultation. This has not resulted in a face-to-face meeting with the Board, however, BTAC has exchanged multiple correspondence on the activity and telephone engagements with BTAC representatives. Woodside has offered to coordinate meetings at the location of BTAC's choosing, with BTAC nominated representatives. As sufficient information and a reasonable period have been provided (see below), any meetings would be considered as ongoing engagement post regulation 11A consultation.
- Provided Consultation Information Sheets and Consultation Summary Sheets developed by Indigenous staff to BTAC. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format.
- Confirmed the purpose of consultation and set out in detail what was being sought through consultation.
- Asked for the consultation and information sheets to be distributed to members and interested individuals.
- Woodside has provided NOPSEMA's Brochure "Consultation on offshore petroleum environment plans" and Guideline "Guideline: Consultation in the course of preparing an environment plan".
- Provided response to questions asked about the activity through consultation. Through these questions, BTAC have displayed an understanding of the activities under this Environment Plan as well as the broader Scarborough Project.

Reasonable Period:

- Woodside published advertisements in national, state, and relevant local newspapers including The Australian, The West Australian, Pilbara News (October 2022 and January 2023), Midwest Times, Northwest Telegraph and Geraldton Guardian (January 2023) advising of the proposed activities and requesting comments or feedback.
- Woodside commenced consultation with BTAC in January 2023. Woodside has since addressed and responded to BTAC queries over 9 months, demonstrating a "reasonable period" of consultation.

Woodside advised that BTAC could request the particular information provided in the consultation not be published (to align with 11A(2)(4))

Woodside asked BTAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside has provided a reasonable opportunity for input since January 2023 and a genuine two-way dialogue has occurred via discussions and written exchanges to further understand the environment in which the activity will take place. BTAC has engaged with the detail of the activity asking related questions. The details of these engagements are described in the consultation summary below.

Woodside engages in ongoing consultation, beyond that required by Regulation 11A, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15 of the EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on BTAC's functions, interests or activities.

Summary of information provided and record of consultation:

Historic Engagement

- Prior to sending out the Consultation Information Sheets, Woodside spoke to BTAC on January 4, 2023, to discuss the best way forward to consult with BTAC.
- On 10 January 2023, Woodside emailed BTAC stating it would be very grateful for the opportunity to meet with BTAC in the second half of February as discussed, or sooner if possible. Woodside also offered to cover the reasonable costs of consultations. Specifically, in relation to this EP, Woodside stated they would like to discuss:
 - BTAC's expectations for consultation - how can Woodside and BTAC best work together.
 - BTAC's aspirations and plans - how can Woodside support BTAC regarding potential employment and contracting opportunities.
 - Environmental planning consultations about Woodside's Scarborough Project with gas fields planned to be located offshore, approximately 380km northwest of Karratha.

In addition:

- Woodside advised it would like to and is required to consult with BTAC about the nature of any interests BTAC have in the "environment that may be affected" (EMBA) by this work, and any concerns BTAC may have about potential environmental impacts, so these concerns can be addressed through the environmental planning and approvals process.
- Woodside provided further information about government guidelines for these consultations and provided a link to <https://consultation.nopsema.gov.au/environment-division/consultation-guideline/>.
- Woodside advised it would reach out in the next week with consultation information sheets.
- Woodside stated in the 10 January 2023 email that it would like to arrange a meeting between senior Woodside staff and BTAC's Board if BTAC felt that was appropriate and it would await guidance from BTAC.

Ensuring Sufficient Information and Sufficient Time

- On 20 January 2023, Woodside emailed BTAC advising of the proposed activity (Appendix F, reference 2.12) and provided a simplified Consultation Information Sheet (including a link to the detailed information sheet on Woodside's website) as well as a summary overview fact sheet. The email requested information on the interests that BTAC and its members may have within the EMBA, information on how BTAC would like to engage, and requested that BTAC provide information to members.
- On 24 January 2023, BTAC emailed Woodside acknowledging it had received the information.
- On 27 January 2023, Woodside placed a phone call and as there was no answer, left a voice message and emailed BTAC to follow up on the information provided (Appendix F, reference 3.14).
- On 27 January 2023, BTAC emailed Woodside to acknowledge receipt of information and said they would be meeting within the week and would be in contact following their meeting.
- On 13 February 2023, BTAC representative called and spoke to Woodside asking what Woodside was proposing for next steps for consultation and whether Woodside would like to meet with the BTAC Board. The Council of Thalanyji Elders or present at a common law meeting. Woodside said they would be guided by BTAC, but suggested initially suggested the BTAC Board. Following a suggestion that the group may benefit from an anthropologist to articulate sea country values, Woodside

said they would look at those sorts of request on a case-by-case basis, Woodside also confirmed they are able to support consultation meetings. BTAC representative said he would discuss Woodside Eps with BTAC and aim to respond by 20 February 2023.

- On 20 February 2023, BTAC provided a letter to Woodside in relation to consultation on the broader Scarborough activities, including this proposed activity:
 - BTAC referred to the advertisements placed by Woodside regarding the proposed activity which sought feedback from persons or organisations who may hold interests in the EMBA by the activities.
 - **(1) (2)** BTAC confirmed that BTAC on behalf of Thalanyji people has interests and that the Thalanyji people have an enduring deep connection to sea country north of Onslow, extending out to islands off the Pilbara coast such as the Montebello islands, Barrow Island and the Mackerel Islands.
 - BTAC advised it was seeking the opportunity to engage with Woodside and NOPSEMA on the activity.
 - **(5)** BTAC advised it has not specifically developed values regarding Sea Country into a format that could be articulated for consultation and seeks support from Woodside to enable BTAC to define and articulate its values on Sea Country in a manner that could be more clearly understood by the offshore sector, government, and the community. This would enable BTAC and Woodside to collaborate to develop effective management plans that can provide adequate protection to sea country values.
 - **(3)** BTAC advised the information in the consultation fact sheets is very general. BTAC seeks support from Woodside to obtain technical support to review the information and provide BTAC and its members with feedback on the project risks to Sea Country and help BTAC contemplate the potential management controls that could be developed to protect its values and interests.
 - **(4)** BTAC requested that emergency response capability is developed and locally provided to be able to respond to potential activities/actions that may cause an impact in the EMBA. BTAC encouraged Woodside and industry to build capacity and capability in BTAC's ranger program so that it could participate in response planning and management activities.
 - **(6)** BTAC noted that ongoing consultation with BTAC will be imperative and likely continuous given recent changes to consultation requirements and this will continue to be a burden on the organisation. BTAC requested that Woodside enter a consultation or engagement framework to ensure BTAC can be properly resourced financially and intellectually to participate in the consultation and management planning processes for the activities.
- On 22 February 2023, Woodside emailed BTAC:
 - Woodside thanked BTAC for its 20 February 2023 correspondence regarding consultations about the Scarborough project.
 - Woodside advised it will respond to this correspondence in the coming days and would be most grateful for the opportunity to meet with BTAC to discuss the matters raised in its letter and Woodside's relationship more broadly.
- On 17 March 2023, Woodside emailed a letter to BTAC:
 - Woodside thanked BTAC for its feedback and it looks forward to working with BTAC.
 - Woodside advised it acknowledges and respects that BTAC on behalf of the Thalanyji People (Thalanyji) has interests in the EMBA by the Scarborough Activities and wants to ensure these values and interests are protected.
 - Woodside advised it also acknowledges that through BTAC's correspondence, BTAC has proposed several important risk mitigation and management measures.
 - Woodside agreed that the principles BTAC have outlined are important. To paraphrase, these principles are that:
 - Woodside and BTAC work in a structured way and on an ongoing basis to learn about, articulate and understand each other's values, aspirations, and work, particularly to ensure BTAC understands how Woodside's activities may impact on Thalanyji's values and interests.
 - **(2)** Arising from this consultation, Woodside and BTAC will continue to identify environmental risks and design and implement monitoring and management responses to these risks on an ongoing basis. This includes building on Woodside's knowledge base to understand Thalanyji's values and interests. Woodside understands this

work will also improve BTAC's capability and capacity to identify risks and address monitoring and management arrangements, including through BTAC's ranger program.

- BTAC has requested that Woodside provides BTAC with the resources that are necessary to undertake this work, including through the provision of information and Woodside personnel to provide briefings, and independent expert anthropological and environmental management advice to BTAC.
- **(3)** Woodside advised that in response to the provision of independent expert environmental management advice to BTAC, Woodside would be pleased to provide the resources necessary for BTAC to obtain and retain this advice on the basis that such advice is provided by an experienced and reputable oil and gas environmental management expert who is independent of Woodside, and who has the capacity to undertake this work to meet consultation schedules.
- Woodside suggested a range of organisations for BTAC's consideration who are not working for Woodside.
- **(4)** Woodside also advised it would also be pleased to support BTAC to acquire anthropological advice.
- Woodside advised that it respects that BTAC has assessed the likelihood of unplanned events and impacts as possible, Woodside has assessed the likelihood of a major unplanned hydrocarbon release event as highly unlikely. By way of example the Scarborough Activities EMBA's are premised on an unmitigated diesel spill arising from the collision of large vessels, the piercing of fuel tank(s) from that collision causing all the fuel tank to leak out, and no control measures being enacted. Woodside has been operating for over 35 years and has never caused an unplanned event like this; however, Woodside must plan for and consult about such events.
- Woodside advised that Woodside's target is to ship the first cargo of LNG from the Scarborough project in 2026, and to enable that:
 - Drilling and completions work is planned to occur anytime within a five-year window commencing in the second half of 2023, pending approvals.
 - Seabed installation and trunkline installation activities in Commonwealth waters are expected to commence in around late 2023, pending approvals.
 - Subsea infrastructure installation activities are planned to commence in the second half of 2023, pending approvals, with activities occurring in multiple campaigns and estimated to be completed within about 18 months.
 - Seismic activities are planned to start in the first half of 2023, pending approvals, and will take place over a period of between 55 and 70 days.
 - Links to relevant consultation information sheets to the above activities were also provided to BTAC for the second time (first sent on 23 January).
- Woodside noted that considering the above schedule, there is time for BTAC and Woodside to work together in the short, medium, and longer term to identify, develop and refine management responses to environmental risk.
- Woodside advised that with reference to the timeframes as described above, environmental protection and management associated with these activities is subject to an adaptive management approach. This means that consultation between Woodside and BTAC about environmental risk and management responses is ongoing, and changes can be made to improve environmental protection and management practices over time, including in the associated Environment Plans (EPs). Woodside proposed the following next steps:
 - Woodside will formalise the matters outlined in its correspondence between Woodside and BTAC by including in each of the Environment Plans statements along the following lines:
 - BTAC for and on behalf of Thalanyji has interests and values in the EMBAs and is concerned about the possible impact on these interests and values, including to Sea Country, arising from Woodside's proposed activities.
 - BTAC, with support from Woodside and through the provision of independent expertise, will on an ongoing basis:
 - (5)** convey to Woodside the nature of Thalanyji's interests and values, noting that BTAC would like to conduct work to articulate those values in a manner that Woodside understands.
- provide information to Woodside about how those interests and values intersect with the EMBAs and how that should be managed.

- **(4)** Woodside will engage in ongoing consultation with BTAC for the purposes of ongoing monitoring, management and emergency response associated with environmental risk.
- Woodside and BTAC will work under an adaptive management approach as the understanding of each other's values and interests, activities, needs and aspirations grow during the course of ongoing consultation. This means that Woodside's Environment Plans may be updated from time to time so they accurately reflect environmental risk as they relate to BTAC's interests and values, and the management measures that Woodside and BTAC will put in place to avoid and otherwise mitigate and manage environmental risk.
- BTAC can at any time can make direct representations to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) about the nature of BTAC's interests and how they may be affected by Woodside's activities.
- Woodside proposed if BTAC considers it appropriate, that the principles discussed in its correspondence (this 17 March 2023 letter and BTAC's correspondence of 20 February 2023) apply to the various decommissioning and drilling EPs that Woodside has notified BTAC about. This will ensure these arrangements are formalised into regulatory processes and documentation. As per Woodside's ongoing consultation approach, feedback continues to be assessed through the life of the EPs.
- Woodside advised BTAC that its letter of 20 February 2023 and this response will be included in the EP. Woodside requested that if their feedback is sensitive, please inform Woodside, and it will make this known to NOPSEMA upon submission of the Environment Plans to ensure this information remains confidential to NOPSEMA.
- On 30 March 2023, Woodside spoke with BTAC to follow up on correspondence described above. BTAC indicated that they desire a consultation agreement and intend to provide correspondence accordingly.
- **(1) (2)** On 17 April 2023, Woodside spoke with BTAC by telephone. The BTAC representative stated that they were aware that there were archaeological sites identified on nearshore islands and a cultural obligation to care for the environmental values of sea country. The BTAC representative stated there was in principle agreement to submission of current EPs while continuing to negotiate the collaboration agreement for support for rangers and support for recording of cultural values.
- **On 18 April 2023, BTAC emailed a response regarding Woodside's Scarborough activities:**
 - BTAC agreed that subject to formalising arrangements, BTAC agrees in principle for Woodside to include the statements described in our letter dated 17 March.
 - **(6)** BTAC proposed that a Collaboration Agreement would be an appropriate mechanism to provide ongoing feedback to Woodside regarding its activities.
 - BTAC invited Woodside to a board meeting to discuss Scarborough activities and other short-, medium- and longer-term activities, discuss BTAC's strategic plan and details of a collaboration agreement.
- **On 19 April 2023, Woodside emailed to accept an invitation from BTAC to attend their forthcoming board meeting and requesting half a day of the board's time, preferably before the first week of May.**
- On 28 April 2023, Woodside emailed BTAC to follow up in relation to BTAC's proposed collaboration agreement and confirmed Woodside's intention to submit this EP on the understanding that BTAC is agreeable to this course of action, on the basis that we will progress the collaboration agreement. Woodside asked BTAC to identify if it had misinterpreted BTAC's position.
- On 4 May 2023, Woodside called BTAC. It was discussed that:
 - Woodside would be sending BTAC more EPs (for other activities) for consultation.
 - **(6)** Woodside is working on draft key terms/principles for the collaboration agreement for BTAC's consideration.
 - A meeting between Woodside and the BTAC board may be possible in June.
 - Woodside intended to submit the Scarborough EPs (including this proposed activity) soon.

- On 4 May 2023, BTAC emailed Woodside to continue discussion regarding a potential future meeting between Woodside and the BTAC board to discuss activities on Thalanyji Country, activities for which BTAC's ongoing consultation is sought, the collaboration agreement and other items not related to this proposed activity.
- **6)** On 14 June 2023, Woodside emailed BTAC attaching a letter setting out a draft framework for ongoing consultation which includes recording of sea country values, commitments to regular three-monthly meetings, support for BTAC's capacity to engage, a set of milestones for agreeing the framework and commencement of implementation.
- On the 6 July 2023, Woodside attempted to make contact via phone call, but BTAC did not answer.
- On the 7 July 2023, Woodside attempted to make contact via phone call, but BTAC did not answer.
- On the 10 July 2023, Woodside followed a phone call with BTAC with an email to seek further confirmation that BTAC did not object to Woodside's submission of a number Environmental Plans (including this one) that it is planning to submit to NOPSEMA. Woodside outlined a series of commitments to BTAC to ensure ongoing consultation and a positive working relationship continues.
- On 19 July 2023, Woodside emailed BTAC NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information. This email also reiterated Woodside's request that BTAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult. No response was received to this email.
- On 19 July 2023, Woodside emailed BTAC seeking a time to continue discussion regarding a draft presentation to meeting between Woodside and the BTAC Board about activities on Thalanyji country including other items not related to this proposed activity, and the collaboration principles.
- On 19 July 2023, BTAC emailed Woodside to organise a time for the discussion.
- On 20 July 2023, Woodside emailed BTAC a draft presentation for discussion.
- On 21 July 2023, Woodside emailed BTAC a Teams meeting invite for 28 July 2023.
- On 21 July 2023, BTAC accepted the meeting invite.
- On 26 July 2023, Woodside emailed BTAC Woodside's planned Program of Ongoing Engagement with Traditional Custodians.
- On 26 July 2023, Woodside emailed BTAC confirming the planned meeting for 28 July 2023, a presentation regarding consultation, and re-sent the draft presentation sent on 20 July 2023.
- On 28 July 2023, BTAC emailed Woodside with outcomes of meeting, confirming Woodside had set aside funding for engagement, Woodside wish to meet with BTAC board (or sub-committee) as soon as available to discuss offshore activities/EPs. Woodside will prepare a draft framework agreement to address consultations in relation to NOPSEMA matters.
- On 31 July 2023, Woodside emailed BTAC noting that Woodside would be open to funding a special meeting with the board or sub-committee and requesting a cost estimate for such a meeting.
- On 31 July 2023, Woodside emailed 3 letters to BTAC, 1 of those letters related to the issue of a s91 license for this EP. The 2nd letter outlined support for an ethnographic assessment to:
 - **(2)** Identify sea country values generally sufficient to inform all Woodside EP's.
 - Any work necessary to clarify or define the offshore areas that are relevant to the Thalanyji People.
 - The delivery of interim reports if this will enable prioritising matters considered most critical by BTAC.
 - Woodside will be responsible for all reasonable costs to complete the assessment.

- Confirm BTAC retains intellectual property.
The 3rd letter provided information regarding this EP activities as they relate to Thalanyji country. Woodside provided this information to assist Thalanyji to define and articulate sea country values so Woodside could mitigate any potential impacts. Woodside provided timeframes for activities and a map depicting relevant Islands and this EP activity area.
- On 3 August 2023, Woodside emailed BTAC regarding the acceptance of different Scarborough EP, and asking for information in accordance with conditions of acceptance of the EP, specifically whether BTAC was aware of any people, who in accordance with Indigenous tradition, may have spiritual or cultural connections to the environment that may be affected by the activity that have not yet been afforded the opportunity to provide information that may inform management of the activity. The email also contained links to information on NOPSEMA's publications on EP consultation and its purpose. It also made clear that any gender restricted, or culturally sensitive information would be managed carefully and appropriately. An offer of support to participate in consultation was made.
- On 9 August 2023, Woodside emailed BTAC again seeking feedback and information relating to the different Scarborough EP, stating the conditions of acceptance of the EP:
 - If BTAC was aware of any people, who in accordance with Indigenous tradition, may have spiritual and cultural connections to the environment that may be affected by the activity that have not yet been afforded the opportunity to provide information that may inform the management of the activity; and
 - If there was any information they wished to provide on cultural features and/or heritage values.
 - The email gave the planned commencement of activity under that EP and stated that if no feedback had been received by COB on the day prior, it would be taken to mean no information was desired to be given prior to commencement. The email also described the purpose of consultation.
- On 11 August 2023, BTAC emailed Woodside notifying that a response could be expected by the end of the week.
- On 15 August 2023, Woodside telephoned and emailed BTAC following up on correspondence from 31 July 2023, requesting to meet and discuss matters with BTAC.
- On 22 August 2023, BTAC emailed Woodside acknowledging correspondence and noting they would come back with a time to meet and progress matters within the following weeks.
- On 23 August 2023, Woodside emailed BTAC requesting to meet for an initial discussion to layout the various matters that have been under discussion, including BTAC's capacity and priority areas previously identified by BTAC.
- On 14 September 2023, BTAC emailed a letter to Woodside regarding a framework agreement with BTAC. The intent of the agreement would be to formalise a co-ordinated, streamlined approach to progressing meaningful ongoing engagement and consultation. The letter included areas the agreed framework could address, and confirmed that the agreed framework would allow BTAC to meaningfully comment on a range of issues including:
 - How/whether EP activities could impact cultural values, interests and customary or organisational activities and concerns and useful ways these could be addressed.
 - The content of EPs prior to submission to NOPSEMA.
 - Appropriate ways for mitigating risk and ensuring ongoing social licence.
- **(7)** A further letter was attached outlining a proposed cost recovery mechanism for consultation activities, and BTAC stated that it did not sanction or endorse any consultation occurring without cost recovery.
- On 14 September 2023, Woodside emailed BTAC acknowledging the previous email, advising of the planned start date for the activity, and once again requesting if BTAC was aware of any other people with whom Woodside should consult, and whether there was any information BTAC wished to provide on cultural values. The email requested that information be distributed to members or individuals who may be interested. It requested this information prior to 28 September 2023. The Summary Information Sheet for this activity was attached (Appendix F, reference 5.61).

- On 20 September 2023, BTAC emailed Woodside requesting a response from Woodside about accepting the proposed costs acceptance letter which BTAC sent on 14 September 2023 and requesting a list of current and ongoing activities Woodside are seeking ongoing consultation for.
- On 20 September 2023, BTAC emailed Woodside further to their earlier email, requesting a response to BTAC’s cost proposal, a list of Woodside activities for ongoing consultation and an update on the status of the framework agreement for BTAC’s review.
- **(6)** On 22 September 2023, Woodside emailed BTAC accepting BTAC’s proposed consultation fee structure, the list of activities that Woodside has consulted BTAC on and advising that the draft framework agreement was under internal review.
- On 26 September BTAC emailed Woodside acknowledging EP information received, signed costs and acceptance letter and that a draft agreement was currently under internal Woodside review. The email confirmed BTAC will be assisted with legal advice from Banks-Smith & Associates (BSA).
- On 27 September 2023, BSA emailed Woodside clarifying that they are instructed by BTAC on this matter.

Summary of Feedback, Objection or Claim	Woodside Energy’s Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>(1) BTAC stated that their interests include archaeological sites identified on nearshore islands including the Montebello Islands, Barrow Island and the Montebello Islands.</p> <p>(2) BTAC has a cultural obligation to care for the environmental values of sea country.</p> <p>(3) Requested Woodside supports BTAC in obtaining technical advice relating to the proposed activity which was sent to BTAC.</p> <p>(4) Expressed desire to be involved in local emergency response capability, potentially via an Indigenous Ranger Program.</p> <p>(5) BTAC has not specifically developed values regarding Sea Country into a format that could be articulated for consultation. BTAC sought support from Woodside to enable BTAC to</p>	<p>(1) The nearshore islands identified by BTAC do not fall within the EMBA and will not be impacted by any of the activities set out in the EP.</p> <p>(2) Woodside assessed BTAC’s cultural obligation to care for environmental values of -26 Sepsea country to represent potential cultural values.</p> <p>(3) Woodside has offered financial support for technical advice and other support that has not been taken up (eg 17 March 23 letter).</p> <p>(4) Woodside will engage in ongoing consultation with BTAC for the purposes of ongoing monitoring, management and emergency response associated with environmental risk (eg 17 March letter).</p> <p>(5) Woodside agreed to support the articulation and recording of sea country values. Since Woodside formally offered to support BTAC undertake an ethnographic assessment in July 2023, BTAC has not indicated that it desires to initiate the activity. Completion of an ethnographic assessment is not required to undertake or complete consultation under Reg 11A. Opportunity to undertake this work continues</p>	<p>(1) Not required</p> <p>(2) Woodside updated Section 4.9 to record BTAC’s interests and potential cultural values and assessed potential impact on these, including controls, in Section 6.10.</p> <p>(3) Not required</p> <p>(4) The Program for Ongoing Engagement with Traditional Custodians (Appendix L) includes commitments to social investment to support Indigenous Ranger programs, and support for Indigenous oil spill response capabilities.</p> <p>(5) Woodside has developed the Thalanyji Sea Country Management process described in the EP Section 7.6 to develop a robust understanding of Thalanyji Sea Country cultural values and heritage features, in the absence of the ethnographic survey. Woodside has taken all reasonable steps to identify cultural features and heritage features of Thalanyji people within the EMBA. This is described in Section 4.9. The proposed Collaboration Agreement and PS 16.2.1 enables an ethnographic survey to be undertaken at a later date. Should feedback be received after the EP has been accepted (including any relevant new information on</p>

Robe River Kuruma Aboriginal Corporation (RRKAC)

RRKAC is established under the Native Title Act 1993 by the Robe River Kuruma people to represent the Robe River Kuruma people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside has discharged its obligations for consultation under Regulation 11A(1) and consultation with RRKAC for the purpose of 11A(1) is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information:

- Woodside Sought direction on RRKAC's preferred method of consultation. This resulted in a face-to-face meeting being coordinated at the location of RRKAC's choosing, with RRKAC nominated representatives. This meeting included Woodside presenting information in a format and style that was readily accessible and appropriate.
- Provided Consultation Information Sheets and Consultation Summary Sheets developed by Indigenous staff to RRKAC. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format
- Articulated planned and unplanned environmental risks and impacts, with proposed controls.
- Confirmed the purpose of consultation and set out in detail what was being sought through consultation.
- Asked for the consultation and information sheets to be distributed to members and individuals.
- Woodside has provided NOPSEMA's Brochure "Consultation on offshore petroleum environment plans" and Guideline "Guideline: Consultation in the course of preparing an environment plan
- Provided response to questions asked about the activity through consultation. Through these questions, RRKAC have displayed an understanding of the activities under this Environment Plan as well as the broader Scarborough Project.
- Advised that RRKAC could request the particular information provided in the consultation not be published (to align with 11A(2)(4))

Reasonable Period:

- Woodside published advertisements in national, state, and relevant local newspapers including The Australian, The West Australian, Pilbara News (October 2022 and January 2023), Midwest Times, Northwest Telegraph and Geraldton Guardian (January 2023) advising of the proposed activities and requesting comments or feedback.
- Consultation information provided to RRKAC on 20 January 2023 based on their function, interest, and activities.
- Woodside has addressed and responded to RRKAC over 9 months, demonstrating a "reasonable period" of consultation.

Woodside asked RRKAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside has provided a reasonable opportunity for input since January 2023 and a genuine two-way dialogue has occurred via meetings and written exchanges to further understand the environment in which the activity will take place. RRKAC has engaged with the detail of the activity asking related questions. The details of these engagements are described in the consultation summary below.

Woodside engages in ongoing consultation, beyond that required by Regulation 11A, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15 of the EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on RRKAC's functions, interests or activities.

Summary of information provided and record of consultation:

- On 20 January 2023, Woodside emailed RRKAC advising of the proposed activity (Appendix F, reference 3.7) and provided a simplified Consultation Information Sheet (including a link to the detailed information sheet on Woodside's website) as well as a summary overview fact sheet. The email requested information on the interests that RRKAC and its members may have within the EMBA, information on how RRKAC would like to engage, and requested that RRKAC provide information to members as required.
- On 31 January 2023, Woodside discussed with a RRKAC representative to discuss the proposed activity and ways forward for consultation:
 - RRKAC advised during the virtual meeting that the activity would need to be considered by their Heritage Advisory Committee scheduled for late February 2023.
- On 24 February 2023 Woodside emailed RRKAC to follow up on the information provided (Appendix F, reference 5.46) and the proposed February 2023 meeting. Woodside noted it is seeking RRKAC's feedback as soon as possible on the proposed activity.
- On 9 March 2023, RRKAC emailed Woodside (and copied in CEO of Wirrawandi Aboriginal Corporation (WAC)):
 - RRKAC advised it has discussed the proposed activity with the Robe River Kuruma Heritage Advisory Committee and they have recommended that the interests of Robe River Kuruma people are best served through the joint Heritage Advisory Committee that is required under Yaburara Mardudhunera and Kuruma Marthudunera Indigenous Land Use Agreement.
 - RRKAC also suggested that WAC is required to facilitate this Committee and noted there is an emerging need to deal with other proponent matters, so there is an opportunity to link the engagement from a meeting efficiency perspective.
- Between 15-17 March 2023, Woodside exchanged email correspondence with RRKAC (and WAC) and in relation to establishing a meeting with the joint Heritage Advisory Committee (HAC). The meeting was confirmed for 31 March 2023:
 - On 15 March 2023, Woodside emailed RRKAC to ask when date of joint HAC would occur and how Woodside can support it.
 - On 15 March 2023, RRKAC emailed Woodside regarding contacts for the proposed meeting.
 - On 15 March 2023, Woodside emailed RRKAC to advise who from Woodside would lead the process.
 - On 15 March 2023, RRKAC emailed Woodside to advise the joint HAC meeting was scheduled tentatively for 31 March 2023 but that this would depend on WAC's availability but that the RRKAC representatives are able to attend.
- **(1)** On 31 March 2023, Woodside met with the Robe River Kuruma and Wirrawandi Joint Heritage Advisory Committee (HAC) in Karratha:
 - Woodside described the Environment Plan framework, referring to the Offshore Petroleum and Greenhouse Gas Storage Act (Environment) Regulations, NOPSEMA's role as regulator and general contents of Environment Plans.
 - Woodside encouraged HAC to raise anything which they feel is missing in the information provided during the meeting, or any issues or concerns.
 - Woodside displayed a map of activities open for feedback to be discussed in the meeting and provided a list of other upcoming activities which will be open for consultation in 2023.
 - Woodside provided an overview of the broader Scarborough Project and overview of activities.
 - HAC asked what would happen if something happened to subsea pipelines in operation. Woodside responded that dry gas would be released, and a portion would be dissolved into the water before reaching surface depending on water depth, and gas reaching the surface could be a safety risk or contribute to greenhouse gas in the atmosphere.
 - Woodside provided an overview of each proposed Scarborough activity (including Seismic Survey, Drilling and Completions, Seabed Intervention and Trunkline Installation and Subsea Infrastructure Installation) and a summary of both planned and unplanned impacts and associated controls. This included the use of a video to show the pipelay which was designed for public audience.
 - Woodside described the proposed activity using visual aids and a video.
 - HAC asked whether the pipeline at the shore crossing will impact any heritage sites, Woodside responded that the trunkline would enter the existing Woodside Pluto gas plant and no heritage onshore would be impacted. A map was used to show the crossing site relative to known heritage locations.

- Woodside described planned and unplanned environmental risks and impacts in accordance with tables provided in the Information Sheets for the activities, emphasising that unplanned risks are not expected to occur and are unlikely.
- The EMBA for each proposed Scarborough activity was displayed, and the individual worst-case loss of containment scenarios identified, noting that they are all diesel fuel releases which would only be caused by vessel collisions.
- HAC asked what response Woodside would implement for a diesel spill. Woodside responded that response arrangements are checked by NOPSEMA and since diesel rapidly evaporates and disperses response is mainly monitoring.
- Woodside noted this concluded the Scarborough section of the meeting and called for any further questions or feedback. None were received.
- Woodside provided personal contact details for further feedback.
- Woodside provided NOPSEMA contact details, should the HAC desire to provide feedback directly to the regulator.
- **(2 & 3)** On 3 May 2023, Woodside emailed RRKAC and attached a letter (Appendix F reference 5.55):
 - Woodside thanked the HAC for the meeting, their careful consideration of the matters and feedback provided.
 - Woodside acknowledged that the RRKAC have interests in the EMBA and noted that we want to ensure impacts are as minimal as reasonably practicable.
 - A high-level overview of presented topics was provided.
 - Woodside provided responses to questions noted from the meeting that were not related to the proposed activity.
 - Woodside notified that the feedback and the letter will be included in Environment Plans that will be submitted to NOPSEMA.
 - Woodside provided responses to questions noted from the meeting that were not related to the proposed activity.
 - Woodside notified that the feedback and the letter will be included in Environment Plans that will be submitted to NOPSEMA.
- On 19 July 2023, Woodside emailed RRKAC NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information. This email also reiterated Woodside's request that RRKAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult, No response was received to this email
- **(3)** On 26 July 2023, Woodside emailed RRKAC Woodside's planned Program of Ongoing Engagement with Traditional Custodians.
- On 2 August 2023, Woodside emailed RRKAC regarding the acceptance of a different Scarborough EP, asking for information in accordance with conditions of acceptance of the EP. It specifically asked whether RRKAC was aware of any people, who in accordance with Indigenous tradition, may have spiritual or cultural connections to the environment that may be affected by the activity that have not yet been afforded the opportunity to provide information. The email also contained links to information on NOPSEMA's publications on EP consultation and its purpose. It also made clear that any gender restricted, or culturally sensitive information would be managed carefully and appropriately. An offer of support to participate in consultation was made.
- On 9 August 2023, Woodside emailed RRKAC again seeking feedback and information relating to the accepted Scarborough EP, stating the conditions of acceptance:
 - if RRKAC were aware of any people, who in accordance with Indigenous tradition, may have spiritual and cultural connections to the environment that may be affected by the activity that have not yet been afforded the opportunity to provide information that may inform the management of the activity; and
 - if there was any information RRKAC wished to provide on cultural features and/or heritage values
 - the email gave the planned commencement of activity under that EP and stated that if no feedback had been received by COB on the day prior, it would be taken to mean no information was desired to be given prior to commencement.
- On 11 August 2023, RRKAC emailed Woodside in response to another matter and in addition requesting ongoing consultation and training opportunities for rangers to prepare rangers for caring for sea and coastal country.
- On 14 August 2023, Woodside emailed RRKAC thanking them for their response and requesting to meet to discuss training opportunities for rangers.
- On 14 August RRKAC emailed Woodside agreeing to a meeting and indicating they would arrange a suitable time for a discussion.
- On 14 September 2023, Woodside emailed RRKAC acknowledging the previous email, advising of the planned start date for the activity, and once again requesting if RRKAC was aware of any other people with whom Woodside should consult, and whether there was any information RRKAC wished to provide on cultural values.

<p>The email requested that information be distributed to members or individuals who may be interested. It requested this information prior to 28 September 2023. The Summary Information Sheet for this activity was attached (Appendix F, reference 5.62).</p> <ul style="list-style-type: none"> • (3) On 15 September 2023, RRKAC emailed Woodside noting the compliance burden on industry and RRKAC, advising they have noted Woodside's plans, and that they aren't resourced to adequately respond, and would require Woodside to fund additional resources. • (3) On 18 September 2023, Woodside emailed RRKAC confirming that Woodside will provide funding to enable groups to participate in consultations. 		
<p>Summary of Feedback, Objection or Claim</p>	<p>Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response</p>	<p>Environment Plan Controls</p>
<p>(1) During face-to-face engagements related to this activity and others, the RRKAC/ HAC requested further information on topics related to this proposed activity which was responded to during the meeting:</p> <ul style="list-style-type: none"> - Emergency preparedness. - What happens with a small diesel spill. - Pipeline operation - The RRKAC/HAC raised feedback and request for further information on the Scarborough project more broadly which will be provided as part of ongoing engagement. <p>(2) The RRKAC/HAC expressed a desire for ongoing engagement and partnership.</p> <p>(3) RRKAC noted that they are insufficiently resourced to fully engage and respond regarding EPs.</p>	<p>(1) Woodside responded to RRKAC/HAC's requests for further information during face-to-face engagements, and no further information was requested on these topics.</p> <p>(2) Woodside supports ongoing engagement and have responded to RRKACs advice about the limitations on their resources, Woodside has offered to support RRKAC in correspondence sent in May and September 2023, however these offers have not been taken up as yet.</p> <p>(3) Woodside has assessed the Program of Ongoing Engagement with Traditional Custodians will support ongoing consultation with RRKAC and address appropriate support for resourcing, separate from consultation under Reg 11A, Sufficient information to allow informed assessment has already been provided by other means, including Consultation Information Sheets and a Summary Information Sheet developed by Indigenous staff members, and a face to face meeting on 31 March 2023 for which Woodside met RRKAC's costs, with appropriate material (pictures, maps, videos) and project attendance allowing opportunity to ask questions and seek further understanding.</p>	<p>(1) Existing controls considered sufficient, as described in Section 6.</p> <p>(2) & (3) Woodside is implementing a program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on environment plans referenced as PS 16.2.1 in this EP. This includes addressing RRKAC's resourcing issue for ongoing consultation via a Framework Agreement.</p>

Nganhurra Thanardi Garrbu Aboriginal Corporation (NTGAC)

NTGAC is established under the Native Title Act 1993 by the Baiyungu people to represent the Baiyungu people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside has consulted under Regulation 11A with NTGAC by providing sufficient information, a reasonable period of time and opportunity for NTGAC to make an informed assessment of the possible consequences of the activities on functions, interests or activities. Woodside has addressed each objection or claim made by NTGAC. Woodside has included cultural values and controls relevant to Woodside's understanding of NTGAC's functions, interests and activities in its environment plan and in response to topics raised during consultation by NTGAC.

As demonstrated in the summary below and consultation record that follows, consultation with NTGAC complies with Regulation 11A and is complete.

Summary

Sufficient Information:

- Woodside Sought direction on NTGAC's preferred method of consultation. This resulted in two face-to-face meetings being coordinated at location of NTGAC's choosing, with NTGAC nominated representatives. These meetings included Woodside presenting information in a format and style that was readily accessible and appropriate.
- Provided Consultation Information Sheet and Consultation Summary Sheets to NTGAC. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity in a digestible, plain English format.
- Articulated planned and unplanned environmental risks and impacts, with proposed controls to manage potential impacts to ALARP and acceptable levels.
- Confirmed the purpose of consultation and set out in detail what is being sought through consultation.
- Suggested that information and request for feedback be distributed to members as required.
- Woodside has provided NOPSEMA's Brochure "Consultation on offshore petroleum environment plans" and Guideline "Guideline: Consultation in the course of preparing an environment plan"
- Provided response to questions asked about the activity through consultation. Through these questions, NTGAC have displayed an understanding of the activities under this Environment Plan as well as the broader Scarborough Project.
- As per a request from NTGAC, Woodside funded YMAC's environmental scientist to attend two face-to-face meetings to support consultation and funded a YMAC lawyer to attend the August meeting with NTGAC. This assisted in ensuring any technical information was provided in a way which allowed NTGAC to make an informed assessment of the possible consequences of the activities on the functions, interests or activities.

Reasonable Period:

- Woodside published advertisements in national, state, and relevant local newspapers including The Australian, The West Australian, Pilbara News (October 2022 and January 2023), Midwest Times, Northwest Telegraph and Geraldton Guardian (January 2023) advising of the proposed activities and requesting comments or feedback.
- Woodside commenced consultation with NTGAC in January 2023. Woodside has since addressed and responded to NTGAC queries over 9 months, demonstrating a "reasonable period" of consultation.

Woodside advised that NTGAC can request that particular information provided in the consultation not be published (to align with 11A(2)(4))

Woodside asked NTGAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside has provided a reasonable opportunity for input since January 2023 and a genuine two-way dialogue has occurred via meetings and written exchanges to further understand the environment in which the activity will take place. NTGAC has engaged with the detail of the activity asking related questions. The details of these engagements are described in the consultation summary below.

Woodside engages in ongoing consultation, beyond that required by Regulation 11A, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15 of the EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on NTGAC functions, interests or activities.

Woodside does not agree with NTGAC's assertion that it has not yet completed consultation under regulation 11A for the activity. Woodside has assessed the claims and feedback raised by NTGAC, as detailed later in this section alongside Woodside's response to the claims. Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on NTGAC's functions, interests, or activities.

Summary of information provided and record of consultation:

YMAC is the Native Title Representative Body (NTRB) for the Yamatji and Pilbara regions, which includes NTGAC. NTRBs exist to provide assistance to native title claimants and holders in regard to their native title rights. No native title has been recognised over the Project Area, however YMAC is identified in the North-west Marine Parks Network Management Plan as the contact for identifying cultural values in nearby Australian Marine Parks.

- On 7 July 2022, Woodside met with YMAC to request advice on the appropriate cultural authorities for the Scarborough project area, including but not limited to the scope of this EP and nearby marine parks:
 - Woodside described the Scarborough Project and its footprint and gave an overview of indigenous parties consulted.
 - Woodside noted that YMAC was identified in the North-West Marine Parks Network Management Plan as contact for identifying cultural values in nearby Australian Marine Parks. Woodside sought to understand if cultural values of the nearby Gascoyne Marine Park may extend into the offshore Scarborough project areas.
 - Woodside requested advice on how best (in addition to work completed) to identify any cultural values in the Marine Parks and the broader project footprint.
 - YMAC requested Woodside provide the relevant detailed information relating to the location and extent of the project.
 - YMAC directed Woodside that consultation related to Scarborough Project would be best directed to Murujuga Aboriginal Corporation and Ngarluma Aboriginal Corporation
 - YMAC did not direct Woodside to engage with NTGAC, however NTGAC was identified as a relevant person under methodology outlined in 5.X and YMAC is listed as NTGAC's preferred contact on the ORIC website and is therefore Woodside's primary contact when engaging NTGAC.
- On 6 January 2023, Woodside phoned NTGAC via the representative body Yamatji Marpa Aboriginal Corporation (YMAC) for the purpose of introduction and to explain that Woodside will be sending information concerning EPs.
- On 20 January 2023, Woodside emailed NTGAC via the representative body YMAC advising of the proposed activity (Appendix F, reference 3.3) and provided a simplified Consultation Information Sheet (including a link to the detailed information sheet on Woodside's website) as well as a summary overview fact sheet, asking what interests NTGAC and its members may have within the EMBA and whether they required any information to prepare for a meeting.
- On 27 January 2023 Woodside phoned and emailed NTGAC/YMAC to follow up on the information provided and information sought. Woodside requested if NTGAC required anything further ahead of a planned meeting with Woodside on 16 February 2023.
- On 1 February 2023, NTGAC/YMAC phoned Woodside to confirm the planned meeting for 16 February 2023. It was arranged to hold a subsequent phone discussion between key representatives on 10 February to discuss scope for the consultation meeting. Woodside said that it is anticipating feedback from the group on the proposed activity at this consultation meeting and asked for any specific families or individuals that Woodside should be engaging with to be invited.

NTGAC/YMAC responded that consultation with NTGAC as the representative body is appropriate. Woodside respected NTGAC's response and supported all NTGAC's proposed attendees to attend the meeting.

- On 10 February 2023, Woodside phone NTGAC and described the proposed scope of the consultation meeting planned for 16 February.
- On 16 February 2023, Woodside presented to a meeting of the NTGAC Board and YMAC representatives:
 - Woodside described the Environment Plan framework, referring to the Offshore Petroleum and Greenhouse Gas Storage Act (Environment) Regulations, NOPSEMA's role as regulator and general contents of Environment Plans.
 - Woodside encouraged NTGAC to raise anything which they feel is missing in the information provided during the meeting.
 - Woodside displayed a map of activities open for feedback to be discussed in the meeting and provided a list of other upcoming activities which will be open for consultation in 2023.
 - Woodside provided an overview of the broader Scarborough Project.
 - Woodside provided an overview of each proposed activity (including Seismic Survey, Drilling and Completions, Seabed Intervention and Trunkline Installation and Subsea Infrastructure Installation) and a summary of both planned and unplanned impacts and associated controls. This included the use of a video to show the pipelay which was designed for public audience.
 - Woodside noted that decommissioning and the ability to remove equipment has been part of the design process across the Scarborough Project, including for the trunkline.
 - Woodside described planned and unplanned environmental risks and impacts in accordance with tables provided in the Information Sheets for the activities, emphasising that unplanned risks are not expected to occur and are unlikely. It was noted that at a high level the categories of risks and impacts are similar to decommissioning previously discussed.
 - Woodside explained that there is significantly more seabed disturbance associated with Scarborough activities than decommissioning, such as dredging and infrastructure installation, and that over several years Woodside has been undertaking modelling and research to understand impacts like dredge plumes. This also incorporates real monitoring observations from previous activities.
 - Woodside described planned and unplanned environmental risks and impacts in accordance with tables provided in the Information Sheets for the activities, emphasising that unplanned risks are not expected to occur and are unlikely.
 - **(1, 2)** NTGAC asked if Woodside could explain impacts on whales from noise.
 - Woodside replied that there has been modelling work done and applied to understanding of thresholds for hearing and behavioural impacts. It shows that there will be no lasting effect on whales, however there could be short term hearing impacts. Measures have been taken like removing driven piling from the activities to reduce noise impacts.
 - Woodside further explained that there are not expected to be many turtles, dugongs, or humpbacks offshore but there could be pygmy blue whales.
 - **(1)** YMAC asked how Woodside will monitor for whales.
 - Woodside explained that it will have dedicated marine fauna observers and systems which can listen for whale song on some vessels. Presence of whales can postpone activities. Woodside noted that noise impacts are time bound and that whale tagging, and behaviour monitoring shows they are migrating and unlikely to stay around for hours, reducing the likelihood of impact from noise.
 - **(2)** While discussing another activity, NTGAC expressed interest in whale sharks
 - **(1)** NTGAC asked whether local traditional owners have been engaged about dredging.
 - Woodside responded that significant and ongoing consultation with Murujuga Aboriginal Corporation has been undertaken regarding this, for over two years. Dredging will be up to 38 km, and it is a goal to limit the amount of dredging required.
 - The EMBA for the proposed Scarborough activity was displayed, and the individual worst-case loss of containment scenario described.
 - Woodside noted this concluded the Scarborough section of the meeting and called for any further questions or feedback. None were received.
 - Woodside stated that there is significant work and consultation coming up, and it hope to spend more time with NTGAC to understand expectations and desire of how Woodside can work with NTGAC.

- YMAC expressed that they are being inundated with requests for consultation from oil and gas operators and are working internally on processes and priorities for consultation.
- Woodside welcomed the transparency and discussion on capacity.
- NTGAC expressed that consulting on these types of activities is not viewed as wasting time, but consultation which gives nothing back to the community is not a priority. They are interested in partnership programs and on-country engagements.
- Woodside stated that while all the big companies will have deadlines and need to get feedback to meet legal requirements, Woodside desires it to be a jointly held process and that if NTGAC desires any support or assistance to please request it.
- Woodside provided personal contact details for further feedback.
- Woodside provided NOPSEMA contact details should NTGAC desire to provide feedback directly to the regulator.
- On 21 February 2023, NTGAC/YMAC emailed Woodside to seek clarification of the attendee names at the 16 February 2023 Board meeting.
- On 21 February 2023, Woodside emailed NTGAC/YMAC the attendee names at the 16 February 2023 Board meeting and provided a copy of the presentation pack. Woodside followed up on request for any further feedback on the proposed activity.
- On 22 February 2023, NTGAC/YMAC emailed Woodside to thank Woodside for sending the relevant information.
- On 13 March 2023, Woodside met with NTGAC's legal representatives to discuss consultation on the Scarborough Project, preferred method and locality of consultation meetings, and to note that they will assist groups with funding to hold meetings on an agreed basis.
- On 22 March 2023, Woodside followed up by phone with NTGAC/YMAC on any feedback on the proposed activities. None was received.
- On 28 March 2023, YMAC followed up with Woodside on a Woodside action arising from the 16 February meeting to supply photos and diagrams in relation to the different activity.
- On 31 March 2023, Woodside followed up with the relevant photos and diagrams, noting contact details and welcoming any further feedback. Woodside thanked NTGAC for their work to date and requested that NTGAC reach out for any assistance. No further response was received to Woodside's request for feedback on the activity.
- On 19 April 2023, Woodside emailed YMAC/NTGAC following up with information offered at the meeting of 13 March 2023; management of emissions, organisations that may provide independent expertise and re-iterating they would like to meet with NTGAC.
- **(3)** On 20 June 2023, in two separate emails NTGAC replied they would return to Woodside with a suitable date and sought confirmation that Woodside would again fund the attendance of the in-house environmental scientist.
- On 20 June 2023, Woodside replied they were happy to fund the in-house environmental scientist.
- On 21 June NTGAC/YMAC emailed Woodside confirming a full day workshop to cover all activities
- On 21 June 2023, Woodside emailed NTGAC seeking a pre-meet to plan the workshop and offer further assistance.
- On 30 June 2023, NTGAC emailed Woodside with a budget estimate for the meeting in Exmouth.
- On 5 July 2023, Woodside replied confirming the date and that they would pay for the costs outlined in the budget.
- On 17 July 2023, YMAC emailed Woodside referring to the draft YMAC consultation framework for PBCs and asked that the workshop focus on strategic planning with additional funding.
- On 19 July 2023, Woodside emailed NTGAC NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information. This email also reiterated Woodside's request that NTGAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult. No response was received to this email.
- On 24 July 2023, Woodside agreed to the change of workshop focus and additional funding, proposed an agenda and a pre-meeting for joint planning.

- On 25 July 2023, Woodside emailed the YMAC CEO (and copied the NTGAC representatives) responding to the draft YMAC Framework for Consultation and emailing Woodside's planned Program of Ongoing Engagement with Traditional Custodians, noting that Woodside's Program would complement what is proposed in NTGAC's proposed Framework. The email proposed a meeting at YMAC's earliest convenience.
- On 28 July 2023, NTGAC confirmed availability for a pre meeting.
- On 31 July 2023, Woodside emailed NTGAC/YMAC to accept a pre meeting date.
- On 9 August 2023, Woodside emailed NTGAC/YMAC requesting clarity around the meeting scheduled for 15 August 2023.
- On 9 August 2023, Woodside emailed NTGAC/YMAC again seeking feedback and information relating to a separate Scarborough EP that had been accepted, stating the conditions of acceptance of that EP:
 - if you are aware of any people, who in accordance with Indigenous tradition, may have spiritual and cultural connections to the environment that may be affected by the activity that have not yet been afforded the opportunity to provide information that may inform the management of the activity; and
 - if there is any information you wish to provide on cultural features and/or heritage values.
- **(4)** On 11 August 2023, NTGAC/YMAC emailed Woodside stating that NTGAC had not yet been consulted regarding the separate accepted Scarborough activity, that the proposed time frame for consultation is not workable for NTGAC, that they would be raising this with NOPSEMA and wished to discuss further in the meeting planned for 15 August 2023.
- On 11 August 2023, Woodside emailed NTGAC/YMAC noting that activity under Scarborough Seismic would no longer commence on the date previously notified. Woodside confirmed the attendees for the meeting on 15 August 2023.
- On 14 August 2023, NTGAC/YMAC emailed Woodside acknowledging the meeting to be held 15 August 2023.
- On 15 August 2023, Woodside presented to the NTGAC about several EPs including an update on this EP. At the meeting Woodside:
 - Described the Environment Plan framework, referring to the Offshore Petroleum and Greenhouse Gas Storage Act (Environment) Regulations, NOPSEMA's role as regulator and general contents of Environment Plans.
 - Displayed a map of activities open for feedback to be discussed in the meeting and provided a list of other upcoming activities which will be open for consultation in 2023.
 - Provided an update and overview of the Scarborough Project activities including the Marine Seismic Survey, Drilling and Completions, Seabed Intervention and Trunkline Installation and Subsea Installation EPs..
 - Described the types of vessels involved.
 - Described planned and unplanned environmental risks and impacts in accordance with tables provided in the Information Sheets for the activities, emphasising that unplanned risks are not expected to occur and are unlikely.
 - Displayed and spoke to the EMBA for each proposed activity, and the individual worst-case loss of containment scenarios identified, noting that they are all diesel fuel releases which would only be caused by vessel collisions.
 - Described planned and unplanned risks and impacts of the activity, and discussed controls in place to manage risks/impacts to ALARP and acceptable levels
 - Stated that Woodside wanted to understand how the functions, activities, or interests of NTGAC and the people it represents may be impacted by any of those activities.
 - Specifically asked the following:
 - How could these activities impact your cultural values, interests, and activities – does protecting the environment do enough to protect your cultural values?
 - What are your concerns about the proposed activities and what do you think we should do about them?
 - Is there anything you would like included in the EPs before submission?
 - Is there anyone else Woodside should consult with about the activities?
 - Advised that Woodside will continue to take feedback from NTGAC for the life of the EP.

- Provided personal contact details for further feedback. Woodside provided NOPSEMA contact details, should NTGAC desire to provide feedback directly to the regulator.
- At the 15 August meeting NTGAC/YMAC asked the following questions and gave the following feedback:
- **(1)** YMAC asked about whale sightings and response.
- Woodside responded that response depended on activity and controls, Marine Mammal Observers are implemented.
- **(1)** NTGAC asked about ballast water discharges, Woodside responded by describing Invasive Marine Species requirements and controls.
- **(5)** A proposed framework for consultation was discussed, involving Woodside funding a General Project Report to be written by an independent suitably qualified and experienced consultant, to be provided to NTGAC initially and then on to Woodside. The General Project Reports were proposed to outline the nature of the activities for each phase of the project and the risks associated with each of the relevant activities
- Terms for ongoing engagement were discussed, including frequency, participation, and content in context of the proposed General Project Report
- **(6)** NTGAC Strategic Plan and relation to potential Woodside social investment opportunities were explored.
- NTGAC stated their consultation expectations (two-way dialogue preferred over one-way presentations and requested that consultation meetings cover whole projects or phases rather than single EP activities which is too time consuming).
- NTGAC requested that a table of EPs be submitted by December with a timeline.
- **(4)** NTGAC stated that they did not consider that they had been consulted on other EP's based on engagement to date, stating that the information provided had been too technical.
- On 31 August Woodside emailed NGTAC/YMAC to provide a copy of the presentation from 15 August and communicating Woodside's understanding of next actions:
- YMAC to provide a first draft of a consultation agreement. Woodside has offered to provide support or first draft if NTGAC desired, however this offer of support has not been accepted.
- YMAC to prepare the first draft of a general report.
- Woodside to provide a list of upcoming activities.
- Agreed to continue discussions relating to key community focus areas highlighted by NTGAC.
- Feedback from NTGAC on the appropriateness of the information given by Woodside (too technical) to enable NTGAC to provide feedback.
- The email also noted that Woodside considers consultation has commenced and is ongoing, however Woodside will work with NTGAC to develop the process further.
- On 31 August 2023, NTGAC/YMAC emailed Woodside confirming they would respond shortly to the outcomes as assessed by Woodside and requesting response to queries in relation to another activity.
- On 1 September Woodside emailed NTGAC/YMAC, acknowledging information requested would be provided as soon as possible.
- On 14 September 2023, Woodside emailed NTGAC (Appendix F, reference 5.63) advising of the planned start date for the activity, and once again requesting if NTGAC is aware of any other people with whom Woodside should consult, and if there is any information NTGAC wish to provide on cultural values. The email requested that information be distributed to members or individuals who may be interested. It requested this information prior to 28 September 2023, but reiterated that Woodside will take feedback after the commencement of the activity as part of ongoing consultation. The Summary Information Sheet for this activity was attached. No response was received to this email.

Woodside will continue to pursue an ongoing two-way relationship with NTGAC under the Proposed Program of Ongoing Engagement with Traditional Custodians

Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>(1) During face-to-face engagements on 16 Feb and 15 Aug 2023 related to this activity and others, the NTGAC requested further information on topics related to this proposed activity which was responded to during the meetings:</p> <ul style="list-style-type: none"> • How EMBA's are developed. • Ballast water discharges • Whale sightings and response • Whether other Traditional Owners had been consulted about dredging <p>(2) NTGAC have expressed a general interest in whales and whale sharks. Woodside discussed controls protecting whales and whale sharks from an ecological perspective during meetings in which they were raised, and no further feedback or comment was received on these topics.</p> <p>(3) NTGAC requested funding for YMAC's in-house environmental scientist.</p> <p>(4) NTGAC claimed that they have not been consulted about the activity to date, stating that they could not provide information on cultural values because the information provided has been</p>	<p>(1) Woodside responded to NTGAC's requests for further information during face-to-face engagements in which they were raised, and no further information was requested on these topics.</p> <p>(2) Woodside noted NTGAC's interest in whales and whale sharks</p> <p>(3) Woodside funded YMAC's environmental scientist to attend two face-to-face meetings to support consultation and funded a YMAC lawyer to attend the August meeting with NTGAC. No feedback was received from this activity.</p> <p>(4) Woodside does not agree with NTGAC's claim that it has not yet been consulted on the activity, or that information provided has been too technical. Woodside considers regulation 11A consultation is complete and closed. Woodside met with NTGAC nominated representatives, at location of NTGAC's choice on 16 Feb and 15 Aug 2023 for multiple hour sessions where the activity was described face to face by Woodside project representatives, subject matter experts and First Nations relations advisers (see section 5 for approach). This included specifically developed "plain English" material developed by First Nations personnel in collaboration with technical experts, maps, pictures and a short video visually communicating the pipelay process. During the meeting, NTGAC and YMAC representatives were encouraged to control the pace of the engagement and seek clarification. NTGAC and YMAC asked questions about the activity (see point 1) which indicates that material was engaged with. Woodside has also funded YMAC's in-house environmental scientist to support consultation. Woodside has addressed and responded to NTGAC over 9 months, demonstrating a "reasonable period" of consultation.</p>	<p>(1) Existing controls considered sufficient, as described in Section 6.</p> <p>(2) Woodside updated Section 4.9 to reflect NTGAC's interests and potential cultural values, including whales and whale sharks, and assessed potential impact on these, including controls, in section 6.10.</p> <p>(3) Not required</p> <p>(4) Not required</p> <p>(5) (6) Woodside is implementing a program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on environment plans, referenced as PS 16.2.1 in this EP. This includes continued engagement regarding NTGAC's proposed Consultation Framework which will be applied to ongoing consultation, and potential support for their Strategic Plan. This is described further in the Program of Ongoing Engagement with Traditional Custodians, Appendix L.</p>

<p>too technical and that timeframes were not sufficient.</p> <p>(5) NTGAC are developing the first draft of a Consultation Agreement, and General Report. The proposal for the General Report is that it would outline the nature of the activities for each phase of the project and the risks associated with each of the relevant activities. Woodside are awaiting receipt of the initial draft of the General Report.</p> <p>(6) NTGAC are interested in exploring social investment opportunities with Woodside which may support NTGAC's Strategic Plan.</p>	<p>(5) Separate from consultation under Reg 11A for this activity, Woodside will establish a Consultation Agreement with NTGAC. The Consultation Agreement and General Report/s would be used to frame ongoing consultation to occur as part of Woodside's commitment to post Reg 11A consultation. Sufficient information to allow informed assessment has already been provided by other means, including summary sheets developed by Indigenous staff, multiple face to face meetings with appropriate material (pictures, maps, videos) and project attendance allowing opportunity to ask questions and seek further understanding, and agreement to fund NTGAC/YMAC environmental scientist who was also present at the meetings.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15).</p> <p>(6) Woodside is continuing to work with NTGAC regarding social investment opportunities. Woodside has assessed that the Framework for Ongoing Consultation with NTGAC is an effective mechanism for exploring opportunities for alignment with NTGAC's Strategic Plan</p>	
--	---	--

Malgana Aboriginal Corporation

Malgana is established under the Native Title Act 1993 by the Malgana people to represent the Malgana people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside has discharged its obligations for consultation under Regulation 11A(1) and consultation with Malgana for the purpose of 11A(1) is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information:

- Woodside Sought direction on Malgana's preferred method of consultation. This resulted in two face-to-face meetings being coordinated at location of Malgana 's choosing, with Malgana nominated representatives. These meetings included Woodside presenting information in a format and style that was readily accessible and appropriate.

- Provided Consultation Information Sheet and Consultation Summary Sheets developed by Indigenous staff to Malgana. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format
- Articulated planned and unplanned environmental risks and impacts, with proposed controls.
- Confirmed the purpose of consultation and set out in detail what is being sought through consultation.
- Asked for the consultation and information sheets to be distributed to members and individuals.
- Woodside has provided NOPSEMA's Brochure "Consultation on offshore petroleum environment plans" and Guideline "Guideline: Consultation in the course of preparing an environment plan
- Provided response to questions asked about the activity through consultation. Through these questions, Malgana have displayed an understanding of the activities under this Environment Plan as well as the broader Scarborough Project.
- Advised that Malgana can request that particular information provided in the consultation not be published (to align with 11A(2)(4))

Reasonable Period:

- Woodside published advertisements in national, state, and relevant local newspapers including The Australian, The West Australian, Pilbara News (October 2022 and January 2023), Midwest Times, Northwest Telegraph and Geraldton Guardian (January 2023) advising of the proposed activities and requesting comments or feedback.
- Woodside has addressed and responded to Malgana over 9 months, demonstrating a "reasonable period" of consultation.

Woodside asked Malgana if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside has provided a reasonable opportunity for input since January 2023 and a genuine two-way dialogue has occurred via meetings and written exchanges to further understand the environment in which the activity will take place. Malgana has engaged with the detail of the activity asking related questions. The details of these engagements are described in the consultation summary below.

Woodside engages in ongoing consultation, beyond that required by Regulation 11A, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15 of the EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on Malgana functions, interests or activities.

Summary of information provided and record of consultation:

- On 20 January 2023, Woodside emailed Malgana advising of the proposed activity (Appendix F, reference 2.19) and provided a simplified Consultation Information Sheet (including a link to the detailed information sheet on Woodside's website) as well as a summary overview fact sheet. The email requested information on the interests that Malgana and its members may have within the EMBA, information on how Malgana would like to engage, and requested that Malgana provide information to members as required.
- On 1 February 2023, Woodside phoned and left a voice message, and sent an email to Malgana, to follow up on the information provided (Appendix F reference 4.23) and information sought.
- On 6 February 2023, the Malgana CEO emailed Woodside to advise they were discussing the consultation information with the Malgana Board at the next meeting.
- On 10 February 2023, Woodside emailed Malgana to request any feedback from its Board of Directors.
- On 21 February 2023, Woodside followed up with Malgana via email to request any feedback from its Board of Directors.

- On 22 February 2023, Malgana emailed Woodside regarding scheduling an opportunity for Woodside to present at an upcoming Malgana Board Meeting.
- On 7 March 2023, Malgana emailed Woodside.
 - Malgana provided proposed dates (3-4 April 2023) for a meeting.
 - Malgana asked if one or two hours was suitable for Woodside's presentation and discussion.
 - **(3)** Malgana asked Woodside to provide financial support for consultation meeting costs
- On 9 March 2023, Woodside emailed Malgana:
 - Woodside confirmed the proposed meeting dates and logistics.
 - Woodside requested a half day to present on the EPs on which it is seeking feedback.
 - **(3)** Woodside agreed to pay meeting costs
- On 19 March 2023, Woodside emailed Malgana to propose an alternate date for the meeting so that required project personnel would be available.
- On 22 March 2023, Malgana emailed Woodside to agree the proposed date and coordinate arrangements for the meeting.
- On 23 March 2023, Woodside emailed Malgana to confirm arrangements for the meeting and agree a budget proposal.
- On 23 March 2023, Malgana emailed with an invoice for 50% advance payment of meeting budget.
- On 4 April 2023, Woodside met with Malgana Aboriginal Corporation (Malgana) representatives in Perth:
 - Woodside described the Environment Plan framework, referring to the Offshore Petroleum and Greenhouse Gas Storage Act (Environment) Regulations, NOPSEMA's role as regulator and general contents of Environment Plans.
 - **(1)** Malgana asked what arrangements are in place for earthquake tremors, Woodside responded that facilities and equipment are designed to withstand seismic activity which could be expected.
 - Woodside encouraged Malgana to raise anything they felt was missing in the information provided during the meeting, or any issues or concerns.
 - **(2)** Malgana stated that the Shark Bay environment is unique and has the largest living organism in the world. It also contains stromatolites and microbial mats which are among the oldest living organisms in the world. Stochastic modelling of the worst-case credible spill scenario for the petroleum activity indicates that these receptors would not be contacted.
 - Woodside displayed a map of activities open for feedback to be discussed in the meeting and provided a list of other upcoming activities which will be open for consultation in 2023.
 - **(4)** Malgana expressed that they are very interested in genuine relationship and partnership building with long term structure. Woodside responded that we are very open to this and look forward to working together.
 - Woodside described how EMBA's are prepared and their relevance to consultation.
 - **(1)** Malgana stated that they believe there are flaws in modelling related to Shark Bay hydrodynamics. Woodside responded that nearshore processes may not be very accurate in the model, but we plan for spill response in Shark Bay regardless. Woodside committed to providing further detail on how Shark Bay hydrodynamics is resolved in the model to Malgana.
 - Woodside provided an overview of the broader Scarborough Project and overview of activities.
 - Woodside described the proposed activity, using a video and visual aids.
 - Woodside provided an overview of each proposed Scarborough activity (including Seismic Survey, Drilling and Completions, Seabed Intervention and Trunkline Installation and Subsea Infrastructure Installation) and a summary of both planned and unplanned impacts and associated controls. This included the use of a video to show the pipelay which was designed for public audience.

- **(1)** Malgana asked whether the pipelay vessel would need to return to shore to collect more pipe sections, Woodside responded that it would be continually supplied by other vessels so that it can continue laying.
- Woodside described planned and unplanned environmental risks and impacts in accordance with tables provided in the Information Sheets for the activities, emphasising that unplanned risks are not expected to occur and are unlikely.
- The EMBA for each proposed Scarborough activity was displayed, and the individual worst-case loss of containment scenarios identified, noting that they are all diesel fuel releases which would only be caused by vessel collisions.
- Woodside noted this concluded the Scarborough section of the meeting and called for any further questions or feedback. None were received.
- Woodside provided personal contact details for further feedback.
- Woodside provided NOPSEMA contact details, should Malgana desire to provide feedback directly to the regulator.
- **(1 & 4)** On 20 April 2023, Malgana Aboriginal Corporation emailed Woodside:
 - Malgana thanked Woodside for the consultation meeting, noting that the Board enjoyed the informative and detailed information provided.
 - Malgana thanked Woodside for its proactive response to ensure Malgana country is sufficiently protected and ready in case of unplanned events.

Malgana noted discussion points from the meeting:

- **(4)** Agreement that an ongoing partnership should be formed.
- **(2)** Emphasised the sensitivity and importance of Shark Bay culturally and environmentally.
- **(1)** Indicated concerns regarding hydrodynamic modelling and reflection of flow into the bay.
- Discussion on how feedback helps Woodside improve Environment Plans

Malgana requested:

- **(1)** Woodside to clarify how hydrodynamics of Shark Bay are resolved in modelling.
- Provision of Malgana rangers with training and equipment for incident response
- A Shark Bay response team with emergency response plans and exercises
- A communication strategy for emergencies
- **(1)** Information on how Woodside can support Malgana rangers and people.
- A timeframe for a follow up meeting to discuss these points.
- Guidance on the format of desired feedback.
- On 18 May 2023, Woodside emailed Malgana:
 - Woodside thanked Malgana for the consultation meeting and its correspondence of 20 April 2023, and their careful consideration of the matters presented.
 - Woodside acknowledged that Malgana has interests in the EMBA and noted that they want to ensure impacts are as minimal as reasonably practicable.
 - A high-level overview of presented topics was provided.

Woodside provided responses to the requests made in Malgana correspondence of 20 April 2023:

- Woodside's hydrocarbon spill modelling is provided by specialist consultants using global best practice techniques and software. Woodside has requested further information from the consultants on how Shark Bay hydrodynamics are resolved in the model and will communicate to Malgana once received.
- **(1)** Woodside is investigating options for Indigenous Ranger hydrocarbon spill response training and capability. Woodside intends to work on this collaboratively with spill response agencies, Traditional Owners, and industry.
- Existing emergency response arrangements that help protect the environment would trigger notification of Traditional Owners and other relevant stakeholders based on the spill's trajectory at the time of the spill.
- Woodside proposed another meeting to discuss opportunities for rangers and Indigenous people, noting that Woodside will contact Malgana by phone to arrange details.

- **(3)** Woodside is able to receive feedback in any format of Malgana’s choice. Woodside offered to provide resources to Malgana to obtain expert advice on proposed activities for which Malgana is a relevant person, beyond that which has already been received in the course of preparing the EP. A suggested list of experienced and reputable industry environmental consultants was provided. To date, this offer has not been taken up.
- Woodside notified that the feedback and the letter from Malgana would be included in Environment Plans that will be submitted to NOPSEMA.
- Woodside provided responses to questions noted from the meeting that were not related to the proposed activity.
- 19 July 2023, Woodside emailed Malgana NOPSEMA’s Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information. This email also reiterated Woodside’s request that Malgana advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult. No response was received to this email.
- **(4)** On 26 July 2023, Woodside emailed Malgana Woodside’s planned Program of Ongoing Engagement with Traditional Custodians.
- **(1 & 2)** On 1 August 2023, Woodside emailed Malgana with follow up information that Malgana requested about hydrocarbon spill modelling which came out of the meeting of 4 April 2023 with Malgana. The information showed that Shark Bay hydrodynamics are adequately resolved in the model, as tidal flushing can be observed. This reinforces that the indication from modelling that the EMBA for the activity does not enter Shark Bay is appropriate.
- **(3)** On 1 August 2023, Woodside emailed Malgana with thanks for the information and noting that Malgana was looking to get an environmental consultant to provide advice to their Board.
- **(3)** On 3 August 2023, Woodside emailed Malgana notifying about another activity and requesting to meet to discuss matters, including the issue raised by Malgana about getting an environmental consultant to give advice to their Board. Woodside also said they were available to catch up over the phone over the next coming days to discuss the above matters and for Malgana to reply with a preferred time. Malgana have not yet responded.
- On 14 September 2023, Woodside emailed Malgana (Appendix F, reference 5.65) advising of the planned start date for the activity, and once again requesting if Malgana was aware of any other people with whom Woodside should consult, and whether there was any information Malgana wished to provide on cultural values. The email requested that information be distributed to members or individuals who may be interested. It requested this information prior to 28 September 2023 and reiterating that Woodside will take feedback after the commencement of the activity as part of ongoing consultation. The Summary Information Sheet for this activity was attached.

Summary of Feedback, Objection or Claim	Woodside Energy’s Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>(1) During face-to-face engagements related to this activity and others, Malgana requested further information on topics related to this proposed activity which were responded to during the meeting and in correspondence shortly afterwards:</p> <ul style="list-style-type: none"> • Ability for infrastructure to withstand seismic activity. • Spill response arrangements. 	<p>(1) Woodside responded to Malgana’s requests for further information during face-to-face engagements and follow up emails, and no further information was requested on these topics.</p> <p>(2) Woodside noted Malgana’s interest in sea grasses, stromatolites and microbial mats. Environmental sensitivities that Malgana Aboriginal Corporation noted as having particular interest within Shark Bay are not predicted to be impacted by the worst-case credible scenario, as shown in Figure 4-1.</p>	<p>(1) Existing controls considered sufficient, as described in Section 6.</p> <p>(2) Woodside updated Section 4.9 to record Malgana’s interests and potential cultural values, including sea grasses, stromatolites and microbial mats and assessed potential impact on these, including controls, in section 6.10.</p> <p>(3) & (4) Woodside is implementing a program to actively support Traditional Custodians’ capacity for ongoing engagement and consultation on environment plans, referenced as PS 16.2.1 in this EP. This includes</p>

<ul style="list-style-type: none"> Hydrodynamic modelling and reflection of flow into the bay. Ranger training for incident response. <p>(2) Malgana indicated that they have particular interest in sea grasses, stromatolites, and microbial mats. Malgana also identified a concern regarding spills into Shark Bay and hydrodynamic modelling.</p> <p>(3) Malgana noted that their funding is restricted for these types of engagement and requested funding support, including an environmental consultant to advise the Board.</p> <p>(4) Malgana expressed a desire for ongoing engagement and partnership.</p>	<p>(3) & (4) Woodside supports ongoing engagement and have responded to Malgana’s advice about the limitations on their resources. Woodside has offered to support Malgana in correspondence sent May and August 2023, including support for environmental expertise supplying names of organisation that Malgana may want to consider to conduct the work, however these offers have not been taken up as of yet.</p> <p>Woodside has assessed the Program of Ongoing Engagement with Traditional Custodians will support ongoing consultation with Malgana and address appropriate support for resourcing, separate from consultation under Reg 11A, Sufficient information to allow informed assessment has already been provided by other means, including Consultation Information Sheets and a Summary Information Sheet developed by Indigenous staff members, and a face to face meeting on 04 April 2023 for which Woodside met Malgana’s costs, with appropriate material (pictures, maps, videos) and project attendance allowing opportunity to ask questions and seek further understanding.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15).</p>	<p>addressing Malgana’s resourcing issue for ongoing consultation via a Framework Agreement.</p>
<p>Nanda Aboriginal Corporation</p> <p>Nanda is established under the Native Title Act 1993 by the Nanda people to represent the Nanda people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.</p>		
<p>Woodside has discharged its obligations for consultation under Regulation 11A(1) and consultation with Nanda for the purpose of 11A(1) is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:</p> <ul style="list-style-type: none"> Sufficient Information: 		

- Woodside Sought direction on Nanda's preferred method of consultation. This resulted in two face-to-face meetings being coordinated at location of Nanda's choosing, with Nanda nominated representatives. These meetings included Woodside presenting information in a format and style that was readily accessible and appropriate. .
- Provided Consultation Information Sheet and Consultation Summary Sheets developed by Indigenous staff to Nanda. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format
- Articulated planned and unplanned environmental risks and impacts, with proposed controls.
- Confirmed the purpose of consultation and set out in detail what is being sought through consultation.
- Asked for the consultation and information sheets to be distributed to members and individuals.
- Woodside has provided NOPSEMA's Brochure "Consultation on offshore petroleum environment plans" and Guideline "Guideline: Consultation in the course of preparing an environment plan
- Provided response to questions asked about the activity through consultation. Through these questions, Nanda have displayed an understanding of the activities under this Environment Plan as well as the broader Scarborough Project.
- Advised that Nanda can request that particular information provided in the consultation not be published (to align with 11A(2)(4))
- Reasonable Period:
 - Woodside published advertisements in national, state, and relevant local newspapers including The Australian, The West Australian, Pilbara News (October 2022 and January 2023), Midwest Times, Northwest Telegraph and Geraldton Guardian (January 2023) advising of the proposed activities and requesting comments or feedback.
 - Woodside has addressed and responded to Nanda over 9 months, demonstrating a "reasonable period" of consultation.

Woodside asked Nanda if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside has provided a reasonable opportunity for input since January 2023 and a genuine two-way dialogue has occurred via meetings and written exchanges to further understand the environment in which the activity will take place. Nanda has engaged with the detail of the activity asking related questions. The details of these engagements are described in the consultation summary below.

Woodside engages in ongoing consultation, beyond that required by Regulation 11A, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15 of the EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on Nanda's functions, interests or activities.

Summary of information provided and record of consultation:

YMAC is the Native Title Representative Body (NTRB) for the Yamatji and Pilbara regions, which includes Nanda. NTRBs exist to provide assistance to native title claimants and holders in regard to their native title rights. No native title has been recognised over the Project Area, however YMAC is identified in the North-West Marine Parks Network Management Plan as the contact for identifying cultural values in nearby Australian Marine Parks.

- On 7 July 2022, Woodside met with YMAC to request advice on the appropriate cultural authorities for the Scarborough project area, including but not limited to the scope of this EP and nearby parks:
 - Woodside described the Scarborough Project and its footprint and gave an overview of indigenous parties consulted.

- Woodside noted that YMAC was identified in the North-West Marine Parks Network Management Plan as contact for identifying cultural values in nearby Australian Marine Parks. Woodside sought to understand if cultural values of the nearby Gascoyne Marine Park may extend into the offshore Scarborough project areas.
- Woodside requested advice on how best (in addition to work completed) to identify any cultural values in the Marine Parks and the broader project footprint.
- YMAC requested Woodside provide the relevant detailed information relating to the location and extent of the project.
- YMAC directed Woodside that consultation related to Scarborough Project would be best directed to Murujuga Aboriginal Corporation and Ngarluma Aboriginal Corporation
- YMAC did not direct Woodside to engage with Nanda, however Nanda was identified as a relevant person under methodology outlined in Section 5 and YMAC is listed as Nanda's preferred contact on the ORIC website and is therefore Woodside's primary contact when engaging Nanda.
- On 20 January 2023, Woodside emailed Nanda via the representative body Yamatji Marlpa Aboriginal Corporation (YMAC) advising of the proposed activity (Appendix F, reference 3.2) and provided a simplified Consultation Information Sheet (including a link to the detailed information sheet on Woodside's website) as well as a summary overview fact sheet, asking what interests Nanda and its members may have within the EMBA and whether they required any information to prepare for a meeting.
- On 1 February 2023, Woodside emailed Nanda /YMAC to follow up on the information provided (Appendix F, reference 4.24) and information sought. Woodside advised it would like to be able to speak with the relevant representative to ensure that Nanda are receiving the relevant information and seek an understanding of whether it would like to discuss any of the information in more detail.
- On 3 February 2023, Nanda/YMAC emailed Woodside:
 - Nanda noted that it currently considers itself a 'relevant person' and would welcome consultation with Woodside.
 - Nanda noted the information sheets provided by Woodside and that the activities are not described in any detail and are also of a highly technical nature. The activities, and their impacts, are not familiar to the Nanda Board.
 - Nanda advised that to ensure Nanda Aboriginal Corporation is fully informed, and able to engage in meaningful consultation:
 - Woodside attend a half-day (or full day, if that is Woodside's preference), workshop with Nanda to explain to the Nanda Board the proposed activities and the EP process; and
 - if, after the presentation Nanda Aboriginal Corporation still considers itself a relevant person, provide funds to Nanda Aboriginal Corporation:
 - **(3)** to engage an expert(s) (such as environmental scientist and/or marine scientist) to advise the Nanda Board about the impact of the proposed activities; and
 - draft an appropriate response for Woodside to include in the EP.
 - Nanda proposed that as next steps it prepares a budget and look to arrange a date for Woodside to meet with the Board.
 - Nanda noted that this initial meeting does not in itself constitute 'consultation' on the EP as contemplated by the Guide or other applicable law.
- On 10 February 2023, Woodside emailed Nanda/YMAC:
 - Woodside advised that it welcomed the opportunity to meet with Nanda to establish a relationship and requested a budget estimate and Nanda's preferred meeting date(s) at its earliest convenience.
 - **(3)** Woodside advised it would be pleased to meet at a location that is suitable to Nanda and in funding this meeting would seek to receive some initial feedback from Nanda about their views of the proposed activities.
 - **(3)** Woodside advised it considers requests to fund independent experts on a case-by-case basis. Woodside note an expert would need to be agreed between Nanda and Woodside and be an expert in oil and gas environmental management in the marine context.
 - Woodside noted it plans to send Nanda consultation information on a further three EPs shortly for Nanda's consideration and there will be more scheduled over the course of the year. Woodside would be sending separate emails for each of these EPs.
 - Woodside requested that in anticipation of Woodside and Nanda meeting, if there is an opportunity for Woodside to meet with YMAC / Nanda representatives prior to the meeting, so that Woodside can best prepare, it would be most grateful for that opportunity.

- **(3)** On 7 March 2023, Nanda/YMAC emailed Woodside to advise it would revert back shortly with a cost estimate and proposed dates.
- On 13 March 2023, Woodside met with Nanda's legal representatives to discuss consultation on the Scarborough Project, preferred method and locality of consultation meetings, and to note that Woodside will assist groups with funding to hold meetings on an agreed basis.
- On 17 March 2023, Woodside emailed Nanda/YMAC following up for a date, cost estimate and logistical details for a meeting. Woodside asked whether a date and budget had been confirmed for a meeting with Nanda, the email also notified Nanda of additional EPs for consideration by the Nanda Board.
- On 23 March 2023, Nanda/YMAC responded inviting Woodside to meet the Board of Directors on 19 April 2023 in Geraldton.
- On 23 March 2023, Woodside emailed Nanda/YMAC accepting the invitation and requesting confirmation of location.
- On 24 March 2023, Nanda/YMAC emailed Woodside confirming location of meeting in Geraldton.
- **(3)** On 29 March 2023, Nanda/YMAC emailed Woodside regarding a budget for the upcoming meeting.
- **(3)** On 5 April 2023, Woodside emailed Nanda/YMAC and accepted the proposed budget.
- **(1)** On 19 April 2023, Woodside met with directors and other representatives from Nanda Aboriginal Corporation in Geraldton:
 - Woodside provided background on Woodside and explained the geographical location of the proposed activity relevant to Nanda.
 - Woodside described the Environment Plan framework, referring to the Offshore Petroleum and Greenhouse Gas Storage Act (Environment) Regulations, NOPSEMA's role as regulator and general contents of Environment Plans.
 - **(1)** Nanda asked whether Woodside has ever had an oil spill. Woodside said that they have had had small spills but nothing that had lasting impact, and while worst case spills would be discussed today, they have not had anything close to this scale happen before.
 - **(1)** Nanda asked whether everything we put in the water will be removed, Woodside responded that this is correct except for instances where removing it would cause worse environmental damage such as buried anchors.
 - **(1)** Nanda asked whether our activities are resistant to cyclones, Woodside responded that while some of our assets would continue operating the execution activities such as seabed intervention and pipelay would be moved away and made safe.
 - **(1)** Nanda asked about control measures to avoid impacts to migratory whales, Woodside described control measures intended to be in place for the activity.
 - **(1)** Nanda asked for detail on oil spill response particularly shoreline impact, Woodside described hydrocarbon spill preparedness, emergency planning and the various response techniques.
 - Woodside provided an overview of the broader Scarborough Project and overview of activities.
 - Woodside provided an overview of each proposed Scarborough activity (including Seismic Survey, Drilling and Completions, Seabed Intervention and Trunkline Installation and Subsea Infrastructure Installation) and a summary of both planned and unplanned impacts and associated controls. This included the use of a video to show the pipelay which was designed for public audience.
 - Woodside described the proposed seabed intervention and trunkline installation activities:
 - **(1)** Nanda asked about the risk of a gas leak from the trunkline. Woodside responded that no hydrocarbon gas will be introduced to the trunkline in this activity, but in operations we consider it to be approximately 1 in 10,000 years and if a leak does happen only gas will be released and no liquid oil.
 - **(1)** Nanda asked about the trunkline route, Woodside explained that it follows seabed contours and follows the existing Pluto trunkline route where possible.
 - Woodside described the planned and unplanned risks/impacts and discussed the EMBA for the activity:
 - **(1)** Nanda asked about greenhouse emission reduction activities, Woodside responded that for this activity it is mainly to do with minimising vessel fuel and using more efficient vessels.
 - Woodside noted this concluded the Scarborough section of the meeting and called for any further questions or feedback. None were received.
 - Woodside provided personal contact details for further feedback.
- **(3 & 4)** On 19 April 2023, Woodside emailed YMAC/ Nanda/NTGAC following up with information offered at the meeting of 13 March 2023 (with NTGAC); management of emissions, organisations that may provide independent expertise, and re-iterating they would like to meet regularly with YMAC/Nanda/NTGAC. Woodside made note that PBCs may be interested in Woodside's ongoing support and capacity building by way of social investments.

- **(1)** On 18 May 2023, Woodside emailed Nanda and responded to their requests from the 19 April 2023 meeting:
 - Woodside thanked Nanda for the consultation meeting and their careful consideration of the matters presented.
 - Woodside acknowledged and respected that Nanda have interests in the EMBA and noted that Woodside want to ensure impacts are as minimal as reasonably practicable.
 - A high-level overview of presented topics was provided.
 - **(1)** In response to a question raised at the meeting, Woodside confirmed it makes the final report re findings of its water quality monitoring program related to the Scarborough Seabed Intervention and Trunkline Installation publicly available.
 - Woodside notified that the feedback and the letter would be included in Environment Plans that will be submitted to NOPSEMA.
 - **(1)** Woodside provided responses to questions noted from the meeting that were not related to the proposed activity.
 - **(4)** Noted that during the meeting Nanda expressed a desire for ongoing engagement and partnership, Woodside noted acknowledged they are committed to ongoing consultation engagement beyond that required for the submission of Eps.
- On 21 July 2023 Woodside emailed Nanda NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information. This email also reiterated Woodside's request that Nanda advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 21 July 2023, Nanda sent an automatic email response with a return date of 31 July 2023, no further email correspondence has been received to date.
- **(4)** On 25 July 2023, Woodside emailed Nanda/YMAC Woodside's planned Program of Ongoing Engagement with Traditional Custodians.
- On 14 September 2023, Woodside emailed Nanda advising of the planned start date for the activity, and once again requesting if Nanda was aware of any other people with whom Woodside should consult, and if there was any information Nanda wish to provide on cultural values The email requested that information be distributed to members or individuals who may be interested. It requested this information prior to 28 September 2023. It also asked Nanda to provide the Consultation Fact Sheets and Summary Information Sheets (Appendix F, reference 5.66) to members or individuals who may be interested. No response was received to this email.

Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>(1) During face-to-face engagements related to this activity and others, Nanda requested further information on topics related to this proposed activity which was responded to during the meeting and in correspondence shortly afterwards:</p> <ul style="list-style-type: none"> • Decommissioning. • Hydrocarbon spill response, potential shoreline impact and emergency planning. • Impacts to whales. • Spill response arrangements. 	<p>(1) Woodside responded to Nanda's requests for further information during face-to-face engagements in which they were raised, and no further information was requested on these topics.</p> <p>(2) Woodside noted Nanda's interest in whales</p> <p>(3) Woodside accepted the budget for the 19 April 2023 meeting and on a request for environmental expertise said they fund other requests on a case-by-case basis. Woodside provided the names of organisations Nanda may wish to consider for environmental expertise. No further request for funding has been received by Woodside.</p>	<p>(1) Existing controls considered sufficient, as described in Section 6.</p> <p>(2) Woodside updated Section 4.9 to reflect Nanda's interests and potential cultural values, including whales, and assessed potential impact on these, including controls, in section 6.10.</p> <p>(3) Not required</p> <p>(4) Woodside is implementing a program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on environment plans referenced as PS 16.2.1 in this EP.</p>

<ul style="list-style-type: none"> • Whether all infrastructure is eventually removed at decommissioning. • Cyclone resistant. • Water quality monitoring • Greenhouse emission. • Asked about the trunkline route and risk of gas leak. <p>(2) Nanda expressed a general interest in whales. Woodside discussed control measures to protect migratory whales from an ecological perspective during the meeting in which the issue was raised. No further feedback or comment was received on this topic.</p> <p>(3) Nanda requested funding for meetings and to fund an expert environmental scientist.</p> <p>(4) Nanda have expressed interest in ongoing engagement and capacity building and investment opportunities.</p>	<p>(4) Woodside has assessed the Program of Ongoing Engagement with Traditional Custodians will support ongoing consultation with Nanda and address appropriate support for resourcing, separate from consultation under Reg 11A, Sufficient information to allow informed assessment has already been provided by other means, including Consultation Information Sheets and a Summary Information Sheet developed by Indigenous staff members, and a face to face meeting on 19 April 2023 for which Woodside met Nanda's costs, with appropriate material (pictures, maps, videos) and project attendance allowing opportunity to ask questions and seek further understanding.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15).</p>	
--	--	--

Native Title Representative Bodies

Yamatji Marlpa Aboriginal Corporation (YMAC)

YMAC is the Native Title Representative Body for the Yamatji and Pilbara regions of Western Australia. As such, they are not a Prescribed or Registered Native Title Body Corporate representing the cultural rights of a Traditional Custodian Community but exist to assist native title claimants and holders

Woodside has discharged its obligations for consultation under Regulation 11A(1) and consultation with YMAC for the purpose of 11A(1) is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. YMAC has indicated that it will not provide substantiative comment on EPs.

Sufficient Information:

- Woodside sought direction on YMAC's preferred method of consultation. This resulted in meetings being coordinated at location of YMAC's choosing, with YMAC nominated representatives. These meetings included Woodside presenting information in a format and style that was readily accessible and appropriate
- Provided Consultation Information Sheet and Consultation Summary Sheets developed by Indigenous staff to YMAC. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format
- Articulated planned and unplanned environmental risks and impacts, with proposed controls.

Reasonable Period:

- Consultation Information Sheet publicly available on the Woodside website since July 2021, further updated and available from January 2023.
- Woodside published advertisements in a national, state, and relevant local newspapers in October 2022 and then again 18 and 20 January 2023 advising of the proposed activities and requesting comments or feedback
- Consultation information provided to YMAC on 20 January 2023 based on their function, interest, and activities.
- Woodside has addressed and responded to YMAC over a 12-month period, demonstrating a "reasonable period" of consultation.

Woodside asked YMAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside has provided a reasonable opportunity for input since July 2022 and a genuine two-way dialogue has occurred.

Woodside engages in ongoing consultation, beyond that required by Regulation 11A, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15 of the EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on YMAC functions, interests or activities.

Summary of information provided and record of consultation:

Historical Engagement

- On 7 July 2022, Woodside met with YMAC to request advice on the appropriate cultural authorities for the Scarborough project area, including but not limited to the scope of this EP and nearby marine parks.
 - Woodside described the Scarborough Project and its footprint and gave an overview of indigenous parties consulted.
 - Woodside noted that YMAC was identified in the North West Marine Parks Network Management Plan as the contact for identifying cultural values in nearby Australian Marine Parks. Woodside sought to understand if the cultural values of the nearby Gascoyne Marine Park may extend into the offshore Scarborough project areas.
 - Woodside requested advice on how best (in addition to work completed) to identify any cultural values in the Marine Parks and in the broader project footprint.
 - YMAC requested Woodside provide the relevant detailed information relating to the location and extent of the project.
- On 8 July 2022, Woodside emailed YMAC providing the requested information including a link to the factsheet relevant to this EP:
 - Woodside advised it would like to establish a process to cross check its understanding of cultural and spiritual values associated with proposed offshore development and surrounding areas. Woodside note that YMAC has been listed as the Native Title Representative body in the North West Marine Parks Network Management Plan for nearby Australian Marine Parks, and would therefore like to confirm cultural values of these marine parks don't extend into Woodside's areas of interest.

- Woodside provided an extract from a related Scarborough EP which detailed further context and Woodside's current understanding of cultural and spiritual values associated with proposed offshore development and surrounding areas.
- On 19 July 2022, Woodside followed up via email.
- (1) On 19 July 2022, YMAC emailed Woodside stating the area Woodside has identified requires correspondence directed to Murujuga Aboriginal Corporation and Ngarluma Aboriginal Corporation.
- On 13 March 2023, Woodside emailed YMAC as to whether YMAC considers itself a 'relevant person' under subregulation 11 A (1) of the Environment Regulations for the purposes of consultation on EPs and, if so, whether that relevance is limited to a facilitation function in its capacity as a representative of Traditional Owner groups/corporations that overlap or adjacent to the environment that may be affected (EMBA) of a particular activity.
- On 20 March 2023, YMAC replied to confirm that in its view it is a 'relevant person' under subregulation 11 A (1) of the Environment Regulations for the purposes of consultation on EPs only in relation to its facilitation and coordination function as a Native Title Representative Body under applicable federal legislation. YMAC does not intend to provide substantive comment on the content of EPs.
- On 20 March 2023, Woodside emailed YMAC to thank it for its reply and to advise that that this assessment would be included in Woodside's EPs.
- On 20 March 2023, YMAC emailed Woodside confirming that it is appropriate to use the assessment in the EPs.
- 19 April 2023, Woodside emailed YMAC, providing a link to a page on Woodside's management of emissions associated with the Scarborough Project and provided a list of consultants who may be able to assist PBCs with consultation. Woodside also offered to meet in the second week of May. No response was received.
- YMAC is the representative for NTGAC and Nanda Aboriginal Corporation and was the representative for Yinggarda Aboriginal Corporation until April 2023.
- On 12 June 2023, YMAC emailed Woodside on behalf of itself and its clients. The email attached:
 - A proposal to fund in-house expertise to support consultations and administration of the consultation framework.
 - A draft consultation framework.
- On 12 June 2023, Woodside responded to YMAC by email, thanking them for the documents and that Woodside would respond shortly.
- On 25 July 2023, Woodside emailed YMAC:
 - Agreeing in principle to the draft consultation framework and funding proposal but seeking further discussion on details.
 - Stating that Woodside is open to considering an industry funded position at YMAC to support the work they are facilitating.
 - attaching Woodside's Program for Ongoing Engagement with Traditional Custodians.
 - Seeking a meeting with YMAC in relation to the draft consultation framework at YMAC's earliest convenience.

Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
(1) YMAC has advised that the most appropriate stakeholders for the Scarborough project generally are Murujuga Aboriginal Corporation and Ngarluma Aboriginal Corporation who are not represented by YMAC. (2) YMAC has provided feedback that in its view it is a 'relevant	(1) Woodside agrees with YMAC's advice that MAC and NAC should be consulted regarding the activity, and they have been (2) Woodside notes YMAC's position that it does not intend to provide substantive comment on EPs (3) Woodside has assessed the Program of Ongoing Engagement with Traditional Custodians will support ongoing consultation with YMAC and/or the groups it represents. This can address appropriate support for	(1) Not required (2) Not required (3) Woodside will implement a program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on environment plans for the purpose of avoiding impacts to cultural heritage values, referenced as PS 16.2.1 in this EP.

<p>person' under sub regulation 11 A (1) of the Environment Regulations for the purposes of consultation on EPs only in relation to its facilitation and coordination function as a Native Title Representative Body under applicable federal legislation and does not intend to provide substantive comment on the content of EPs.</p> <p>(3) YMAC has provided feedback that it is seeking an industry funded position to support consultations for this and other activities, and has provided a draft consultation framework to assist the consultation process.</p>	<p>resourcing, separate from consultation under Reg 11A, Sufficient information to allow informed assessment has already been provided by other means.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15).</p>	
--	--	--

Kimberley Land Council (KLC)
 The KLC was formed in 1978 by Kimberley Aboriginal people as a political land rights organisation and are now the peak Indigenous body in the Kimberley region working with Aboriginal people to secure native title, conduct conservation and land management activities and develop cultural business enterprises.

Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below. KLC has stated that they do not wish to be consulted on EPs.

Sufficient information

- Woodside sought direction on KLC's preferred method of consultation.
- Provided Consultation Information Sheet and Consultation Summary Sheets developed by Indigenous staff to KLC. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format
- Articulated planned and unplanned environmental risks and impacts, with proposed controls.
- Confirmed the purpose of consultation and set out in detail what is being sought through consultation.
- Asked for the consultation and information sheets to be distributed to members and individuals.
- Woodside has provided NOPSEMA's Brochure "Consultation on offshore petroleum environment plans" and Guideline "Guideline: Consultation in the course of preparing an environment plan
- Provided response to questions asked about the activity through consultation. Through these questions, KLC have displayed an understanding of the activities under this Environment Plan as well as the broader Scarborough Project.

- Advised that YMAC can request that particular information provided in the consultation not be published (to align with 11A(2)(4))

Reasonable period

- Consultation Information Sheet publicly available on the Woodside website since August 2021.
- Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback.
- Consultation information provided to KLC on 16 February 2023 and 23 March 2023 based on their function, interest, and activities.
- Woodside has addressed and responded to KLC over a 8-month period.

Summary of information provided and record of consultation:

- On 1 February Woodside spoke to KLC by phone to discuss upcoming EP consultations in the KLC region and the best way to consult. KLC stated that:
 - It was an inappropriate time of year for consultation due to law.
 - Stressed that the area had been badly impacted by floods.
 - They were not in a position to undertake consultation itself due to the above commitments.
 - **(1)** They had not formed a view on what the EP consultation means for Traditional Custodians and would not be participating in consultation itself.
 - They could assist provide information to Traditional Custodians and could assist with logistics if needed.
 - Requested a forward plan of EPs on which Woodside was seeking to engage.
- On 16 February 2023, Woodside emailed KLC with the EP Summary Information Sheet and a list of PBCs that appeared to relevant for the activity with whom Woodside had already commenced engagement. The email attached further information about upcoming EPs.
- On 23 February 2023, Woodside emailed KLC about activities not related to this activity but again attached the Summary Information Sheet for this EP.
- **(2)** On 28 March 2023, Woodside and KLC met by Teams and discussed the EP consultations generally. KLC stated that they were looking to be involved in spill response and support for regional ranger groups.
- On 20 April 2023, Woodside and KLC met in Perth to discuss ranger program spill responses and the appropriate timing for EP community information sessions.
- **(2)** On 20 April 2023, Woodside texted KLC to advise on progress within Woodside for exploring oil spill response training for rangers with AMOSC.
- On 21 April 2023, KLC texted Woodside thanking them for the 20 April meeting.
- **(2)** On 26 April 2023, Woodside texted KLC about other industry interest in spill response training for rangers.
- **(2)** On 11 May 2023, Woodside spoke with KLC to discuss a workshop for spill response training for rangers that would include other industry members and Traditional Custodian groups. KLC stated they were very interested in this and would test with relevant groups to see availability.
- **(2)** On 19 May 2023, Woodside texted KLC asking where they would prefer the workshop (Kimberley or Perth) to explore the oil spill response ranger models.
- On 8 June 2023, Woodside emailed KLC to extend an invite to the Broome community drop-in session.
- On 19 June 2023, Woodside spoke to KLC to follow up on attendees for the workshop. KLC stated they were still trying to lock down particular groups.
- **(2)** On 23 June 2023, Woodside spoke to KLC at the NOPSEMA Summit. KLC confirmed they were still interested in the ranger workshop but would be unavailable for a couple of weeks.

Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>(1) The KLC has stated they do not want to be consulted but will facilitate consultations with relevant PBCs.</p> <p>(2) The KLC has stated they are seeking support for regional ranger programs and oil spill response training.</p>	<p>(1) Woodside has consulted with KLC in relation to its facilitation and coordination function as a Native Title Representative Body under applicable federal legislation. KLC informed Woodside that it does not intend to provide comment on EPs</p> <p>(2) Woodside has ongoing engagement with KLC to explore models for ranger spill response.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15).</p>	<p>(1) Not required</p> <p>(2) Woodside will implement a program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on environment plans for the purpose of avoiding impacts to cultural heritage values, referenced as PS 16.2.1 in this EP.</p>

Self-identified First Nations Groups

Ngarluma Yindjibarndi Foundation Ltd (NYFL)

NYFL was created to act as Trustee for the Trust under the Northwest Shelf Agreement 1998 struck between the Ngarluma and Yindjibarndi registered native title claimants, the NWS JVs and Woodside, prior to the resolution of the Ngarluma and Yindjibarndi native title claim. Its purpose is to carry on the business of enterprise development, investment and social welfare.

In 1999 the Ngarluma and Yindjibarndi native title claim was settled with the Federal Court appointing, at the request of the common law native title holders, the Ngarluma Aboriginal Corporation (NAC) as PBC to represent the communal interests of the Ngarluma people and the Yindjibarndi Aboriginal Corporation (YAC) as PBC to represent the communal interests of the Yindjibarndi people. Woodside consulted both NAC and YAC as relevant persons in the course of preparing this EP.

NYFL self-identified and has advised it is relevant for this EP.

Woodside has discharged its obligations for consultation under Regulation 11A(1) and consultation with NYFL for the purpose of 11A(1) is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

- Sufficient Information:
 - Sought direction on NYFL's preferred method of consultation. NYFL requested consultation material suitable for Traditional Custodian audience, which was developed and provided. NYFL and Woodside initially agreed to hold a face-to-face consultation meeting at location of NYFL's choosing with NYFL nominated representatives, however NYFL chose to postpone the engagement for an undefined time.
 - Provided Consultation Information Sheet and Consultation Summary Sheets developed by Indigenous staff to NYFL. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format
 - Articulated planned and unplanned environmental risks and impacts, with proposed controls.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Controlled Ref No: SA0006AH0000004

Revision: 6

Page 168 of 737

Uncontrolled when printed. Refer to electronic version for most up to date information.

- Confirmed purpose of consultation and set out in detail what is being sought through consultation.
- Asked for the consultation and information sheets to be distributed to members and individuals.
- Woodside has provided NOPSEMA's Brochure "Consultation on offshore petroleum environment plans" and Guideline "Guideline: Consultation in the course of preparing an environment plan"
- Reasonable Period:
 - Woodside published advertisements in a national, state, and relevant local newspapers including The Australian, The West Australian, Pilbara News (October 2022 and January 2023), Midwest Times, North West Telegraph and Geraldton Guardian (January 2023) advising of the proposed activities and requesting comments or feedback.
 - Met with NYFL and described the activity in detail in September 2022
 - Consultation information provided to NYFL on 27 January 2023 based on their function, interest, and activities.
 - Woodside has addressed and responded to NYFL over 12 months, demonstrating a "reasonable period" of consultation.

Woodside asked NYFL if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside engages in ongoing consultation, beyond that required by Regulation 11A, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15 of the EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on NYFL functions, interests, or activities.

Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below.

Summary of information provided and record of consultation:

- On 31 August 2021, Woodside emailed NYFL as a member of the Quarterly Heritage Group advising of its plan to submit an Environment Plan (EP) to undertake seabed intervention and Trunkline installation activities in Commonwealth waters for the Scarborough development. The email attached a notice advising of the activities planned under the EP and the operational areas. The email requested feedback to Woodside in relation to the activities.
- On 26 September 2022, NYFL emailed Woodside and stated NYFL would like to understand more about the proposed activities and mitigations.
- On 27 September 2022, Woodside emailed and phoned NYFL seeking a time to meet. Woodside suggested it could then look to respond in detail in early October to give NYFL enough time to respond if there are further concerns.
- On 27 September NYFL emailed Woodside to schedule a meeting in Roebourne on Friday 30 September.
- On 30 September 2022 representatives of Woodside and NYFL met talked through the activities in the EP in detail. NYFL explained that the current information sheets were difficult to understand. Woodside undertook to provide materials in plain English that were being developed.
- On 4 October 2022, NYFL emailed Woodside:
 - NYFL thanked Woodside for taking the time to talk through ways in which complex information such as that which relates to EPs can be appropriately communicated to NYFL and its TO board and members.
 - NYFL advised that as discussed, at present the language and communication approach in EPs, such as that sent to NYFL on 23 September 2022, is not appropriate for NYFL. As such NYFL cannot confidently say it is OK with the activity.

- **(1)** NYFL also thanked Woodside for communicating to the business that NYFL is a 'relevant person' for activity.

- Between October 2022 and March 2023, while Woodside and NYFL have weekly communications on other matters, there was a hiatus on communication due changes to activity scheduling and description of the EMBA.
- On 30 November 2022, Woodside and NYFL held the Woodside NYFL NWS quarterly relationship meeting which is resourced by Woodside to enable meaningful participation by Traditional Custodians. There was a separate discussion about holding a separate meeting for EPs generally.
- **(2)** On 14 February 2023, NYFL emailed Woodside to see if the accessible information for Traditional Custodians had been prepared.
- On 1 March 2023, Woodside and NYFL held the Woodside NYFL NWS quarterly relationship meeting which is resourced by Woodside to enable meaningful participation by Traditional Custodians. The meeting discussed Woodside and NYFL reviewing the NWS 1998 Agreement for renegotiation. There was a separate discussion about holding a separate meeting for EPs generally.
- On 20 March 2023, Woodside emailed NYFL about the activity providing further information (Appendix F, reference 1.210), and provided a simplified Summary Information Sheet (developed with a Ngarluma Traditional Custodian for a Traditional Custodian audience) and including a link to the detailed information sheet on Woodside's website. The timeframes for consultation had been significantly extended.
- On 20 March 2023, NYFL emailed Woodside thanking them for the information and stating they would discuss the information with the Board and members.
- On 20 March 2023, Woodside emailed NYFL offering a meeting to present to the Board in relation to this activity and other activities.
- On 22 May 2023, Woodside emailed NYFL information in relation to an EP not related to this activity.
- **(2)** On 22 May 2023, the NYFL CEO replied saying that they were requesting information in an appropriate format for Traditional Custodians and saying that the language and approach was not appropriate for NYFL's members.
- On 24 May 2023, in response to the email on 22 May 2023, Woodside spoke to NYFL by phone, explained that the information sheets were developed with a Ngarluma Traditional Custodian but that the best way to understand the materials was to take Woodside up on our offer to present to NYFL. These presentations include images and the subject matter experts are on hand to answer questions. Presentations had been well received by other groups. Woodside had budget for consultation meetings and could provide support for the meetings to occur.
- On 8 June 2023, NYFL emailed Woodside about several matters including a request for "further information/culturally appropriate comms" for this activity.
- On 8 June 2023, Woodside reconfirmed previous offers to meet with NYFL in relation to the activity and other activities unrelated to this EP for the purpose face to face and consultation. Explained that these presentations have been well received from groups. Explained also that the summary information sheets provided were developed by Indigenous representatives for a Traditional Owner audience. Requested that if face to face consultation was not preferred by NYFL, whether they could provide some direction as to alternatives. Woodside reiterated they cover consultation costs to and can meet in Roebourne, assuming that is preferred.
- On 28 June 2023, Woodside emailed NYFL confirming a consultation date of 20 July and requesting NYFL send through a quote for costs.
- On 28 June 2023, NYFL responded saying they would hold off on committing to a date while they had a change to digest the outcomes of the NOPSEMA Summit.
- On 29 June 2023, Woodside emailed NYFL in relation to an activity unrelated to this activity and asking whether they wished to be consulted.
- **(3)** On 29 June 2023, NYFL responded stating that they were waiting to agree to national framework for consultation between industry and First Nations to be resolved before they consult on Environment Plans. This email was referring to the NOPSEMA Summit.
- On 10 July 2023, Woodside emailed NYFL seeking clarity in relation to their request. Woodside stated they understood the outcomes of the NOPSEMA Summit were as recorded by the facilitator and communicated to all participants as:
 - It was agreed that:

- There is a need for a National Summit of Indigenous Groups and Traditional Owners to consult together and agree what they require and what their collective and individual concerns may be.
 - Government (DISR) will assist by mapping and compiling a list of all traditional owner groups that should be invited to this Summit,
 - Kimberley Land Council and other PBCs will form a Steering Committee to draft the agenda for this Summit,
 - APPEA will seek membership approval to facilitate by funding this Summit, and
 - The Summit will be independently facilitated.
 - APPEA to further consult with their members in order to get some agreement on priorities and next steps for Industry.
 - After the National Summit of Indigenous Groups, the first of several meetings will be held between a smaller representative Traditional Owners group and a smaller representative Industry group, the latter to be coordinated through APPEA; and
 - There will be ongoing parallel consultations in relation to current EPs, which will continue in accordance with what is required by Reg 11(A)(1)(d) of the OPGGSA Environment Regulations.
 - Woodside stated it is committed to supporting the National Summit of Traditional Owners and is committed to industry and Traditional Owners working together to agree consultation frameworks. Woodside noted, however, this will take time and necessarily must occur in parallel to ongoing consultation, with operators obliged to consult pursuant to Reg 11(A). Woodside also stated they were committing to a program of ongoing consultation for the life of the EP that would be happy to discuss that with NYFL.
- **(3)** On 10 July 2023, NYFL stated that they did not agree with the facilitators record of the NOPSEMA Summit, particularly that there will be parallel ongoing consultation in relation to current EPs prior to the proposed National Summit of Indigenous Groups and Traditional Owners.
 - On 19 July 2023, Woodside emailed NYFL NOPSEMA's Consultation Guideline, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information. This email also requested that NYFL advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult. No response was received to this email
 - On 26 July 2023, Woodside emailed NYFL Woodside's planned Program of Ongoing Engagement with Traditional Custodians.
 - On 26 July 2023, NYFL emailed Woodside in response to Woodside's planned Program of Ongoing Engagement with Traditional Custodians, noting it was a good start particularly with the inclusion of Traditional Owner feedback and indicating that assistance with resourcing and internal capacity would be required..
 - On 2 August 2023, Woodside emailed NYFL regarding the acceptance of a different Scarborough EP with the same EMBA, asking for information in accordance with conditions of acceptance of the EP. It specifically asked whether NYFL is aware of any people, who in accordance with Indigenous tradition, may have spiritual or cultural connections to the environment that may be affected by the activity that have not yet been afforded the opportunity to provide information. The email also contained links to information on NOPSEMA's publications on EP consultation and its purpose. It also made clear that any gender restricted, or culturally sensitive information would be managed carefully and appropriately. An offer of support to participate in consultation was made.
 - On 4 August 2023, NYFL emailed Woodside regarding notification about acceptance of another Scarborough EP stating that they do not have sufficient resourcing to respond to EP matters. Requesting to meet to discuss a way forward.
 - On 11 August NYFL emailed Woodside primarily in response to another matter. The email noted that :
 - NYFL look forward to progressing discussion with Woodside on the proposed program of consultation.
 - **(4)** NYFL is participating with other First Nations organisations and representative bodies to develop a framework for consultation.
 - **(5)** There may be people, who in accordance with Indigenous tradition, may have spiritual and cultural connections to the EMBA that have not yet been afforded the opportunity to provide information
 - **(6)** There may be additional cultural or environmental values that relate to the area that have not been identified or communicated to Woodside
 - On 15 August 2023, Woodside emailed NYFL thanking them for their correspondence and requesting availability to meet.

- On 18 August 2023, NYFL emailed Woodside proposing a date of 30 August to meet to discuss next steps.
- On 18 August 2023, Woodside emailed NYFL accepting the proposed date to meet to discuss engagement processes.
- On 28 August 2023, Woodside emailed NYFL requesting a video link for a consultant to Woodside who will be involved in consultation and engagement going forward.
- On 28 August 2023, NYFL emailed through an agenda for the proposed meeting.
- On 28 August 2023, Woodside emailed NYFL acknowledging receipt of agenda and providing contact details for engagement.
- On 30 August 2023, Woodside met with NYFL to discuss a consultation process and engagement with NYFL and YAC, NYFL put forward the following:
 - (7) NYFL requested Woodside employ 3 traditional Owners who would engage/consult with NYFL members.
 - (8) NYFL stated that time frames must be longer than one month for consultation.
- On 14 September 2023, Woodside emailed NYFL advising of the planned start date for the activity, and once again requesting if NYFL is aware of any other people with whom Woodside should consult, and if there is any information NYFL wish to provide on cultural values. The email requested this information prior to 02 October 2023, but reiterated that Woodside will take feedback after the commencement of the activity as part of ongoing consultation. The Summary Information Sheet for this activity was attached (Appendix F, reference 5.64). No response was received to this email.

NYFL is also consulted through its membership on the Karratha Community Liaison Group (KCLG) and the Quarterly Heritage Group

Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<ul style="list-style-type: none"> - NYFL self-identified and advised Woodside that they are a relevant person for this activity. Their feedback included a request for information sheets appropriate for a Traditional Custodian audience. - NYFL requested consultation material suitable to a Traditional Custodian audience. - NYFL wishes to pause consultation until after the First Nations national summit is held 	<p>(1) Woodside has responded to NYFL's self-identification and consulted with them as a relevant person. NYFL was created to act as Trustee for the Northwest Shelf Agreement 1998. NYFL's membership is made up of Ngarluma people and Yindjibarndi people, membership is not open to any person who is not accepted as Ngarluma or Yindjibarndi. Woodside has also consulted with Ngarluma and Yindjibarndi Aboriginal Corporations individually. Ngarluma and Yindjibarndi Aboriginal Corporations were appointed by the Federal Court, at the request of the Ngarluma and Yindjibarndi common law native title holders as PBCs to represent the communal interests of the Ngarluma and Yindjibarndi people respectively. Ngarluma and Yindjibarndi Aboriginal Corporations are representative of all Ngarluma and Yindjibarndi people regardless of membership.</p> <p>(2) Woodside recognises that sufficient information must be provided in a form that is accessible and appropriate to the</p>	<p>(1) NYFL has been consulted with in accordance with the methodology described in Section 5 of the EP</p> <p>(2) Not required</p> <p>(3) Not required</p> <p>(4) Woodside is implementing a program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on environment plans, referenced as PS 16.2.1 in this EP. This includes continued engagement regarding NYFL's proposed Framework Agreement which would be applied to ongoing consultation for this activity. This is described further in the Program of Ongoing Engagement with Traditional Custodians, Appendix L</p> <p>(5) Methodology described in Section 5 adequately addresses this claim</p> <p>(6) Description of cultural values and heritage features is included in Section 4.9 of the EP</p> <p>(7) The proposed Framework Agreement (see point 4) will address appropriate NYFL resourcing. This is described</p>

<p>and a framework for consultation developed. Woodside understands that the First Nations national summit was tentatively scheduled for the end of August 2023, but may now take place in November 2023.</p> <ul style="list-style-type: none"> - NYFL is working with other First Nations Organisations and representative Bodies to develop a framework for consultation. This has not yet been proposed to Woodside. - NYFL expressed that there may be people who in accordance with Indigenous tradition, may have spiritual and cultural connections to the environment that may be affected who have not yet been afforded the opportunity to provide information. - NYFL expressed that there may be additional cultural and environmental values that relate to the area that have not been communicated to Woodside. - NYFL requested that Woodside employ three 	<p>audience. In response to this request, Woodside developed and provided Summary information sheets developed with a Ngarluma Traditional Custodian for a Traditional Custodian audience. Woodside offered face to face consultation meetings resourced by Woodside to enable meaningful Traditional Custodian consultation, which include visual aids and videos. NYFL was initially amenable to this, however later postponed the engagement for an undetermined period (see claim 7)</p> <p>(3) Woodside does not consider that the proposal that consultation be paused until the proposed First Nations National Summit is reasonable. Woodside does not consider that the First Nations Summit is a pre-requisite for consultation to occur under regulation 11A, and such a reading would be against case law guidance that the process of consultation must be capable of reasonable and practicable discharge. Sufficient information and a reasonable period has already been provided prior to the Summit.</p> <p>(4) Separate from consultation under Reg 11A, Woodside is open to engaging with a joint First Nations framework for consultation, however, notes that this is not required to undertake and/or complete consultation in the course of preparing this EP. The framework could be used to frame ongoing consultation. Sufficient information to allow informed assessment has already been provided by other means, including summary sheets developed by Indigenous staff. Woodside has an existing engagement framework in place with NYFL via the Quarterly Heritage Group which enables regular communication about Woodside activities.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its</p>	<p>further in the Program of Ongoing Engagement with Traditional Custodians, Appendix L</p> <p>(8) Not required</p>
---	--	---

<p>Ngarluma/Yindjibarndi Traditional Owners who would consult with NYFL members.</p> <p>- NYFL stated that time frames must be longer than one month for consultation.</p>	<p>Management of Change and Revision process (see Section 7.15).</p> <p>(5) As described in Section 5.9.2 of the EP, Woodside's consultation methodology provided Traditional Custodians with the opportunity to be aware of the proposed activity and to participate in consultation. Woodside considers this methodology has afforded all people whose spiritual connection to the environment that may be affected a reasonable opportunity to consult. Consultation with NYFL has not identified any other groups or individuals relevant to communally held functions, activities or interests. NYFL have been provided with reasonable time to respond with this information since the email from Woodside of 18 July specifically requesting this information, but no response to this request has been received.</p> <p>Woodside has also consulted with Ngarluma and Yindjibarndi Aboriginal Corporations who are the Representative Aboriginal Corporations nominated by the Ngarluma and Yindjibarndi people respectively to represent the communally held interests of the Ngarluma and Yindjibarndi people.</p> <p>(6) Woodside has a robust understanding of the environment, cultural values and heritage features based on publicly available information and consultation with relevant persons. This is described in Section 4.9 of the EP</p> <p>(7) Woodside does not consider NYFL's request that Woodside employ three Ngarluma/Yindjibarndi traditional owners to consult with NYFL members a reasonable proposal or a necessary step to allow consultation to occur. Woodside notes that consultation must be capable of reasonable and practicable discharge. Woodside's consultation efforts are informed and undertaken by personnel with significant experience in First Nations relations, including Indigenous employees. Woodside assesses that the proposed</p>	
--	--	--

	<p>Framework Agreement would be an effective mechanism to address resourcing for ongoing consultation.</p> <p>(8) Woodside has already provided NYFL with reasonable period of time to participate in consultation (as required by regulation 11A) and has been engaging since September 2022.</p>	
--	--	--

Historical cultural heritage groups or organisations

Western Australian Museum (WAM)

Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:

- Consultation Information Sheet publicly available on the Woodside website since August 2021.
- Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback.
- Consultation information provided to WA Museum on 1 February 2023 based on their function, interest, and activities.
- Woodside addressed and responded to WA Museum over a 6 month period.

Summary of information provided and record of consultation:

- On 1 February 2023, Woodside emailed the WAM advising of the proposed activity (Appendix F, reference 4.26) and provided an updated Consultation Information Sheet and State Shipwrecks information (Appendix F, reference 4.27).
- On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.32).
- On 3 March 2023, WAM emailed Woodside:

- WAM advised it had reviewed the documents relating to the proposed activity.
- WAM advised that its feedback should be reviewed in conjunction with the Commonwealth Government's 'Underwater Cultural Heritage (UCH) Guidance for Offshore Developments' regarding UCH assessments, the potential for finding as yet unlocated UCH and proponents' legal responsibilities and Duty of Care requirements. (<https://www.dceew.gov.au/parks-heritage/heritage/publications/underwater-heritage-guidance-offshore>)
- WAM advised that while a list of known, located UCH sites in the broader has been assessed and provided in relation to the Environment that May Be Affected (EMBA), of more direct concern for direct impact is the potential for as yet unlocated UCH to exist in the extensive areas of seabed to be impacted by trenching, borrow ground dredging, spoil grounds and other seabed interventions such as anchoring etc.
- WAM advised that apart from mention of an ethnographic survey for Indigenous UCH, there is no indication that any other desktop or physical assessment for UCH has been undertaken in any of the seabed areas to be impacted, that is required to make a UCH Impact Assessment.
- WAM recommended that a UCH survey is carried out by a qualified and experienced maritime archaeologist(s). This may initially be a desktop survey based on existing data, if the resolution and coverage is sufficient. Further physical investigation may be required to ensure any seabed impact areas do not contain UCH that could be impacted.
- WAM recommended that all project managers, vessel, plant and ROV operators should be advised of the potential to encounter visible or buried UCH, and of their statutory reporting requirements under both the Commonwealth Underwater Cultural Heritage Act 2018 (Australian and Commonwealth waters, including State waters for historic shipwrecks), and Maritime Archaeology Act 1973 (State waters) to report any discoveries of UCH to the WA Museum.
- WAM recommended there should be procedures in place should any UCH be discovered in the course of the works.
- WAM recommended that the documents should be updated to include 'Impact to Underwater Cultural Heritage' as a Potential Impact/ Risk as a result of seabed disturbance, with corresponding Risk Mitigation and Management Measures.
- On 8 May 2023, Woodside responded to points raised in WAM's correspondence.
 - The Scarborough Trunkline is intended to be installed alongside the existing Pluto gas trunkline. The Trunkline route has been assessed for UCH including through multibeam echo sounder and side scan sonar. Assessments considered submerged Indigenous UCH as well as the existence of historic or maritime heritage. No UCH was identified through these assessments.
 - Dedicated surveys have been carried out along the Scarborough Trunkline route. These are sufficient for identifying large scale UCH and have been fully analysed and interpreted by an expert underwater archaeologist.
 - The SITI EP (current revision under assessment, not yet publicly available) will contain an Environmental Performance Objective to 'Minimise direct and indirect impacts to social, cultural, heritage and archaeological values within and surrounding the Operational Area'. It is intended that there will be a commitment that a Heritage Management Committee will be established to assess new information from further archaeological or ethnographic studies with regards to Indigenous UCH relevant to Murujuga Aboriginal Corporation. Woodside has also consulted broadly with other Indigenous representative organisations on this activity including on heritage management.
- On 25 July 2023, Woodside emailed WAM stating that Woodside originally responded to WAM on 8 May 2023 with regards to the WAM correspondence, however changes have since been made to the SITI EP as it progresses through the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) assessment process, that are relevant to the original WAM claims.
 - The SITI EP has been updated to include controls around the Unexpected Finds Procedure and risks to UCH.

Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>WAM has provided feedback regarding:</p> <ul style="list-style-type: none"> • Its concerns about unlocated underwater cultural heritage (UCH), • A lack of desktop or physical assessment for UCH undertaken to make a UCH impact assessment, • Its recommendation for a UCH survey, • Advice to be provided to project managers, vessel, plant and ROV operators regarding visible or buried UCH and reporting requirements, • Procedures to be in place should any UCH be discovered, and • The inclusion of 'Impact to Underwater Cultural Heritage' as a Potential Impact / Risk as a result of seabed disturbance with risk mitigation and management measures. 	<p>WAM's feedback has been assessed on merit as it applies to this EP and a summary of responses has been provided to address specific claims and objections raised on the proposed activity, where appropriate.</p> <p>Given the extensive surveys that have been carried out in and around the Operational Area, planned pre-installation surveys as described in the EP and low likelihood of UCH presence in the Operational Area(s), a dedicated UCH survey by a qualified maritime archaeologist is not required.</p> <p>Woodside added three new controls which address WAM concerns and notified WAM of these changes. These included an Unexpected Finds Procedure, vessel / ROV crew awareness of the procedure and obligations to stop work should any potential UCH be discovered, as well as the requirement to report UCH to relevant authorities, including to the WAM.</p> <p>Woodside responded to the DPLH's recommendation to notify WAM in the event of a maritime archaeological incident.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>As described in Section 4.9.1, Woodside has undertaken substantial assessments of the tangible and intangible heritage within the Operational Area. Woodside considers it adopts appropriate controls to manage underwater cultural heritage, as demonstrated in Section 6.7.2 and Section 6.7.3.</p> <p>Woodside and MAC have established the HMC described in Section 7.5. Recommendations of the HMC will be implemented where they (independently or in conjunction with other actions) lower the risk of impacts to heritage to ALARP. New heritage information, where applicable to this proposed activity, will be addressed as part of ongoing consultation and change management (Section 7).</p> <p>Woodside considers the measures and controls in the EP are appropriate, and new controls added to address WAM claims have been communicated to WAM.</p>
Local government and community representative groups or organisations		
Shire of Ashburton		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. 		

<ul style="list-style-type: none"> • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Consultation information provided to Shire of Ashburton on 27 January 2023 based on their function, interest, and activities. • Woodside has sent follow up email(s) seeking feedback on the proposed activities. • Woodside has provided Shire of Ashburton with the opportunity to provide feedback over a 6 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 27 January 2023, Woodside emailed the Shire of Ashburton advising of the proposed activity (Appendix F, reference 4.13) and provided an updated Consultation Information Sheet. • On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.22). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
Whilst feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	No additional measures or controls are required.
Town of Port Hedland		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Consultation information provided Town of Port Hedland on 27 January 2023 based on their function, interest, and activities. • Woodside has sent follow up email(s) seeking feedback on the proposed activities. • Woodside has provided Town of Port Hedland with the opportunity to provide feedback over a 6 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 27 January 2023, Woodside emailed the Town of Port Hedland advising of the proposed activity (Appendix F, reference 4.14) and provided an updated Consultation Information Sheet. • On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.23). 		

Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No further feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	No additional measures or controls are required.
Shire of Carnarvon		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Consultation information provided to Shire of Carnarvon on 27 January 2023 based on their function, interest, and activities. • Woodside has addressed and responded to Shire of Carnarvon over a 7 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 27 January 2023, Woodside emailed the Shire of Carnarvon advising of the proposed activity (Appendix F, reference 4.15) and provided an updated Consultation Information Sheet. • On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.24). • On 3 May 2023, Woodside had a meeting with the Shire of Carnarvon on a separate EP and provided an overview of activities proposed under this EP. The Shire of Carnarvon: 		

- Noted that they were struggling to see how the Shire may be impacted by Woodside's activities that it has been receiving consultation information for. Noted that the Town of Coral Bay is within the Shire of Carnarvon which is closer to Woodside's activities, but this is still quite a distance.
- Noted that the townsite of Coral Bay may be more directly within Woodside's area of potential impact and is very reliant on the environment. Noted that there are fisheries based in Carnarvon going out to Shark Bay which are an important part of the economy and lifestyle.
- Woodside thanked the Shire of Carnarvon for its advice around engagement and agreed that the meeting was a good opportunity to establish a relationship with the Shire of Carnarvon and determine the best method to engage moving forward.
- Woodside explained recent changes to consultation and the expansive area titleholders are now required to consult on, referred to as the EMBA.
- Woodside explained that the EMBA for each EP is determined based on the largest spatial extent where unplanned events could potentially have an environmental consequence. Explained that for each of the EPs Woodside would be discussing with the SoC, the EMBA is determined by the unlikely event of a hydrocarbon release.
- Woodside explained that the Shire of Carnarvon has the opportunity to provide feedback on each of Woodside's proposed activities that it would be providing an overview of.
- Woodside provided an overview of the proposed activities, including planned and unplanned impacts. No feedback or queries were raised by the Shire of Carnarvon on the proposed activities.
- The Shire of Carnarvon advised it appreciated the overview of environment plans, including the activities proposed under this EP. The Shire requested Woodside send an email with the full list of EPs it had consulted the Shire on, so they had it in one place, including this EP.
- The Shire undertook to give the Council an update and if they have further input, they would reach out to Woodside.
- As part of broader discussions within the meeting, Woodside committed to providing the Shire with the contact points for Coral Bay for each of the environment plans discussed, including the activities proposed under this EP.
- On 5 May 2023, Woodside emailed the Shire of Carnarvon to thank the Shire for a meeting held on 3 May 2023. Woodside also resent consultation information previously sent to the Shire and invited feedback. Woodside reiterated a request regarding the likelihood of contact along Coral Bay for each of the EPs and that additional information would be sent to the Shire soon. Woodside stated it looked forward to developing a streamlined approach to consultation with the Shire.
- On 29 May 2023, the Shire of Carnarvon responded and thanked Woodside for providing the consultation information. The Shire advised it appreciated being kept informed and felt the meeting was useful in allowing the Shire to better understand the potential risks for areas within the Shire and the mitigations measures in place. The Shire requested that if risks to the Shire change for these projects or new risks emerge for these or other projects, it would appreciate being advised. The Shire had no further comment.
- On 29 May 2023, Woodside responded and thanked the Shire for its feedback with respect to a number of EPs, including the activities proposed under this EP and noted the Shire's advice that:
 - It would like to be updated if risks to the Shire change for these projects or new risks emerge for these or other projects.
 - The Shire has no further comments.
 - Noted that at the 3 May 2023 meeting, Woodside committed to providing the Shire with the likelihood of contact along Coral Bay for each of the above EPs. Woodside:
 - Explained the EMBA being determined by the highly unlikely event of a hydrocarbon release from activities within the scope of the EP.
 - Explained that when Woodside models the EMBA for a hydrocarbon spill, we consider both the environmental and visual amenity risk. The outputs identify which areas of the marine environment could be exposed to hydrocarbons at levels exceeding certain threshold concentrations in the unlikely event of a spill.

- Summarised the probabilities of surface, shoreline and in-water hydrocarbon contact at Coral Bay for a number of EPs, including the activities proposed under this EP.
- On 29 May 2023, the Shire of Carnarvon thanked Woodside for its previous correspondence and suggested Woodside brief its Local Emergency Management Committee (LEMC), via an online meeting if necessary, as most of this risk is only in the event of an emergency. A Shire representative was prompted to contact Woodside to arrange this meeting.
- On 8 June 2023, Woodside responded thanking the SoC for its email and confirmed Woodside would welcome the opportunity to brief the Shire’s LEMC.
- On 20 July 2023, Woodside followed up with SoC requesting to attend its Local Emergency Management Committee meeting.
- On 20 July 2023, SoC responded inviting Woodside to attend its next LEMC on August 16, 2023.
- On 21 July 2023, Woodside responded to SoC accepting the invitation to attend the committee meeting.
- On 16 August 2023, Woodside attended SoC LEMC meeting and provided:
 - An overview of proposed activities relevant to the Shire including this EP
 - Outlined consultation approach and explanation of Environment That May be Affected (EMBA) as a modelling process of the broadest extent a diesel could spread based on a number of conditions.
 - Detail of oil spill response approach in the highly unlikely event of a hydrocarbon spill
 - Woodside key steps when activating an oil spill response plan
- SoC thanked Woodside for presenting to the committee and no questions or concerns were raised.

<p>Exmouth Community Reference Group (ECRG)</p>		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Consultation information provided to ECRG on 7 April 2022 based on their function, interest, and activities.. • Woodside has sent follow up emails and given presentations seeking feedback on the proposed activities. • Woodside has addressed and responded to the ECRG over a 16 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 7 April 2022, Woodside presented to the ECRG and provided consultation information that relating to the broader Scarborough activities including the Operational Area of this proposed activity. • On 17 November 2022, Woodside presented to the ECRG on the broader Scarborough activities, including a status update on this EP. • On 1 February 2023, Woodside emailed the ECRG advising of the proposed activity (Appendix F, reference 4.19) and provided an updated Consultation Information Sheet. • On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.17). 		
<p>Summary of Feedback, Objection or Claim</p>	<p>Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response</p>	<p>Environment Plan Controls</p>
<p>No feedback, objections or claims received despite follow up.</p>	<p>Woodside has provided relevant information to the ECRG representative's questions.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>No additional measures or controls are required.</p>

Onslow Chamber of Commerce and Industry		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Consultation information provided to Onslow Chamber of Commerce and Industry on 27 January 2023 based on their function, interest, and activities.. • Woodside has sent follow up emails seeking feedback on the proposed activities. • Woodside has provided Onslow Chamber of Commerce and Industry with the opportunity to provide feedback over a 6 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 27 January 2023, Woodside emailed the Onslow Chamber of Commerce and Industry advising of the proposed activity (Appendix F, reference 4.16) and provided an updated Consultation Information Sheet. • On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.25). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.13).	No additional measures or controls are required.
Carnarvon Chamber of Commerce and Industry		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Consultation information provided to Carnarvon Chamber of Commerce and Industry on 27 January 2023 based on their function, interest, and activities.. • Woodside has sent follow up emails seeking feedback on the proposed activities. • Woodside has provided Carnarvon Chamber of Commerce and Industry with the opportunity to provide feedback over a 6 month period. <p>Summary of information provided and record of consultation:</p>		

<ul style="list-style-type: none"> On 27 January 2023, Woodside emailed the Carnarvon Chamber of Commerce and Industry advising of the proposed activity (Appendix F, reference 4.18) and provided an updated Consultation Information Sheet. On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.27). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	No additional measures or controls are required.
Port Hedland Chamber of Commerce and Industry		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> Consultation Information Sheet publicly available on the Woodside website since August 2021. Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. Consultation information provided to Port Hedland Chamber of Commerce and Industry on 27 January 2023 based on their function, interest, and activities.. Woodside has sent follow up emails seeking feedback on the proposed activities. Woodside has provided the Port Hedland Chamber of Commerce and Industry with the opportunity to provide feedback over a 6 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> On 27 January 2023, Woodside emailed the Port Hedland Chamber of Commerce and Industry advising of the proposed activity (Appendix F, reference 4.17) and provided an updated Consultation Information Sheet. On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.26). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	No additional measures or controls are required.

Other non-government groups or organisations

Conservation Council of WA (CCWA)

Woodside has discharged its obligations for consultation under Regulation 11A(1) and consultation with Conservation Council of WA (CCWA) for the purpose of 11A(1) is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2021.
- Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback.
- Consultation information provided to CCWA on 31 August 2021 based on their function, interest, and activities.
- Woodside addressed and responded to CCWA claims and objections over a 23 month period.

Summary of information provided and record of consultation:

- On 12 August 2021, CCWA emailed Woodside and requested to be consulted on Scarborough EPs.
- On 19 August 2021, Woodside emailed CCWA thanking them for their letter and saying the consultation team would be in touch about future EPs.
- On 31 August 2021 Woodside emailed CCWA advising of the proposed activity (Appendix F, reference 1.21) and provided a Consultation Information Sheet.
- On 15 December 2021, Woodside received third-party correspondence via NOPSEMA in relation to a related Scarborough activity. Following assessment of the feedback, Woodside determined that the feedback from CCWA had included the following feedback, claims and objections that could also be related to the proposed activity the subject of this EP. The feedback also included a number of additional third-party supporting documents:
 - CCWA asserted that impacts on the Dampier Archipelago National Heritage Place, from the development of the Scarborough gas field, need to be assessed in EPs for the Scarborough Project.
 - CCWA claimed that Woodside's consultation process has been restricted and consultation with a wider group of 'relevant' persons is required.
 - CCWA claimed the Scarborough Project has not been properly referred, assessed & approved under the EPBC Act, and noted potential impacts on World Heritage & National Heritage values of Great Barrier Reef.
 - CCWA claimed the information provided by Woodside to date does not meet consultation requirements as defined in the Regulations.
 - CCWA claimed that construction and operation of the pipeline is not an independent activity separate to the Project. Therefore, CCWA expects the impacts and risks (and necessary consultation) should not be narrowed to exclude key aspects of the Project.
 - CCWA requested further information about GHG emissions and potential climate change impacts and risks of the Project.
 - CCWA required further information on how the Project's exacerbation of climate change impacts and risks will be made acceptable and ALARP, including information relating to a number of possible 'control measures' for reducing the degree of environmental impact and risk associated with this EP and the broader Project.
 - CCWA claimed that information provided with respect to Paris Agreement alignment, warming and energy mix scenarios may be inaccurate. CCWA required further information on how the Project's climate change impacts and risks will be made acceptable and ALARP.

- CCWA claimed that emissions reductions arising from coal to LNG switching must be substantiated through credible and reliable evidence that displacement or substitution will or has actually occurred, with emissions reductions properly accounted for.
- CCWA also requested that Woodside provide information as to its consideration of certain options and control measures (i.e. no development, reduction of GHG emissions to Net Zero, selection criteria for LNG buyers).
- CCWA claimed that the cumulative effects from climate change on the ecological communities at risk have not been factored into the impact assessment.
- CCWA claimed that there are limitations in the Environmental Impact Assessment relating to the quality and availability of baseline information and suitability of management and monitoring plans. CCWA noted the proximity of dredging activities to nearby Marine Parks and claimed that the EP requires reappraisal to avoid ecological impacts from the project's construction activities in these areas.
- CCWA claimed that some modelling is based on data from habitats outside the actual impact zones, uses receptor species studies which are not specific to the areas under consideration, or studies that are uncertain in their results.
- CCWA claimed that the importance of epifauna and infauna to overall ecosystem health is downplayed and that sparseness or low species diversity of benthic communities in the spoils ground does not necessarily correspond to low environmental impact.
- CCWA claimed that Woodside have submitted an EP for an activity that is not included in the OPP.
- CCWA claimed that it had not been provided with a reasonable opportunity to be consulted on the EP.
- On 31 January 2022, the EDO emailed Woodside a letter on behalf of their client CCWA:
 - CCWA considers that Woodside's consultation to date had fallen short of that required regarding the activities the subject of this EP and that it did not meet the criteria as per the regulations.
 - CCWA claimed to have not received Woodside's email of 31 August 2021; to have not been provided reasonable opportunity for consultation and reiterated its relevant person status for this activity and other activities relating to the Project.
 - Further comments were regarding:
 - CCWA's expectation that the impacts and risks of Scarborough activities (and consultation) should not be unduly narrowed to exclude key aspects of the project and determination of control measures which may apply.
 - Indirect impacts – without addressing risks associated with the future of the reserve or indirect impacts, this EP does not fully address the environmental impacts and risks of the activity.
 - CCWA does not consider that the indirect impacts and risks of the activity in terms of climate change and degradation of rock art are properly addressed.
 - CCWA requires information about total acid gas and GHG emissions over the life of the project.
 - Inclusion of all activities in the OPP – CCWA is concerned that the OPP sets out a trunkline diameter which had been changed in the EP and require further information about the reason for the change, and how this will affect operations and impacts/risks of this change to the activity.
 - Sufficient information not provided on GHG emissions
 - Climate change impacts and risks – CCWA reiterates climate change impacts and cites various reports as evidence.
 - Further information was requested relating to GHG emissions, different project development options i.e. 'no development' and conditional sale of LNG.
 - CCWA presented next steps outlining expectation for EP consultation and recommendations for NOPSEMA.

- On 28 April 2022, Woodside responded to CCWA and attached a detailed table of responses to address specific claims and objections raised on the proposed activity in its letter to NOPSEMA, where appropriate:
 - Woodside advised that the Scarborough SITI EP assesses both direct and indirect environmental impacts and risks associated with the proposed Petroleum Activities Program, having regard to the nature and scale of the proposed Petroleum Activities Program. The extraction of Scarborough gas for onshore processing is not included in the Petroleum Activities Program for this EP. Therefore, indirect impacts and risks arising from the onshore processing of Scarborough gas are not considered indirect impacts/risks of this proposed PAP and will be evaluated in future Scarborough EPs as appropriate.
 - Woodside advised that consultation requirements set out in Reg 11A of the Environment Regulations have been complied with in relation to the consultation process for this EP.
 - Woodside advise that the Scarborough Offshore Project Proposal (Scarborough OPP) has been appropriately authorised under the EPBC Act through its acceptance by the NOPSEMA, in accordance with the OPGGS Endorsed Program Approval.
 - Woodside acknowledged that CCWA had self-identified as a relevant person and confirmed that Woodside has consulted with CCWA for this proposed activity.
 - Woodside advised that CCWA was consulted in relation to the Scarborough Offshore Project Proposal (OPP). The OPP evaluates the impacts and risks across the phases and activities of the Scarborough Project and demonstrates that they will be managed to an acceptable level. These impacts and risks will then be considered across subsequent EPs, where relevant to the scope of that Petroleum Activity. Each EP which covers a Petroleum Activities Program under the OPP, evaluates and addresses impacts and risks, appropriate to the nature and scale of the particular Petroleum Activities Program.
 - Woodside advise that the GHG emissions associated with the production, processing and consumption of Scarborough gas are not within the scope of the SCA SITI EP and will be addressed in future EPs, as appropriate. Woodside provided additional information contained in Section 6.7.5 of the EP regarding GHG emissions of the SITI activity, which summarises the estimated GHG emissions, considered indirect emissions of the proposed Petroleum Activity.
 - Woodside advised that Section 6.7.5 of this EP has been updated with additional control measures which have been developed since first submission of the EP and which aim to reduce the GHG emissions for the activity to ALARP.
 - Woodside referred CCWA to section 7.1.3 of the Scarborough OPP which includes an assessment of GHG emissions associated with the Scarborough Development over its lifetime. Woodside also advised CCWA that a number of greenhouse related development alternatives are considered in Section 4.5 of the OPP, including a no development option.
 - Woodside advised that Section 6 of this EP demonstrates the impacts and risks of the Petroleum Activity Program are ALARP and acceptable.
 - Woodside advised that to support the environmental impact assessment process for the Scarborough Project a suite of baseline studies were completed, in addition to a review of previous studies and available literature, as described in Section 5 of the OPP and Section 4 of this EP.
 - Woodside advised that Section 6.7.2, 6.7.3 and 6.8.6 of this EP set out the impact and risk assessment and relevant controls to manage potential impacts to benthic communities and habitats to ALARP and acceptable levels. The EP also sets out a number of Environment Performance Outcomes (EPOs) which set the level of performance for protecting water quality, the Dampier AMP Habitat protection zone, marine turtles and ecosystem function from trenching and dredging activities.
 - Woodside advised that regarding monitoring and management of the trenching and spoil disposal, and borrow ground dredging and backfill activities, Section 7.8 of the EP has been updated to include further details on the Tiered Monitoring and Management Framework (TMMF). The TMMF is a proactive and adaptive framework informed by water quality to manage the dredging activities within acceptable water quality boundaries, to avoid reversible impacts to coral communities as the most sensitive receptor in Zone A and B (in State waters) and sponges in the Offshore Zone.

- Woodside provided details regarding dredge plume modelling impact thresholds developed for the Scarborough project which are based on the latest contemporary scientific research from the Western Australian Marine Science Institute (WAMSI) Dredging Science Node, published in Jones et al (2019) and Pineda et al. (2017).
- Woodside referred CCWA to section 7.1.6 of the Scarborough OPP which provides a detailed assessment of both direct and indirect environmental impacts and risks to epifauna and infauna as a result of the seabed intervention and trunkline installation activities, including potential value of this habitat for fish and as foraging habitat for marine turtles. Woodside advised that Section 6.7.2 of this EP has been updated to reflect the additional value of epifauna and infauna as foraging habitat for marine turtles.
- Woodside clarified that an 'Activity' as defined by the regulations means a petroleum activity (operations or works in an offshore area for the purposes of exercising a right conferred). The activity in this context is the installation of the pipeline which was included in the OPP. The OPP is only required to provide general methods and equipment to be used to inform the evaluation of impacts and risks while the specific detail of the project activities will be required in the subsequent EP(s). The change does not introduce any new environmental risk / impacts or significantly alter the environment impacts / risks as described in the accepted Scarborough OPP.

Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>In the course of consultation on a separate Scarborough EP, CCWA provided feedback, objections and claims relating to:</p> <ul style="list-style-type: none"> • Impacts on the Dampier Archipelago National Heritage Place • Consultation requirements under the Regulations • Referral process of the broader Scarborough Project • Impact and risk assessments, including cumulative impacts • Quality and availability of baseline information relating to the Environmental Impact Assessment, noting potential impacts to nearby Marine Parks • Appropriateness of modelling and interpretation in context of receptors • Impact on benthic communities 	<p>Feedback has been assessed on merit as it applies to this EP and a summary of responses has been provided to address specific claims and objections raised on the proposed activity, where appropriate.</p> <p>Woodside has provided responses to feedback received as shown above, including where amendments have been made to the EP in relation to any of the feedback, objections or claims raised.</p> <p>Since initial submission of the EP to NOPSEMA, updates have been made in the EP to address assessment outcomes. Section 6.7.5 of this EP has been updated with additional control measures to better articulate the ALARP position.</p> <p>Sections 6.7.2, 6.7.3 and 6.8.6 of this EP set out the impact and risk assessment and relevant controls to manage potential impacts to benthic communities and habitats to ALARP and acceptable levels.</p> <p>Section 7.8 of the EP has been updated to include further details on the Tiered Monitoring and Management Framework (TMMF).</p> <p>Section 6.7.2 of this EP has been updated to reflect the additional value of epifauna and infauna as foraging habitat for marine turtles.</p>	<p>Woodside has consulted CCWA in the course of preparing this EP. Woodside has assessed the claims or objections raised by CCWA. No additional measures or controls have been put in place.</p> <p>Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on CCWA's functions, interests or activities.</p>

<ul style="list-style-type: none"> • EP activity as described in the OPP. <p>CCWA has requested additional information on:</p> <ul style="list-style-type: none"> • Climate change impacts and risks and control measures for GHG reduction in alignment with the Paris Agreement. 	<p>No further feedback on the proposed activity has been received from CCWA following Woodside's correspondence on 28 April 2022.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	
--	---	--

Greenpeace (GAP)

Woodside has discharged its obligations for consultation under Regulation 11A(1) and consultation with Greenpeace Australia Pacific (GAP) for the purpose of 11A(1) is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2021.
- Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback.
- Consultation information provided to GAP on 29 April 2022 based on their function, interest, and activities.
- Woodside has addressed and responded to GAP over a 15 month period.

Summary of information provided and record of consultation:

- On 8 April 2022, during the course of preparing this EP, Woodside received an email from GAP who self-identified and requested to be consulted on this and other Woodside EPs. GAP also made requests for additional information relating to the proposed activity including:
 - A description of the EMBA in relation to the activities, and the potential environmental impacts and risks,
 - The potential impacts and risks on any species listed under the Environment Protection and Biodiversity Conservation Act 1999 (Cth), on the Ningaloo Reef Marine Park, the Montebello Marine Park, the Dampier Marine Park, and any other significant marine ecosystem,
 - The potential impacts and risks in relation to Sea Country and other areas of marine or terrestrial Aboriginal cultural significance and/or heritage,
 - The total GHGs associated with the activities and where these will occur, including any flaring/venting of greenhouse gas emissions both offshore and onshore,
 - The potential impacts and risks of GHGs in relation to global warming and climate change, including whether and how those emissions would fit within a carbon budget and emissions reduction scenarios aligned with the temperature goals of the Paris Agreement, and specifically whether the Project can be accommodated within a carbon budget for a 1.5 degree, 1.8 degree or 2 degree warming scenario,
 - The proposed GHG emissions control measures, including details of any proposed offsets and any proposal for carbon capture and storage.
 - The potential cumulative impacts of the above listed impacts or risks considered in the context of existing and proposed developments and/or activities in the vicinity of the area that may be affected by the activities and/or the Project,

- The potential cumulative impacts of upstream and downstream activities associated with the Project as a whole, including transport of gas via undersea pipeline and onshore processing of gas.
- On 29 April 2022, Woodside provided a response to GAP which included advice that Woodside has determined there is no potential for the functions, interests or activities of GAP to be affected by the activities to be carried out under the Environment Plan, or the revision of the Plan.
 - Woodside advised it will assess the self-identification by GAP and the comments received to determine relevancy for the purposes of consultation for future Scarborough EPs when those EPs are being prepared.
 - Woodside noted GAP's comments and request for further information relate to the broader Scarborough Development and that the information GAP requested, where relevant, is contained within the accepted Scarborough Development Offshore Project Proposal as well as the publicly available versions of the activity-specific EPs which are published on NOPSEMA's website.
 - Woodside provided a link to the publicly available draft EP on the NOPSEMA website which has been available since 13 January 2022.
 - Woodside invited GAP to provide further feedback on the proposed activity.
- On 1 June 2022, Woodside met with GAP representatives to discuss Woodside's broader business, including the Scarborough development.
- On 15 June 2022, Woodside emailed GAP advising it has further reviewed GAP's letter from 7 April 2022 (emailed to Woodside on 8 April 2022) and considers that GAP is a relevant person under Regulation 11A of the OPGGS Regulations, for the purposes of consultation on this EP. Woodside provided a detailed statement of response to GAP's request for additional information. Woodside noted that similar information was also provided to CCWA as well as to NOPSEMA where relevant. Woodside's responses are summarised as follows:
 - The EMBA has been determined based on the extent and area of the worst-case loss of containment scenario for the activity. This scenario is a 2000 m3 marine diesel spill from a vessel collision resulting in the rupture of a fuel tank. The EMBA presented does not represent the predicted coverage of any one hydrocarbon spill or a depiction of a slick or plume at any particular point in time. Rather, the areas are a composite of a large number of theoretical paths, integrated over the full duration of the simulations under various metocean conditions.
 - Key impacts and risks are summarised in the consultation fact sheet available on the Woodside website. A full list of the environmental aspects which have been impact and risk assessed in the EP (Section 6) are provided in Table 1 (at the end of this correspondence).
 - Section 4.6 of the EP identifies protected species which occur within the Operational Area and/or EMBA. Potential impacts to these species are included in the impact assessment in Section 6 of the EP where relevant.
 - Regarding impacts to Sea Country, Woodside engaged submerged heritage experts to conduct a study in consultation with the Murujuga Aboriginal Corporation. The study concluded that the Scarborough pipeline route is likely to have "low to nil impacts" to Indigenous archaeological values across the project footprint in Commonwealth waters. The existence of any unknown Aboriginal sites or artefacts of significance within the offshore waters of WA is considered highly unlikely. Section 6.7.2 in the EP outlines impact potential for Cultural Heritage considerations from the worst case credible loss of containment scenario.
 - Regarding GHG emissions, this EP assesses both direct and indirect environmental impacts and risks associated with the proposed Petroleum Activities Program. The extraction of Scarborough gas for onshore processing is not included in the Petroleum Activities Program for this EP. Indirect impacts and risks arising from the onshore processing of Scarborough gas will be evaluated in Scarborough EPs as appropriate.
 - Assessment of the broader Scarborough Project, including the contribution to global GHG emissions and the potential impacts of climate change on sensitive receptors within Australian jurisdictions, is described in Section 7.1.3 of the OPP.

- Controls in the EP include but are not limited to: Marine Order 97 (Marine Pollution Prevention – Air Pollution); Vessel operations planned where practicable to minimise fuel consumption and associated GHG/air emissions; Project vessels will not use HFO or IFO; and DP Bulk Carriers (B-types) will predominantly be used for pipe supply to the PV. Woodside continuously seeks opportunities to improve energy efficiency and reduce GHG emissions. Section 6.6.5 of the EP (Rev 2) has been updated with additional control measures.
- While there may be spatial overlap with a number of pipelines and cables, activities on/around this infrastructure cannot occur concurrently and therefore, no cumulative risks or impacts will credibly occur.
- Regarding potential cumulative impacts of upstream and downstream activities, consideration of the Project and the cumulative assessment is detailed in the OPP Section 8. The cumulative impact assessment has shown that there is little cross-over in spatial extent of aspects, both within the project and between Scarborough and other activities/developments.
- Woodside concluded by pointing to various sections in the EP where more information can be found in regard to impacts and risks being reduced to ALARP, Environmental Performance Outcomes and the implementation strategy and monitoring, recording and reporting arrangements.
- On 29 June 2022, GAP provided a response to Woodside and the regulator that contained a number of claims /objections and requests for further information relating to the following topics (labelled as 'Grounds for refusal/amendment of the EP'):
 - The Proponent has not consulted with all relevant persons and incorporated their feedback into the Environment Plan
 - The Proponent has not adequately evaluated all impacts and risks
 - The Proponent should clarify to the regulator the depth of experience of the attendees at the Environmental Risk and Impact Identification workshop
 - The Proponent should thoroughly assess the backfill sourcing options
 - The risk analysis should be updated and reassessed based on more realistic impact durations
 - The proponent should include modelling to substantiate an assessment of potential long term impacts to AMP due to the altered sea floor in the Offshore Borrow Ground.
 - Greenpeace recommends that a full assessment be conducted to determine the degree to which dugongs and seagrass will be impacted
 - The Proponent should further assess impacts to benthic habitats and the fauna associated with them i.e. faunal communities currently using the neighbouring Pluto trunkline
 - The Proponent should adopt additional measures that will reduce light impacts from vessels and activities should not take place within the turtle BIAs during peak hatching periods
 - The Environment Plan is inconsistent with the Blue Whale Conservation Management Plan and threatened species recovery plans
 - The Proponent should provide evidence to demonstrate how the activity aligns with the Federal Government's emissions reductions commitments
 - The Proponent should provide accurate scope 1, 2 and 3 emissions estimates from the Scarborough Project and the proposed activity
 - Consistency with the principles of ecologically sustainable development, specifically the 'intergenerational principle'
 - The Proponent should re-evaluate air quality risks in regard to GHG emissions
 - Consideration of the direct, indirect and cumulative impacts of the activities including acoustic emissions should be given

- The Proponent should assess and report on potential cumulative impacts from all activities to be conducted at Scarborough site as a whole
- Activities described pose unacceptable risks to cetaceans, including threatened species like PBW
- The Proponent and the regulator should check the modelling completed for the trunkline EP for circular reasoning issues and correct as required and make other recommendations regarding noise and acoustic monitoring
- Greenpeace suggest using a more conservative estimate of noise levels likely to impact cetacean behaviours and the proponent provide evidence about likely masking impacts. Other noise recommendations are made relating to threshold exceedance, passive acoustic monitoring and displacement costs / impacts for cetaceans.
- The Proponent assesses impacts of FCGT discharge material on fish inhabiting the existing Pluto trunkline.
- Recommendations relating to unplanned hydrocarbon release (vessel collision) including recalculation of the EMBA, verification of the modelled weathering simulations, full assessment of impact potential to plankton, duration of spill and work near the turtle / whale BIAs should not be conducted during peak periods.
- All vessels servicing the project should be restricted to a maximum speed of 8kn (except in the event of an emergency).
- Dedicated MFO's and passive acoustic monitoring should be used for cetacean identification
- Regarding decommissioning, GAP recommends the current EP confirms that the trunkline and associated infrastructure will be removed and the likely process of decommissioning.
- Greenpeace recommends the proponent be required to conduct more frequent /thorough inspections of all infrastructure.
- On 30 August 2022, Woodside responded to GAP and attached a detailed table of responses to address specific claims and objections raised on the proposed activity, where appropriate. A summary of the table is as follows:
 - Consultation requirements set out in Reg 11A of the Environment Regulations have been complied with in relation to the consultation process for the SITI EP. Woodside has followed the requirements of subregulation 11A (1) of the Environment Regulations to identify relevant persons for the purposes of consultation on its EPs.
 - With respect to the ENVID, the participants at the Environmental Risk and Impact Identification workshop were from a multi-disciplinary background with a wealth of relevant knowledge and experience and included external environmental consultants supporting the EP development with extensive experience and understanding across all topics highlighted.
 - Regarding Offshore Borrow Ground dredging and backfill, Section 4.5.4.6 of the Scarborough OPP (SA0006AF0000002) provides an assessment of the various options for post lay stabilisation and protection and borrow ground location which considered the environment, economic and technical feasibility and safety aspects. The borrow ground is located in the offshore open ocean environment to the northeast of Legendre Island. Results from geotechnical studies over time suggest that the borrow ground area is a dynamic environment which experiences measurable sand movement, with sand waves up to 0.5 m with typical wave lengths of 5-10 m found in some areas. The dredging of sand from the borrow ground is not expected to result in deep depressions that would markedly change the hydrodynamics in this open ocean environment, and hence not affect the adjacent Dampier Marine Park.
 - Regarding environmental risk analysis and summary, Table 6-3 in the EP summarises the risk assessment outcomes from Section 6 and the ENVID.
 - In relation to the Petroleum Activities Program, impacts to significant seagrass communities and dugong foraging habitat are not anticipated Equally, impacts to fish assemblages are not expected as stated in Section 7.1.6.2 of the Scarborough OPP (SA0006AF0000002),

- Section 6.7.4 of the EP provides an assessment of vessel lighting on marine turtles including reference to light modelling. Impacts to hatchling emergence, including hatchling mis- or dis-orientation, are not predicted and highly unlikely. The desktop lighting assessments by PENV (2020a and 2022) concluded that the light emissions from vessel activities in the Trunkline and Borrow Ground Project Area would not have significant impact on marine turtles across the whole life cycle.
- The activities set out in the EP are not inconsistent with the Blue Whale Conservation Management Plan.
- In relation to GHG emissions - Section 6.7.5 of the SITI EP describes GHG emissions of the SITI activity. GHG emissions associated with the Petroleum Activities Program set out in the EP will not go beyond the 5 year life of the EP (expected to cease prior to the end of 2024) and are therefore aligned with Australia's emission reduction commitments. Section 6.7.5 of this EP has been updated to consider more recent climate change reports with updated projections of climate change, including the IPCC's Sixth Assessment Report (AR6), the CSIRO and Bureau of Meteorology's State of the Climate 2020 and the IEA's World Energy Outlook 2021.
- The extraction of Scarborough gas for onshore processing is not included in this Petroleum Activities Program. Subsequent and future petroleum activities must first be authorised under the OPGGS(E)R and implemented before Scarborough gas is able to be extracted for onshore processing. Any indirect impacts and risks arising from the onshore processing of Scarborough gas are not considered indirect impacts/risks of this Petroleum Activities Program but may be evaluated in future Scarborough EPs as appropriate. This EP assesses both direct and indirect environmental impacts and risks associated with the proposed Petroleum Activities Program that are appropriate to the nature and scale of the Petroleum Activities Program.
- The Intergenerational Principle, as part of Ecologically Sustainable Development, was part of the criteria for acceptability that the Scarborough project as a whole was assessed against in the OPP. As demonstrated in Section 7.1.3.9 of the OPP (SA0006AF0000002, Rev 5), the project is aligned with the principles of Ecologically Sustainable Development.
- Regarding activities posing unacceptable risks to cetaceans, all activities have been assessed in Section 6 of the EP and all risks to cetaceans have been reduced to ALARP and acceptable levels.
- Section 6.7.6 of this EP assesses potential impacts from acoustic emissions as a part of the Petroleum Activities Program as well as potential cumulative impacts. A comprehensive summary of the JASCO Animal Simulation Model Including Noise Exposure (JASMINE) which was used to predict the exposure of animals (pygmy blue whales) to sound arising from the vessel operations was provided and Woodside noted this was also added to the EP as Appendix K. Woodside noted the threshold level for behavioural responses in marine mammals from continuous noise sources (120 dB re 1 µPa SPL) is based on the best data available published in peer-reviewed literature, and represents a conservative, internationally accepted threshold. Section 6.9.3 of the EP demonstrates that the activity is not inconsistent with the Conservation Management Plan for the Blue Whale.
- Regarding masking impacts and communication interference in cetaceans, details were provided to demonstrate that for pygmy blue whales there is limited overlap in frequency range with the mid- and high-frequency acoustic emissions from vessels that will be utilised for the activity (broadband levels centred around 20 kHz) While for humpback whales, there is the possibility that acoustic emissions from the project vessels could contribute to masking of vocalisations during activities that overlap the migration BIA during migration periods however, given the very low overlap with the migration BIA and the short range from the vessels at which masking effects could occur (within hundreds of metres), significant masking impacts to humpback whale vocalizations are not likely to occur.
- The Demonstration of ALARP in Section 6.7.6 of the EP includes assessment of a number of approaches/technologies for detecting pygmy blue whales. The use of trained vessel crew as marine fauna observers on project vessels while operating in the pygmy blue whale migration BIA during migration periods, to watch for pygmy blue whales and record cetacean presence / activity was included. In addition, a number of adaptive management controls to minimize the likelihood of impacts to pygmy blue whales from underwater acoustic emissions have been identified in the EP (Section 6.7.6) and will be implemented during the activities.

- Regarding displacement costs and impacts for cetaceans, there are no data that indicates that the area of the pygmy blue whale migration BIA overlapped by the Operational Area for the activities represents an area where opportunistic foraging by pygmy blue whales occurs regularly. Hence, it is highly unlikely that the activity would displace pygmy blue whales from any critical habitat, such as a foraging location or resting area.
- In relation to FCGT impacts in the vicinity of the Pluto trunkline, the contingent FCGT discharge, at KP 33 has been removed from the EP due to progression in activity design. Alternative options are now available which do not result in any discharge to the marine environment.
- In relation to the EMBA and recalculation of worst-case scenarios; rationale for selection of credible loss of containment scenarios is provided in Section 6.8.2 of the EP. The worst-case hydrocarbon loss of containment scenarios are identified in accordance with appropriate guidance, including NOPSEMA information papers and AMSA publications. A range of information was considered, including the onboard fuel inventory for project vessels.
- Modelled weathering simulations have been provided in Section 6.8.2 of the EP to illustrate the potential behaviour of marine diesel when exposed to idealized (constant wind conditions) and representative (variable wind conditions) environmental conditions. Intent is to provide an understanding of the proportional fate of the hydrocarbon in the environment, while not representing the actual scenario.
- Regarding impacts to plankton following an unplanned hydrocarbon spill, Woodside noted the EMBA is a representation of the outputs from 200 simulations, under different wind and current conditions, to determine the widest extent of possible oil dispersion, at 3 locations, which in the event of an actual unplanned hydrocarbon release the area of exposure would be considerably smaller. It was noted that plankton in contact with the spill source at the time of release may be impacted, and there is potential for localised mortality. However, given hydrocarbon characteristics, expected rapid weathering and then degradation of the entrained component, and the relatively quick recovery times of plankton, unplanned marine diesel releases are not expected to have a substantial adverse effect on plankton life cycle and spatial distribution and potential impacts would be limited to slight.
- In response to the question of how long hydrocarbons remain above threshold levels; after an unplanned spill, how long surface, accumulated, entrained and dissolved hydrocarbons are expected to remain above threshold levels will be dependent on the individual simulations. Stochastic modelling is used to understand all the areas that could be affected by a potential hydrocarbon release, and it is further clarified in the EP that in the highly unlikely event of a release the potential area exposed to hydrocarbons is much smaller and only for a small period of time given the nature of marine diesel to evaporate and spread quickly. The 'Summary of Assessment Outcomes' is appropriate for the nature and scale of a diesel spill.
- Regarding GAP's seasonal restrictions to activities based on receptor sensitivity, substantial adverse effect on the population, or spatial distribution of these species; or likelihood of substantially modifying, destroying or isolating an area of important habitat for migratory species is not expected. .
- Regarding interaction with marine fauna, Section 6.8.7 of the EP has been updated with a new control for limiting Petroleum Activities Program vessel speeds in the Operational Area to 10 km or less when in the humpback whale migration / pygmy blue whale migration BIA's, during migration periods.
- Regarding decommissioning, all major and ancillary infrastructure, including the trunkline, will be designed and maintained to enable removal at the time of decommissioning. Identified decommissioning critical systems (asset systems that will be required to facilitate the flushing, cleaning and decommissioning of infrastructure) will be appropriately maintained through operational life to ensure system functionality is available at the time of decommissioning. A technical decommissioning assessment has been undertaken and a Decommissioning Plan developed. The plan may be used at the time of decommissioning, with due consideration of best environmental outcome and technological advances available at the time, noting detailed plans and justification will be subject of a future EP.
- Woodside has 30+ years of operating experience, with a focus on safety, reliability, efficiency and environmental performance. Woodside recognises that our performance in Environmental, Social and Governance (ESG) is integral to our success. Woodside's risk and compliance processes support Woodside to manage risk, comply with the law and implement fit for purpose processes.

- Woodside has responded to GAP's concerns and updated the EP where indicated in the correspondence; Woodside considers that the impacts have been reduced to ALARP and acceptable levels.
- Woodside noted draft EPs are not provided to stakeholders while in development or under assessment and provided a summary of its consultation process.
- On 2 September 2022, GAP sent a letter to NOPSEMA (cc Woodside). The letter called for NOPSEMA to not to accept the SITI EP and to make a request for the Woodside to provide further information on how it has provided a reasonable opportunity for Greenpeace to provide feedback.
 - GAP stated the information provided to them by Woodside and the consultation period were insufficient,
 - Woodside has not adequately responded to or addressed the issues raised by GAP on 29 June 2022.
 - GAP requested an additional four weeks to provide feedback to Woodside.
- On 28 September 2022, GAP provided feedback on the SITI EP. GAP requested that:
 - Woodside provides further information; and
 - NOPSEMA should not accept the SITI EP.
 - GAP commented:
 - Not all relevant persons have been consulted
 - Woodside has not adequately demonstrated that the environmental impacts and risks will be reduced to ALARP and acceptable level
 - The proposed activity is inconsistent with the Blue Whale Conservation Management Plan and threatened species recovery plans
 - The SITI EP is inconsistent with the principles of ecologically sustainable development
 - Woodside should describe the faunal communities currently using the neighbouring Pluto trunkline across a range of water depths and assess the likely impacts to those communities from seabed disturbance given their close proximity to the proposed new trunkline.
- On 1 May 2023, GAP emailed Woodside regarding scheduling of a meeting.
 - GAP thanked Woodside for the offer of a direct meeting made at the 2023 Woodside AGM and this letter is confirmation of acceptance of the meeting offer.
 - GAP reiterated its commitment to ensuring fast and effective action on climate change in line with the internationally agreed Paris climate goal and that in late 2021, GAP began to specifically call on Woodside to abandon fossil fuel expansion plans particularly in relation to the proposed development of the Burrup Hub.
 - GAP stated its concern about potential threats to marine ecosystems and wildlife caused by the development of the Burrup Hub including to whale populations in WA waters.
 - GAP stated there is a genuine opportunity for Woodside to become a world leader in the transformation from fossil fuels to renewable energy.
- On 9 May 2023, Woodside emailed GAP thanking GAP for its letter dated 1 May 2023, reiterating Woodside's willingness to engage with GAP, and welcoming an opportunity for Woodside's climate team to engage with GAP to discuss GAP's views on Woodside's climate strategy and most recent climate report. The offer to meet was extended at either an executive or CEO level either virtually or in-person.

- On 15 May 2023, Woodside emailed GAP and attached a detailed table of responses to address specific claims and objections in 28 September 2022 correspondence regarding the proposed activity, where appropriate. Responses are summarised below. Woodside also attached the updated Consultation Information Sheet.
 - Woodside responded that it had undertaken a comprehensive assessment, including full justification of the impacts and risks of dredging for NOPSEMA to assess according to the Regulations. The depth-averaged TSS concentration is the value calculated as an average over the modelled layers in the water column. section 6.7.2 of the EP has been updated to include further assessment of the potential impacts of elevated suspended sediment from the Petroleum Activities Program on fish assemblages.
 - Section 5 of Appendix H (Master Existing Environment) and Section 5.4.4 of the Scarborough OPP provide a description of the fish assemblages of the North-west Marine Region, while Section 7.1.6 of the Scarborough OPP provides an assessment of potential impacts and risk to fish from elevated suspended sediments.
 - The thresholds are described in detail (with associated references) in Section 4 of Appendix I (dredge sediment dispersion modelling) of the Scarborough OPP (Revision 5).
 - Section 7.8 of the SITI EP has been updated to provide details of the tiered monitoring and management framework as it relates to the Commonwealth waters activities, including the trigger values and associated dredge management actions. and Appendix I includes a later version of the modelling report, which will be made available once the revised EP is submitted and accepted by NOPSEMA. The approved Scarborough Project Dredging and Spoil Disposal Management Plan (DSDMP) will be published online and includes the Water Quality Thresholds Report as an appendix to the DSDMP.
- On 15 May 2023, Woodside received and auto response to its email detailed above (of the same date) stating that if a matter were urgent, an alternative GAP representative could be contacted.
- On 13 June 2023, GAP emailed NOPSEMA and cc'd Woodside in relation to the four Scarborough EPs currently being assessed by NOPSEMA and urged NOPSEMA to not accept the EPs due to Woodside's unsatisfactory consultation approach (insufficient time and insufficient information provided for consultation).
 - GAP confirmed its relevant person status and summarised recent communications with Woodside across the four Scarborough Project EPs. Regarding this EP, GAP acknowledged Woodside's response of 15 May 2023, GAP's auto reply on the same date and that Woodside submitted an updated version of this EP to NOPSEMA on or before 1 June 2023. Further claims made by GAP are summarised as follows:
 - Submission of EPs without Notice – Woodside did not seek confirmation that information provided to GAP regarding the EPs was sufficient, nor did Woodside invite any response to the information by a particular date before it intended to resubmit. Further, Woodside did not notify GAP as to the imminent submission of the EPs, nor that any of the EPs had been resubmitted. GAP has had to continue to rely on NOPSEMA's website for status updates.
 - GAP stated Woodside cannot unilaterally determine what is a reasonable period or sufficient information for a 'relevant person' such as GAP without seeking and considering GAP's views. It was not clear to GAP why Woodside did not at least notify GAP of imminent resubmission of EPs as this would allow GAP to communicate to Woodside whether further time was required to respond to information. GAP stated it had previously indicated it required around a month to respond to information from Woodside. GAP stated this did not meet the Regulations nor NOPSEMA's consultation guideline.
 - Failure to provide sufficient time for consultation – GAP stated it had not yet had an opportunity to fully consider whether it had been provided with sufficient information in Woodside's recent responses to allow GAP to make an informed assessment of the possible consequences of the activities on GAP's functions, interests or activities (as required under reg 11A(2)). This was mainly because GAP believed Woodside had not provided GAP with sufficient time to consider its responses.
 - GAP stated 'NOPSEMA's consultation guideline indicated that what constitutes a 'reasonable period' may be informed by the "nature, scale and complexity of an activity as well as the extent and severity of potential impacts and risks on a relevant persons["] functions, interests or activities" and that "[r]elevant persons may

have also provided the titleholder with their views of what constitutes reasonable timeframes, their availability and or accessibility issues that should be taken into account.”

- GAP considered a reasonable period to be around one month in most cases but sometimes more.
- Woodside had only allowed 4-7 business days for GAP to review and respond to additional information since the GAP representative’s return from travel.
- GAP provided the timeframes it required to respond to Woodside’s latest responses to each of the Scarborough EPs. For this EP it required 4 weeks from 11 July 2023.
- The timeframes were required because Woodside had sent responses on multiple EPs in short succession despite having had a significant amount of time to prepare some of its responses e.g. Woodside had had over 7 months to consider GAP’s last submission on this EP and on another Scarborough EP (Drilling and Completions).
- GAP was experiencing a high volume of requests for consultation on other Woodside projects and those of other proponents due to the backlog of consultation requests following clarity on the Santos NA Barossa Pty Ltd v Tipakalippa [2022] FCAFC 193 appeal decision.
- Woodside had refused to provide GAP with additional information on the Scarborough Subsea EP despite repeated requests. The first time GAP saw detail on this EP was on 30 May 2023 when it was published by NOPSEMA. GAP required considerable time to consider and respond to this complex document.
- GAP referred to Woodside’s statement in several of its recent correspondences: ‘given the well-informed feedback received together with the length of time the [Environment Plan] has been open for comment, any further feedback GAP provides on the [Environment Plan] will be accepted and considered as part of ongoing consultation.’ GAP stated that while this statement was not clear, GAP assumed Woodside was implying that the total period the EP had been open for comment was the primary determinant of ‘reasonable period’. However, GAP pointed out that NOPSEMA’s consultation guideline states clearly: Information may well need to be provided in an iterative manner, as finer detail and precision is developed through the consultation process.” GAP has found this to be true.
- GAP further stated that NOPSEMA’s guideline does not clarify whether the ‘reasonable period’ relates to the overall period of consultation or each piece of information provided. GAP stated it had discussed this issue in previous correspondence to Woodside and NOPSEMA. GAP stated given that the period must be sufficient to allow GAP to make an informed assessment, it must tie in with the time at which sufficient information was provided i.e. if insufficient information has been provided, time will not start to run. At a minimum, it would appear that the ‘reasonable period’ would commence from the provision of new or additional information.
- GAP stated it believed it is more relevant to consider when information was last provided when determining whether a ‘reasonable period’ had been provided.
- GAP concluded by stating it believed Woodside’s consultation with GAP did not meet NOPSEMA’s guidelines and Woodside had not met its consultation obligations under reg 11A of the Regulations nor demonstrated the criteria for acceptance of the Environment Plans in reg 10A.
- On 23 June 2023, Woodside thanked GAP via email for GAP’s letter dated 13 June 2023 sent to NOPSEMA and cc’d to Woodside. Woodside stated:
 - Based on the long history of consultation with GAP, Woodside was comfortable with the consultation between Woodside and GAP which had allowed GAP many opportunities to provide Woodside with its claims and objections as they related to the proposed activities under the four Scarborough EPs.
 - Woodside stated it remained open to consulting with GAP and additional feedback GAP provided on the Scarborough EPs would be accepted and considered as part of ongoing consultation.

- Woodside further stated that as per Woodside's ongoing consultation approach, feedback and comments received would continue to be assessed and responded to, as appropriate, through the life of an EP, including during EP assessment and throughout the duration of the accepted EP, in accordance with the intended outcome of consultation.
- On 11 July 2023, GAP provided a response to Woodside and the regulator that contained an objection to the acceptance of the current version of the EP, due to consultation not meeting minimum requirements (and the Regulations) in the following respects:
 - Failure to adapt the consultation process to Greenpeace's needs;
 - Failure to provide sufficient information;
 - Failure to provide sufficient time to consider additional information; and
 - Failure to meet the general principles for effective consultation.
 - Relating to the above objections and claims, GAP made several claims and requests from Woodside:
 - GAP requested a detailed description of Woodside usual approach to 'relevant person' consultation, including guiding principles underlying the approach. GAP also requested a detailed description of how that general approach has been adapted to it's individual needs.
 - GAP requested that Woodside provide:
 - An explanation as to how it determines the form of information (including what constitutes 'sufficient information') to provide to 'relevant persons';
 - An explanation of how the form of information (including what constitutes 'sufficient information') has been adapted to GPAP's needs; and
 - Detailed justification as to why it believes that it has provided GAP with 'sufficient information'.
 - GAP contends that withholding updated versions of the Environment Plan is not consistent with the principles of openness and transparency and GAP requested a copy of the most recent version of the environmental plan, its appendices and the tiered monitoring and management framework.
 - If it cannot be provided, GAP alternatively requested that Woodside provide detailed explanations as to why it is unnecessary and how it is consistent with the principles of openness and transparency.
 - GAP requested a description of how Woodside determines what is a 'reasonable period' for 'relevant person' consultation and how that 'reasonable period' has been adapted to Greenpeace's individual needs.
 - GAP contends that there is outstanding additional information required from Woodside. GAP provided a number of requests for information from previous correspondence:
 - (29/6/22) Regarding the Borrow Ground backfill sourcing option that conveys the lowest environmental impact, and Commonwealth compensation.
 - Additionally, GAP recommended NOPSEMA request information about the cost of each Borrow Ground option.
 - GAP recommended that Woodside revise the environmental assessment of the Borrow Ground options so they are not reliant on depth-averaged turbidity modelling.
 - (29/6/22) Regarding activities not taking place within the turtle BIAS during peak hatching periods.
 - (29/6/22) Regarding a summary of the expected offsets and ACCUs.

- GAP additionally requested information as to how Woodside proposed to reduce scope 1 emissions from the activities to net zero; why the EP does not include actions to reduce scope 1 emissions; and if the proposal includes use of offsets, a summary of those offsets.
- (29/6/22) Regarding a check of the modelling completed for the trunkline EP for circular reasoning issues.
- (29/6/22) Regarding the passive acoustic monitoring system, and that activities should cease immediately after malfunction or damage to the system.
- GAP asked how many times a passive acoustic monitoring system has malfunctioned or been damaged during Woodside's activities in the past 5 years.
- GAP contends that Woodside has now instigated temporal restrictions to avoid peak whale seasons and asks how Woodside will locate pygmy blue whales and humpback whales that may be using the BIAs during the activities in the EP to ensure they do not incur acoustic injuries.
- GAP asks what steps Woodside will take to ensure these issues do not occur during the activities.
- (29/6/22) Regarding more frequent and more thorough inspections of all infrastructure.
- GAP requested Woodside provide an ongoing inspection and maintenance plan for the trunkline.
- (28/9/22) Regarding consultation with marine tourism representatives in the EMBA.
- (28/9/22) Regarding provision of information to NOPSEMA about potential conflicts, and input into risk and impact assessments to ensure they are reduced to an ALARP level.
- (28/9/22) Regarding a definition of and justification for using "depth-averaged SSC concentration".
- GAP requested a copy of Woodside's further assessment as referenced in Woodside's correspondence on 15/5/23.
- (28/9/22) Regarding description of the fish assemblage diversity and abundance using the existing neighbouring trunkline from the Commonwealth waters boundary to KP 50, and the request for Woodside to assess the likely impacts to those communities from suspended sediments.
- (28/9/22) Regarding the justification for not ceasing activities causing the turbidity when trigger values are exceeded and adjustments made in the EP. GAP also questioned at what point would excessive turbidity levels cause operations to cease?
- GAP requested a copy of the updated EP including the Tiered Monitoring and Management Framework.
- (28/9/22) Regarding updated modelling on dredged sediment dispersion.
- GAP requested a copy of: RPS., 2020. Scarborough Development Dredged Sediment Dispersion Modelling. Prepared for Woodside Energy Ltd. RPS Group.
- (28/9/22) Regarding full text copies of several references cited in the EP.
- GAP provided feedback on the activity and requests for information:
- Cumulative and indirect impacts - state waters trunkline.
- GAP requested an evaluation of the potential cumulative risks and impacts from the Entire Trunkline in its entirety.
- An evaluation of the potential cumulative impacts, including the indirect risks and impacts from the state waters trunkline.
- GAP contends that if Woodside disagrees that the indirect or cumulative impacts of the state waters trunkline should be evaluated in the EP, it requests justification and more information.

- Scope 1 greenhouse gas emissions.
- GAP requested request information as to how Woodside proposes to reduce the scope 1 greenhouse gas emissions from the activities in the EP to net zero. Or in the alternative, justification as to why the EP does not include actions to reduce scope 1 greenhouse gas emissions to net zero.
- On 27 July 2023, Woodside responded to GAP thanking them for their correspondence and responding to new claims. Woodside outlined its attempts to engage in genuine, two-way consultation with Greenpeace since December 2018 and that it continues to be open to consulting further. The responses to new claims included the following:
 - Claims of failure to consult effectively were addressed with the methodology that Woodside apply to non government groups or organisations and outlining correspondence from Woodside which had been missed by GAP in their letter.
 - GAP claims it has been dissatisfied with the way it has been consulted were addressed with evidence of ongoing direct consultation as well opportunities for GAP to attend a variety of community-based information sessions.
 - Lack of sufficient information claims have been addressed by evidence of a meeting and four detailed responses to GAP correspondence on the SITI EP.
 - Requests by GAP for a copy of EP were denied for a number of reasons.
 - Claims of lack of sufficient time for consultation has been addressed as correspondence between Woodside and Greenpeace on this EP has been taking place since 8 April 2022.
 - The methodology outlining how Woodside meets NOPSEMA consultation requirements was provided as requested to demonstrate sufficient time and information.
 - Further information was provided around the borrow grounds enquiries.
 - Actions being taken to ensure limited impact on peak turtle hatchling emergence periods.
 - General enquiries around reducing scope 1 emissions for activities to net zero and use of offsets had been addressed previously.
 - Circular reasoning modelling enquiries were rejected and new information provided to evidence these claims.
 - Passive acoustic monitoring concerns were addressed by explaining they were not being used as part of the SITI EP PAP.
 - GAP would like to see more inspections around infrastructure but the EP already addresses this.
 - Woodside has added more detail to a GAP enquiry around using depth-averaged SSC concentration.
 - Woodside has provided links to three resources to assist GAP around understand fish assembly diversity and abundance.
 - Woodside has referred GAP to the Scarborough Dredging and Spoil Disposal Management Plan which is publicly available for further information.
 - Cumulative impacts from State, and Commonwealth water activities have been addressed in the EP.
- On 27 July 2023, Woodside resent an email in response to an out of office reply.
- On 3 August 2023, Woodside wrote to NOPSEMA sharing GAP's stance on Woodside which it had posted on its website and shared with media on 2 August 2023 stating the following:

- A public statement by Greenpeace stating its objective to “use every means possible to stop Woodside”. In its statement GAP says: “Greenpeace will oppose Woodside’s Burrup Hub at every step, and that means stopping its dangerous seismic blasting.”
- Woodside asked that NOPSEMA note the actions threatened by GAP.
- On 7 August 2023, GAP wrote to NOPSEMA and copied Woodside:
 - GAP urged NOPSEMA to not accept this EP, reiterated its relevant person status and recapped consultation between GAP and Woodside to date.
 - GAP claimed Woodside had not adequately discharged its obligations under reg 25.
 - GAP claimed consultation had worsened since Woodside’s letter dated 27 July 2023 in which Woodside criticised GAP and demonstrated Woodside’s misconception of the consultation requirements in terms of reasonable time and sufficient information, and the formation of relevant person consultation; GAP stated it preferred to consult in writing.
 - GAP stated that outside the relevant person consultation process, GAP’s CEO had continued to request meetings with Woodside’s CEO but none had eventuated.
 - GAP stated its alleged public activities were irrelevant to the statutory requirement for Woodside to consult in regs 25(2) and 25(3).
 - GAP set out why it required additional information in relation to the EP – GAP stated its functions, interests and activities included - but were not limited to - protecting marine life and identifying climate related harm caused by Woodside’s activities to foster public engagement.
 - GAP provided examples of its work and listed possible consequences of Woodside’s activities (harm to marine life and marine environments).
 - GAP claimed without the additional information it required, it could not conduct its work effectively.
 - Additionally, GAP stated it had made several information requests that Woodside had not met related to the relevant person consultation process.
 - GAP summarised how the consultation process should be adapted to GAP’s needs i.e. all consultation in writing; GAP typically requires one month to respond but sometimes more; GAP expects Woodside to not resubmit EPs to NOPSEMA for assessment without first allowing GAP one month or longer if required; GAP requires the full text of any changes made to a published draft EP provided as an updated version; Woodside should be generous with additional information; Woodside should answer GAP’s questions; additional information requested needs to be highly detailed.
 - GAP provided a list of previously requested additional information. GAP stated while Woodside had previously provided responses several had not addressed their concerns.
 - GAP stated it did not believe the EP met the criteria for acceptance in reg 34, specifically 34(b) and 34(c) and that NOPSEMA could not accept the EP.
 - GAP stated the EP was inconsistent with the Recovery Plan for Marine Turtles in Australia, noted Woodside had considered several mitigation measures but had deliberately chosen to not adopt them for reasons related to cost and convenience, and noted Woodside had failed to adopt and implement basic mitigation measures as per the National Light Pollution Guidelines for Wildlife.
 - GAP stated Woodside had not reduced emissions from the activities in the EP to net zero.
 - GAP stated the EP only addressed the installation of the trunkline, not the ongoing management of the trunkline which should be included in the EP and then superseded by a future EP.
 - GAP stated water turbidity modelling was not fit for purpose.
 - GAP stated Woodside had not considered indirect and/or cumulative impacts from developing the entire Scarborough trunkline, i.e. both the state waters and commonwealth waters components.
 - GAP stated Woodside had not considered the cumulative and/or indirect impacts of the scope 3 emissions that would be released through the development of the Scarborough gas field.
 - GAP stated marine activities should not continue through the night or during poor visibility.

- GAP stated Woodside had failed to reduce the risk of vessel strikes on marine fauna to ALARP.
- Given the persistent and bioaccumulative nature of chemicals used in planned or unplanned activities, Woodside should investigate alternative products.
- GAP expressed concern that consultation with other relevant persons may also have fallen short of the minimum requirements.
- On 11 August 2023, Woodside responded and stated:
 - Woodside had been in continued dialogue and a significant amount of information had been exchanged between GAP and Woodside since Woodside first contacted GAP in 2018.
 - Although GAP did not participate in consultation regarding the Scarborough OPP in 2018, Woodside and GAP had met on 1 June 2022 to discuss Woodside’s activities and determine authentic, two-way consultation yet the day after the meeting, GAP launched an on-line campaign against Woodside and targeted Woodside with protest-based campaigns, unlawful entry to safety exclusion zones and boarding of Woodside’s decommissioned infrastructure.
 - Woodside had continued to accommodate GAP’s requests for information.
 - GAP CEO’s request to meet with Woodside to discuss Woodside’s climate strategy was agreed and an offer to meet with Woodside’s climate team was confirmed in a letter from Woodside’s CEO on 9 May 2023. Woodside’s EVP of Strategy and Climate had also attempted to meet GAP.
 - GAP had not requested to meet about Woodside’s Scarborough EPs nor had GAP disclosed how it preferred to be consulted.
 - GAP had not provided Woodside with the opportunity to consider GAPs’ consultation expectations or needs - inconsistent with other ‘relevant persons’ that had provided statements regarding their consultation preferences.
 - Woodside had provided Consultation Information Sheets and responses to issues regarding technical matters, in relation to all four Scarborough EPs including this EP, the full draft of which had been available since 13 January 2022.
 - GAP had shown a high level of technical awareness and understanding due to questions and issues raised in writing with Woodside, demonstrating GAP’s understanding of the potential environmental risks and impacts posed by the activities in the EPs as well as the mitigations proposed by Woodside.
 - Woodside had responded to GAP’s correspondence, advertised in local, State and National newspapers about its plans and held Community Information Sessions which were promoted to local communities and more broadly across social media. To Woodside’s knowledge, GAP had not attended a Woodside session (other eNGO’s had, enabling 2-way consultation).
 - Woodside had made genuine attempts to consult with GAP and given GAP many opportunities to provide Woodside with its claims and objections.
 - Woodside continued to act in good faith and accept feedback from GAP.
 - As articulated by recent case law, Woodside’s position was that in light of the concepts of “reasonable time”, “reasonable diligence”, a consultation obligation “must be capable of practical and reasonable discharge... that must be capable of performance”. Given the length of time involved, the amount of information provided, and the opportunity given to consult, Woodside was satisfied that an appropriate level of consultation had taken place with GAP.
 - Woodside was concerned that the protracted engagement might be aimed at achieving alternative outcomes.
 - Woodside remained open to consulting with GAP.
 - Woodside noted GAP’s 1 August 2023 statement ‘Greenpeace vows to fight Woodside's dangerous seismic blasting in which Greenpeace states it will “use every means possible to stop Woodside”’.

Summary of Feedback, Objection or Claim	Woodside Energy’s Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
GAP has responded and provided feedback, objections and claims relating to:	Feedback has been assessed on merit as it applies to this EP and a summary of responses has been provided to address	Woodside has consulted GAP in the course of preparing this EP. Woodside has assessed the claims or objections raised by GAP. An additional

<ul style="list-style-type: none"> • GAP self-identified as a relevant person and requested to be consulted on this EP and other Woodside EPs. • GAP requested more information on the activity. <p>GAP claims Woodside has not:</p> <ul style="list-style-type: none"> • Consulted with all relevant persons; • Adequately evaluated all impacts and risks; • Adequately demonstrated that the environmental impacts and risks will be reduced to as low as reasonably practicable; • Adequately demonstrated that the environmental impacts and risks will be of an acceptable level; • And that the EP is inconsistent with the Blue Whale Conservation Management Plan and threatened species recovery plans; • The EP is inconsistent with the principles of ecologically sustainable development, specifically the 'intergenerational principle'. <p>GAP has further responded and provided feedback, objections and claims relating to:</p> <ul style="list-style-type: none"> • Consultation • Impact and risk identification • Offshore Borrow Ground dredging and back fill • Environmental risk analysis and summary • Physical presence - Seabed disturbance (trenching, spoil disposal, borrow ground dredging and trunkline backfill) • Modelling for turbidity associated with dredging not being fit for purpose • Routine light emissions from project vessels and ability to meet National Light Pollution Guidelines for Wildlife. Consideration of no activities at night 	<p>specific claims and objections raised on the proposed activity, where appropriate.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>control was put in place for limiting Petroleum Activities Program vessel speeds in the Operational Area to 10 kn or less when in the humpback whale migration / pygmy blue whale migration BIAs, during migration periods (PS 6.7.1).</p> <p>Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on GAP's functions, interests or activities.</p>
--	---	--

<ul style="list-style-type: none"> • Routine atmospheric emissions and GHG emissions • Routine acoustic emissions • Routine and non-routine discharges – trunkline installation and pre-commissioning. Consideration of alternative chemicals • Unplanned Hydrocarbon Release - Vessel Collision • Physical presence (unplanned) - interaction with marine fauna. Vessel strike risk to be reduced to ALARP • Viability of decommissioning • Woodside not being a fit and proper Proponent. <p>GAP has further responded and provided feedback, objections and claims relating to:</p> <ul style="list-style-type: none"> • Climate change and abandoning fossil fuel plans – reducing emissions to net zero • Threats to marine ecosystems and whales. <p>GAP requested further information regarding the state waters trunkline on:</p> <ul style="list-style-type: none"> • Ongoing trunkline management, not just installation • Cumulative and indirect impacts regarding the state waters trunkline. 		
<p>Australian Conservation Foundation (ACF)</p>		
<p>Woodside has discharged its obligations for consultation under Regulation 11A(1) and consultation with Australian Conservation Foundation (ACF) for the purpose of 11A(1) is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Consultation information provided to ACF on 30 August 2022 based on their function, interest, and activities. • Woodside addressed and responded to ACF over a 11-month period. <p>Summary of information provided and record of consultation:</p>		

- On 15 July 2022, the Environmental Defenders Office (EDO) sent a letter to Woodside's Legal representation, on behalf of its client, ACF. During the course of preparing the EP, ACF self-identified, provided comment on proposed activity and requested to be consulted on the EP.
 - ACF included a list of topics raised in its letter that referenced the draft EP which was made available on NOPSEMA's website on 13 January 2022. The topics covered the impacts and risks of activities in relation to marine and avian species, benthic habitats and communities, Marine Parks, World Heritage areas and the shoreline, and coral receptors. These are summarised below (relevant to the SITI EP – other letter points are covered in the relevant EP):
 - Insufficient consultation and incorporation of feedback into the EP.
 - Risks to marine and avian species could include:
 - Vulnerable, endangered and critically endangered marine species within both the operational area and the environment being affected,
 - Routine acoustic and light emissions having potential impacts and risks for marine species including light emissions being identified as a “high risk threat” with potential to affect the overall reproductive output of a stock, and therefore recovery of the species; the worst-case scenario for acoustic emissions would impact on cetaceans by reference to the standards in the Blue Whale Conservation Management Plan, as well as the identified potential foraging areas that overlap migration paths and the operational area; humpback whales could have behavioural responses to acoustic emissions affecting their migration; marine turtles could avoid important habitats and could sustain physical damage in areas reached by acoustic emissions;
 - The worst-case scenario for a hydrocarbon spill would involve the release of 2,000 m³ of marine diesel into the marine environment, which could impact marine parks, World Heritage areas and the shoreline and a worst-case hydrocarbon spill is expected to have a “major” impact on coral receptors.
 - AFC stated the Scarborough Gas Project EPs should include an evaluation of all impacts and risks related to GHG emissions that will be caused by the Scarborough Gas Project.
 - ACF stated it is a relevant person in relation to the Scarborough Gas Project EPs and is required to be consulted by Woodside pursuant to Div 2.2A of the Environment Regulations.
- On 30 August 2022, Woodside responded to ACF with an email covering the following points:
 - Woodside confirmed that it is open to receiving feedback and to discussing issues raised in relation to each of its Scarborough Environment Plans (EPs). Consultation is ongoing and feedback is accepted throughout the life of the EP, including while it is being prepared, while it is under assessment as well as after acceptance, while the EP remains in force.
 - Woodside stated the SITI EP Consultation Information Sheet available on the Woodside website since August 2021, and also attached to the letter, confirmed that Woodside plans to undertake the proposed activities in Commonwealth waters for the proposed Scarborough development. Woodside further stated that Revision 1 of the SITI EP dated January 2022 and made available on NOPSEMA's website since January 2022, contains further information regarding the activities, impacts and risks.
 - Woodside noted that ACF's letter generally related to impacts and risks of the Petroleum Activities Program primarily in relation to marine species and GHG emissions and that it also included references to potential impacts to Marine Parks, World Heritage areas and the shoreline and coral receptors. Woodside confirmed that following an assessment of the letter, no new information had been presented for consideration under the Petroleum Activities Program for this EP.
 - On impacts and risks of activities in relation to marine species, Marine Parks, World Heritage areas and the shoreline, and coral receptors, Woodside confirmed that for the Petroleum Activities Program, an environment impact and risk assessment was carried out in Section 6 (Rev 1) of the publicly available EP. The risk assessment, covered marine species, Marine Parks, World Heritage areas and the shoreline, and coral receptors, and included a consideration of controls, performance outcomes, standards and measurement criteria relating to risks relevant to these aspects and receptors.
 - On GHG emissions, Woodside confirmed that the SITI EP assesses both direct and indirect impacts and risks associated with the proposed activities, having regard to the nature and scale of the proposed Petroleum Activities Program and the extraction of Scarborough gas for onshore processing, and the combustion of Scarborough gas, are not activities within the scope of the SITI EP. GHG emissions associated with the activity are considered in Section 6.6.5 (Rev 1) of the publicly available EP.

- Woodside stated that during the course of development of the EP, it had received feedback from non-government organisations with similar interests in this activity. Woodside further stated it has addressed this feedback and has updated the EP where appropriate. Section 5 of the updated EP will include a summary of stakeholder feedback (including responses to relevant claims and objections) and will be made available on the NOPSEMA website following acceptance.
- The response sent by Woodside to ACF on 30 August 2022 included an attachment of additional information that Woodside has also provided to non-government organisations in response to similar subjects to those outlined in ACF's letter. Summarised at a high level that additional information included:
 - How consultation requirements set out in reg 11A of the Environment Regulations have been met and updates to Section 5 of the EP to address this
 - Assessment of backfill and sediment sourcing options in relation to the Offshore Borrow Ground
 - Risk analysis and cumulative impact, including from concurrent operations and where / how these have been addressed in the EP
 - Environmental impact from seabed disturbance activities including impacts to the Dampier AMP from the Offshore Borrow Ground dredging, no impacts to seagrass or dugongs and faunal communities established along the Pluto trunkline
 - GHG emissions including Woodside's approach to emissions reduction targets and total GHG emissions for the Petroleum Activities Program
 - Demonstration that the Petroleum Activities Program is not inconsistent with the principles of ESD
 - Demonstration that noise modelling carried out has been appropriate, including explanation of the JASMINE model and noise thresholds used
 - Noise impacts to pygmy blue whales, masking impacts from underwater noise, ALARP position for controls relating to noise impacts on PBW and consideration of additional technologies for PBW detection
 - Impacts from trunkline discharges (FCGT)
 - Information in relation to worst case credible loss of containment scenario including EMBA, impacts to plankton, duration of hydrocarbon persistence, and ALARP / acceptability of impacts and risks from loss of containment
 - Control measures relating to interaction with marine fauna including ALARP position for cetacean detection; and
 - Decommissioning philosophy for the Trunkline and associated infrastructure.
- On 5 September 2022, the Environmental Defenders Office (EDO) sent a letter to Woodside's Legal representation, on behalf of its client, ACF. EDO commented:
 - Woodside's letter of 30 August 2022 in response to ACF's letter of 15 July 2022, did not address the other EPs that have been submitted to NOPSEMA (i.e. the Scarborough Drilling and Completions Environment Plan and the Scarborough 4D B1 Marine Seismic Survey Environment Plan);
 - Woodside did not acknowledge ACF's 'relevant person' status in relation to the Scarborough EPs; and
 - Woodside did not provide sufficient information on the proposed activity under reg 11A(2) to allow consultation to commence.
- On 14 September 2022, EDO on behalf of its client, ACF, sent a letter to NOPSEMA (cc Woodside's Legal representation). EDO commented:
 - Woodside has not stated whether it recognises that ACF is a relevant person;
 - Woodside has not provided sufficient information for ACF to determine whether its functions, interests or activities may be affected and the Scarborough EPs do not contain information required by the Environment Regulations.
- On 19 September 2022, Woodside responded to ACF via EDO. Woodside confirmed it is open to receiving feedback and to discussing with ACF, issues raised in relation to each of its Scarborough EPs. Woodside noted:
 - It has attempted to provide information that it assumes may be of interest to ACF to confirm issues that have been addressed and to allay potential concerns ACF may have;
 - The publicly available version of the EP together with information provided in its 30 August 2022 response addresses the impacts and risks of the activity and the relevant controls proposed to be adopted;
 - For the Petroleum Activities Program, an environment impact and risk assessment was carried out in Section 6 of the publicly available EP. The risk assessment includes a consideration of controls, performance outcomes, standards and measurement criteria relating to risks relevant to these aspects and receptors;

- An environment impact and risk assessment was carried out in Section 6 of the publicly available EP in relation to GHGs. The risk assessment includes a consideration of controls, performance outcomes, standards and measurement criteria relating to risks relevant to these aspects and receptors;
- Given recent correspondence, ACF has clearly read the publicly available information on the EP and has had sufficient time to provide feedback; and its invitation to engage with ACF to understand specific concerns or issues.
- Woodside extended an invite to meet with ACF regarding the proposed activity and requested feedback by 11 October 2022.
- On 27 September 2022, ACF/EDO responded via email on a related proposed activity and advised it would like to meet with Woodside to discuss the proposed activity.
- On 29 September 2022, Woodside responded to ACF offering a meeting on 10 October 2022.
- On 5 October 2022, ACF responded and provided its availability to meet via video conference.
- On 11 October 2022, Woodside provided a briefing to ACF via video conference on the proposed activity and the broader Scarborough Project. The briefing covered:
 - Scarborough project overview
 - Description of specific proposed activities (including this proposed activity) along with a map of the OA.
- On 12 October 2022, Woodside emailed ACF thanking the organisation for the meeting.
- On 15 May 2023, Woodside emailed ACF and included responses to address specific claims and objections raised in the 11 October 2022 meeting regarding the proposed activity, where appropriate Woodside noted:
 - Regarding impacts of trunkline installation activities on threatened migratory species and marine species in general and Woodside's controls deemed to be inadequate, Woodside confirmed it has undertaken a comprehensive assessment, including full justification of the impacts and risks for NOPSEMA in accordance with the Environmental Regulations and NOPSEMA's guidance. Section 4.6 of the EP identifies migratory marine and terrestrial species under the EPBC Act which may occur within the Operational Area and/or EMBA. Section 6 of the EP assesses impact potential to these and other species /environmental factors.
 - Regarding why the proposed trunkline needs to be buried in certain locations, Woodside advised that for the section of trunkline from shore to maximum KP (Kilometre Point) 50 in Commonwealth waters (likely to be less), there will be a requirement for some trenching (pre-lay) and back fill (post-lay) to stabilise the trunkline to ensure the integrity and safety of the trunkline during construction and operations phases.
 - Woodside provided information in the Scarborough OPP relating to the Scarborough trunkline's proximity to the Montebello Multiple Use Zone
 - Regarding cyclone risk mitigation, Woodside noted the EP includes dangerous weather preparation arrangements. As the timing of some activities associated with the Petroleum Activities Program are not yet confirmed, it is possible seabed intervention and trunkline installation activities will overlap with the cyclone season. As per Section 7.15.7.3 of the EP, if activities occur during this time, vessel contractors must have a Cyclone Contingency Plan (CCP) in place. The project vessels will receive daily forecasts from the Bureau of Meteorology (BoM). If a cyclone (or severe weather event) is forecast, the path and its development will be plotted and monitored using the BoM data. If there is the potential for the cyclone to affect the Petroleum Activities Program, the CCP will be actioned. If required, vessels can transit from the proposed track of the cyclone (or the severe weather event).
 - Woodside advised no piling activities have been included in the EP because the Floating Production Unit (FPU) suction piling activities are outside the scope of the Petroleum Activities Program of the SITI EP and will be the subject of a subsequent EP. Woodside also noted no impact pile driving is proposed as part of the Scarborough Project, only suction piles.
 - Woodside advised sand backfill will be sourced from the offshore borrow ground. Rock supply, quarrying and load out will occur outside the Operational Area and is outside the scope of this EP. It is noted however that rock will be locally sourced from the Boral Quarry Karratha.
 - Woodside advised tie-in to the existing Pluto trunkline does not meet the economic drivers for the Scarborough project. The existing Pluto project and trunkline is expected to continue operating at full capacity for a number of years.

- Regarding Petroleum Activities Program timing; Woodside advised the EP has been updated to reflect an earliest commencement date of Q2 2023 - pending approvals and subject to change depending on weather, vessel availability and unforeseen circumstances or delays..
- Woodside confirmed Section 6 of the EP assesses the risk and impact potential from marine fauna interactions and presents controls to reduce the risks to ALARP. Risks can be reduced to ALARP and acceptable levels without the avoidance of seasonal sensitivities like migration and breeding. This is the case also for other impact assessments such as Section 6.6.4 Routine Light Emissions from project vessels and Section 6.6.6 Routine Acoustic Emissions.

Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>ACF has requested feedback on impacts and risks of activities in relation to:</p> <ul style="list-style-type: none"> • marine and avian species, benthic habitats and communities, Marine Parks, World Heritage areas and the shoreline, and coral receptors; • GHG emissions. <p>ACF requested acknowledgement of 'relevant person' status.</p> <p>ACF provided feedback that Woodside has not provided sufficient information on the proposed activity under the regulations to allow consultation to commence.</p> <p>ACF has requested a full copy of recently submitted EPs (relating to other Scarborough activities) for its review in addition to the consultation information provided.</p> <p>ACF has met with Woodside and provided additional consultation information on the broader Scarborough activities, including this proposed activity.</p>	<p>Feedback has been assessed on merit as it applies to this EP and a summary of responses has been provided to address specific claims and objections raised on the proposed activity, where appropriate.</p> <p>Woodside has advised that the draft EP has been available on NOPSEMA's website since 30 August 2021. Woodside considers information in the EP including summaries of modelling and studies relating to the Petroleum Activities Program to be sufficient to address feedback, objection and claims received as well as requests for additional information.</p> <p>No amendments have been made to the EP in relation to any of the feedback, objections or claims raised. Woodside has provided responses to feedback received as shown above.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on ACF's functions, interests or activities.</p>

350 Australia (350A)

Woodside has discharged its obligations for consultation under Regulation 11A(1) and consultation with 350 Australia (350A) for the purpose of 11A(1) is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2021.
- Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback.
- Consultation information provided to 350A on 25 February 2022 based on their function, interest, and activities..

- Woodside has addressed and responded to 350A over a 17 month period.

Summary of information provided and record of consultation:

- On 14 February 2022, during the course of preparing the EP, 350A self-identified and provided comment on the broader Scarborough development and requested to be consulted on the proposed activity based on the following reasons:
 - 350A's members are affected by the Scarborough development in a number of ways; it has the potential to impact on marine wildlife. 350A needs to be certain the EP has considered impacts from all pollution sources on all potential receptors and has stringent monitoring and pollution response programs.
 - 350A believes the Scarborough development will produce over one billion tonnes of carbon emissions over the next 25 years, adding to WA's emissions and the planet's burden of climate change impacts, and it will accelerate climate change.
- On 25 February 2022, Woodside provided a response to 350A which included advice that Woodside has determined there is no potential for the functions, interests or activities of 350A to be affected by the activities to be carried out under the EP, or the revision of the EP.
 - Woodside advised it will assess the self-identification by 350A and the comments received to determine relevancy for the purposes of consultation for future Scarborough EPs when those EPs are being prepared.
 - Woodside provided a link to the publicly available draft EP on the NOPSEMA website which has been available since 13 January 2022.
 - Woodside invited 350A to provide further feedback on the proposed activity.
- On 10 November 2022, Woodside emailed 350A and shared it is preparing Revision 3 of the SITI EP.
 - Woodside confirmed the activities, location and duration described in Revision 1 of the publicly available SITI EP remain the same, with no material changes.
 - Woodside also noted 350A's interest in whales as they related to the positioning of the Scarborough trunkline and advised an impact assessment for trunkline installation has been carried out in the EP and risks and impacts have been controlled to as low as reasonably practical and acceptable levels.
 - Woodside welcomed any final feedback 350A may have by 24 November 2022 and noted any feedback received after this date will continue to be assessed and responded to, as required, through the life of an EP
- On 17 November 2022, Woodside sent 350A a follow up email
- On 24 November 2022, 350A responded and asked for additional time to provide feedback.
- On 29 November 2022, Woodside responded to 350A's request for additional time to provide feedback and confirmed it was pleased to extend the feedback period.
- On 9 December 2022, 350A responded and thanked Woodside for the opportunity to provide feedback.
 - 350A stated consultation should be undertaken when Revision 3 of the SITI EP is complete and available.
 - 350A requested a full report on JASCO acoustic modelling.
 - 350A requested additional information and commented on Woodside's risk mitigation measures in relation to marine impacts for this proposal, the impact on vulnerable and endangered turtle species, and limiting vessels in the operational area to 6 knots to mitigate impacts on whales.
 - 350A disagreed that the risk and impacts have been controlled to ALARP with respect to whales and turtles.
- On 15 May 2023, Woodside emailed 350A and provided responses to address specific claims and objections in 350A's 9 December 2022 correspondence regarding the proposed activity, summarised as:
 - Woodside advised the next revision of the SITI EP will be made publicly available once accepted by NOPSEMA. Consultation continues through the life of an EP, including during EP assessment and throughout the duration of the accepted EP,
 - Regarding marine impacts and the reports requested, Woodside advised the acoustic modelling results and other pertinent information related to the modelling that has been completed are presented in Section 6.6.6 (acoustic emissions) of the EP. This includes Table 6-12 Summary of animat simulation results for migratory PBW.
 - Regarding insufficient mitigation for the impacts of continuous vessel use on vulnerable and endangered turtle species, Woodside advised Section 6.6.4 (light emissions), 6.6.6 (acoustic emissions) and 6.7.7 (Interaction with marine fauna) in the EP provide a suite of management actions that will be in place to avoid or minimise potential impacts to relevant threatened fauna, and specifically marine turtles, as a result of the Petroleum Activities Program.

- Regarding 350A's suggestion to limit all vessels in the operational area to 6 knots to mitigate adverse impacts to whales, Woodside advises Section 6.8.7 (Interaction with marine fauna) of the EP will provide a suite of management actions that will be in place to avoid or minimise potential impacts to relevant threatened fauna, including whales, as a result of the Petroleum Activities Program. This will include a vessel speed restriction in pygmy blue whale and humpback whale migration BIAs (Biologically Important Areas) during migration periods.
- Regarding risks and impacts not being reduced to ALARP for vulnerable species e.g. pygmy blue and humpback whales, loggerhead and leatherback turtles, Woodside advised it has undertaken a comprehensive assessment, including full justification of the impacts and risks for NOPSEMA to assess in accordance with the Environmental Regulations and NOPSEMA's guidance.

Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>350A self-identified, provided comment on the broader Scarborough development and requested to be consulted on the proposed activity. It expressed concerns relating to:</p> <ul style="list-style-type: none"> • Impacts to marine wildlife from pollution • Carbon emissions and climate change. • 350A asked for additional time to provide feedback. • 350A later provided additional feedback: • Consultation should be undertaken when Revision 3 of the EP is complete and available • 350A requested a JASCO report on marine acoustic impacts • Impacts of vessel use on turtles • Limiting vessel speed in relation to whales • Risks controlled to ALARP for vulnerable and endangered species. 	<p>Feedback has been assessed on merit as it applies to this EP and a summary of responses has been provided to address specific claims and objections raised on the proposed activity, where appropriate.</p> <p>Woodside also noted 350A's interest in whales as they related to the positioning of the Scarborough trunkline and advised an impact assessment for trunkline installation has been carried out in the EP and risks and impacts have been controlled to as low as reasonably practical and acceptable levels.</p> <p>Woodside advised acoustic modelling results and other modelling information are in Section 6.6.6 (acoustic emissions) of the publicly available EP.</p> <p>Woodside advised Section 6.6.4 (light emissions), 6.6.6 (acoustic emissions) and 6.7.7 (Interaction with marine fauna) in the publicly available EP will provide management actions to minimise impacts to fauna, such as marine turtles and whales including a vessel speed restriction in pygmy blue whale and humpback whale migration during migration periods.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>Woodside has consulted 350A in the course of preparing this EP. Woodside has assessed the claims or objections raised by 350A. No additional measures or controls have been put in place.</p> <p>Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on 350A's functions, interests or activities.</p>
The Wilderness Society (TWS)		
<p>Woodside has discharged its obligations for consultation under Regulation 11A(1) and consultation with The Wilderness Society (TWS) for the purpose of 11A(1) is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:</p>		

- Consultation Information Sheet publicly available on the Woodside website since August 2021.
- Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback.
- Consultation information provided to TWS on 23 September 2022 based on their function, interest, and activities..
- Woodside addressed and responded to TWS over a 10 month period.

Summary of information provided and record of consultation:

- On 21 September 2022, in response to other related Scarborough EP consultation, TWS emailed Woodside seeking an opportunity to meet.
- Between 23 September and 4 October 2022, Woodside and TWS exchanged emails regarding setting up a meeting for 6 October 2022.
- On 30 September 2021, Woodside emailed TWS advising of the proposed activity (Appendix F, reference 2.2) and provided a Consultation Information Sheet.
- On 6 October 2022, Woodside provided a briefing to TWS on the proposed activities and the broader Scarborough Project. The briefing covered:
 - Scarborough project overview.
 - Description of specific proposed activities (including this proposed activity) along with a map of the Operating Area.
- On 17 October 2022 Woodside emailed TWS:
 - Woodside attached a meeting summary which included responses to address specific claims and objections raised on the proposed activity, where appropriate. The following topics were covered relevant to the broader Scarborough activities, including this proposed activity:
 - The decision to consult TWS with regard to Woodside's proposed activities for the purpose of understanding how Woodside may mitigate any adverse impacts its activities may have on The Wilderness Society's functions, interests and activities.
 - The work undertaken to understand marine fauna populations and their migration patterns in relation to Woodside's proposed activities and the controls in place to mitigate any potential impacts, including, but not limited to, acoustic surveillance and marine fauna observers.
 - The route of the Scarborough trunkline, including the position, depth and length.
 - The real-time monitoring of plumes from the seabed intervention and trunkline installation activities, subsequent reporting to the regulator and public sharing - following a quality assurance review, and
 - The absence of blasting and pile driving in the trunkline installation or other proposed activities.
 - In response to questions raised by TWS during the meeting regarding perceived environmental impacts, Woodside confirmed that:
 - A significant number of scientific studies and findings informed the Scarborough OPP and subsequent EPs, including Woodside-supported studies undertaken by the Australian Institute of Marine Science and The University of Western Australia
 - Scientific studies and modelling were also used to inform the impact assessment in relevant EPs which demonstrate the activities (i.e., seismic acquisition) will be performed in a manner that prevents injury to whales, and minimises the potential for biologically significant behavioural disturbance
 - Continuous consideration of cumulative impacts for the proposed activities under each EP, as was previously considered for the OPP; and
 - The Scarborough pipeline and subsea infrastructure is designed to be removed from the seabed, which would be the subject of a future decommissioning EP and approval.
 - Regarding TWS's queries in relation to Woodside's engagement with Traditional Owners on the relevant EPs, Woodside confirmed it has undertaken extensive engagement with the relevant Traditional Owners and Traditional Owner representative groups with respect to the proposed activities. Woodside confirmed this engagement included archaeological and ethnographic surveys, which have informed the Scarborough EPs.

<ul style="list-style-type: none"> - In relation to TWS's query regarding zooplankton and any potential impacts from the proposed activities on the broader food chain, Woodside confirmed scientific studies and modelling have been used to assess and ensure an ALARP and acceptable approach to activities. - Woodside noted that no new concerns or queries have been raised by TWS directly to Woodside that have not already been addressed by Woodside in each of the EPs discussed. - Noting TWS's more general interest in carbon offsets, biodiversity and native vegetation, though outside of the scope of the Scarborough Project consultation, Woodside would welcome the opportunity for TWS to meet with subject matter advisers from Woodside to discuss the work that is being undertaken in this space. • On 19 October 2022, Woodside received a letter from TWS addressed to NOPSEMA. The letter referenced the 6 October 2022 briefing but contained comments relating specifically to a separate activity (Scarborough 4D MSS). • On 14 February 2022, TWS emailed Woodside in response to the meeting summary provided by Woodside on 17 October 2022. The response referenced consultation undertaken and contained specific feedback regarding a separate activity (Scarborough 4D MSS). • On 22 February 2023, TWS emailed Woodside to check the feedback sent on 14 February had been received. • On 23 February 2023, Woodside emailed to confirm the feedback had been received. 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>Woodside has received feedback from TWS during the course of consultation on a range of Woodside EPs covering the broader Scarborough activities.</p> <p>Feedback was predominantly related to impacts from seismic activities, but broader feedback, objections or claims relating to the proposed activity included:</p> <ul style="list-style-type: none"> • Mitigation of adverse impacts Woodside's activities may have on TWS' functions, interests and activities • Work undertaken to understand marine fauna populations and their migration patterns • Positioning of trunkline • Monitoring of plumes from installation activities • Absence of blasting and pile driving in installation activities • Supported scientific studies • Cumulative impacts • Decommissioning • Engagement with Traditional Owners • Impacts to Zooplankton. 	<p>Feedback has been assessed on merit as it applies to this EP and a summary of responses has been provided to address specific claims and objections raised on the proposed activity, where appropriate.</p> <p>Woodside has outlined its existing processes relating to the topics raised by TWS during consultation.</p> <p>Noting TWS's response on 19 October 2022 and 14 February 2023 contained feedback relating to a separate activity, no further response was required. Woodside has responded to this feedback as part of consultation relating to a separate activity.</p> <p>No amendments have been made to the EP in relation to any of the feedback, objections or claims raised. Woodside has provided responses to feedback received as shown above.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>Woodside has consulted TWS in the course of preparing this EP. Woodside has assessed the claims or objections raised by TWS. No additional measures or controls have been put in place.</p> <p>Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on TWS's functions, interests or activities.</p>
Say No to Scarborough Gas (SNTSG)		

Woodside has discharged its obligations for consultation under Regulation 11A(1) and consultation with Say No to Scarborough Gas (SNTSG) for the purpose of 11A(1) is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2021.
- Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback.
- Consultation information provided to SNTSG on 30 September 2022 based on their function, interest, and activities.
- Woodside addressed and responded to SNTSG over a 10 month period.

Summary of information provided and record of consultation:

- On 30 September 2022, Woodside emailed SNTSG advising of the proposed activity (Appendix F, reference 1.37) and provided a Consultation Information Sheet. Woodside also provided specific information relevant to the proposed activity based on the claims and objections raised on the SNTSG public website that addressed the following topics relevant to the proposed activity, where appropriate:
 - Assessment of climate change from activity:
 - Woodside confirmed that the SITI EP assesses both direct and indirect impacts and risks associated with the proposed Petroleum Activities Program, having regard to the nature and scale of the proposed Petroleum Activities Program. The extraction of Scarborough gas for onshore processing is not within the scope of the activity described in the SITI EP. Therefore, indirect impacts and risks arising from the onshore processing of Scarborough gas are not considered indirect impacts/risks of the Petroleum Activities Program for the SITI EP but may be evaluated in Scarborough EPs as appropriate. GHG emissions associated with the SITI activity (i.e. fuel combustion from project vessels) are considered in Section 6.7.5 of the EP.
 - Trunkline installation through Montebello Multiple Use Zone:
 - The proposed activity will include works through the Montebello Marine Park Multiple Use Zone. In accordance with the North-west Marine Parks Network Management Plan, petroleum activities including transportation of minerals by pipeline, and oil spill response are permissible subject to approval in Multiple Use Zone (IUCN category VI) and Special Purpose Zone Trawl (IUCN category VI).
 - Woodside provided information from Section 6 of the EP relating to impact assessments and impact potential to AMP's. The potential for any mortality in marine fauna as a result of the Petroleum Activities Program is unlikely, highly unlikely or remote.
 - Rock art and Aboriginal cultural heritage:
 - Emissions from the activities covered by the SITI EP are of a scale and physical remoteness from Murujuga's rock art that no credible impact pathway is foreseen. Damage to heritage sites is not anticipated as a result of the proposed Petroleum Activities Program.
 - Woodside has undertaken archaeological assessments and ethnographic surveys to identify cultural heritage that may be impacted by the Scarborough development. These works have not identified any heritage places, objects or values which will be impacted by the activities covered by the SITI EP. A summary of this work and its results are provided in Section 4.9.1 of the EP.
 - No rock art will be displaced as a result of the proposed Petroleum Activities Program.
- On 4 October 2022, Woodside emailed SNTSG confirming its availability to meet on 10 October 2022 regarding a number of Scarborough activities.
- On 5 October 2022, SNTSG emailed Woodside advising it was unavailable to meet on 10 October 2022 and requested to meet on 13 October 2022.
- On 6 October 2022 Woodside emailed SNTSG confirming its availability to meet on 13 October 2022.

- On 7 October 2023, Woodside emailed SNTSG a reminder regarding the SITI consultation information sheet previously sent and noted details regarding the upcoming meeting on scheduled for 13 October 2022.
- On 11 October 2022 SNTSG emailed Woodside in response to other Scarborough EP consultation and referenced that its main focus of the scheduled meeting on 13 October 2022 was to discuss a separate specific proposed Woodside activity.
 - SNTSG noted that more information about all of the EPs will be valued but SNTSG will require more time after the meeting to give feedback and go through a thorough consultation process.
- On 11 October 2022 Woodside emailed SNTSG:
 - Woodside confirmed the purpose of the meeting is to provide context and an overview on the upcoming activities for the Scarborough Project to allow for feedback and information to be provided as relevant.
 - Woodside advised will discuss a number of Scarborough EPs.
 - Woodside encouraged Say No to Scarborough Gas to share any interests, claims or concerns it has in relation to these EPs to inform Woodside of appropriate measures it may take to mitigate any adverse impacts Woodside's activities may have.
- On 12 October 2022 SNTSG emailed Woodside and advised it will endeavour to give as much feedback as possible on the day and as soon it can after the 13 October 2022 meeting.
- On 13 October 2022, Woodside provided a briefing to SNTSG on the proposed activities and the broader Scarborough Project. The briefing covered:
 - Scarborough project overview
 - Description of specific proposed activities (including this proposed activity) along with a map of the OA.
 - During the meeting SNTSG noted it will provide Woodside, early in the week commencing Monday, 17 October 2022, with a summary of concerns it has in relation to the relevant EPs.
- On 14 October 2022 Woodside emailed SNTSG:
 - Woodside acknowledged the EPs discussed during the meeting and noted the date of week commencing 17 October 2022 for SNTSG to provide feedback.
 - At the request of SNTSG, Woodside resent the consultation information sheet as SNTSG mentioned it had not yet received it. Woodside confirmed that it emailed SNTSG and sent the consultation information on 30 September 2022.
 - Woodside encouraged SNTSG to visit the Consultation Activities page of the Woodside Energy website, where all Consultation Information Sheets can be located, and to sign up to the mailing list on the Consultation Activities page, enabling it to receive notifications when new Information Sheets are released.
- On 19 October 2022, Woodside received an email from NOPSEMA that was sent to NOPSEMA by SNTSG on 29 September 2022 regarding another EP.
- On 16 November 2022, SNTSG emailed Woodside and included a letter: The letter contained a number of comments, claims and objections relating to the proposed activity covering the following topics / asking the following questions:
 - Community consultation, stating there was no information on which communities and community groups would be consulted. Further, there was no information on what the process would be for incorporating feedback and then re-releasing the EPs. SNTSG asked if Woodside will publish it's redrafted EP's
 - Indigenous peoples and communities have strong cultural and spiritual connections to sites within the EPs and would have an interest in management decisions impacting culturally important oceanic fauna. To what extent are they being consulted? Which communities are being consulted? And how is their feedback incorporated into the EPs?

- Query whether certain groups had been consulted such as Australian Marine Conservation Society and marine tourism operators
- SNTSG were also concerned that work on the project is already well and truly underway, before approvals have been granted, and that parties are acting as though environmental approvals are guaranteed.
- EPs are not consistent with existing conservation plans or ecological principles – including the intergenerational principle and the Blue Whale Conservation Management Plan / threatened species recovery plans
- Independence of participants in Environmental Risk and Impact Identification workshop and the meaning / determinants of ALARP
- Emissions – requests for further information and figures on lifetime emissions of the project, emissions forecasting, consistency with conservation management plans and species recovery plans, Woodsides response to various external reports and sources, CCS and carbon offset planning, emissions projections and Scope 3 emissions.
- Ecosystem impacts such as effects of climate change, ecological parameters used to assess impacts on species / populations etc., the process of the deep-water survey, microbial communities and carrying out work during PBW migration season
- Trunkline and impacts associated with the borrow-ground such as why is a borrow-ground being used instead of onshore rock, long-term impacts to Australian Marine Parks and faunal communities that currently exist on the nearby Pluto trunkline.
- On 15 May 2023, Woodside emailed SNTSG and included responses to address specific claims and objections raised, during the 13 October 2022 meeting, and the 16 November 2023 correspondence regarding the proposed activity, where appropriate:
 - Woodside re-provided responses it had previously provided to SNTSG on 30 September 2022 based on the claims and objections raised on the SNTSG public website relevant to the proposed activity, where appropriate.
 - Woodside confirmed that during the meeting on 13 October 2022, Woodside provided responses for SNTSG’s queries regarding this EP and the respective proposed activities. As a result of our consultation, Woodside confirmed that the issues raised by SNTSG are addressed in this EP and Woodside remains comfortable the measures proposed in the EP remain appropriate.
 - With respect to climate change, Woodside confirmed concerns related to carbon and the impact on climate change from Scarborough gas are not relevant to this EP. Woodside confirmed the EP assesses both direct and indirect impacts and risks associated with the Petroleum Activities Program, having regard to the nature and scale of the proposed Petroleum Activities Program. The extraction of Scarborough gas for onshore processing is not within the scope of the activity described in the EP. Therefore, indirect impacts and risks arising from the onshore processing of Scarborough gas are not considered indirect impacts/risks of the Petroleum Activities Program for the SITI EP but may be evaluated in Scarborough EPs as appropriate. GHG emissions associated with the SITI activity (i.e., fuel combustion from project vessels) are considered in this EP in Section 6.7.5.
 - Relating to Trunkline installation through the Montebello MUZ – Woodside advised the option for selection for the trunkline route is described in Section 4.5.4.5 of the Scarborough OPP
 - Relating to rock art and Aboriginal Cultural Heritage, Woodside advised that emissions from the activities covered by this EP are of a scale and physical remoteness from Murujuga’s rock art that no credible impact pathway is foreseen. No rock art will be displaced as a result of the proposed Petroleum Activities Program. Damage to heritage sites is not anticipated as a result of the proposed Petroleum Activities Program. Woodside has undertaken archaeological assessments and ethnographic surveys to identify cultural heritage that may be impacted by the Scarborough development. These works have not identified any heritage places, objects or values which will be impacted by the activities covered by this EP.
 - In response to consultation engagement with SNTSG on 13 October 2022:

- In response to SNTSG queries about movement of the trunkline over its operational life, trunkline backfilling and reasoning for using sand from the borrow ground, Woodside advised that that information on seabed intervention activities is provided in Section 3.9 of the EP. Woodside also provided information on trunkline installation and stabilisation activities, including trenching (pre-lay) and back fill (post-lay). Woodside provided information on borrow ground activities and pointed to Section 3.9.4 of the EP for more information. Woodside advised that Section 4.5.4.6 of the Scarborough OPP 'Post Lay Stabilisation and Protection and Borrow Ground Location' assesses the different trunkline stabilisation options against economic, technical feasibility, safety and environment criteria.
- In response to the question of studies into the impacts of the Pluto trunkline on the marine environment, Woodside referenced Section 6.6.3 of the EP relating to habitats and species present which have been subject to detailed by McLean et al. (2020), McLean et al. (2018), Bond et al. (2018) and McLean et al. (2017). These habitats not only have structural complexity but also create habitat for a large diversity of fish species that commonly occur elsewhere in the NWS but do not occur over soft unconsolidated sediments.
- In response to the letter sent by SNTSG to Woodside on 16 November 2022:
 - Woodside advised consultation requirements set out in Reg 11A of the Environment Regulations have been complied with in relation to the consultation process for the EPs Woodside detailed during its consultation meeting with SNTSG on 13 October 2022. Woodside's consultation process has continued to evolve based on ongoing Regulator feedback. Where feedback is received which informs Woodside of measures that it may take to mitigate the potential adverse environmental impacts from the Petroleum Activities Program, Woodside incorporates this feedback into its EP, and where appropriate, it will introduce additional controls to ensure risks are managed to ALARP and an acceptable level.
 - Where feedback is received which informs Woodside of measures that it may take to mitigate the potential adverse environmental impacts from the Petroleum Activities Program, Woodside incorporates this feedback into its EP, and where appropriate, it will introduce additional controls to ensure risks are managed to ALARP and an acceptable level.
 - Woodside advised that as discussed during Woodside's consultation meeting with SNTSG on 13 October 2022, the Petroleum Activities Program of the EP remains the same as what is included in the Consultation Information Sheets which are updated as required and published on our website and also in the EPs on NOPSEMA's website. EPs are initially published on NOPSEMA's website and may change whilst under assessment prior to the final EP being accepted. Following the initial public comment period, an additional round of stakeholder Consultation Information Sheets and advertisements in local publications were issued during the development of the EP.
 - Woodside advised EPs are published initially on NOPSEMA's website and may change whilst under assessment prior to the final EP being accepted. Following the initial public comment period, an additional round of stakeholder Consultation Information Sheets and advertisements in local publications were issued during the development of the EP.
 - Woodside confirmed it has undertaken extensive engagement with relevant Traditional Owners and Traditional Owner representative groups with respect to proposed activities. Woodside confirms this engagement included archaeological and ethnographic surveys, which have informed the Scarborough EPs.
 - In relation to concerns that work has commenced before approvals have been granted, Woodside confirmed it has not undertaken any of the activities which are the subject of environment approvals which are currently under assessment.
 - Relating to consistency with existing conservation plans / ecological principles, Woodside advised that the Petroleum Activities Program is carried out in a manner consistent with the principles of ecologically sustainable development (ESD) (as defined in Section 3A of the Commonwealth Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act)). Woodside confirmed during its consultation meeting with SNTSG on 13 October 2022 that proposed activities are consistent with the Blue Whale Conservation Management Plan. Evaluation column and mapping of EPO, Controls and Performance Standards in Table 6-34 in this EP provides the assessment of the relevant activities against the Blue Whale Conservation Management Plan.

<ul style="list-style-type: none"> • Woodside confirmed the participants at the Environmental Risk and Impact Identification workshop were from a multi-disciplinary background, including external environmental consultants supporting the EP development, with extensive experience and understanding across all topics highlighted. Woodside referred SNTSG to Section 2.3 of the EP for the risk assessment process. • Woodside referred SNTSG to Sections 2.2 and 2.3 of the EP to address the criteria Woodside uses to determine 'ALARP' for the EP. • Woodside referred SNTSG to Section 6.7.5 of this EP regarding an acceptability statement relating to the impact and risk of emissions relevant to the Petroleum Activities Program. This section discusses Routine Atmospheric Emissions and GHG Emissions including emissions sources relevant to the Petroleum Activities Program, such as use of marine diesel in vessel engines. • Woodside confirmed the EP Recovery Plan and Threat Abatement Plan Assessment identifies applicability of recovery plan and threat abatement plan objectives and action areas, including threatened species such as Marine Turtles, Blue Whales and Sawfish. • Woodside advised that Impacts to all relevant ecological parameters are considered in the risk/impact assessments in Section 6 of the EP. • Woodside referred SNTSG to Section 5.3 'Marine Regional Characteristics of the Scarborough OPP' which describes the Petroleum Activities Program environment including seabed features ground truthing data, marine sediments, water quality and benthic organisms; and references relevant surveys and studies carried out. • Woodside referred SNTSG to Section 4 of the EP which provides information on the habitats and biological communities in the Operational Area. • Woodside referred SNTSG to Section 6.7.6 of the EP which includes an ALARP assessment related to Petroleum Activities Program noise emissions. • Woodside advised it has undertaken a comprehensive assessment, including full justification of the impacts and risks for the regulator NOPSEMA to assess in accordance with relevant Legislation and Regulations. 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>Following a briefing with Woodside, SNTSG has provided feedback, objections and claims relating to:</p> <ul style="list-style-type: none"> • Assessment of climate change from activity • Rock art and Aboriginal cultural heritage • Community consultation • EPs are not consistent with existing conservation plans or ecological principles • Independence of participants in Environmental Risk and Impact Identification workshop • Emissions • Lighting • Ecosystem impacts • Trunkline installation, location and impacts, including those associated with the borrow-ground. 	<p>Feedback has been assessed on merit as it applies to this EP and a summary of responses has been provided to address specific claims and objections raised on the proposed activity, where appropriate.</p> <p>Woodside has assessed claims and objections raised on the SNTSG public website that cover topics relevant to the proposed activity, where appropriate and provided responses to SNTSG (shown above).</p> <p>Woodside has provided specific information from the EP to address feedback, objections and claims, as well as Woodside's consultation approach and methodology to identify relevant persons (see Section 5.7).</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed</p>	<p>Woodside has consulted SNTSG in the course of preparing this EP. Woodside has assessed the claims or objections raised by SNTSG. No additional measures or controls have been put in place.</p> <p>Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on SNTSG's functions, interests or activities.</p>

	<p>and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	
<p>Sea Shepherd Australia (SSA)</p>		
<p>Woodside has discharged its obligations for consultation under Regulation 11A(1) and consultation with Sea Shepherd Australia (SSA) for the purpose of 11A(1) is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Consultation information provided to SSA on 30 September 2022 based on their function, interest, and activities.. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Woodside has provided the SSA with the opportunity to provide feedback over a 10 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 30 September 2022, Woodside emailed SSA advising of the proposed activity (Appendix F, reference 2.5) and provided a Consultation Information Sheet. Woodside also provided specific information relevant to the proposed activity based on the claims and objections raised on the SSA public website that addressed the following topics relevant to the proposed activity, where appropriate: <ul style="list-style-type: none"> - Assessment of climate change from activity <ul style="list-style-type: none"> • Woodside confirmed that the SITI EP assesses both direct and indirect impacts and risks associated with the proposed Petroleum Activities Program, having regard to the nature and scale of the proposed Petroleum Activities Program. The extraction of Scarborough gas for onshore processing is not within the scope of the activity described in the SITI EP. Therefore, indirect impacts and risks arising from the onshore processing of Scarborough gas are not considered indirect impacts/risks of the Petroleum Activities Program for the SITI EP but may be evaluated in Scarborough EPs as appropriate. GHG emissions associated with the SITI activity (i.e. fuel combustion from project vessels) are considered in Section 6.7.5 of the EP. - Trunkline installation through Montebello Multiple Use Zone <ul style="list-style-type: none"> • The proposed activity will include works through the Montebello Marine Park Multiple Use Zone. In accordance with the North-west Marine Parks Network Management Plan, petroleum activities including transportation of minerals by pipeline, and oil spill response are permissible subject to approval in Multiple Use Zone (IUCN category VI) and Special Purpose Zone Trawl (IUCN category VI). • Woodside provided information from Section 6 of the EP relating to impact assessments and impact potential to AMP's. The potential for any mortality in marine fauna as a result of the Petroleum Activities Program is unlikely, highly unlikely or remote. - Rock art and Aboriginal cultural heritage <ul style="list-style-type: none"> • Emissions from the activities covered by the SITI EP are of a scale and physical remoteness from Murujuga's rock art that no credible impact pathway is foreseen. Damage to heritage sites is not anticipated as a result of the proposed Petroleum Activities Program. • Woodside has undertaken archaeological assessments and ethnographic surveys to identify cultural heritage that may be impacted by the Scarborough development. These works have not identified any heritage places, objects or values which will be impacted by the activities covered by the SITI EP. A summary of this work and its results are provided in Section 4.9.1 of the EP. 		

- No rock art will be displaced as a result of the proposed Petroleum Activities Program.
- Marine life and trunkline installation activities
 - Impact assessment for receptors such as marine fauna are provided in Section 6.6 and Section 6.7 of the EP. Impact assessment shows that potential consequence for marine fauna across the potential risks is maximum 'D' (Ref Figure 2-2 in the EP) which is a Minor short-term impact, with the most common consequences being Slight short-term or no lasting effect. Potential for any mortality in marine fauna as a result of the Petroleum Activities Program is unlikely, highly unlikely or remote.
- Pygmy Blue Whale migration BIA
 - The Scarborough Trunkline route passes through the Pygmy Blue Whale migration BIA; an area along the coast from Augusta to Derby which passes along the shelf edge. Impact assessment for trunkline installation through the BIA has been carried out in Section 6 of the EP including Section 6.6.6 Routine Acoustic Emissions and Section 6.7.7 Physical Presence (Unplanned) – Interaction with Marine Fauna.
- Impact to turtle nesting beaches
 - Section 6.6.4 of the EP assesses impact potential from project vessel lighting on turtle nesting beaches. The distance between turtle nesting beaches and the Operational Area at the closest point (6.6 km to Legendre Island and >10km to closest nesting beach on Legendre Island and 14 km to Rosemary Island) are greater than the zone where behavioural impacts from vessel lighting are possible. Therefore, impacts to nesting female turtles, including discouraging females from nesting, or affecting nest site selection and sea-finding behaviour, are not predicted, and females are not expected to be displaced from nesting habitat.
- Woodside extended an opportunity to meet to discuss the proposed activity.
 - On 7 October 2022, Woodside sent a follow up email.

Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	<p>Woodside has assessed claims and objections raised on the SSA public website that cover topics relevant to the proposed activity, where appropriate and provided responses to SSA (shown above).</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	No additional measures or controls are required.

Australian Marine Conservation Society (AMCS)

Woodside has discharged its obligations for consultation under Regulation 11A(1) and consultation with Australian Marine Conservation Society (AMCS) for the purpose of 11A(1) is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2021.
- Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback.
- Consultation information provided to AMCS on 30 September 2022 based on their function, interest, and activities.
- Woodside has provided AMCS with the opportunity to provide feedback over a 10 month period.

Summary of information provided and record of consultation:

- On 30 September 2022, Woodside emailed AMCS advising of the proposed activity (Appendix F, reference 2.8) and provided a Consultation Information Sheet. Woodside also provided specific information relevant to the proposed activity based on the claims and objections raised on the AMCS public website that addressed the following topics relevant to the proposed activity, where appropriate:
 - Assessment of climate change from activity:
 - Woodside confirmed that the SITI EP assesses both direct and indirect impacts and risks associated with the proposed Petroleum Activities Program, having regard to the nature and scale of the proposed Petroleum Activities Program. The extraction of Scarborough gas for onshore processing is not within the scope of the activity described in the SITI EP. Therefore, indirect impacts and risks arising from the onshore processing of Scarborough gas are not considered indirect impacts/risks of the Petroleum Activities Program for the SITI EP but may be evaluated in Scarborough EPs as appropriate. GHG emissions associated with the SITI activity (i.e. fuel combustion from project vessels) are considered in Section 6.6.5 of the EP.
 - Marine life and trunkline installation activities:
 - Impact assessment for receptors such as marine fauna are provided in Section 6.6 and Section 6.7 of the EP. Impact assessment shows that potential consequence for marine fauna across the potential risks is maximum 'D' (Ref Figure 2-2 in the EP) which is a minor short-term impact, with the most common consequences being slight short-term or no lasting effect.
 - Potential for any mortality in marine fauna as a result of the Petroleum Activities Program is unlikely, highly unlikely or remote.
 - Assessment of light emissions:
 - Routine Light Emissions from Project Vessels are considered in Section 6.6.4 of the EP.
 - Assessment on vessel noise and strikes:
 - The risk assessment on vessel noise and marine fauna is addressed in Section 6.6.6 of the EP. The risks associated with vessel collision with marine fauna during the Petroleum Activities Program are addressed in Section 6.7.2 of the EP.
 - Assessment of impacts on Biologically Important Areas (BIAs) for turtles and other marine fauna:
 - Tables 4-5 and Section 4.6 of the EP list the relevant protected species and habitats or BIAs that overlap the Operational Area and EMBA.
 - Table 4-5 shows that within the Operational Area coral habitats may be present, however mangroves, saltmarsh and seagrass beds are only present within the broader EMBA and thus impact potential would only result from an unplanned marine diesel release due to vessel collision.
 - In addition, potential impacts to BIAs, are described in the impact assessment in Section 6 of the EP.
 - Assessment on marine diesel spill risk:

- Unplanned Activities (Accidents, Incidents, Emergency Situations) from the Trunkline installation and associated activities are assessed in Section 6.7 of the EP. Section 4 of the EP describes the EMBA which is the largest spatial extent where unplanned events could have an environmental consequence on the surrounding environment. For this EP, the EMBA is the potential spatial extent of surface and in-water hydrocarbons at concentrations above ecological impact thresholds, in the event of the worst-case credible marine diesel spill.
 - Ecological impact thresholds used to delineate the EMBA are defined in Section 6.7.1. The worst-case credible spill scenario for this EP is a vessel collision resulting in hydrocarbon release of 2,000 m3 of marine diesel. The EMBA and the size of the worst-case credible spill scenario align with the Scarborough OPP. The EMBA presented does not represent the predicted coverage of any one marine diesel spill or a depiction of a slick or plume at any particular point in time. Rather, the areas are a composite of a large number of theoretical paths, integrated over the full duration of the simulations under various metocean conditions.
 - The best response to a marine pollution event is considered to be prevention. Woodside and its contractors have agreed operating procedures and management plans in the unlikely event of a marine diesel release, to minimise loss of hydrocarbons to the environment.
 - In the unlikely event of a marine diesel release, a NOPSEMA approved Oil Pollution Emergency Plan (OPEP) will be in place for all activities to be managed under this EP. The OPEP supports timely implementation of pre-determined response strategies through defined organisational structures, human and physical resource requirements, and alignment with applicable government and industry oil spill response plans and requirements.
- Woodside extended an opportunity to meet to discuss the proposed activity.
- On 7 October 2022, Woodside sent a follow up email.

Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	<p>Woodside has assessed claims and objections raised on the AMCS public website that cover topics relevant to the proposed activity, where appropriate and provided responses to AMCS (shown above).</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	No additional measures or controls are required.

██████████, ██████████ and Save Our Songlines

Woodside has consulted in accordance with Regulation 11A with ██████████, ██████████ and Save Our Songlines (SOS) by providing them with sufficient information and a reasonable period of time and opportunity to make an informed assessment of the possible consequences of the activities on their functions, interests or activities in their individual Traditional Owner and eNGO capacities.

Woodside has addressed each objection or claim made by ██████████, ██████████ and SOS, and has implemented controls in response to topics raised by them during consultation as well as in response to objections and claims they have made. Woodside has consulted ██████████, ██████████ and SOS both individually and together, providing

opportunities for any and all topics relating to their functions, interests and activities – and potential risks or impacts to their functions, interests and activities - to be discussed, including those relating to a fundamental objection to the Scarborough Project as well as those relating, in accordance with indigenous tradition, to spiritual and cultural heritage and values.

For completeness, it is also noted that [REDACTED] and [REDACTED] have also, from time to time, been members of Aboriginal Corporations who have been separately consulted as relevant persons by Woodside.

As demonstrated in the summary below and the consultation record that follows [in Section 5.8], consultation with [REDACTED], [REDACTED] and SOS complies with Regulation 11A and is complete.

Summary

Sufficient information

Woodside has, since at least 2022, provided information to [REDACTED], [REDACTED] and SOS to allow an informed assessment of the possible consequences of the activity on their functions, interests or activities in their Traditional Owner and eNGO capacities. This information has been sufficient to allow an informed assessment of the possible consequences of the activity on their functions, interests or activities. The method of consultation has been informed by [REDACTED], [REDACTED] and SOS' preferences and has included consultation meetings held on Country:

- Since at least 2022, [REDACTED], [REDACTED] and SOS have been provided with and have been made aware of the Environment Plan, Fact Sheets and Information Sheets which set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity and on the basis of which [REDACTED], [REDACTED] and SOS could assess any potential impact on their cultural interests. The documents set out the information in various formats that provide many levels of detail – from the fulsome detail provided in the Environment Plan through to summary information and visual diagrams in the Fact Sheets and Information Sheets (written in plain English). Woodside also provided power point slides tailored to topics that [REDACTED], [REDACTED] and SOS have indicated are of interest to them [Ref in particular: Woodside letter 26 August 2022; EDO email 25 July 2023; EDO letter 4 October 2023; Meetings on 25 July 2023; 12 September 2023 and subsequent correspondence]
- Information has been provided to [REDACTED], [REDACTED] and SOS in hard copy as well as electronic format. [REDACTED], [REDACTED] and SOS, through their lawyers confirmed that, for correspondence, electronic format is an appropriate format for the information to be provided [Ref: 12 September 2023 meeting].
- The information in those documents as they relate to the activity description, the location of the activity and the potential risks and impacts of the activity have remained materially the same since the information was first provided in 2022. In some instances, activity scope has reduced and consequently, risks and impacts of the activity have been removed from scope. This has allowed [REDACTED], [REDACTED] and SOS sufficient information in both a high level of detail, in summary format and in a format specifically tailored to topics they have shown interest in, to allow an informed assessment of the possible consequences of the activity on their functions, interests and activities. [Ref: Correspondence to [REDACTED], [REDACTED] and SOS 26 August 2022 and 2 December 2022; Woodside letter to NOPSEMA 17 April 2023; power point slides 25 July 2023, 12 September and 4 October 2023 and meetings on those days and 14 March 2023]
- In addition to the information provided, Woodside has had several meetings with [REDACTED], [REDACTED] and SOS since 2022 on Country and online in accordance with the meeting formats requested by [REDACTED], [REDACTED] and SOS. This EP or issues relevant to it, have been discussed at each of those meetings [Ref: 14 March 2023; 25 July 2023; 12 September 2023; 4 October 2023].
- Woodside has on a number of occasions, confirmed to [REDACTED], [REDACTED] and SOS the purpose of consultation and has provided NOPSEMA's Brochure "Consultation on offshore petroleum environment plans", Guideline "Guideline: Consultation in the course of preparing an environment plan" and Policy "Draft policy for managing gender-restricted information PL2098" [Ref for example: email 15 September 2023].
- In meetings and correspondence:

- ██████████, ██████████ and SOS have confirmed that, since around 2022 they have received and read the Scarborough Project EP materials [most recently: 4 October 2023].
- ██████████, ██████████ and SOS have raised specific issues and displayed an understanding of the activities under this Environment Plan as well as the broader Scarborough Project. [Ref Woodside 29 March 2023 email; 27 July 2023 email; meetings on 25 July 2023; 12 September 2023; 4 October 2023].
- Since around 2022, ██████████, ██████████ and SOS have been represented by the Environment Defenders Office (EDO), a legal team with experience in oil and gas projects and environment plans, who are experienced in representing clients who, in accordance with Indigenous tradition, have cultural and spiritual values.
- ██████████, ██████████ and SOS originally sought to consult on all Scarborough EPs at once and confirmed they have information and “objections” to share on all Scarborough EPs as early as September 2022. From about June 2023, this position changed and ██████████, ██████████ and SOS expressly directed Woodside to consult on individual EPs. Woodside has been ready, willing and able to consult on all Scarborough EPs (including this EP) since consultation commenced and has attempted to do so [i.e. most recently 25 July 2023, 12 September 2023, 4 October 2023,] through the presentation and provision of information on this EP as well as discussion on all EPs.
- Objections, claims and topics relevant to ██████████, ██████████ and SOS and addressed by Woodside, were initially focused on Murujuga and included a focus on land-based impacts to Murujuga rock art, removal of Murujuga rock art, air emission impacts on Murujuga rock art, restriction to sites on the Burrup Peninsula and to plants and animals of Murujuga [Ref letter to Woodside 6 June 2022; letter to NOPSEMA 26 September 2022]. More recently, their focus has shifted to an interest in Sea Country and marine plants and animals [Ref for example Second ██████████ Affidavit dated 7 September 2022]. As of mid-September 2023, they have identified Rosemary Island (near the Burrup Peninsula, and not near the EMBA or operations area) as being a place of particular cultural significance. Notably, the Second ██████████ Affidavit dated 7 September 2023 stated that ██████████, ██████████ and SOS have information to share with Woodside and this information “needs to be shared at the appropriate place, namely on Country”. However, the Second ██████████ Affidavit did not identify Rosemary Island as being a culturally significant location or the only location at which that information could be shared with Woodside.
- Objections, claims and topics have been unclear or inconsistent in some instances – in one meeting ██████████ indicated her concern was *not* pygmy blue whales (a focus of EP noise controls due to PBW distribution and behaviour) but humpback whales [12 September 2023]. At the next meeting, Woodside was criticised for reflecting a position that humpback whales were a topic of specific interest to ██████████, ██████████ and SOS [4 October 2023]. Generally speaking, ██████████ has stated that whales carry important songlines, the whale Dreaming, and connection between land and sea [Second ██████████ Affidavit dated 7 September 2023]. The EP contains several controls to manage potential risks and impacts to whales to ALARP and acceptable levels.
- Throughout consultation, it has been made clear to Woodside that ██████████, ██████████ and SOS hold a fundamental objection to the Scarborough Project and their preference is for the Scarborough Project to be stopped [Ref: 14 March 2023; 12 October 2023 meetings; SOS website].
- Throughout consultation, ██████████, ██████████ and SOS have continued to state that they have further information they wish to tell Woodside and that they say Woodside requires for its Environment Plans. However, despite Woodside offering ample opportunities for consultation, including online and in person on Country, ██████████, ██████████ and SOS have expressly refused to provide that information to Woodside [Ref 17 April 2023 letter and most recently 4 October 2023 meeting].
- On a number of occasions, ██████████, ██████████ and SOS have declined to provide the information to Woodside but have been prepared to provide the information publicly [Affidavits of ██████████ September 2023] or offered to provide the information to others [Ref: letter to NOPSEMA 26 September 2022; letter to NOPSEMA 4 October 2023].
- Woodside has attended all meetings in listening mode to hear from ██████████, ██████████ and SOS and also in presentation mode, ready, willing and able to present and provide information on the activities proposed under the Environment Plan as well as on the broader Scarborough Project. In those meetings, Woodside has listened to items and topics raised by ██████████, ██████████ and SOS and has prepared and brought material in the form of presentations, tables, maps and video to share with ██████████, ██████████ and SOS. [Ref meetings on 14 March 2023; 25 July 2023; 12 September 2023; 4 October 2023 and presentations prepared for those meetings]

- During meetings, Woodside has discussed with ██████████, ██████████ and SOS, the controls Woodside has in place to manage topics relating to potential impacts and risks relating to spiritual and cultural connections and values that Woodside understands are relevant to ██████████, ██████████ and SOS. Woodside has also attended ready, willing and able to answer questions and provide additional information as appropriate and when requested. In a number of instances, despite confirmation that Woodside would present on all of the activities under the Scarborough Project, ██████████, ██████████ and SOS expressly told Woodside that they did not want to hear from Woodside on the Scarborough project activities and instead directed Woodside to only discuss or present on specific aspects of each Environment Plan. Despite that direction, at some of those meetings, ██████████, ██████████ and SOS raised queries that related more broadly to other activities in the Scarborough Project. Woodside provided responses and information in relation to those questions [Ref: meetings and following correspondence on 14 March; 25 July; 12 September; 4 October 2023].
- As part of consultation, Woodside has also taken time to show ██████████, ██████████ and SOS how the information ██████████, ██████████ and SOS have provided during consultation has been incorporated into the EPs and how Woodside has proposed control measures to manage potential impacts and risks to topics Woodside understands are relevant to them, including to request any input by ██████████, ██████████ and SOS into the proposed control measures or any other available measures. ██████████, ██████████ and SOS have provided input in some cases and have otherwise expressed views in relation to the control measures. In some instances, in response to queries seeking their views, ██████████, ██████████ and SOS have explicitly stated that they do not have any views to share with Woodside on the control measures. [12 September; 4 October meetings]
- In a number of instances, ██████████, ██████████ and SOS have indicated an impossibility to provide information to Woodside – in that they cannot yet, or that it is not possible to provide the information. For instance they have made statements to Woodside to the effect that there is information that they *do not yet know* and that they *don't know when they will know* (for example, information that the Murujuga rocks have not yet disclosed to them) [Ref 14 March 2023] or information that they will find out from animals who speak to them [Second ██████████ affidavit Sept 2023 para 11] as well as information that comes to them from time-to-time in visions [12 September 2023].
- During consultation, consistent with NOPSEMA's guidance and suggestions, Woodside has asked ██████████, ██████████ and SOS on a number of occasions whether there are other individuals who ought to be consulted. ██████████, ██████████ and SOS have made various references to MAC. In some instances, ██████████, ██████████ and SOS did not provide an answer [Email to EDO 3 August 2023 and EDO response 9 August 2023]. Most recently, ██████████, ██████████ and SOS stated words to the effect that "it is not [their] responsibility to identify relevant persons on Woodside's behalf and to distribute information to them". Consultation with ██████████, ██████████ and SOS has not otherwise identified any other groups or individuals who, in accordance with Indigenous tradition, may have spiritual and cultural connections to the environment that may be affected by the activity, or whom may have other communally held functions, activities or interests. [Ref example: Woodside email 15 Sept 2023 email; EDO email 19 September 2023].
- In correspondence and meetings, Woodside has questioned what it has perceived to be a general refusal by ██████████, ██████████ and SOS to provide information to Woodside, including at meetings where ██████████, ██████████ and SOS had confirmed they would provide information [25 July 2023; 12 September 2023; 4 October 2023].
- Throughout consultation, ██████████, ██████████ and SOS have expressed a general dislike and mistrust of Woodside and a reluctance to provide Woodside with information, stating most recently words to the effect: "I don't trust any of you. There is no trust here, trust me lady, there is nothing" [Ref 4th October 2023 meeting].
- Given those circumstances, and with a genuine concerted aim of attempting to manage potential impacts and risks to ██████████, ██████████ and SOS and to more broadly understand their functions, interests and activities, as well as topics that might relate to a fundamental objection to the Scarborough Project and in accordance with Indigenous tradition, ██████████, ██████████ and SOS' potential spiritual cultural and connections and values; Woodside has reviewed publicly available information. This has included reviewing ██████████ statement made to the Commonwealth Senate Standing Committee on Environment and Communications [Ref Opening Statement from ██████████, ██████████ Murujuga Aboriginal Corporation – Public Hearing, Perth – 20 April 2017], information provided by ██████████, ██████████ and SOS on their SOS website, submissions made by ██████████, ██████████ and SOS to various Commonwealth government bodies [Ref: February 2022 and 19 October 2022 s10 ATSIHP Act applications] the United Nations [Ref: UN letter 22 September 2022], the Woodside Board [Ref June 2022], various government bodies [Ref NOPSEMA letters including 22 September 2022], at Annual General Meetings held by Woodside [Ref transcript Question time 19 May 2022], in proceedings against NOPSEMA and

Woodside in the Federal Court [Ref ██████ Affidavits dated August and September 2023] and in various Appeal Convenor processes. Topics, claims and objections in that information have been included in the EP where relevant and in brief, provide the following insights:

- Information set out in the publicly available information shows that ██████, ██████ and SOS have an understanding of the Scarborough Project and the activities involved in the Scarborough Project and this EP.
- ██████ has expressed a view that MAC holds the key responsibility for the stewardship and management of the Land and Sea Country according to the Aboriginal Lore and Culture; MAC's work includes collecting environmental and heritage records to assist with compiling data [building a library] relevant to Law and Culture on sacred sites, including 42 islands of the Dampier Archipelago; MAC has been embraced by the community as the body for cultural knowledge and guidance which allows the community to speak with one spiritual and cultural voice and with strong cultural integrity. This means that some decisions or advice given by individuals previously, may not reflect the current and more valid cultural leadership that governs today [Ref: 20 April 2017 Opening Statement]. This position is at odds with the position being put forward by ██████, ██████ and SOS in consultation with Woodside.
- ██████, ██████ and SOS hold a fundamental objection to the Scarborough Project [for example: SOS website]
- On a number of occasions, ██████, ██████ and SOS have declined to provide the information to Woodside and have instead provided information publicly [Affidavits of ██████ September 2023] or offered to provide the information to others [Ref: letter to NOPSEMA 26 September 2022; letter to NOPSEMA 4 October 2023]

Reasonable period of time

- ██████ is a former member of MAC. Woodside's engagement and correspondence with ██████ (as a MAC representative) date back an extended period to when discussions on the Scarborough Project commenced with MAC in around June 2018.
- Woodside has been consulting specifically with ██████, ██████ and SOS on the Seismic EP since at least July 2022 D&C EP since at least September 2022 and SIT EP since around August 2022.
- ██████, ██████ and SOS have recently confirmed that consultation commenced in at least 2022 [Ref: 4 October 2023 letter]. This represents a consultation period that spans over 1 year which on an objective analysis fulfills Woodside's obligation to provide a reasonable period of time for consultation.
- Woodside has accommodated ██████, ██████ and SOS's initial consultation requests for at least 4 weeks [Ref 8 November 2022 letter] and then, later in the consultation, requests for 6 weeks [Ref EDO letter 24 March 2023] between consultation meetings to enable them to provide information they wish to share.
- ██████, ██████ and SOS have been made aware of the Scarborough Project and desire by Woodside to commence activities under each EP. Since at least August 2023, ██████, ██████ and SOS have been made aware that commencement of activities under the Scarborough Project is imminent and that, if they would like Woodside to consider their information prior to commencement of activities, they needed to provide any and all information to Woodside imminently [Ref: 15 Sept 2023; August 2023; Federal Court proceedings]
- Woodside notes the assertion by ██████, ██████ and SOS, through their legal representatives, that consultation is 'in its early stages' [Ref: EDO letter 10 August 2023]. This statement is contrary to the history of consultation, and to their recent confirmation that consultation indeed commenced in at least 2022 [EDO 4 October 2023 letter].
- Having regard to the timeframe provided by Woodside for consultation, the history of engagement between Woodside and ██████, ██████ and SOS and the transparency with which Woodside has communicated timeframes for consultation, Woodside has provided ██████, ██████ and SOS a reasonable period for consultation.

Reasonable opportunity

- ██████, ██████ and SOS have been provided a reasonable opportunity to consult in relation to this EP and all of the Scarborough EPs.

- There is a large body of correspondence, email and text messages which show Woodside's continual offers for consultation meetings for over a year. It is noteworthy that despite around 9 months of offers and attempts by Woodside to meet with ██████████, ██████████ and SOS (from around June 2022 – March 2023) a meeting only first took place at Hearson Cove in March 2023.
- There have been at least six instances where Woodside has attended an agreed meeting venue on an agreed date, ready, willing and able to consult in person with ██████████, ██████████ and SOS. ██████████, ██████████ and SOS attended most agreed meetings, but otherwise failed to attend or refused to attend [11 October 2022; 14 March 2023; 25 July 2023; 12 September 2023; 4 October 2023; 5 October 2023]
- Since 2022, Woodside has expressed a willingness and openness to consult at any time and having regard to ██████████, ██████████ and SOS' preferred consultation methods [Ref: Allens letter 21 August 2023]. To further support the consultation process, Woodside also offered to engage in fortnightly meetings with ██████████, ██████████ and SOS. This offer was declined. [Ref 25 July 2023 meeting; Woodside email 27 July 2023; EDP email 9 August 2023]
- Woodside has respectfully accommodated delay to meetings or rescheduling of meetings where ██████████, ██████████ and SOS have requested that to occur.
- Woodside has agreed with requests from ██████████, ██████████ and SOS in relation to meeting protocols. This has included significant efforts by Woodside to accommodate ██████████ and ██████████ cultural requests by allocating female subject matter experts to prepare and attend meetings with ██████████, ██████████ and SOS where matters are otherwise managed by male subject matter experts for Woodside.
- Upon request from ██████████, ██████████ and SOS, Woodside has also nominated a specific woman at Woodside who is able to receive culturally sensitive information on behalf of Woodside. Despite this, ██████████, ██████████ and SOS have declined to provide this information. [Ref Woodside email 28 February 2023]
- During the consultation, ██████████, ██████████ and SOS have stated that they will provide information to Woodside by way of video and that had just finished "one big dreaming story" [transcript 25 July 2023 meeting]. [Ref emails from EDO 15 July 2023; 9 August 2023] Woodside waited for that information to be provided, only to be told at a later date that no video will be provided [Ref EDO emails post 25 July meeting; Woodside email 29 August 2023; EDO email 4 September 2023].
- During the consultation, ██████████, ██████████ and SOS have informed Woodside, and made public statements that they have further information they want to provide to Woodside for its Scarborough Environment Plans [Second ██████████ Affidavit dated 7 September 2023]. Notwithstanding numerous opportunities, ██████████, ██████████ and SOS have not provided any further information to Woodside. At the last meeting in October, ██████████ and SOS did not present Woodside with any viable way to receive the information when Woodside informed ██████████ and SOS that its employees were unable to attend consultation at Rosemary Island for cultural protection and safety reasons.
- Until around 12 September 2023, Woodside was told by ██████████, ██████████ and SOS that their preference was to meet at Murujuga [Ref 8 Nov 2022 letter]. It was previously suggested that Hearson Cove on the Burrup Peninsula in the Pilbara was ██████████, ██████████ and SOS' preferred on-Country location to share culturally sensitive information with Woodside [February 2023]. Woodside has confirmed on a number of occasions its willingness to attend on-Country to consult with ██████████, ██████████ and SOS at that location.
- In the meeting on 12 September 2023, ██████████ indicated that the preferred location was Rosemary Island and that Woodside would need to make arrangements (including chartering a boat) in order for ██████████, ██████████ and SOS to share information. This was the first time that ██████████, ██████████ had requested to consult at Rosemary Island. Woodside agreed to investigate arrangements to meet on Rosemary Island and proceeded to contract a vessel, at short notice, to take 6 people to Rosemary Island for the meeting and offering ██████████ an opportunity to bring with her, 3 support people on the vessel. ██████████ provided a list of 8 people (including 3 lawyers and men, after indicating the island was a women's island and the story to be shared there was women's business) and demanded that Woodside, at short notice, charter a larger vessel to accommodate that additional number of people. While investigating arrangements for the meeting, it was made clear to Woodside from other Traditional Owner groups that Woodside did not have cultural permission or spiritual protection to convene a meeting on Rosemary Island. When that information was communicated to ██████████, ██████████ and SOS, ██████████ expressed disappointment. A compromise was initially agreed involving Woodside chartering a vessel to

circumnavigate Rosemary Island so that [REDACTED] and SOS could provide information to Woodside. When Woodside confirmed it could arrange this at short notice, [REDACTED] withdrew the agreement and cancelled the meeting and declined to provide information to Woodside.

- During the 4 October 2023 meeting, [REDACTED] indicated there is broader community misalignment and difference on topics and information being presented by [REDACTED], [REDACTED] and SOS and [REDACTED] expressed some emotion in relation to discussing those differences with the various members of the community. From the meeting and the way the message was delivered, Woodside staff apprehended that there is potential for physical and verbal exchanges between community members. Woodside considers it is not appropriate for Woodside to consult further on these issues in circumstances where Woodside will be brought into community cultural disagreements. It is also not appropriate for Woodside to expose its employees to behaviours and situations where psychosocial safety is not guaranteed, and that put the health and safety of those employees at risk, including mental and emotional health and wellbeing.

Consultation capacities

- [REDACTED], [REDACTED] and SOS have been consulted in their individual traditional owner and eNGO capacities. Notably:
 - [REDACTED], [REDACTED] and SOS have been consulted in their capacities as eNGOs who have a fundamental objection to the Scarborough Project and seek to pause or stop the Scarborough project or “Stop Scarborough Gas” [Ref for example SOS website; 14 March 2023 meeting; 4 October 2023 meeting].
 - [REDACTED] has indicated she is a Kuruma Mardudhunera woman and [REDACTED] has indicated she is a Mardudhunera woman. Woodside has consulted with the Kuruma and Mardudhunera people including through consultation with MAC, Wirrawandi Aboriginal Corporation (**WAC**), Ngarluma Aboriginal Corporation (**NAC**) and Robe River Aboriginal Corporations. Both [REDACTED] and [REDACTED] have been consulted in their capacities as Traditional Custodians of Murujuga in so far as their interests relate, in accordance with indigenous tradition, to spiritual and cultural heritage and values. Further, the results from an ethnographic heritage assessment undertaken for the Scarborough Project development footprint identified no ethnographic sites, values or traditional interests relevant to this EP or the Scarborough Project [Ref MAC consultation]
- As to individual interests,
 - Woodside has addressed in this EP, topics expressed to be of interest to [REDACTED] and [REDACTED]. Controls that Woodside has either updated or implemented as a result of consultation with [REDACTED] and [REDACTED] have been discussed with them and their views have been provided on them.
 - [REDACTED] has been invited to all consultation meetings and has been provided opportunity to consult. Despite this, she has not engaged in consultation in person since 25 July 2023 and, despite being invited, did not attend consultation meetings on 12 September or 4 and 5 October. Woodside has made enquiries directly to [REDACTED] by email, phone calls and text messages and has sought confirmation from [REDACTED] and the lawyers Woodside understood were acting for [REDACTED]. [REDACTED] has declined to attend meetings.
 - During correspondence, in Court affidavits and at meetings with [REDACTED] and [REDACTED] (in so far as [REDACTED] attended those meetings), [REDACTED] and [REDACTED] have expressed a deep and emotional interest in topics they have covered. They have provided information to Woodside about “visions” that come to them individually [Ref for example 14 March and 12 September 2023 meetings], information that comes to them from ancestors from the grave [Ref for example 4 October meeting] messages that are communicated to them individually from Murujuga rocks [Ref for example 14 March 2023 meeting] and to their ability to listen and speak on behalf of all plants and animals [REDACTED Affidavit 7 Sept 2023]. Stories about songlines have been communicated to Woodside as being “my stories” and songlines have been expressed as being personal, as expressed in consultation [for example 4 October 2023]. Songlines have also been expressed to Woodside as having been recent and individually held, rather than ancient, group songlines, passed down in community [25 July 2023 meeting]. For example, [REDACTED], [REDACTED] and SOS expressed words to the effect that the whales is a “big dreaming story [they] just finished” [25 July 2023 meeting]. This may have been what was referenced as a being a first proposed response by video of storytelling generally and of storytelling on country [Ref EDO emails 25 July 2023 and 9 August 2023]. [REDACTED], [REDACTED] and SOS later declined to provide the videos. In addition, a whale songline was expressed to Woodside as having been recently envisioned by [REDACTED]

when she was doing certain activities at a recent visit to Rosemary Island [Ref for example 12 September and 4 October meetings – sensitive woman's only information]. Information has been expressed along the lines of being "my story", "my songline" [Ref 12 September and 4 October 2023 meetings].

- In circumstances where it has been expressed to Woodside that these stories and interests are deeply personal and personally emotionally connected to ██████████ and ██████████, they are interests that are individual. They have not been expressed by ██████████ and ██████████ as being stories or connections that are communal or are held by traditional owner groups. Indeed, other traditional owner groups consulted by Woodside have indicated a position to the effect that it is very unlikely that cultural stories and values can be known only to individuals within a community. This is consistent with the sentiment expressed in ██████████ statements from 2017 when she was on the Board of MAC to the effect that "MAC has been embraced by the community as the body for cultural knowledge and guidance which allows the community to speak with one spiritual and cultural voice and with strong cultural integrity... [A]dvice given by individuals ... may not reflect the current and more valid cultural leadership ... [of MAC]". Ethnographic surveys undertaken by traditional owner groups, as well as continuing engagements with those groups, have similarly indicated there are no specific values and interests at risk of harm in the operational area or EMBA for this EP. In these circumstances, the interests conveyed by ██████████ and ██████████, while respected by Woodside appear to be individual interests and presented in an individual capacity, rather than interests held by a community.
- Consistent with the indications from other traditional owner groups, Woodside is not aware of any other individual interests of this nature (and no other individual First Nations persons have indicated to Woodside that they have any such individual or personal interests).
- Consistent with this position, ██████████, ██████████ and SOS have expressly stated to Woodside that their views and positions differ from that of MAC and other elders. In addition, Woodside has received communications, strong warnings and information from authorised traditional owner groups expressing a view that ██████████, ██████████ and SOS do not speak for them and ██████████, ██████████ and SOS views are not held by the communities. [Ref for example, letter from Allens to EDO dated 21 August 2023; emails from Woodside 3 October 2023]

Conduct in consultation

- The process of consultation has limits. It is a statutory obligation that must be understood in a practical and reasonable way so that it is capable of performance. It cannot be one that is incapable of being complied with within a reasonable time. The consultation scheme must operate in a way that a Titleholder will be able to, with reasonable diligence, discharge its obligation to consult. The consultation obligation is an obligation that must be capable of practical and reasonable discharge by the person upon whom it is imposed.¹ Consultation does not require consent². In carrying out consultation, Titleholders are not required to wait indefinitely for a response.³
- During consultation, ██████████, ██████████ and SOS have made serious statements including that Woodside has caused delays in meetings, has misrepresented information, is disrespectful, discriminatory and has breached protocols. In each instance, Woodside has expressed concern that ██████████, ██████████ and SOS have formed these perceptions of consultation, and Woodside has taken time to address and clarify the issue in each instance. Despite challenging circumstances, Woodside personnel have maintained professionalism and integrity in genuine efforts to consult with ██████████, ██████████ and SOS during all consultation efforts, which have been occurring since at least 2022.
- Woodside has demonstrated a genuine openness to consult, provide and listen to information. In most instances, meetings have opened and closed amicably but, during the progress of the meeting, Woodside employees have often been subjected to hostile, offensive language and behaviours, placing unacceptable strain on Woodside personnel. This includes recent demands to meet on Rosemary Island, where cultural safety concerns were raised by the recognised traditional custodians. Woodside does not consider these outcomes to be aligned with the consultation requirement. In circumstances where Woodside has fulfilled its obligations under reg 11A, Woodside does not consider it appropriate to continue to consult further with ██████████, ██████████ and SOS including because of these risks.
- Finally, Woodside has made clear to ██████████, ██████████ and SOS that consultation is not to be used by parties as a mechanism to stall and delay approvals [Ref: Woodside 17 April 2023 letter], especially in circumstances where parties (as in this instance) have publicly stated a fundamental objection to the Scarborough project and stated publicly an aim including one which is to stop or pause the Scarborough Project.

Consultation is complete

- Consultation under Reg 11A is complete because sufficient information, a reasonable period of time and reasonable opportunity have been provided to ██████████, ██████████ and SOS in their individual Traditional Owner and eNGO capacities.
- The fact that relevant persons have requested further consultation does not mean that Woodside has not met its obligations under reg 11A. This is underscored in the current circumstances where further consultation is not reasonable and is not required in order to comply with reg 11A:
 - persons being consulted have stated they have additional information they wish to share with Woodside for Woodside's EPs [Ref Federal Court proceedings] but then declined to share this information.
 - persons being consulted have stated that information has not yet been revealed to them, is not yet known to them, it will be revealed 'in time', but also they do not know when it will be revealed to or known by them (for instance where the wisdom of Murujuga rocks have not yet spoken to them; when animals have not yet provided information to them or where they at various times, receive information in visions) [Ref meetings on 14 March 2014 and 12 September 2023; ██████████ Affidavit dated 17 August 2023]
 - persons have affirmed that information about certain matters can only be disclosed to people "born as biological female and living as a female in accordance with their beliefs and customary practices" [Ref ██████████ Affidavit 7 Spet para 12]
 - further consultation exposes Woodside employees to unacceptable risk – including psychosocial, health and safety risk.

In all of the circumstances, consultation under Regulation 11A has been completed and Woodside has met its obligations under Regulation 11A.

Summary of information provided and record of consultation :

- Woodside understands:
 - ██████████ is a Karuma Mardudhunera woman and a traditional custodian of Murujuga
 - ██████████ is a Mardudhunera woman and a traditional custodian of Murujuga
 - Save Our Songlines is an organisation formed by ██████████ and ██████████.

Historical Engagement

2017 – September 2022

Woodside has engaged with the Ngarluma and Mardudhunera communities on the Scarborough project since 2018 through their representative organisations including Murujuga Aboriginal Corporation, Wirrawandi Aboriginal Corporation and Ngarluma Aboriginal Corporation.

Woodside understands ██████████ was a member of MAC since inception, was the ██████████ of MAC between 2016 and 2017 and was a board member of MAC until 11 February 2022, and took part in discussions between Woodside and MAC on the Scarborough Project. During these two-way engagements, in the three years leading up

¹ Santos NA Barossa Pty Ltd v Tipakalippa [2022] FCAFC 193 at [136], [138], [89], [95]

² F2023L00998ES Explanatory Statement issued by the authority of the Minister for Resources OPGGS (E) Regulations page 28

³ F2023L00998ES Explanatory Statement issued by the authority of the Minister for Resources OPGGS (E) Regulations page 30

to November 2021, Woodside was not made aware of any specific concerns of [REDACTED], [REDACTED], (Mardudhunera Traditional Owners) and [REDACTED] (Ngarluma Traditional Owner) around the Scarborough Project.

While a member of MAC, [REDACTED] expressed a view that MAC holds the key responsibility for the stewardship and management of the Land and Sea Country according to the Aboriginal Lore and Culture; MAC's work including collecting environmental and heritage records to assist with compiling data [building a library] relevant to Law and Culture on sacred sites, including 42 islands of the Dampier Archipelago; MAC has been embraced by the community as the body for cultural knowledge and guidance which allows the community to speak with one spiritual and cultural voice and with strong cultural integrity. This means that some decisions or advice given by individuals previously, may not reflect the current and more valid cultural leadership that governs today [Ref Opening Statement from [REDACTED], [REDACTED] Murujuga Aboriginal Corporation – Public Hearing, Perth – 20 April 2017].

The first time Woodside became aware of [REDACTED], [REDACTED] and SOS' concerns regarding the Scarborough Project was via a number of public statements on the Save Our Songlines websites and social media (November 2021).

After seeing the concerns, Woodside met or has attempted to meet with individuals involved in SOS to discuss the Scarborough project in other capacities and on numerous occasions, including:

- On 15 December 2021, Woodside held a meeting at the MAC office in Dampier with the MAC Board (including [REDACTED]) and Circle of Elders, to provide an overview of the Scarborough and Pluto Train 2 projects. (Evidence of this meeting supplied with the MAC correspondence in the Traditional Custodian part of this Table).
- In February 2022, [REDACTED] and [REDACTED] wrote to the (then) Federal Environment Minister requesting an assessment under s10 of the Aboriginal Torres Strait Islander Heritage Protection Act 1984 (Cth) regarding "threats to the Murujuga Aboriginal heritage posed by proposed Scarborough LNG..." (2). This letter cited potential damage to Murujuga rock art due to industrial activity on the Burrup Peninsula and climate change. The letter also claimed that members of MAC had been subject to a "gag clause"(3).
- On 21 March 2022, [REDACTED] and [REDACTED] sent an email addressed to the Woodside [REDACTED], requesting a meeting with Woodside on the morning of 21 March 2022
- On 24 March 2022, there was an attempted virtual meeting over Microsoft Teams between Woodside, [REDACTED], [REDACTED] and [REDACTED]. On the same day Woodside emailed [REDACTED], [REDACTED] and SOS:
- Woodside noted that despite its representatives being online and waiting for 35 minutes, the meeting did not proceed due to technical issues.
- Woodside advised that it remained keen to understand Traditional Custodian concerns, including those matters that [REDACTED], [REDACTED] and SOS have set out, and that Woodside remained available to meet.
- On 24 March 2022, [REDACTED], [REDACTED] and SOS also emailed Woodside to advise that:
 - They were waiting to join the virtual meeting but there was no response.
 - They were disappointed at this outcome and hoped to have a more formal meeting in times to come.
 - Emails exchanged later that day extended Woodside's offer to hold further meetings. By this stage, there had been four attempts by Woodside to meet and discuss issues with [REDACTED], [REDACTED] and SOS. This was in addition to the previous three years of consultation with [REDACTED] and [REDACTED] via MAC.
- On 6 June 2022, some seven months after SOS had launched its public campaign on social media, [REDACTED], [REDACTED] and SOS wrote to the [REDACTED] of Woodside regarding consultation on the NOPSEMA assessment of Scarborough offshore gas field development. The letter contained the following:

- Industrialisation of our globally significant Murujuga cultural landscape is causing impacts on rock art through pollution, physical displacement of rock art which is highly significant within our ongoing system of Aboriginal Law and culture, damage to other heritage sites, and restriction of access to sites of cultural and spiritual significance. These impacts on our cultural heritage will all be further exacerbated by the Scarborough gas developments and related activities. After being preserved and respected for at least 50,000 years of continuous cultural and spiritual practice, Traditional Owners and Custodians are now seeing this degradation occur within our own lifetimes. As a result, industrial activity on the Burrup is already impacting our ability to practice cultural traditions and pass on our culture to future generations in accordance with our cultural obligations.
- We assert our rights to be consulted as 'relevant persons' in relation to cultural heritage impacts of the Scarborough gas development according to the OPGGS (E) regulations. [This relates to cultural values that are nationally protected as part of the *Dampier National Heritage Place* and values yet to be described as part of the proposed World Heritage Listing for the Burrup Peninsula and surrounds] (4)
- Given the lack of previous assessment of cultural heritage impacts and the significant uncertainties regarding these impacts a precautionary approach must be taken according to the ESD Principles in Section 3A of the EPBC Act. (5)
- Direct and indirect impacts on cultural heritage must be assessed now, and for all stages of the Scarborough development according to Section 527E of the Environmental Protection and Biodiversity Conservation (EPBC) Act and the EPBC Act Indirect Consequences Policy. (5)
- In order to comply with requirements to consult under the regulations, disclosure of certain information is required from Woodside.
- Woodside's own policy, the UNDRIP and other frameworks require that Traditional Owners are provided with the right of free, prior and informed consent regarding any cultural heritage impacts.
- Impacts to heritage values and other potential impacts associated with the Scarborough gas development must be understood and assessed with reference to the cultural practices, beliefs and customs and unique understanding of these issues held by Murujuga's traditional knowledge holders.
- The Murujuga Aboriginal Corporation does not represent the interests of Traditional Owners seeking to protect cultural heritage (6) and Woodside's limited consultation with MAC does not satisfy the requirement for free, prior and informed consent for cultural heritage impacts, or the requirements of 'relevant person' consultation according to the above regulations.
- Woodside notes that in the opening paragraph of this letter [REDACTED] and [REDACTED] state that they are Murujuga Elders, Traditional Owners, Traditional Custodians and members of the Murujuga Aboriginal Corporation (MAC). MAC was established to preserve and protect the land, heritage and culture of the Burrup and Maitland Industrial Estate and is made up of a Circle of Elders who hold cultural authority and consist of representation from the 5 language groups.
- Included with the correspondence was an open letter signed by several Traditional Custodians requesting (among other things) that further investment on project on Murujuga be withheld and that any further investments decisions on the Scarborough Project be paused. The letter was titled 'Open letter from Traditional Owners and Custodians of Murujuga concerning the proposed Woodside Scarborough gas development'.
- On 22 July 2022, Woodside responded to the 6 June letter sent by [REDACTED] and [REDACTED]. The letter largely related to the Seismic Survey EP, but also stated that Woodside 'is open to receiving feedback and to discussing issues raised in relation to each of its Scarborough Environment Plans'.
- Throughout July and August 2022, Ngarluma and Yindjibarndi Foundation Ltd (NYFL) offered to engage [REDACTED] and [REDACTED] and to facilitate a series of up to three meetings between Woodside and [REDACTED] and [REDACTED] to discuss Scarborough and Pluto Train 2 project and activities. Woodside accepted this invitation, including outlining payment for [REDACTED] and [REDACTED] time. The proposed meeting did not progress because of a lack of response from [REDACTED] and [REDACTED].
- On 2 August 2022, Woodside wrote to NYFL accepting NYFL's offer to facilitate SOS meetings.
- On 26 August 2022, Woodside wrote to [REDACTED] and [REDACTED] and SOS providing an information sheet and link to the EP. The letter confirmed ethnographic surveys undertaken of the pipeline route concluded that the pipeline route is likely to have "low to nil" impacts to indigenous archaeological values across the project footprint. It noted that risks and impacts from onshore processing of gas are not related to this EP and will be evaluated in relevant EPs

- On 26 September 2022, [REDACTED], [REDACTED] and Save Our Songlines emailed a letter to NOPSEMA regarding a number of Scarborough EPs, including this one:
 - [REDACTED], [REDACTED] and Save Our Songlines raised several issues relating to Woodside’s consultation requirements under the Regulations.
 - [REDACTED], [REDACTED] and Save Our Songlines stated that they have functions interests and activities within the EMBA’s of the Scarborough EPs (including this EP) which might be directly affected by the proposed activity.
 - [REDACTED], [REDACTED] and Save Our Songlines requested that NOPSEMA refrain from accepting the Scarborough EPs until Woodside had properly complied with Reg 11A in relation to their functions, interests and activities and in relation to the time provided for consultation.
 - [REDACTED], [REDACTED] and Save Our Songlines offered to provide to NOPSEMA, further information about their functions, interests and activities that may be affected by activities under the Scarborough EPs.
 - Information to be shared by Save Our Songlines is to be treated with high sensitivity and confidentially (7).
 - The letter stated that Woodside had not provided a “reasonable opportunity to provide our objections in relation to the Trunkline and Drilling EPs, and therefore cannot have responded to those objections”. (8)
 - [REDACTED] and [REDACTED] offered to share information about their functions, interests and activities regarding these EPs to NOPSEMA (9). This is an indication that as early as September 2022, [REDACTED] and [REDACTED] had information and “objections” to share about all Scarborough EPs which, despite Woodside providing ample opportunity, they had not shared with Woodside.
- On 29 September 2022, Woodside emailed [REDACTED], [REDACTED] and Save Our Songlines:
 - Woodside requested a meeting to share information in relation to the Scarborough Gas Project. Woodside requested to hold this meeting prior to 10 October 2022.
 - Woodside advised it welcomed the opportunity to meet to discuss the matters raised in the letters of 6 June 2022 and 29 September 2022, to share information in relation to the Scarborough Gas Project and demonstrate how items raised in the correspondence have been addressed in the relevant environment plans.
 - Woodside proposed that the meeting would be attended by subject matter experts and project personnel as required, to answer any questions.
- On 6 October 2022, Woodside followed up with [REDACTED], [REDACTED] and Save Our Songlines via email and phone / voicemail.
- On 7 October 2022, [REDACTED], [REDACTED] and Save Our Songlines responded to Woodside via phone to arrange a suitable date and time.
- On 7 October 2022, Woodside and [REDACTED], [REDACTED] and Save Our Songlines discussed arrangements via phone to meet on 11 October 2022.
- On 7 October 2022, [REDACTED] and Save Our Songlines contacted Woodside via phone to advise that [REDACTED] would be in touch to set up the meeting. [REDACTED] and Save Our Songlines could not confirm if the 11 October 2022 meeting was proceeding as planned.
- On 10 October 2022, Woodside emailed [REDACTED], [REDACTED] and Save Our Songlines noting it had not received any further contact or confirmation of the 11 October 2022 consultation meeting. Woodside advised it was still ready and available to proceed with a meeting.
- On 11 October 2022, Woodside flew personnel to Karratha to attend the meeting with [REDACTED], [REDACTED] and SOS and followed up with [REDACTED], [REDACTED] and Save Our Songlines via phone and SMS.
- On 11 October 2022, [REDACTED], [REDACTED] and Save Our Songlines advised Woodside via SMS that it was awaiting confirmation from its lawyers regarding the proposed meeting.

- ☐ Woodside did not receive further contact and, despite Woodside being ready in Karratha for the meeting as agreed, this meeting did not proceed.
- ☐ None of ██████████, ██████████, or SOS provided an explanation to Woodside as to their non-attendance at this meeting.
- On 8 November 2022, ██████████, ██████████ and Save Our Songlines sent a letter to Woodside in relation to the Scarborough gas project EP meetings request including this EP.
- ██████████, ██████████ and Save Our Songlines acknowledged Woodside's correspondence of 29 September 2022 and 6 October 2022 in respect of Woodside's consultation with relevant persons for activities related to the Scarborough Project and associated EPs. Acknowledging their understanding that Woodside's correspondence encompassed all activities with the Scarborough Gas Project including Seismic, D&C, SIT1 and State EPs and of the forthcoming Subsea EP.
- ██████████, ██████████ and Save Our Songlines reiterated that they were relevant persons for activities relating to these EPs and acknowledged the invitation to meeting to discuss the EPs and the answer any questions they may have.(4)
- ██████████, ██████████ and Save Our Songlines stated that it was unfortunate that they had been unavailable to meet as requested, however they welcomed the opportunity to discuss their letters dated 6 June 2022 and 26 September 2022 and their concerns on the impacts and risks of the above activities. They acknowledged that Woodside may have an internal target date but that it was generally not practicable to arrange meetings with less than 4 weeks' notice and requested that Woodside provide sufficient notice for any meeting opportunities.
- ██████████, ██████████ and Save Our Songlines offered several dates on which they were available to meet and shared their preference to meet on Murujuga.
- ██████████ and ██████████ wrote to Woodside, stating "Unfortunately we have been unavailable to meet as requested..." but that "we acknowledge your invitation to meet... to discuss the Scarborough EPs and to answer any questions we may have" and that ██████████ and ██████████ "welcome the opportunity to discuss our letters of 6 June 2022 and 26 September 2022 and our concerns as to the impacts and risks of the above activities" (being the Seismic EP, Trunkline EP, Drilling EP and SURF EP). ██████████ and ██████████ therefore represented they were ready and able to discuss all Scarborough EPs. ██████████ and ██████████ also requested 4 weeks notice for meetings, and proposed a meeting in late November 2022.
- On 22 November 2022, Woodside emailed ██████████, ██████████ and Save Our Songlines:
 - Woodside acknowledged the letter addressed to Woodside on 8 November 2022 that was passed on via NOPSEMA.
 - Woodside confirmed its availability to meet in Karratha on Tuesday 29 November 2022 or a date suitable to ██████████, ██████████ and SOS.
- On 24 November 2022, ██████████, ██████████ and Save Our Songlines wrote a letter to Woodside regarding the proposed meeting date. Despite recording in their correspondence on 26 September 2022 and 8 November 2022 that they had information and "objections" they were ready to share regarding the Scarborough Project, ██████████ and ██████████ now stated they would not proceed with consultation until there was clarification around the scope and purpose of the meeting and until Woodside confirmed their status as "relevant persons" and Woodside provided requested information. ██████████ and ██████████ stated "We will not be in a position to provide substantive information about our functions, interests and activities at the first meeting you have proposed", but still committed to discussing all Scarborough EPs. In particular ██████████, ██████████ and Save Our Songlines sought confirmation on the following items:
 - Acknowledgement from Woodside as to relevant person status for all EPs associated with the Scarborough Gas Project (4).
 - Provision of necessary information about the proposed activities and the anticipated impacts to allow for informed comment and input to be made as part of the relevant person consultation process. As a minimum they requested draft copies of the Scarborough EPs and associated technical and other information and any studies, research or other information held by Woodside relating to:
 - cultural values (not limited to ethnographic sites) including marine fauna of cultural significance (5)
 - impacts and risks of industrial pollution from gas processing on cultural heritage at Murujuga (2)

- Purpose of meeting, indicating they would be happy to meet when information requested in points above was received and they understood Woodside's assessment of them as relevant persons (4). They indicated that the initial meeting would be for introductions and an opportunity for [REDACTED], [REDACTED] and Save Our Songlines to ask questions and obtain information they require to determine the consequences, impacts and risks of the proposed activities so that consultation could commence. The issue of protocols around gender restricted information was raised and they stated that they would not be able to provide substantive information about their functions, interests and activities at the first meeting proposed (7).
- On 2 December 2022, Woodside emailed [REDACTED], [REDACTED] and Save Our Songlines and included responses to address the items raised on 24 November 2022, where appropriate. Woodside reiterated its availability to meet and provided an option for any date in December 2022. [REDACTED], [REDACTED] and Save Our Songlines did not respond to this offer.
 - Woodside reiterated that it is open to continue consulting, receiving feedback and discussing concerns in relation to Woodside's Scarborough Environment Plans (EPs). Consultation is ongoing and feedback will continue to be accepted throughout the life of the EP, including while it is being prepared, while it is under assessment as well as after acceptance, while the EP remains in force. (4)
 - Woodside confirmed its arrangements to meet and consult that have been ongoing since November 2021, and it remains open to continue consulting in relation to the Scarborough EPs.(4)
 - Woodside advised it is available to meet with [REDACTED], [REDACTED] and Save Our Songlines on any date in December 2022 in Karratha. Woodside requested confirmation of availability to meet by 9 December 2022. (4)
 - Woodside again provided a link to the Consultation Information Sheets for all Scarborough EPs, which had been available on Woodside's website since September 2022, to assist in preparing for the meeting.
 - Woodside noted there has been ample time and information available to inform feedback on our proposed Scarborough EPs. Woodside requested [REDACTED], [REDACTED] and Save Our Songlines provide feedback no later than at the proposed meeting in December 2022 (8).
 - Woodside noted the letter dated 24 November 2022 made reference to arrangements which would enable [REDACTED], [REDACTED] and Save Our Songlines to share relevant information such as matters that are restricted to women or men only. Woodside requested for [REDACTED], [REDACTED] and Save Our Songlines to confirm what arrangements are required to enable them to share this information by 9 December 2022. (7)
 - Despite Woodside being available to meet any time in December and the date of December 9 being suggested, there was no response from [REDACTED], [REDACTED] and Save Our Songlines so a meeting could not proceed (8).
- On 4 January 2023, Woodside emailed [REDACTED], [REDACTED] and Save Our Songlines to follow-up on its meeting request Woodside reiterated its availability to meet and provided an option for any date in January 2023.
- On 13 January 2023, [REDACTED], [REDACTED] Save Our Songlines emailed Woodside:
 - (1) [REDACTED], [REDACTED] and Save Our Songlines confirmed it would like to meet with Woodside, but reiterated its requests contained within its 24 November 2022 correspondence.
 - (2) [REDACTED], [REDACTED] and Save Our Songlines stated it can advise of its availability for a meeting once the information requested above is provided.
- On 19 January 2023, Woodside emailed [REDACTED], [REDACTED] and Save Our Songlines. Woodside included the following responses to address the items raised, where appropriate:

- (1) Woodside reiterated it is open to continue consulting with [REDACTED], [REDACTED] and Save Our Songlines, receiving feedback and discussing their concerns in relation to Woodside's Scarborough Environment Plans (EPs) in Commonwealth and State waters (collectively referred to as the Scarborough EPs). (4)
- (2) That consultation on the Scarborough EPs began when Woodside provided [REDACTED], [REDACTED] and Save Our Songlines with consultation information on the Scarborough EPs. (8) Information on the Seismic EP has been provided directly to [REDACTED], [REDACTED] and SOS since at least July 2022 [Ref Woodside letter 22 July 2022]
- (3) That Woodside has made every effort to meet with [REDACTED], [REDACTED] and Save Our Songlines to understand their claim of relevance and to develop a comprehensive understanding of potential impacts to their functions, interests or activities. (8)
- (4) That it has been trying to arrange a meeting with [REDACTED], [REDACTED] and Save Our Songlines since November 2021 to discuss the Scarborough EPs, including a representative travelling to Karratha for a planned meeting on 11 October 2022 and making representatives available for a meeting on 29 November 2022. (8)
- (5) Woodside reiterated its availability to meet and provided an option for any date in January or early February 2023 (8).
 - On 8 February 2023, Woodside was copied into correspondence sent from the Environmental Defender's Office (EDO) to the WA State Minister for Mines and Petroleum regarding a separate Environment Plan under State Regulations. Copies of previous correspondence between Woodside and [REDACTED], [REDACTED] and Save Our Songlines were attached to the email. This included a detailed response from Woodside dated 5 January 2023 which responded to claims and objections made in relation to spiritual and cultural values.
 - On 8 February 2023, the EDO (acting on behalf of SOS) emailed Woodside and stated that the earliest its clients would be able to meet would be the weeks commencing 13 and 20 March 2023.
 - On 15 February 2023, Woodside emailed [REDACTED], [REDACTED] and Save Our Songlines. Woodside reiterated its availability to meet and, based on dates suggested within the 8 February correspondence, provided [REDACTED], [REDACTED] and Save Our Songlines with confirmation it was available to meet on the suggested dates in March 2023. (1)
 - On 24 February 2023 Woodside sent [REDACTED], [REDACTED] and Save Our Songlines a follow up email. Woodside reiterated its availability to meet.
 - On 24 February 2023 the EDO (acting on behalf of [REDACTED], [REDACTED] and Save Our Songlines) emailed Woodside and advised its client was available to meet on 13 and 14 March 2023. EDO requested that Woodside nominate a female staff member who could receive "highly sensitive" cultural information at the meeting, which Woodside took to mean that [REDACTED], [REDACTED] and Save our Songlines intended to share cultural information at the meeting.
 - On 28 February 2023 the EDO (acting on behalf of [REDACTED], [REDACTED] and Save Our Songlines) emailed Woodside to follow up on the request to secure a meeting.
 - On 1 March 2023 Woodside emailed [REDACTED], [REDACTED] and Save Our Songlines (and CC to EDO) to propose the meeting time and location for 14 March 2023 Woodside also nominated a female staff member to receive cultural information (7).
 - On 7 March 2023 the EDO (acting on behalf of [REDACTED], [REDACTED] and Save Our Songlines) emailed Woodside to confirm the meeting time and location for 14 March 2023.
 - On 8 March 2023 Woodside emailed the EDO, [REDACTED], [REDACTED] and Save Our Songlines with a proposed agenda for the 14 March 2023 meeting and requested they advise if there were any particular issues they wished to discuss during the meeting. (8)
 - On 10 March 2023, Woodside emailed EDO, [REDACTED], [REDACTED] and Save Our Songlines with further logistic and meeting protocol details for the proposed meeting on 14 March 2023. The agreed meeting protocol, based on a discussion between Woodside and [REDACTED] included that attendees would be all female, would attend with open hearts, deep listening and seeking a respectful conversation and open to sharing knowledge about the environment that may be affected, including the heritage of places. It was also agreed that there would be no audio or video recording of the meeting to respect privacy, safety and cultural values (7).

- On 13 March, the female nominated by Woodside to receive sensitive information called ██████████, ██████████ and SOS to check in and confirm the meeting would go ahead.
- **MEETING:** On 14 March 2023 (summarised in 16 March 2023 email), Woodside met with EDO, ██████████, ██████████ and Save Our Songlines on-country and discussed the proposed activity including providing a description of the pipeline route and risks and impacts associated with the activity. Maps and pictures of the pipeline and Scarborough Project footprint were shown. Despite Woodside's continued efforts and offers to meet since at least September 2022, this meeting represented the first time Woodside and ██████████, ██████████ and Save Our Songlines had met in person since the establishment of Save Our Songlines in November 2021. (4, 8)

Woodside provided an overview of the Scarborough activities (Seismic EP, Subsea EP, D&C EP, SITI EP (Cth and State)).

Feedback from ██████████, ██████████ and Save Our Songlines (at the on-Country meeting):

- When told about the pipeline route, borrow grounds and pipelay, ██████████, ██████████ and Save our Songlines spoke of concerns to the effect of the earth and world breaking apart when the project got underway and raised specific concerns about the pipeline passing near contaminated waters near the Montebello islands . They also discussed topics relating to whales and other sea animals related to the installation of the Scarborough Trunkline.
- When asked for their views on how the activities could be managed by Woodside to reduce risks and impacts to their interests, ██████████, ██████████ and Save Our Songlines told Woodside that the proposed activities gave them a sick feeling and the activities should be stopped (10). ██████████, ██████████ and Save Our Songlines also informed Woodside that, in their view, there is nothing that could be done by Woodside to progress with the proposed Scarborough activities in a way that could

minimise impact to [REDACTED], [REDACTED] and Save Our Songlines' functions, activities and interests or that would be respectful to its culture and country (10). Woodside Response (at the on-Country meeting):

- Woodside agreed to keep confidential to women and to not otherwise share cultural details which were shared at the 14 March 2023 meeting (7).
- [REDACTED] and [REDACTED] noted there is information that is not yet known to them as the rocks have not yet told them (for instance, wisdom that Murujuga rocks have for the past and future) and they are not sure when it will be known (9).
- On 16 March 2023, Woodside emailed EDO, [REDACTED], [REDACTED] and Save Our Songlines to advise that:
 - It appreciated the request for Woodside to attend the meeting with open hearts, deep listening and respectful conversation and that it would intend to continue this approach to engagement.
 - Woodside's consultation process is ongoing through the environmental approval process and when an activity is being performed and that Woodside looks forward to continuing its discussions with [REDACTED], [REDACTED] and Save Our Songlines in the future (8).
 - Woodside is open to consulting further with [REDACTED], [REDACTED] and Save Our Songlines on the proposed Scarborough activities and are open to the continuing engagements regarding the Scarborough activities (8). Woodside noted this was notwithstanding comments made at the meeting by [REDACTED] and [REDACTED] that the proposed activities gave them a 'sick feeling' and should be stopped.
 - Woodside provided responses to specific actions taken during the meeting, including:
 - A request for Woodside to provide background information on the "why" behind the Scarborough activities. Woodside responded that the Scarborough Gas Project helps play a role in the global energy transition, including helping neighbouring Asian countries take action on emissions reduction and advised there is further information on Woodside's website.
 - A request for Woodside to check with MAC whether MAC's ethnographic survey can be shared with [REDACTED], [REDACTED] and Save Our Songlines. Woodside advised that the ethnographic survey is held by MAC and Woodside does not have permission to share it (3).
 - A request for Woodside to confirm whether fracking would occur in relation to the Scarborough activities. Woodside confirmed that no fracking would be undertaken as part of the proposed Scarborough activities (1).
- On 17 March 2023, Woodside emailed [REDACTED] and [REDACTED] and Save Our Songlines acknowledging SOS correspondence to Woodside dated 6 June 2022, 26 September 2022 and 24 November 2022 and the discussion with Woodside on 14 March 2023. Woodside included an attachment containing responses to relevant objections, claims and additional information raised in the correspondence relating to the activities the subject of this EP. Woodside stated:
 - Woodside has conducted an ethnographic survey to support the development of EPs for the Scarborough Project which have not identified any heritage places, objects or values which will be impacted by the activities covered by the this EP.
 - None of Woodside's agreements with Traditional Custodians include "gag clauses" or restrictions on voicing opinions on our projects.
 - Re the principles of FPIC: Woodside is guided by UNDRIP under our Indigenous Communities Policy and has consulted representative institutions including MAC for a number of years.
 - Woodside has made several attempts since November 2021 to engage with [REDACTED], [REDACTED] and Save Our Songlines. There was a meeting held on Tuesday 14 March 2023. Woodside is open to receiving feedback.
 - Re cultural heritage impacts, concerns related to carbon and the impact on climate change from Scarborough gas are not relevant to the SITI EP. The extraction of Scarborough gas for onshore processing is not within the scope of the activity described in the SITI EP. Therefore, indirect impacts and risks arising from the onshore processing of Scarborough gas are not considered indirect impacts/risks of the PAP for this EP but may be evaluated in other Scarborough EPs as appropriate.

- Re impacts on rock art through pollution, emissions from the activities covered by the SITI EP are of a scale and physical remoteness from Murujuga's rock art that no credible impact pathway is foreseen. The activities covered by the Seismic EP are located ~374 km away from Murujuga.
- Re the proposed removal of rock art from the Perdaman site, Woodside stated it is not appropriate for Woodside's EPs to address or seek to regulate the activities of third parties progressing separate projects.
- Woodside has resourced Traditional Custodian representative institutions to access relevant information and independent expert advice so that they are enabled to provide informed and considered feedback on the broader Scarborough activities.
- A number of documents containing cultural heritage information, including heritage assessments, contain the intellectual property of Traditional Custodians or sensitive information that may be culturally restricted. For these reasons, Woodside does not disclose this information. This information is held by representative institutions and may be disclosed by them where they consider it appropriate to do so. The Scarborough Project Cultural Heritage Management Plan is a publicly available document and can be found on Woodside's website.
- Woodside continues to consult with MAC on all relevant aspects of this EP prior to and during the execution of activities.
- Re impacts and risks on Aboriginal heritage sites on and around Murujuga, Woodside has undertaken archaeological assessments and ethnographic surveys to identify cultural heritage that may be impacted by Scarborough activities. These works have not identified any heritage places, objects or values which will be impacted by the activities covered by the Seismic EP.
- Woodside considers the time it has provided to consider information prior to meetings to be more than suitable to inform ██████████ ██████████ and SOS' feedback on Woodside's proposed Scarborough EPs.
- We confirm as per Woodside's ongoing consultation approach, feedback and comments received continue to be assessed and responded to, as required, through the life of an EP, including during EP assessment and throughout the duration of the accepted EP, in accordance with the intended outcome of consultation.
- On 24 March 2023, the EDO (acting on behalf of ██████████, ██████████ and Save Our Songlines) provided a letter to Woodside which copied NOPSEMA, DMIRS and the WA Minister for Mines and Petroleum:
 - The letter acknowledged that Woodside had provided information on all relevant Scarborough EPs (Seismic, Drilling, SITI and Subsea), and confirmed that ██████████ ██████████ and ██████████ raised "particular concerns about the impacts that underwater activities that form part of the EP activities might have on their functions, interests an activities". This confirmed that the parties were consulting on all EPs.
 - The letter detailed a response to the 14 March 2023 meeting and Woodside's 16 March 2023 email, and covered the range of Scarborough EPs (Seismic, D&C, SITI, Subsea and State EP), including this proposed activity. The EDO noted its client's concerns relating to:
 - The summary of the meeting, stating the functions, interests and activities of their client were distinct from those of Murujuga Aboriginal Corporation and that their stories were not told as a part of any consultation with MAC (6). They raised concerns about impact of underwater activities, impacts related to greenhouse gas and Murujuga industrialisation.
 - Clarification of its client's position, that Woodside had mischaracterised their clients position. Their view is that Woodside should not undertake the Scarborough Gas Project because of the harm it will cause and that is different to the conclusion that there is 'nothing that can be done' to minimise impacts or be respectful to our clients, their culture and their country (10) Their clients regard genuine consultation on the proposed EP activities an important demonstration of their respect for their functions, interests and activities. The letters assert that they consider that the consultation process has just commenced (11).
 - Communication of relevant person status – the EDO stated that their clients should be recognised as relevant persons individually and not only Save Our Songlines, the foundation their clients founded.(4)
 - Acknowledgement of response to questions arising at the meeting of 14 March 2023 (1), that Woodside had followed up their requests and provided a link to Woodside's publicly available website and advised that the ethnographic survey was held by MAC and Woodside did not have permission to share it.(12)

- The letter noted that the EDO's clients would review the consultation information provided, and that it anticipated its clients would require approximately six weeks to do this (8).
- The letter requested Woodside not submit the draft environment plan until consultation was complete.
- On 28 March 2023 Woodside emailed the EDO, ██████████, ██████████ and Save Our Songlines (CC to NOPSEMA) in response to the 24 March 2023 letter. Woodside reiterated its responses to topics raised during the meeting and in previous correspondence, relevant to the proposed activity. The response included the following responses which are summarised as follows:

In regards to additional or new information:

- Woodside advised it has a process in place for the life of an EP that allows the EP to be updated to include additional or new information or feedback that is received after an EP is submitted. This is done through a "Management of Knowledge" process. This means that feedback or information provided in future meetings can still be taken into account and, where appropriate, can be incorporated in the EP during the life of the activity.
- Woodside advised that following the meeting, based on the information provided, no updates were required to the EP via the Management of Knowledge process.
- In regards to functions, interests and activities
- Woodside acknowledged that it had been advised that ██████████, ██████████ and Save our Songlines' functions interests and activities are distinct from those of MAC and that it was interested to learn about this further (6).
- In response to a request for the ethnographic survey undertaken by MAC, Woodside reiterated that it has no authority to provide this information. Given ██████████ previous role with MAC at the time the ethnographic survey was being undertaken, Woodside suggested that ██████████ may have contacts at MAC to request a copy of that survey (12).
- Woodside advised that as to ██████████, ██████████ and Save Our Songlines' functions, interests and activities, it continues to invite these to be shared with Woodside so it can consider the likely impacts and risks of the EP activities on these functions, interests and activities and what Woodside can do to lessen or avoid those impacts (8).
- Woodside confirmed that as ██████████, ██████████ and Save Our Songlines' were not prepared to share some information with Woodside, it remains open to hearing from them when this is known, and it is ready to be shared (8, 9).
- In regards to minimising impacts to functions, interests and activities, Woodside reshared its interpretation of the take-aways from the meeting in relation to underwater activities, Greenhouse gas emissions and industrialisation of Murujuga (2)
- In the meeting, Woodside provided an overview of the Scarborough Project and potential impacts of activities on whales (13).
- Emissions from the activities covered by the Commonwealth EPs are of a scale that no credible impact pathway to their onshore cultural interests is foreseen. This has been the subject of separate correspondence (2).
- In relation to the detail of the EPs and information accessed and provided, the meeting provided an overview of the Scarborough Project and followed volumes of previous correspondence on the Scarborough Project. Previous correspondence indicated that a large volume of information on the Scarborough Project had been accessed, read and considered. The correspondence showed an informed and thorough understanding of the various Scarborough activities and the Scarborough Project. (8, 9)
- In relation to Consultation in general (8), Woodside advised it has continued to consult with ██████████, ██████████ and Save Our Songlines' and continues to invite further consultation.
- In relation to Relevant persons. (4), Woodside advised that the Commonwealth approval process requires Woodside to consult with "relevant persons".

- Woodside has previously explained the approval process relating to the concept of “relevant persons” and noted that, at the relevant time consultations are included under a category of “relevant persons” in EPs. Woodside generally applies this category at a stage when they are trying to understand more about a person’s functions, interests and activities and also the impacts of Woodside’s activities on them.
- Woodside reiterated that there is no need for it to categorise persons as relevant in order to consult with them.
- In relation to Ongoing consultation (4), Woodside advised that once an EP is accepted, Woodside continues ongoing consultations with relevant persons. Is open to continuing consultation to understand how the proposed Commonwealth EP activities relevantly affect ██████████, ██████████ and Save Our Songlines.
- In relation to Further consultation (8, 9), Woodside noted that ██████████, ██████████ and Save Our Songlines’ correspondence, it would like to organise another meeting and will require approximately six weeks to read into materials and prepare for a meeting.
- Woodside requested for ██████████, ██████████ and Save Our Songlines’ to advise its preferred times for the next meeting, noting the time taken to arrange the previous meeting.
- Woodside advised it is available to meet in the week commencing 8 May 2023 or earlier.
- The agreed meeting protocol was shared again, including there being no audio or visual recording of meetings.
- On 29 March 2023, the EDO responded acknowledging receipt of Woodside’s email, noted the invitation for further consultation and advised it was seeking instructions and would respond in due course.
- On 17 April 2023, Woodside responded by email to a letter from the EDO dated 6 April 2023 addressed to NOPSEMA and copied to Woodside about a different activity. Woodside stated:
 - Woodside provided notes including in relation to Woodside’s repeated and protracted attempts to meet, engage and consult with ██████████ and ██████████ and SOS on the Scarborough Project(8).
 - Woodside reiterated the process for consultation remains open post EP approval and that it has consistently offered an open invitation to ██████████ and ██████████ and SOS to provide feedback to allow Woodside to consider the potential impacts and risks of the activities on functions, interests and activities and to provide input on things Woodside can do to mitigate those potential impacts and risks on all Scarborough EPs. (8)
 - An attachment of 5 pages sent with this response to NOPSEMA sets out the history of Woodside’s extensive engagements with ██████████ and ██████████ and SOS. It states that since June 2018, Woodside has undertaken 82 substantial engagements relating to the Scarborough Project including 32 meetings with Traditional Custodians and their representatives (8).
 - The letter went on to provide further context and highlighted relevant engagements with ██████████ and ██████████ and SOS, and stated Woodside’s position i.e. having regard to all of the circumstances of the consultation undertaken with ██████████ and ██████████ and SOS, and in light of the concepts of “reasonable time”, “reasonable diligence”, a consultation obligation that “must be capable of practical and reasonable discharge ... that must be capable of performance”, NOPSEMA can be reasonably satisfied that an appropriate level of consultation has taken place with ██████████ and ██████████ and SOS (8).
 - Woodside also outlined details about correspondence and the opportunities and invitations Woodside has attempted to provide for consultation to occur and why these have not occurred (8).
 - Woodside closed the letter by stating Woodside would be pleased to discuss the notes contained in this letter and the issues raised in the Letter from EDO with NOPSEMA.
- On 8 May 2023, the EDO emailed Woodside to advise they had not had any response to date, and were writing again to enquire whether Woodside wished to propose dates that can put to their clients for consultation regarding another Scarborough EP.
- On 9 May 2023, Woodside emailed ██████████, ██████████, and Save Our Songlines via the EDO reiterating Woodside’s willingness to engage in ongoing consultation on Scarborough EPs; On proposed meeting dates in May, noting that Woodside was awaiting response on ██████████, ██████████ and Save our Songlines availability

and that Woodside was open to meeting either on country or remotely, noted draft guidance from NOPSEMA regarding Managing gender-restricted information, and included a draft agenda (8).

- On 9 May 2023, Woodside emailed ██████, ██████ and Save Our Songlines, with respect to the SITI EP and included responses to relevant objections (some of which are broadly applicable to the entire Scarborough Project including activities under the other Scarborough EPs), claims and additional information raised on 6 June 2022, 26 September 2022 and 24 November 2022:
 - Woodside confirmed it has conducted an ethnographic survey to support the development of EPs for the Scarborough Project (Mott 2019, UWA 2021, McDonald and Phillips 2021, Nutley 2022a and 2022b). These works have not identified any heritage places, objects or values which will be impacted by the activities covered by the SITI EP. An ethnographic survey determines the cultural values which are associated with a particular area, feature or object. Representatives from the Mardudhunera, Ngarluma, Yaburara, Yindjibarndi and Wong-Goo-Tt-Oo Peoples—all five Indigenous groups represented by MAC—participated in these surveys (Mott 2019, McDonald and Phillips 2021). Participants were not restricted in the types of heritage or other values they were encouraged to identify, but typical results from surveys of this nature might include songlines, ceremonial places such as ‘thalu’ sites for managing environmental resources, or places where activities such as birthing, initiation or other significant activities are performed. (5, 6)
 - Woodside advised Archaeological assessments have been made over the ancient landscape, being the extent of the continental shelf which was previously exposed during human occupation. This includes an Australian-first assessment of the archaeological perspectivity along the trunkline route conducted with the support and consultation of Traditional Custodians (UWA 2021). An executive summary is available on Woodside’s website at <https://www.woodside.com/docs/default-source/sustainability-documents/indigenous-peoples/cultural-heritage/scarborough-pipeline-cultural-heritage-assessment-exec-summary.pdf> (5).
 - Woodside advised it has had all of its submerged heritage work assessed by an expert underwater archaeologist for gaps in our processes (Nutley 2022a), as well as a review of Side Scan Sonar data to confirm whether archaeological sites could be identified on the seabed (Nutley 2022b). (5)
 - Woodside advised that Section 4.9.1 of the SITI EP includes a summary of these assessments. The assessments include the relevant areas sufficient to assess the cultural values of the Operational Area for this EP. (5)
 - Woodside confirmed that none of Woodside’s agreements with Traditional Custodians include “gag clauses” or restrictions on voicing opinions on its projects. Woodside has supported Traditional Custodian representative institutions to access relevant information and independent expert advice so that they are enabled to provide informed and considered feedback on the Scarborough project. (3)
 - Woodside advised that the principles of Free, Prior and Informed Consent (FPIC) are based in the United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP) where it is envisaged as a communal right of Indigenous communities and secured through consultation with representative institutions

utilising traditional decision-making mechanism such as deferring to MAC's Circle of Elders. Woodside is guided by UNDRIP under its First Nations Communities Policy and has consulted representative institutions including MAC for a number of years (6).

- Woodside confirmed it has made several attempts since November 2021 to engage with Save Our Songlines, [REDACTED] and [REDACTED], with a meeting held on Tuesday 14 March 2023. Woodside confirmed that Woodside is open to receiving feedback on the SITI EP (8).
 - Woodside confirmed that concerns related to carbon and the impact on climate change from Scarborough gas are not relevant to the SITI EP (2). This EP assesses both direct and indirect impacts and risks associated with the proposed Petroleum Activities Program, having regard to the nature and scale of the proposed Petroleum Activities Program (2, 5).
 - Woodside advised the proposed Petroleum Activities Program is outside of the National Heritage Place and the anticipated boundary of the Murujuga Cultural Landscape World Heritage Property (2).
 - Woodside confirmed the extraction of Scarborough gas for onshore processing is not within the scope of the activity described in this EP. Therefore, indirect impacts and risks arising from the onshore processing of Scarborough gas are not considered indirect impacts/risks of the Petroleum Activities Program for this EP but may be evaluated in other Scarborough EPs as appropriate (2).
 - Woodside confirmed emissions from the activities covered by this EP are of a scale and physical remoteness from Murujuga's rock art that no credible impact pathway is foreseen. Woodside advised that no rock art will be displaced as a result of the Scarborough Project (2).
 - The activities covered by this EP are located in Commonwealth waters and will have no impact on access to sites of cultural and spiritual significance (2).
 - Woodside advised it has resourced Traditional Custodian representative institutions to access relevant information and independent expert advice so that they are enabled to provide informed and considered feedback on the broader Scarborough activities. A number of documents containing cultural heritage information, including heritage assessments, contain the intellectual property of Traditional Custodians or sensitive information that may be culturally restricted. For these reasons, Woodside does not disclose this information. This information is held by representative institutions and may be disclosed by them where they consider it appropriate to do so. (5)
 - Woodside provided a link to the Scarborough Project Cultural Heritage Management Plan which is a publicly available document and can be found at: https://www.woodside.com/docs/default-source/our-business---documents-and-files/burrup-hub---documents-and-files/scarborough---documents-and-files/scarborough-cultural-heritage-management-plan.pdf?sfvrsn=162e353a_3 (3)
 - Woodside advised it continues to consult with MAC on all relevant aspects of this EP prior to and during the execution of activities. (1)
 - Woodside advised it considers the adequate time and information it has provided, including the meeting on Tuesday 14 March 2023, to be more than suitable to inform feedback on Woodside's proposed Scarborough EPs (8, 9).
 - Woodside confirmed that as per Woodside's ongoing consultation approach, feedback and comments received continue to be assessed and responded to, as required, through the life of an EP, including during EP assessment and throughout the duration of the accepted EP, in accordance with the intended outcome of consultation (8, 9).
 - Woodside reiterated the consultation information sheet has been available on Woodside's website since August 2021 and invited feedback on the proposed activities to be provided before 30 September 2021. Revision 1 of the SITI EP has been available on the NOPSEMA website since 13 January 2022. Woodside re-provided links to both documents (8, 9).
- On 10 May 2023, the EDO (acting on behalf of [REDACTED], [REDACTED], and Save Our Songlines) emailed Woodside to query the date of previous correspondence.
 - On 15 May 2023, Woodside emailed the EDO confirming that the May 2023 correspondence refers to emails dated 9 May 2023 with the subject line "RE: Scarborough Environment Plans – Consultation.
 - On 1 June 2023, the EDO emailed Woodside confirming [REDACTED], [REDACTED], and Save Our Songlines were available to meet in Karratha on Tuesday, 13 June 2023 (8).

- On 7 June 2023, Woodside emailed ██████████, ██████████, and Save Our Songlines. Acknowledging and in response to the Save our Songlines correspondence of 6 June 2022, 26 September 2022, 24 November 2022, correspondence via EDO of 6 April 2023, 18 April 2023 and during meeting on 14 March 2023, Woodside confirmed:
 - Ethnographic surveys have been carried out to support EP development (and the EP updated to reflect this), with surveys not identifying any heritage places, objects or values which will be impacted by any of the activities covered by the SITI EP (5)
 - None of Woodside's agreements with Traditional Custodians include "gag clauses" or restrictions on voicing opinions on our projects. Woodside has supported Traditional Custodian representative institutions to access relevant information and independent expert advice so that they are enabled to provide informed and considered feedback on the Scarborough project (3).
 - The principles of Free, Prior and Informed Consent (FPIC) are based in the United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP) where it is envisaged as a communal right of Indigenous communities and secured through consultation with representative institutions utilising traditional decision-making mechanisms such as deferring to MAC's Circle of Elders. Woodside is guided by UNDRIP under our Indigenous Communities Policy and has consulted representative institutions including MAC for a number of years (6).
 - Woodside has made several attempts since November 2021 to engage with Save Our Songlines, with a meeting held on Tuesday 14 March 2023. We confirm that Woodside is open to receiving feedback and to discussing issues raised in relation to the SITI EP. As per Woodside's ongoing consultation approach, feedback and comments received continue to be assessed and responded to, as required, through the life of an EP, including during EP assessment and throughout the duration of the accepted EP, in accordance with the intended outcome of consultation. (8)
 - The SITI EP assesses both direct and indirect impacts and risks associated with the PAP and is outside the National Heritage Place and anticipated boundary of the Murujuga Cultural Landscape World Heritage Property (5).
 - Emissions from the activities covered by the SITI EP are of a scale and physical remoteness from Murujuga's rock art that no credible impact pathway is foreseen. No rock art will be displaced as a result of the Scarborough Project and damage to heritage sites is not anticipated as a result of the PAP (2, 5)
 - The activities covered by the SITI EP are located ~430km away from Murujuga and will have no impact on access to sites of cultural and spiritual significance. (2, 5)
 - Woodside has resourced Traditional Custodian representative institutions to access relevant information and independent expert advice so that they are enabled to provide informed and considered feedback on the broader Scarborough activities. A number of documents containing cultural heritage information, including heritage assessments, contain the intellectual property of Traditional Custodians or sensitive information that may be culturally restricted. For these reasons, Woodside does not disclose this information. This information is held by representative institutions and may be disclosed by them where they consider it appropriate to do so (12)
 - Woodside shared a link to the publicly available Scarborough Project Cultural Heritage Management Plan (12)
 - In response to the letter dated 26 September 2022, Woodside referred to responses provided to address claims in the 6 June 2022 letter and also confirmed Woodside has undertaken an ethnographic survey to identify cultural heritage that may be impacted by Scarborough activities. This work has not identified any heritage places, objects or values which will be impacted by the activities covered by the SITI EP (5).
 - In response to the letter dated 24 November 2022, Woodside confirmed it considers the time and information it has provided, including the meeting on Tuesday 14 March 2023, to be more than suitable to inform feedback on proposed Scarborough EPs. As per the ongoing consultation approach, feedback and comments received continue to be assessed and responded to, as required, through the life of an EP, including during EP assessment and throughout the duration of the accepted EP, in accordance with the intended outcome of consultation (8, 9).
- On 7 June 2023, Woodside emailed the EDO requesting the email be forwarded to ██████████, ██████████, and Save Our Songlines. Woodside confirmed availability to meet in Karratha on 13 June 2023 to continue consultation on the Scarborough EPs; proposed an agenda; confirmed meeting protocols and advised Woodside attendees. Woodside requested to know who would be attending on behalf of SOS and confirmation of other meeting details. The agenda included the sharing of interests, the functions of ██████████, ██████████ and Save Our Song lines, a walk through of Scarborough EPs, and a description of the Scarborough Project and activities to be undertaken under each EP. The same meeting protocol agreed prior to the March meeting was shared, including female only meeting, attend with

open hearts and prepared for deep listening and respectful conversation and to share knowledge about the environment including the heritage of places. In addition, it was agreed there would be no audio or visual recording. Because it had not received confirmation of the meeting and because of past history of Woodside turning up for meetings without ██████, ██████ or SOS attending, or meetings that did not proceed, on 9 June 2023, Woodside emailed the EDO, ██████, ██████, and Save Our Songlines requesting confirmation of the meeting scheduled for Tuesday 13 June 2023 and its time and location. Confirmation was sought by 5pm on 9 June 2023 as there were a number of flight and other logistics that needed to be confirmed by 5pm in order for that meeting to progress on Tuesday. If the meeting could not proceed then requested the provision of alternative meeting dates (8).

- On 9 June 2023 after 5pm the EDO emailed Woodside confirming availability for a morning meeting on 13 June 2023 (8).
- On 9 June 2023, Woodside emailed the EDO advising reasons why it was not available to meet on 13 June 2023 ie. flights and other logistics had timed out (8).
- On 10 June 2023, the EDO emailed Woodside to advise ██████, ██████ and Save Our Songlines were available to meet on 13 June 2023 on country with the EDO and provided a phone number to discuss logistics. EDO did not object to the agenda or the meeting protocol (including no recording being taken) (7, 8, 9).
- On 12 June 2023, the EDO on behalf of its clients ██████ ██████ and Save Our Songlines emailed Woodside advising availability to meet on 13 June 2023 at Hearson Cove. Despite its previous position committing to consulting on all Scarborough EPs, and confirmation that ██████, ██████ and SOS had information to share on all Scarborough EPs and the Scarborough Project generally (see correspondence dated 26 September 2022, 8 November 2022 and 24 November 2022) the EDO for the first time stated it did not think it was appropriate to deal with all 4 EPs in one meeting (15). EDO did not raise any concern with the meeting protocol, including no recording being taken.
- On 12 June 2023, Woodside emailed ██████, ██████ and Save Our Songlines and the EDO regarding meeting arrangements and a draft agenda. Woodside requested next available dates for a meeting with ██████, ██████ and Save Our Songlines and the EDO.
- On 12 June 2023, the EDO emailed Woodside to advise the ██████, ██████ and Save Our Songlines wanted to keep the existing arrangement for a consultation meeting on 13 June 2023 in Karratha.
- On 14 June 2023, the EDO emailed Woodside to advise that their clients, ██████, ██████ and Save Our Songlines were still willing to meet at the times specified in the previous email while EDO solicitors will be available in Karratha and that Woodside could join by phone or videoconference if needed.
- On 14 June 2023, Woodside emailed the EDO and ██████, ██████ and Save Our Songlines to advise Woodside was not available to meet the week of 13 June 2023 but proposed 5 alternative dates in June 2023 for a meeting to be held in Karratha or via Teams (remotely). These dates allow for Woodside to follow the agreed protocols (including having a female only team) (7, 8).
- On 14 June 2023, the EDO emailed Woodside to advise it would revert back once instructions had been received from their clients.
- On 14 June 2023, the EDO emailed Woodside, confirming dates to meet in Karratha in June, and noted the agreed meeting protocols.
- On 20 June 2023, the EDO emailed Woodside to advise the EDO will not be in a position to arrange any in-person consultation meeting for the week of 20 June and the EDO is awaiting instructions as to preferred dates and next steps for consultation. In the meantime Woodside could let the EDO know if Woodside had any questions (8).
- On 21 June 2023, Woodside emailed the EDO, ██████, ██████ and Save Our Songlines, thanking them for their email and advising that Woodside was looking forward to hearing from them when ready. Woodside offered for comments / queries / requests to be emailed in the meantime if more efficient (8, 9).
- On 28 June 2023, the EDO on behalf of its clients ██████, ██████ and SOS, emailed a letter to NOPSEMA and copied Woodside urging NOPSEMA to not accept the 4 Scarborough EPs Woodside had submitted as Woodside had failed to comply with its consultation obligations under reg 11A (8, 9). The EDO stated:

Woodside had not notified their clients that the EPs had been submitted nor the dates of submission.

A meeting scheduled for 13 June 2023 did not proceed; plans to reschedule are ongoing.

Woodside had not explained the activities of the Scarborough EPs and the associated impacts and risks in a way the SOS can understand and how this will impact their functions, interests and activities. Also, [REDACTED], [REDACTED] and SOS had not been provided with sufficient information and a reasonable period for consultation (8, 9).

- On 3 July 2023, Woodside emailed the EDO and copied NOPSEMA in response to the EDO's letter to NOPSEMA dated 28 June 2023 (copied to Woodside). Woodside clarified:
 - Woodside had consulted [REDACTED], [REDACTED] and SOS while preparing the 4 Scarborough Project EPs since March 2022. Woodside reaffirmed [REDACTED], [REDACTED] and SOS's relevant persons status (4, 8).
 - Consultation between Woodside and [REDACTED], [REDACTED] and SOS had been extensive over an extended period. As at 13 April 2023, consultation had included 5 meetings, 2 attempted meetings, 19 emails, 7 phone calls and 10 letters [Ref letter to NOPSEMA, copied to EDO dated 17 April 2023] (8, 9).
 - At a meeting on 14 March 2023, Woodside provided an overview of the Scarborough Project to [REDACTED], [REDACTED] and SOS to provide further understanding of the activities to be carried out under the Scarborough EPs. Woodside agreed to keep the full details of the meeting confidential at the request of the EDO's clients on the basis that some matters included secret women's business (7, 8, 9).
 - Following this meeting, a suite of correspondence was exchanged where Woodside further explained the activities to enable [REDACTED], [REDACTED] and SOS to make an informed assessment of the possible consequences of the activities on their functions, interests or activities. This was in addition to consultation material previously provided since August 2022 and the publicly accessible Scarborough EPs published on NOPSEMA's website. (8, 9)
 - During the meeting, without expressing to Woodside what their functions, activities and interests were (which remained (at the date of this letter) unexpressed by the EDO or its clients), [REDACTED], [REDACTED] and SOS informed Woodside that nothing could be done by it to progress with the activities to be carried out under the Scarborough EPs in a way that could minimise the effects of those activities on their undisclosed functions, interests or activities (10). Nonetheless, Woodside had continued to continue to consult with [REDACTED], [REDACTED] and SOS in the event they had any matters they wished to communicate to Woodside that could be relevant to the Scarborough EPs (8, 9).
 - Woodside had been prepared to meet and had continued to correspond with the EDO's clients and the EDO.
 - Woodside considered it had met reg 11A of the Regulations.
 - Woodside remained open and available to meet and proposed a meeting date from 3 July 2023.
- On 17 July 2023, the EDO emailed Woodside with 4 potential video conference meeting dates in July. The EDO also acknowledged receipt of Woodside's letter of 3 July 2023 and advised it would revert in due course.
- On 17 July 2023, Woodside emailed the EDO advising it would revert with meeting details.
- On 18 July 2023, Woodside emailed the EDO confirming it was available for a meeting on Tuesday 25 July at 9am by Webex and asked for confirmation. A draft agenda was proposed and the agreed protocols were included that were previously agreed. This included female only attendees, an agreement to attend with open hearts and ready for deep listening and respectful conversation and an agreement to share knowledge of the environment including the heritage of places. It also included an agreement that there would be no audio or video recordings.
- On 19 July 2023, Woodside again provided the EDO with NOPSEMA consultation documents (brochure, guideline and policy) and again asked they be provided to [REDACTED], [REDACTED] and Save Our Songlines ahead of the meeting.
- On 19 July 2023, the EDO advised [REDACTED] and [REDACTED] of EDO have taken over carriage of the matter and they will respond to the latest emails from Woodside.

- On 19 July 2023, the EDO responded to Woodside confirming the meeting on 25 July 2023 and provided a revised agenda which was the agenda that was agreed ahead of the 13 June Karratha meeting that did not proceed. The EDO made no objection to the agreed meeting protocol, including no audio or video recordings (7).
- On 20 July 2023, Woodside responded to EDO agreeing to the meeting time and date, stating that the proposed agenda would be reviewed internally, and requesting confirmation on specific protocols to be adhered to in the meeting would be aligned with those previously set by SOS (7).
- On 21 July 2023, Woodside emailed EDO notifying that arrangements had been made for the planned meeting on 25 July, that Woodside was comfortable with the proposed agenda and that Woodside would provide information on the broader Scarborough project and EPs currently being assessed rather than a single EP. This would give ██████████, ██████████ and SOS an opportunity to discuss and ask questions on the other Scarborough EPs currently being assessed. Woodside also sought confirmation that previously mentioned protocols would be followed (7).
- On 24 July 2023, EDO emailed Woodside to inform that presentation of broader information on the Scarborough Project and EPs was acceptable (15) and requested that the meeting be recorded but paused for discussion of culturally sensitive matters (7). This was raised a day before the meeting, despite Woodside circulating the agreed protocol for comment several times since the March 2023 meeting. EDO had also confirmed that the existing protocols would be appropriate (7).
- On 25 July 2023, Woodside emailed EDO to state that Woodside intends to adhere to the protocols already agreed, including that attendees are welcome to take written notes however there will be no other recording of meetings. Woodside stated that it does not consent to the meeting being recorded (7).
- On 25 July 2023, ██████████, ██████████ and SOS' lawyers confirmed they were running late to the meeting. [Ref 25 July 2023 email 9:01am]
- **MEETING:** On 25 July 2023, Woodside met with EDO and SOS, ██████████ and ██████████ via web meeting:
 - introductions, EDO stated that for the meeting to proceed the meeting had to be recorded. It was stated that if the meeting was not recorded, ██████████, ██████████ and SOS would not participate in the meeting. ██████████, ██████████ and SOS were emphatic and made this point with raised voices.
 - As this had not been agreed between the parties, at around 9.40am, the meeting paused while arrangements were discussed. As noted above, EDO only raised this as an issue on 24 July, the day before the meeting. EDO, SOS, ██████████ and ██████████ had an opportunity to object to the agreed meeting protocol at any time between the March and July meetings, including when Woodside circulated the agreed protocol on several occasions (7).
 - During the meeting on 25 July, following a pause in the meeting to consider recording, Woodside emailed EDO to inform that following an internal discussion, Woodside agreed to rejoin the meeting and the meeting being recorded under certain conditions (7). The issue around recording delayed the meeting by approximately 1 hour.
 - When the meeting recommenced, Woodside provided the meeting with a power-point presentation covering all 4 Scarborough EPs and presented on regulatory context and provided an overview of the Scarborough Project. In accordance with emails exchanged before the meeting Woodside came to the meeting ready, willing and able to address all 4 Scarborough EPs including the activities under this EP and to hear from ██████████, ██████████ and SOS on their knowledge and concerns. Detailed information on each EP was provided in the slide pack (8, 15).
 - Woodside opened the presentation by describing the Scarborough Project and the 430km trunkline route and the use of the trunkline including that gas will be pumped through it and exported back to the Pluto Gas Plant. On behalf of ██████████, ██████████ and SOS, EDO intervened on a number of occasions during the meeting and told Woodside words to the effect that ██████████, ██████████ and SOS did not want the opportunity to hear the presentation on any other EP, stating that their client was only there to consult on one EP (Seismic EP). This was despite EDO confirming in its email on 24 July 2023 that Woodside had said it would provide information on the Scarborough Project and other EPs. Woodside presented on the Seismic EP including by describing the activity in detail and talking through potential risks and impacts of the proposed activity and controls in place to manage them. Woodside also attempted to provide information on the rest of the Scarborough EPs (SIT1, D&C and Subsea) and gave an opportunity to hear ██████████, ██████████ and SOS in relation to the activities under these EPs (as agreed in the meeting agenda), but was refused (8, 15).
 - Woodside provided an overview of the Scarborough project and the offshore infrastructure. Despite a direction to only discuss the Seismic EP, ██████████ asked a question relating to the Drilling EP regarding the depth of the Scarborough wells(1). Woodside noted the wells will be drilled in approximately 900 -950 m water depth, however the wells themselves are drilled a lot deeper to get to the reservoir. Woodside noted they would take an action to provide specific accurate water depths and

- target reservoir depths, and provided this detail as part of their correspondence on 27 July 2023. ██████████, ██████████ and SOS also asked questions relating more broadly to the other Scarborough EPs.
- Woodside provided an overview of the Scarborough Seismic survey activity. ██████████ asked about the spatial extent of the Operational Area and the larger environment that may be affected. Woodside provided an overview of the spatial extent of the environment that may be affected for the Scarborough project and how it is driven by the highly unlikely event of a hydrocarbon spill from a vessel collision. ██████████ enquired as to the unplanned risk of an oil spill, particularly querying who determines the credible spill scenario (1). Woodside offered to explain or to note the question and respond after the presentation, though EDO lawyers said they would make a list of questions to go through after. At this point. EDO lawyers again required that the meeting would only discuss the seismic EP (15). When the topic of drilling and well depth was raised later in the meeting ██████████ indicated she didn't want to skip past and wanted to go through the 'whole lot', and, despite this, EDO lawyers again suggested the meeting was to only discuss the seismic EP (15).
 - ██████████, ██████████ and SOS provided feedback and asked questions some which related to all of the Scarborough EPs. ██████████, ██████████ and SOS stated at the meeting words to the effect that no new cultural information was provided relevant to any of the Scarborough activities. ██████████, ██████████ and SOS declined to provide further detail about the nature of their cultural values at the meeting (8, 9).
 - ██████████, ██████████ and SOS raised queries relating to the oil spill modelling Woodside undertakes to determine the EMBA (1). Woodside gave an overview of oil spill modelling and the stochastic nature of the model (1). EDO requested Woodside to provide the underlying information for the oil spill modelling about how the risk is determined i.e. worst case hydrocarbon spill scenario. Woodside provided a response to this request as part of their correspondence on 27 July 2023.
 - ██████████, ██████████ and SOS stated that they are broadly concerned about impact on the whales (13) and other animals (16), the songlines (unspecified) and the energy lines (unspecified) (18).
 - ██████████, ██████████ and SOS stated that only they know the songlines and other Traditional Custodians did not, including MAC (6)
 - The meeting agreed outstanding questions for Woodside to revert on (1). Woodside also pointed Save Our Songlines, ██████████ and ██████████ to the summary consultation information sheets which are designed to explain highly complex content in a more readily understood manner (8).
 - Woodside asked whether Save Our Songlines, ██████████ and ██████████ could share information about themselves and Save Our Songlines, in particular the communal and/ or individual interests held (9). ██████████ declined to do so and suggested that this meeting was not the time for that. ██████████ stated the focus of herself, ██████████ and Save Our Songlines at that time was to understand the activities, and that this information could be shared at a later time when they are ready (9).
 - Woodside pointed out that ██████████, ██████████ and SOS had told Woodside that they would provide information at the meeting and had not done so. Woodside asked for honesty going forward so that information would be provided to Woodside where ██████████, ██████████ and SOS had told Woodside they would provide it.
 - Woodside offered to establish fortnightly meetings to provide ██████████, ██████████ and SOS opportunities to provide the information to Woodside. ██████████, ██████████ and SOS stated they would be unavailable for the next 6 weeks. (8)
 - SOS stated that they did not regard consultation had commenced until today. Woodside did not agree and this contradicts previous correspondence from ██████████, ██████████ and SOS, where letter 24 March 2023 consultation had just commenced (11).
 - At this meeting, further meeting opportunities were also discussed by Woodside. Woodside suggested there be fortnightly meetings. ██████████, ██████████ and SOS declined this offer.
 - The parties agreed to share the recording of the meeting.
 - On 25 July 2023, EDO emailed Woodside:
 - (1) Requesting a copy of the recording,
 - (2) Requesting a response to seven follow up questions from ██████████, ██████████ and SOS, six of which are relevant to this EP relating to freshwater, migratory patterns of whales, dugongs and turtles, seagrass distribution, the worst case spill scenario and modelling, acoustic emissions (specifically decibels) associated with the seismic survey (1).
 - (3) Informing Woodside of ██████████, ██████████ and SOS' desired approach for response to the meeting on 25 July and further engagements, including that ██████████, ██████████ and SOS would provide a preliminary response to the meeting in video format on country, which may need to be supplemented (14). This video has never been provided to Woodside.

- (4) Proposing a sequence of meetings and responses be adopted on a per-EP basis (15)
- On 25 July 2023, Woodside emailed EDO notifying that Woodside will discuss the points raised and respond accordingly, and agreeing to provide the recording of the meeting.
 - On 25 July 2023, EDO emailed Woodside requesting the meeting recording be provided via SharePoint, confirming that it would be passed on.
 - On 26 July 2023, Woodside provided a recording of the meeting held on 25 July to EDO via a secure file transfer system and requested that it be passed on to SOS.
 - On 27 July 2023, Woodside responded to EDO's email on 25 July:
 - Confirming that a copy of the meeting recording from 25 July had been sent to EDO
 - Providing responses to the seven follow up questions from ██████████, ██████████ and SOS (1)
 - Noting that despite agreement prior to the meeting that cultural interests and feedback would be discussed at the meeting, this was not shared (9)
 - Describing previous offers of meetings, noting that these were declined and confirming Woodside availability to meet on country (8, 14)
 - Describing why it is it Woodside's preference to consult on the Scarborough project as a whole rather than on a per-EP basis, and noting that during the meeting ██████████, ██████████ and SOS asked questions about various Scarborough Project EPs (15).
 - Describing how requirements of Reg 11A have been met, however Woodside remains open to continued consultation with SOS in good faith (8).
 - Noting that an offer to meet fortnightly to support consultation had been made, which was declined
 - On 3 August, Woodside emailed EDO requesting that a message be passed on to SOS:
 - Following up on Woodside's offer to meet on-country and whether SOS would be available (15).
 - Informing that a separate Scarborough EP had been accepted by NOPSEMA with conditions requiring Woodside to seek further input, and requesting that SOS inform Woodside if it has input or information to provide (8, 9).
 - Providing links to information about EP consultation and describing the purpose of EP consultation (8).
 - Informing SOS that gender-restricted or culturally sensitive information is managed carefully, and attaching NOPSEMA's Policy for Managing Gender-Restricted Information" (7).
 - On 9 August 2023, EDO emailed Woodside:
 - Confirming that the recording of the meeting from 25 July had been received and passed on to SOS
 - Reiterating its "clients explained they were not ready to provide Woodside with information following the presentation". This was contrary to previous correspondence where ██████████ and ██████████ confirmed they had information to share on all Scarborough EPs and the Scarborough Project generally (see correspondence dated 26 September 2022, 8 November 2022 and 24 November 2022) (8, 9).
 - Stating that approaching consultation in good faith requires flexibility, that a fortnightly meeting arrangement is not appropriate and that a proposed date for another meeting will be part of a separate email (8).
 - Reiterating that SOS, ██████████ and ██████████ intend to consult on EPs individually and consecutively, rather than concurrently, despite the previous position that consultation was occurring across all Scarborough EPs and the Scarborough Project generally (15).
 - Stating that SOS do not consider that requirements of Regulations have been met, and that a response following the meeting on 25 July is in preparation (8).
 - On 16 August 2023, Woodside emailed the EDO to clarify that they were acting for ██████████ and ██████████.
 - On 17 August 2023, EDO confirmed they representing both ██████████ and ██████████.

- On 21 August 2023, Woodside emailed the EDO seeking consultation regarding another EP. In the email, Woodside also reiterated previously agreed upon consultation conditions and reaffirmed its readiness and willingness to meet and consult with [REDACTED], [REDACTED] and SOS, and requested available date to meet
- On 21 August 2023, Allens on behalf of Woodside sent a letter to the EDO to inform that Woodside's position is that it had complied with Regulations, and that Woodside is prepared to meet with [REDACTED], [REDACTED] and Save Our Songlines at any time or place suitable to them so that they could provide any information they consider relevant. That letter attached a table confirming consultation undertaken with [REDACTED], [REDACTED] and SOS, relevant to all Scarborough EPs.
- On 22 August 2023, the EDO emailed Woodside informing that they would obtain further instructions from their clients regarding available dates for consultation and would email soon. The EDO also reiterated that SOS remains willing to consult.
- On 25 August 2023, the EDO emailed Woodside with two dates and location options available for consultation with their clients.
- On 25 August 2023, Woodside emailed the EDO seeking clarification on the two dates and information regarding payment for [REDACTED] airfare to and from the consultation location.
- On 25 August 2023, the EDO emailed Woodside confirming both date options.
- On 25 August 2023, Woodside emailed the EDO confirming receipt of the email and responding that they would revert with availability.
- On 29 August 2023, Woodside emailed the EDO with a preferred consultation date of 12-13 September 2023. Woodside also reaffirmed that these consultations would take place on a no-admission basis in relation to whether Woodside has satisfied Reg 11A of the OPGGS (E) Regulations given that EDO's clients hold a different view. It was also stated in the email that Woodside is proceeding on the basis that previously agreed protocols apply (7, 8). Woodside also enquired about receipt of a video taken on Murujuga that was expected to be forwarded from [REDACTED], [REDACTED] and SOS (8, 9, 14).
- On 30 August 2023, the EDO emailed Woodside confirming receipt of email and said they would respond soon.
- On 1 September 2023, Woodside emailed the EDO following up a confirmation for consultation on the 12 and 13 September 2023, for a 2-day on-Country workshop with SOS.
- On 4 September 2023, the EDO emailed Woodside responding to the email sent on the 29 August 2023:
 - The EDO agreed that consultations are to take place on a no-admission basis and provided instructions on how the 2-day consultation meeting is to proceed including separating the two days over time (7, 8).
 - The EDO asked that the first meeting focus on Seismic EP and the second meeting, sometime after the 29 September 2023, will take place on Country with the intention of visiting the island off Murujuga (14). As noted above, this was contrary to the initial position taken by [REDACTED], [REDACTED] and SOS that they would consult on all Scarborough EPs and had information to share on each Scarborough EP (15).
 - The EDO expressed their client's interest in meeting a third time to discuss appropriate measures put in place.
 - The EDO asked Woodside to confirm that audio recordings at the meeting are permissible, as agreed on 25 July 2023, and that the consultation is to take place with only women (7).
 - The EDO responded to Woodsides query about the on-Country Murujuga video and stated that, their clients no longer intend to provide that video (14).
- On 7 September 2023, the EDO emailed Woodside asking to confirm the consultation date of 12 September 2023 for planning purposes (flights and accommodation).

- On 7 September 2023, Woodside emailed the EDO confirming the consultation date of 12 September 2023 along with a proposed location in Karratha. Woodside restated the previously agreed upon protocols and listed the female Woodside employees that would be attending the meeting. Woodside confirmed the consultation would be conducted on a non-admission basis given the different view of the parties as to whether consultation occurred in accordance with Environment Regulations (7, 8).
- On 7 September 2023, the EDO emailed Woodside agreeing to the location, outlining dietary requirements and listing the attendees on their side.
- On 7 September 2023, as part of the Federal Court proceedings, a second affidavit of ██████████ was filed. This affidavit sets out information relating to ██████████, ██████████ and SOS. It contains information that ██████████, ██████████ and SOS have declined to previously provide to Woodside in the course of consultation, communications and meetings that have taken place since around 2022.
- The affidavit contains information about ██████████, ██████████ and SOS' interests, including in relation to "whale dreaming" and songlines. This information is publicly accessible in an online court file. This information was not provided to Woodside in previous consultation, and was asserted it could not be provided due to cultural sensitivity and as a result of a lack of information about the Scarborough EPs and their impacts on ██████████ interests (9). Woodside was therefore surprised to see the information for the first time being provided in a public forum when Woodside has been asking for and consulting with ██████████, ██████████ and SOS in order to hear and discuss the information for at least a year.
- On 11 September 2023, the EDO emailed Woodside confirming the 12 September 2023 meeting and asked Woodside to confirm that the purpose for the meeting is to discuss the Seismic EP to better understand the nature of the activities and ask questions to Woodside (15).
- On 11 September 2023, Woodside emailed the EDO:
 - Confirming that the meeting proposed is to go over the Seismic EP as well as the Scarborough project and answer any further questions their clients have (15, 8, 9).
 - Asking ██████████, ██████████ and SOS to provide questions in advance so that Woodside can have answers ready to share (8, 9).
 - Stating that they would like to provide a refresher on other Scarborough EPs including this EP with the aim to consult and provide ██████████, ██████████ and SOS the opportunity to discuss their interests and any claims and objections that they may have on the broader Scarborough Project footprint (15, 8).
 - Restating Woodside's commitment to ongoing consultation with ██████████, ██████████ and SOS as part of its commitment to ongoing consultation during the life of an environment plan.
- **MEETING:** On 12 September, Woodside met with ██████████, SOS and EDO in Karratha. ██████████ told Woodside that ██████████ sent her apologies as she could not make it and asked for the meeting to go ahead without her. Culturally sensitive and gender restricted content was discussed and has been provided to NOPSEMA separately in accordance NOPSEMA's Managing Gender Restricted Information. The meeting covered all of the Scarborough activities to the extent that is described or discussed below. During the meeting:
 - EDO and ██████████ opened the meeting by stating that ██████████ would like to learn more about the activities covered under the Seismic EP and that she would then revert to Woodside to share her story.
 - Woodside provided a recap of the previous meeting (25 July 2023) and ran through how Woodside had addressed the topics raised during that meeting. Woodside shared the control measures that had been adopted in the Scarborough EPs as a result of consultation with ██████████, ██████████ and SOS. ██████████, SOS and EDO queried whether any control measures have been removed from the Scarborough EPs overtime and what mitigation measures were considered and not

implemented in the EPs (1). Woodside explained that principles of the ALARP process that underpins environmental impact and risk assessment, and that the process generally means building in and improving environmental controls over time (1).

- The trunkline and pipeline route was mentioned a number of times and in the context of topics of concern to ██████████, ██████████ and SOS.
- Throughout the meeting, ██████████ SOS raised concerns and questions, which are summarised below, and were addressed during the meeting:
- How Woodside determines that the potential impacts from an activity are ALARP and acceptable (1).
- A concern about the potential impacts from the Seismic EP on whales (16) and emphasized the importance of these animals (whales) and their deep connection to them (13).
- Who conducted the MAC ethnographic surveys, and whether ██████████ and SOS could be provided with the full report (12).
- How Marine Fauna Observers (MFOs) are able to spot whales from the vessels.
- A request for further information on the Jupiter Fields. Woodside noted that all the Scarborough gas fields are covered in the Scarborough OPP and that this information could be provided to ██████████, ██████████ and SOS (1).
- In response to these concerns and questions, Woodside asked ██████████ and SOS whether there was anything that Woodside might be able to do to help minimise any impacts to cultural values. ██████████ and SOS stated words to the effect that the only thing Woodside could do is stop the project (10).
- During a discussion on the impacts of noise emissions on cetaceans, ██████████ and SOS questioned why there was a focus on pygmy blue whales, rather than humpback whales, which ██████████ and SOS stated they were more concerned about. In particular, ██████████ expressed her desire to see controls adopted for humpback whales, which Woodside considered, implemented and showed to ██████████ and SOS at a subsequent meeting [ref meeting 4 October 2023].
- Woodside encouraged ██████████ and SOS to take some time and read through materials provided to her. Woodside asked whether ██████████ and SOS had any information from her own history and her own knowledge and information that she could share, including the kinds of issues that Woodside should be looking at that are of importance to her. ██████████ and SOS again stated that she could not share any further information until she is provided with the cultural heritage surveys Woodside has had completed. Woodside said they would share the publicly available content from the report, and repeated that ██████████ and SOS would need to speak to MAC if they wanted access to the full report (12).
- ██████████ and SOS indicated her desire to take Woodside employees out to Rosemary Island for an on-Country meeting. Woodside enquired as to the logistics including whether they would need to travel by boat and how long the boat ride would take (14).
- Woodside shared that there are consultation meetings happening in Karratha, Port Headland and Roebourne the following week, and that ██████████, ██████████ and SOS were welcome to attend and ask any questions or share anything then (8, 9).
- Woodside concluded the meeting noting the information that Woodside had committed to providing ██████████, ██████████ and SOS and checking whether there were any other documents to be provided.
- On 13 September 2023, the EDO emailed Woodside thanking them for the meeting on the 12 September 2023. The EDO also stated that they were looking forward to receiving requested information and listed the specific requests in the email. They also reiterated that they expected that certain cultural information divulged in the meeting to remain confidential and gender-restricted, referring to the agreed upon consultation protocols (7). This was not expected by Woodside because at all times, ██████████ and SOS have control to stop a recording and point out that culturally sensitive information is being shared. It was not apparent during the meeting that the information was culturally sensitive and ██████████ at no time asked for the recording to be stopped. In any event, Woodside acknowledged the position and undertook to manage the information sensitively.
- On 13 September 2023, as part of the Federal Court proceedings, a third ██████████ affidavit was filed. This affidavit confirmed that ██████████ “has not been consulted and wishes to be consulted in relation to the Drilling EP (and other Environment Plans relevant to the Scarborough Project that are not the subject of these proceedings)” (8).

Woodside provided the information to [REDACTED], [REDACTED] and SOS by email on 17 September.

Summary: - correspondence leading to 4 and 5 October meeting

A significant amount of correspondence was exchanged between Woodside and [REDACTED], [REDACTED] and SOS from 15 September in relation to Woodside's offer to meet on 4 and 5 October to give another opportunity for [REDACTED], [REDACTED] and SOS to provide and discuss information they say they have and that Woodside needs for its Scarborough EPs.

A summary of the correspondence is as follows:

17 September – 2 October 2023

- On 17 September 2023, Woodside emailed [REDACTED], [REDACTED] and SOS to agree a way forward to finalise consultation on all Scarborough EPs with the utmost expedition and in a culturally appropriate way.
 - Woodside confirmed the urgency around consultation and offered an opportunity to attend a meeting on country every day (including weekends) during the next week. Woodside also confirmed it is open to discussing and receiving any and all information on all Scarborough EPs. This was acknowledged by EDO (Ref email 19 September 2023 and 20 September) (7,8,9)
 - Given the urgency and given there was no response, the email was followed by phone calls, voice mail and text messages to [REDACTED] and [REDACTED] on 18 September.
 - In this email Woodside confirmed that information provided at [REDACTED], [REDACTED] and SOS' request relating to the DSDMP, CHMP, UWA study and OPP is already publicly available.
 - The information has been previously provided to [REDACTED], [REDACTED] and SOS or is information they were previously aware of. Reading that information is not a reason to delay consultation on the Scarborough Commonwealth EPs
- On 19 September, the EDO sent an email to Woodside and noted that [REDACTED] was unable to meet because of personal circumstances, because her lawyers were heavily occupied with the Federal Court proceedings and because of the large amount of information provided following the 12 September meeting.
- On 20 September 2023, Woodside sent an email to the EDO and reiterated [REDACTED] has stated that she already knows the information that she wishes to provide to Woodside, has received information on each Scarborough EP since at least 2022, through questions and information has shown an understanding of each of the EPs and has been provided the opportunity to discuss each of the EPs at each meeting this year. Woodside requested a meeting by 6 October 2023 at the latest.
- On 20 September, EDO confirmed [REDACTED], [REDACTED] and SOS were available for a meeting on 4 and 5 October and that they would like to visit the islands off Murujuga during this part of consultation and asked Woodside to coordinate logistics. A concern was expressed regarding the amount of information that would need to be reviewed prior to the meeting.
- On 21 September, Woodside agreed to a meeting on 4 and 5 October and agreed to investigate logistics regarding a trip to Rosemary Island. Woodside appreciated the confirmation that consultation would occur on all Scarborough EPs on those 2 meeting dates. Woodside also confirmed that there was no reason for concern regarding information that would need to be reviewed prior to the meeting because [REDACTED] has stated that the information she and SOS want to share with Woodside is currently known to them given she and SOS have stated that they have information they want and are ready to share with Woodside. Woodside also reiterated that [REDACTED], [REDACTED] and SOS have had that information since at least 2022 and have shown an understanding of the content. Woodside asked [REDACTED], [REDACTED] and SOS to confirm items so that Woodside could investigate logistics associated with arranging the meeting, including hiring a boat and venue for the meetings.

- On 25 September, the EDO confirmed that [REDACTED] wishes to visit Rosemary Island as part of the consultation meeting, that [REDACTED] attendance was not yet confirmed, and that further logistics would be confirmed the next day.
- On 27 September, Woodside sent a follow up email because it still had no confirmation from [REDACTED], [REDACTED] and SOS regarding the items that Woodside needed to be confirmed in order for the meetings and vessel hire to progress. Woodside set out a proposed agenda for the 4 and 5 October meetings and some logistical issues. One issue was that the vessel Woodside is investigating has space for [REDACTED] and 3 other attendees [REDACTED] selects. Woodside respectfully also notified [REDACTED], [REDACTED] and SOS that the crew of the vessel was likely to be male and that there were potentially ways to manage the culturally sensitive information out of ear shot of the male crew.
- On 28 September, EDO provided some information regarding travel to Rosemary Island including that [REDACTED] will potentially bring 8 other attendees with her on the boat to Rosemary Island and requiring Woodside to arrange a larger vessel. [REDACTED] noted that Rosemary Island is a culturally significant place and she had included 2 males to attend for the purposes of cultural safety. She also suggested that a third party Appeals Convenor ([REDACTED]) should be included in the trip. She also noted that she did not anticipate there would be any need for the Appeals Convenor or Woodside to share confidential or culturally sensitive information during or on the trip to Rosemary Island.
- On 29 September 2023, Woodside emailed the EDO advising that the recording of 12 September 2023 would be shared with NOPSEMA and confirming that culturally sensitive and gender restricted information would be managed appropriately, in accordance with NOPSEMA *Draft Policy for Managing Gender Restricted Information*
- On 29 September, Woodside arranged a meeting with the external boat provided to undertake a risk assessment (including for health and safety) for the proposed travel by boat to Rosemary Island.
- On 29 September, during the course making preparations for the trip to Rosemary Island, Woodside received strong advice from cultural authorities that because of Rosemary Island's high cultural significance, the cultural authority did not support Woodside convening a meeting at Rosemary Island.
- On 29 September Woodside sent an email to the EDO. Woodside said that it had received broader cultural advice that Rosemary Island has high cultural significance and that Woodside has been strongly cautioned against convening a meeting at that location because of cultural sensitivity and safety concerns. Woodside suggested Hearson Cove as an alternative meeting location for [REDACTED], [REDACTED] and SOS to share any and all remaining information on the Scarborough EPs. Woodside also stated that it did not think it would be appropriate for the Appeals Convenor to attend, given the purpose of the meeting and questioned why three EDO lawyers needed to be in attendance.
- On 2 October, EDO emailed Woodside, expressing [REDACTED] disappointment at Woodside's decision regarding Rosemary Island and confirming arrangements for the meeting on 4 and 5 October.
- On 2 October, Woodside emailed the EDO regarding the meeting on 4 and 5 October explaining the decision to not progress with the meeting on Rosemary Island. The email also conveyed that Woodside's priority was to understand the cultural values that [REDACTED], [REDACTED] and Save Our Songlines assert that Woodside needed to know for Scarborough EPs.
- Woodside replied on 3 and 4 October confirming that it takes cultural safety very seriously and confirmed that Ngaarda Ngarli community leaders have strongly discouraged Woodside from attending Rosemary Island. Other meeting items and logistics were confirmed.

Meeting on 4 and 5 October 2023

- MEETING: On 04 October 2023 Woodside met with [REDACTED] and SOS in Karratha (8, 9)
 - Prior to meeting on 4 October 2023, Woodside arranged a meeting room at the Karratha Red Earth Arts Precinct and arranged catering. As a gesture of goodwill, Woodside communicated before the meeting and arranged coffees for attendees.
 - Woodside arrived at the Red Earth Art Precinct ahead of the meeting to prepare the room for the meeting and was ready, willing and able to commence at the agreed start time of 10am. Woodside remained at all times, at the meeting room and available to consult on the Environment Plans. A Woodside employee left the meeting for around 15 minutes at a later stage in the meeting in order, at short notice, to re-book a vessel to facilitate a visit to Rosemary Island so that a trip could be made that circumnavigated the island.
 - [REDACTED], SOS and EDO arrived at around 10.20am. They exited the meeting a number of times during the allocated meeting time for private conversations, time out and to manage energies that were being felt. In total, [REDACTED] spent around two hours outside the meeting.
- Opening remarks
 - [REDACTED] and EDO confirmed that [REDACTED] would not attend the meeting and that [REDACTED] was not feeling the best as she was managing some family and other circumstances.
- Rosemary Island Trip
 - There was discussion regarding [REDACTED] preference to travel to Rosemary Island and Woodside's position that could not attend because of the strong cautions given to Woodside not to attend including for spiritual and cultural health and safety reasons.
 - Woodside's aim was to maintain integrity and respect for all first nations people with whom it consults and to present the information in a balanced manner. [REDACTED] stated that she found Woodside's change in position on attending Rosemary Island to be disrespectful. In particular, [REDACTED] was offended by the fact that Woodside had spoken to other person(s) about her consultation with them.
 - [REDACTED] asked Woodside to confirm who specifically had told Woodside not to attend the island and expressed concern around this and referenced a spiritual war that was going on
 - During the meeting, [REDACTED] and SOS shared their perspective on matters leading up to the meeting, including their disappointment about the cancellation of the Rosemary Island trip. Woodside confirmed they were following meeting protocols and showing respect to the Traditional Custodian groups for the area (7, 14). Woodside suggested alternative meeting locations and other options, at a previous meeting [REDACTED], [REDACTED] and SOS had indicated that they would tell their story at Hearson Cove. The offer to meet at another place or meet at an alternative location on-Country of cultural significance where Woodside could receive the information were rejected by [REDACTED] and SOS - all options suggested by Woodside were rejected including (14):
 - A suggestion was made by Woodside that they use the boat Woodside had secured to circumnavigate Rosemary Island (but not disembark onto Rosemary Island), allowing [REDACTED] and SOS to share her information. [REDACTED] and SOS agreed that this could be a compromise. Woodside contacted [REDACTED] during the meeting to see if they had a boat available for 5th Oct that could circumnavigate Rosemary Island to allow for consultation on sea country to proceed, without landing on the Island. [REDACTED] confirmed that they had suitable vessel available, and made special efforts to stand-up a marine crew. When Woodside confirmed this was available, [REDACTED] rejected the offer and declined to meet.
 - Another option suggested was that [REDACTED] and SOS visit Rosemary Island and produce an audio recording of their story; and
 - A meeting at Hearson Cove, as Hearson Cove had previously been identified as culturally safe by [REDACTED], [REDACTED] and SOS and a place where they had (in March 2023) shared information with Woodside.
- Presentation and Discussion on Scarborough EPs

- During the meeting, Woodside presented on each of the Scarborough EPs (D&C, SITI, Subsea and Seismic) and controls suggested to demonstrate how Woodside had addressed each of the topics and cultural values previously raised by ██████████, ██████████ and SOS (13, 17, 19) and the relevant controls in place for each of the SCA EPs activities. Woodside displayed a table on-screen during the meeting which contained the previously expressed areas of interest to ██████████, ██████████ and SOS and controls pertaining to each of these interests. When Woodside went to keep discussing these controls after talking through the D&C updates to cultural heritage and noise controls, Woodside was stopped by EDO and questioned why controls were being discussed, and not EP overview / content. In reviewing the newly adopted controls that were able to be covered, ██████████, SOS and EDO provided views on some controls including the cultural awareness crew training control that had been included in all Scarborough EPs. ██████████ and SOS' feedback on the control was adopted (1).
- While Woodside was presenting on the controls implemented for humpback whales, ██████████ recognized the words were those she had said in the previous meeting with Woodside and appeared pleased that her words were used to describe the controls in the EP (1). ██████████ and SOS noted that all marine animals are important, not just whales. Woodside asked ██████████ and SOS to clarify, as in the previous meeting on 12 September ██████████ and SOS had specified humpback whales as being of particular importance. ██████████ and SOS disagreed and said she had always said all animals and plants, but whales and turtles are bigger and more apparent (16).
- On request of ██████████ and SOS, Woodside presented on the Scarborough activities (Drilling, Seabed Intervention and Trunkline Installation and Subsea Infrastructure Installation), showing the presentation that had been prepared for the 25 July 2023 meeting when Woodside was ready to present on all EPs and was directed to only discuss the Seismic EP.
- Woodside provided an overview of the activity. Woodside described the trunkline route and proximity to existing infrastructure, and controls protecting the environment during installation ██████████ and SOS had various questions, relating to both the drilling, subsea installation and SITI EPs specifically, including (1);
- ██████████ stated she had watched a lot of spills and was concerned that they don't get contained. Woodside responded that gas released at 900m (Scarborough well depths) would dissolve in the water column and not result in a typical oil spill scenario, but that the greater risk for the Scarborough activities including his from a spill perspective is diesel spill from vessels caused by vessel collisions for example. Woodside provided an overview of a credible spill scenario from a vessel collision and discussed the Environment that Might be Affected (EMBA) (1).
- Whether NOPSEMA approves the oil spill preparedness and response plans; Woodside confirmed that these plans are assessed and approved as part of the Environment Plan assessment process (1).
- Woodside provided an overview of the proposed Trunkline and explained the process for selecting the Trunkline route and Trunkline construction methodology. ██████████ ██████████ and SOS spent some time looking at the figures showing where the Trunkline passed through the Montebello MUZ and the various marine park classifications around the Montebello Islands, and sought to understand that further.. Woodside provided an overview of the dredging activity for the offshore borrow ground area, and explained the logic behind the focus on environmental impacts from dredging in that EP.
- Meeting conclusion
- Woodside again emphasized a willingness to listen to ██████████ and SOS story and keenness to ensure her cultural values are protected.
- Towards the end of the meeting, Woodside confirmed that a boat was available to circumnavigate Rosemary island on 5 October as was the agreed compromise position. ██████████ said words to the effect that this was not good enough, and after a brief discussion on the logistics of the boat trip to Rosemary Island, including raised voices and a significant aggressive and emotional diatribe by ██████████, the meeting ended (8, 9, 14).
- After the close of the meeting, Woodside informed EDO lawyers that another option available for ██████████, SOS and ██████████ to share her story was to share it directly with NOPSEMA (9).
- 5 October meeting
- Woodside attended the Read Earth Arts Precinct ready, willing and able to engage in consultation on 5 October 2023. Despite Woodside confirming it was ready for the meeting, ██████████ and EDO declined to attend.

Correspondence following the 4 October meeting

A summary of the correspondence is as follows:

- Woodside and EDO exchanged emails following the meeting, noting that accounts and take-aways from the meeting differed.
- On 4 October 2023, EDO emailed Woodside stating that each of the Scarborough EPs, including this EP, were not discussed “substantively” with ██████████ before the meeting today (4 October 2023), other than the Seismic EP discussed on 25 July 2023 meeting, and that it was the first time Woodside has provided a “substantive” presentation describing the activities described in the D&C EP, SITI EP and Subsea EP.
- ██████████, through EDO, emphasised the importance of understanding the impacts and controls relating to animals affected by the activities (1).
- EDO stated that ██████████ did not agree to meet again on the 5th October in Karratha and ██████████ could not proceed with the proposed agenda, as she could not share the story she wanted to share with Woodside anywhere other than on Rosemary Island. ██████████ wished to engage in consultation and share information about her story and how her functions, interests and activities may be affected, she did not wish to meet in those circumstances (7, 8, 9, 14).
- EDO re-emphasised the importance of attending Rosemary Island for purposes of ██████████ sharing information (7).
- On 5 October 2023 Woodside emailed EDO acknowledging the email sent on 4th Oct 2023 and stating that Woodside’s understanding of the meeting differs. Woodside enquired if there were alternative approaches for ██████████ to share her story from Rosemary Island, such as recording her story or inviting the Regulator to attend and that they remain open to understanding how the issue could be progressed (7, 8, 9, 14).
- On 5 October 2023 EDO emailed Woodside stating that ██████████ and EDO would not be attending the meeting that day.
- ██████████ considered Woodside had seriously damaged the relationship of trust and confidence required for consultation. EDO were instructed to say that ██████████ was open to the prospect of future meetings if the relationship was able to be repaired (7, 8, 9, 14).
- On 5 October 2023 Woodside emailed EDO sharing their disappointment that ██████████ and SOS would not be attending the meeting that day. Woodside confirmed employees were at the Red Earth Arts Precinct centre, as agreed, and were ready, willing and able to participate in the meeting, and that this was another opportunity for ██████████ to share her information on the Scarborough EPs. Woodside re-iterated that there was no disrespect intended towards ██████████, that they had accommodated the consultation requests put forward by ██████████, making themselves available and demonstrating they were ready to listen. Woodside stated that there was a clear limit where consultation in the method proposed was not possible, including instances where there were unacceptable health and safety risk, as was the case in the instance of Woodside employees going onshore for a meeting with ██████████ and SOS at Rosemary Island when it was advised not to, due to cultural sensitivity and cultural safety risks. Woodside reiterated that Woodside employees had received strong advice on cultural safety and did not have cultural permission to convene a meeting with ██████████ or SOS on Rosemary Island and asked again if there were alternatives available for ██████████ to share her information. A link to the NOPSEMA draft policy for managing gender restricted information (PL2098) was provided (7, 8, 9, 14).
- On 5 October 2023, EDO sent a letter on behalf of ██████████ to NOPSEMA, cc’d Woodside, which:

- Acknowledged that, in ██████████ view, consultation with Woodside began in October or November 2022, (3);
- alleged that Woodside had “shared information regarding consultation with individuals outside of those involved in consultation” and that this “may be a breach of the cultural protocol agreed between Woodside and ██████████ to enable consultation to occur in a culturally safe manner”.
- Alleged that Woodside presented on matters outside of the agreed agenda, being control measures Woodside had adopted in each of its environment plans following the 12 September 2023 meeting;
- that ██████████ could not share information directly with Woodside in a culturally safe manner and that the trust and respect necessary for genuine consultation had been breached (8, 9, 14). (11).
- Sought to arrange a meeting with female representatives of NOPSEMA at Rosemary Island or “another place of equivalent cultural significance, where she is able to share her information in a culturally safe manner”.
- On 9 October 2023 Woodside emailed NOPSEMA stating that Woodside disagreed with a number of statements contained within the EDO letter sent to NOPSEMA and, accordingly, wished to correct the record and provide context. Woodside had consistently provided opportunities for ██████████, ██████████ and SOS to share information and engage in two-way dialogue and had attempted to accommodate the varied consultation requests made by ██████████, ██████████ and SOS (7, 8, 9, 14).

Summary of Feedback, Objection or Claim	Woodside Energy’s Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>(1) Questions raised and addressed in meetings or in subsequent emails:</p> <ul style="list-style-type: none"> - Whether the Scarborough activity included fracking - How credible spill scenarios are determined and who determines these. - Oil spill modelling Woodside undertakes. - Freshwater environments in the EMBA - Whale migration patterns - Seagrass distribution - Acoustic emissions, particularly from seismic acquisition. - How MFOs observe whales in the distance from the vessels. - Where Woodside sources information relating to species, migration patterns and Biologically Important Areas, particularly those relating to whales. - Credibility of the science underpinning Woodside’s assessment of noise impacts on species (particularly in reference to the Scarborough seismic EP). - The nature of the credible spill scenario associated with the various Scarborough 	<p>(1) Woodside has addressed the questions raised by SOS, ██████████ and ██████████ in meetings and in subsequent email responses [Ref for example meetings on 14 March 2023; 25 July 2023; 12 September 2023; 4 October 2023 and correspondence for example 17 September 2023 email from Woodside to EDO].</p> <p>(2) Woodside confirmed the extraction of Scarborough gas for onshore processing is not within the scope of the activity described in this EP. Therefore, indirect impacts and risks arising from the onshore processing of Scarborough gas are not considered indirect impacts/risks of the Petroleum Activities Program for this EP but may be evaluated in other Scarborough EPs as appropriate. Woodside confirmed that emissions from the activities covered by this EP are of a scale and physical remoteness from Murujuga’s rock art that no credible impact pathway is foreseen. Woodside advised that no rock art will be displaced as a result of the Scarborough project. [For example</p>	<p>(1) Not required. Existing controls considered sufficient, as described in Section 6. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural features or heritage values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15).</p> <p>(2) Not required</p> <p>(3) Not required</p> <p>(4) Not required</p> <p>(5) Not required</p> <p>(6) Not required.</p> <p>(7) Not required.</p> <p>(8) Not required.</p> <p>(9) Not required.</p>

<p>activities (including this EP), and underlying information on how oil spill modelling is undertaken.</p> <ul style="list-style-type: none"> - Whether NOPSEMA approves OSPRMA for EPs. - Whether ██████ could seek her own external experts to provide opinion on the EPs. - Additional information on the Jupiter field - Environmental controls included in the EPs, including how these have changed overtime, and what controls have been considered and not implemented. - Environmental impacts from Scarborough activities and how Woodside determines that environmental impacts are at an ALARP and acceptable level. <p>(2) Threat posed to Murujuga rock art by Scarborough LNG and industrialization on the Burrup, and values associated with:</p> <ul style="list-style-type: none"> - Murujuga - Murujuga rock art <p>(3) Murujuga Aboriginal Corporation (MAC) are subject to gag clauses</p> <p>(4) Save Our Songlines, ██████ and ██████ desire to be consulted as a relevant person</p> <p>(5) Need for EPs to consider cultural heritage impacts, both direct and indirect.</p> <p>(6) MAC does not represent the interests of Save Our Songlines, ██████ and ██████ Save Our Songlines, ██████ and ██████ have interests that are separate and distinct from those of MAC.</p> <p>(7) Sensitive information shared by Save Our Songlines, ██████ and ██████ was to be treated with high sensitivity and confidentiality. Meeting protocols agreed by both parties should be met.</p> <p>(8) Save Our Songlines, ██████ and ██████ have not been afforded reasonable opportunity or sufficient information for consultation.</p> <p>(9) Save Our Songlines, ██████ and ██████ have interests they wish to share with Woodside, for</p>	<p>email from Woodside 5 Jan 2023 and letter dated 17 April 2023]</p> <p>(3) Woodside confirmed that none of Woodside's agreements with Traditional Custodians include 'gag clauses' or restrictions on voicing opinions on its projects. Woodside confirmed it has supported Traditional Custodian representative institutions to access relevant information and independent expert advice so that they are enabled to provide informed and considered feedback on the Scarborough project. [For example email from Woodside 5 Jan 2023 and letter dated 17 April 2023] In any event, Woodside notes that to the extent that this assertion is considered an objection or claim by ██████, ██████ or SOS, the objection or claim relates to consultation, and not to an adverse impact of an activity to which the EP relates.</p> <p>(4) Woodside has consulted extensively with ██████, ██████ and Save Our Songlines on both the proposed activity and the broader Scarborough project. Woodside has confirmed ██████, ██████ and Save Our Songlines are relevant for this EP and have responded to all requests for further information. [For example, see consultation record in this EP; letter dated 3 July 2023] In any event, as above at (3), Woodside notes that to the extent that this assertion is considered an objection or claim by ██████, ██████ or SOS, the objection or claim relates to consultation, and not to an adverse impact of an activity to which the EP relates</p> <p>(5) Woodside confirmed that EPs assess cultural heritage impacts, including both direct and indirect impacts and risks associated with the PAP. Woodside confirmed that the PAP is outside the National Heritage Place and anticipated boundary of the Murujuga Cultural Landscape World Heritage Property. As above (2), Woodside has confirmed that the extraction of Scarborough gas for onshore processing is not within the scope of the activity described in this EP and therefore that indirect impacts and risks arising from</p>	<p>(10) Not required (existing controls are sufficient)</p> <p>(11) Not required.</p> <p>(12) Not required.</p> <p>(13) Woodside has considered ██████ and SOS's feedback and updated Section 4.9 to record topics of interest and cultural value, including those relating to whales. As a result of consultation with ██████, ██████ and SOS, Woodside has updated the noise adaptive management control relating to pygmy blue whales to also include humpback whales (C 6.5).</p> <p>(14) Not required.</p> <p>(15) Not required.</p> <p>(16) Woodside has considered topics raised by ██████, ██████ and SOS's as to interests and updated Section 4.9 to record these. These are assessed in 6.10 with appropriate controls implemented. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural features or heritage values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.15).</p> <p>(17) Not required (existing controls adequate)</p> <p>(18) Woodside has considered ██████, ██████ and SOS's feedback and updated Section 4.9 to record topics of interest and cultural values, including songlines and energy lines. These are assessed in Section 6.10 with appropriate controls implemented. At</p>
--	---	---

<p>consideration in Woodside's Scarborough Environment Plans.</p> <p>(10) Objection to the Scarborough gas project, including the view that no controls could be implemented to minimise potential impacts to cultural values.</p> <p>(11) Consultation with Save Our Songlines, ██████████ and ██████████ is still in its early stages [Ref: EDO letter 10 August 2023].</p> <p>(12) Request for MAC ethnographic survey results to be shared with Save Our Songlines, ██████████ and ██████████. Requests to know who from MAC participated in the ethnographic surveys.</p> <p>(13) Cultural features associated with whales.</p> <p>(14) Need for Save Our Songlines, ██████████ and ██████████ to share their cultural knowledge and story on Country.</p> <p>(15) That it is not appropriate for Woodside to consult on the Scarborough project as a whole (suite of 4 EPs) in each meeting.</p> <p>(16) Demonstrated an interest in:</p> <ul style="list-style-type: none"> - Marine animals - Seagrass and dugongs - Pygmy blue whales - Whales - Turtles - Underwater heritage - Where saltwater and freshwater meet - Potential impacts of the Scarborough project activities on whales (particularly the seismic activity). - Sharks - Water quality - Seabirds - Plankton - Pelagic fish <p>(17) The need for Woodside to consider all animals in EP impact assessments.</p> <p>(18) Cultural features associated with songlines, dreaming and energy lines.</p>	<p>the onshore processing of Scarborough gas are not considered indirect impacts/risks of the Petroleum Activities Program for this EP but may be evaluated in other Scarborough EPs as appropriate. [For example, see email from Woodside 26 August 2022 and 5 Jan 2023 and letter dated 17 April 2023]</p> <p>(6) Woodside has consulted with ██████████, ██████████ and SOS separately from MAC and other relevant representative bodies. [See consultation record] In any event, as above at (3), Woodside notes that to the extent that this assertion is considered an objection or claim by ██████████, ██████████ or SOS, the objection or claim relates to consultation, and not to an adverse impact of an activity to which the EP relates.</p> <p>(7) Sensitive information has been appropriately handed by Woodside in accordance with agreed protocols. Woodside has agreed with requests from ██████████, ██████████ and SOS in relation to meeting protocols. This has included significant efforts by Woodside to allocate women subject matter experts to prepare and attend meetings with ██████████, ██████████ and SOS where matters are otherwise managed by male subject matter experts for Woodside [For example, see emails setting up meetings on 14 March 2023; 25 July 2023; 12 September 2023 and 4 October 2023. See emails on 3, 4 and 5 October 2023] In any event, as above at (3), Woodside notes that to the extent that this assertion is considered an objection or claim by ██████████, ██████████ or SOS, the objection or claim relates to consultation, and not to an adverse impact of an activity to which the EP relates</p> <p>(8) Woodside has, since at least 2022, provided information to ██████████, ██████████ and SOS to allow an informed assessment of the possible consequences of the activity on their functions, interests or activities in their Traditional Owner and eNGO capacities. The information provided by Woodside meets the requirements of Regulation 11A for the reasons set out above. ██████████, ██████████ and SOS have been provided a reasonable time and</p>	<p>this stage, Woodside has not been provided with specific information on these potential values so as to enable a more fulsome assessment. In lieu of additional information on these values, Woodside has implemented a control that inductions for all relevant marine crew will include information on cultural values, including tangible and intangible cultural heritage (PS 16.4.1). This control was updated further during the October 4th 2023 meeting based on feedback received during the meeting that the control should be timebound.</p> <p>(19) Woodside has considered ██████████, ██████████ and SOS's feedback and updated Section 4.10 to record indicated topics of interest and cultural values. These are assessed in Section 6.9, with appropriate controls implemented.</p>
---	--	--

<p>(19) Cultural values publicly available in the Affidavits of ██████████ (September 2023) and Concise Statement (Ref. Section 4.9.1):</p> <ul style="list-style-type: none"> - Murujuga - Rock art - Caring for Country - Bungarra - Eagle - Kangaroo 	<p>opportunity to consult in relation to this EP and all of the Scarborough EPs. [Please see consultation record]. In any event, as above at (3), Woodside notes that to the extent that this assertion is considered an objection or claim by ██████████, ██████████ or SOS, the objection or claim relates to consultation, and not to an adverse impact of an activity to which the EP relates.</p> <p>(9) Woodside has provided a reasonable period of time and ample opportunity for ██████████, ██████████ and SOS to provide the information that they say Woodside requires for its EPs. Despite providing that reasonable period of time and opportunity, ██████████, ██████████ and SOS have not provided the information. Woodside has consistently sought to provide a culturally safe space for ██████████, ██████████ and SOS to share the information they wish to share with Woodside. Throughout consultation, ██████████, ██████████ and SOS have continued to state that they have additional information they wish to tell Woodside and that they say Woodside requires for its Environment Plans, and, despite Woodside offering ample opportunity, have expressly refused to provide information to Woodside.</p> <p>a. [Ref for example 17 April 2023 letter, letters setting up each meeting on 14 March, 25 July, 12 September and 4 October and most recently 3, 4 and 5 October 2023 correspondence]. There is a limit to consultation – Woodside is not required to wait indefinitely to receive this information. On a number of occasions, ██████████, ██████████ and SOS have declined to provide the information to Woodside and have instead provided information publicly [Affidavits of ██████████ September 2023] or offered to provide the information to others [Ref: letter to NOPSEMA 26 September 2022; letter to NOPSEMA 4 October 2023]. In any event, as above at (3), Woodside notes that to the extent that this assertion is considered an</p>	
---	---	--

	<p>objection or claim by ██████, ██████ or SOS, the objection or claim relates to consultation, and not to an adverse impact of an activity to which the EP relates</p> <p>(10) Woodside considers that ██████, ██████ and SOS have expressed a fundamental objection to the Scarborough project, including this EP. Despite this, Woodside has continued to engage in good faith to understand what could be done to minimise any potential impacts to cultural interests and values held by ██████, ██████ and SOS. [See for example, consultation record and discussions with ██████, ██████ and SOS on their views regarding controls in place to manage topics of concern to them – Ref for example 12 September and 4 October meetings].</p> <p>(11) This is refuted in the letter from EDO dated 4 October 2023 which confirms consultation commenced in at least 2022 [EDO 4 October 2023 letter]. Woodside considers that Consultation under Reg 11A is complete in circumstances because sufficient information, a reasonable period of time and opportunity have been provided to ██████, ██████ and SOS in their individual Traditional Owner and eNGO capacities. In any event, as above at (3), Woodside notes that to the extent that this assertion is considered an objection or claim by ██████, ██████ or SOS, the objection or claim relates to consultation, and not to an adverse impact of an activity to which the EP relates.</p> <p>(12) Woodside has resourced Traditional Custodian representative institutions to access relevant information and independent expert advice so that they are enabled to provide informed and considered feedback on the broader Scarborough activities. A number of documents containing cultural heritage information, including heritage assessments, contain the intellectual property of Traditional Custodians or sensitive information that may be culturally restricted. For these reasons, Woodside respects this position and does not disclose this information. This</p>	
--	--	--

	<p>information is held by representative institutions and may be disclosed by them where they consider it appropriate to do so. Woodside has provided Save Our Songlines, ██████████ and ██████████ with the outcomes of these surveys to the extent that these can be shared publicly, consistent with the information in the public domain (i.e. where culturally appropriate). [Ref for example, 14 March 2023 and following correspondence]. In any event, as above at (3), Woodside notes that to the extent that this assertion is considered an objection or claim by ██████████, ██████████ or SOS, the objection or claim relates to consultation, and not to an adverse impact of an activity to which the EP relates</p> <p>(13) Woodside understands that some species hold spiritual and cultural importance to ██████████, ██████████ and SOS. Woodside has implemented controls to reduce potential risks and impacts to ecological and cultural values to ALARP and to an acceptable level, and has discussed with ██████████, ██████████ and SOS, controls that Woodside has put in place to manage impacts and risks relating to their spiritual and cultural connection to the environment. [Ref for example, 25 July 2023 meeting and following correspondence, 12 September 2023 meeting and following correspondence as well as 4 October meeting]</p> <p>(14) Woodside has consistently sought to make arrangements for ██████████, ██████████ and SOS to be able to share their cultural knowledge and stories in a culturally appropriate manner, including offering and attending several on Country meetings [ref: 14 March, 25 July, 12 September and 4 October 2023 meetings]. Woodside also sought to meet the requests of ██████████ and SOS to attend an on-Country meeting at Rosemary Island, but was cautioned by the relevant cultural authority that Woodside did not have cultural permissions or spiritual protection to do so. Woodside and ██████████ reached a compromise relating to circumnavigating Rosemary Island rather than going on shore. ██████████ later refused this compromise</p>	
--	---	--

	<p>and refused to share information [Ref meeting on 4 October 2023]. In any event, as above at (3), Woodside notes that to the extent that this assertion is considered an objection or claim by ██████████, ██████████ or SOS, the objection or claim relates to consultation, and not to an adverse impact of an activity to which the EP relates</p> <p>(15) ██████████, ██████████ and SOS originally sought to consult on all Scarborough EPs at once and confirmed they have information and “objections” to share on all Scarborough EPs as early as September 2022. [Ref correspondence and information in the public domain from around February 2022, July 2022, 26 August 2022 and 4 January 2023] From about June 2023, this position changed and ██████████, ██████████ and SOS expressly directed Woodside to consult on individual EPs. Woodside has been ready, willing and able to consult on all Scarborough EPs (including this EP) since consultation commenced, and prepared materials to consult on all EPs – and attempted to present these materials – however was directed by EDO to only talk about Seismic, or to describe activities and not cover controls [Ref. 12 September 2023 meeting and 4 October 2023 meeting]. In any event, as above at (3), Woodside notes that to the extent that this assertion is considered an objection or claim by ██████████, ██████████ or SOS, the objection or claim relates to consultation, and not to an adverse impact of an activity to which the EP relates</p> <p>(16) ██████████, ██████████ and SOS have not expressly confirmed their interests and rather, have raised topics of interest to them. Woodside has considered ██████████, ██████████ and SOS’s topics of interest and shared relevant information with ██████████, ██████████ and SOS relating to these interests, including controls put in place to manage risks and impacts to them, during meetings and subsequent emails. [Ref for example, 25 July 2023 meeting and following correspondence, 12 September 2023 meeting and following correspondence; 4 October 2023 meeting]</p>	
--	---	--

	<p>(17) Woodside has confirmed that consideration is given to all marine animals in the Environment Plan preparation process. Marine fauna that may credibly be impacted by both direct or indirect activities are considered in the impact assessment (s. 6). Woodside has also stepped through these issues during consultation meetings [Ref for example 12 September 2023 meeting and 4 October 2023 meeting]</p> <p>(18) Woodside understands that songlines and energy lines to hold personal spiritual and cultural value individually (rather than communally) to ██████████, ██████████ and SOS. Woodside has consistently sought to understand the nature of these values to ensure impacts to these values can be minimised. ██████████, ██████████ and SOS have declined to provide further information on these values. In any event, Woodside has sought to include controls that seek to reduce risks and impacts to ALARP and acceptable levels and has sought ██████████ and ██████████ and SOS' views on the proposed controls. [Ref for example, 12 September 2023 meeting and following correspondence; 4 October 2023 meeting]</p> <p>(19) Through the publicly available Affidavits of ██████████ (August and September 2023) and Concise Statement, Woodside has been made aware that ██████████, ██████████ and SOS may hold cultural and spiritual values associated with caring for Country, bungarra, eagle and kangaroo. Bungarra, eagles and kangaroos have not been identified as species credibly impacted by either direct or indirect activities associated with this proposed activity. Woodside has assessed potential risk/impact of the activity on receptors raised. Woodside has not been provided with any additional detail regarding values associated with Caring for Country. However, Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where</p>	
--	--	--

	appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.7).	
Research institutes and local conservation groups or organisations		
Protect Ningaloo		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Consultation information provided to Protect Ningaloo on 1 February 2023 based on their function, interest, and activities.. • Woodside sent a follow up email seeking feedback on the proposed activities. • Woodside has provided Protect Ningaloo with the opportunity to provide feedback over a 6 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 1 February 2023, Woodside emailed Protect Ningaloo advising of the proposed activity (Appendix F, reference 1.92) and provided a Consultation Information Sheet. <ul style="list-style-type: none"> - Woodside extended an opportunity to meet to discuss the proposed activity. • On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 1.146). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	No additional measures or controls are required.
Cape Conservation Group		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. 		

<ul style="list-style-type: none"> • Consultation information provided to Cape Conservation Group on 12 February 2023 based on their function, interest, and activities.. • Woodside sent a follow up email seeking feedback on the proposed activities. • Woodside has provided Cape Conservation Group with the opportunity to provide feedback over a 6 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 1 February 2023, Woodside emailed Cape Conservation Group advising of the proposed activity (Appendix F, reference 4.21) and provided a Consultation Information Sheet. <ul style="list-style-type: none"> - Woodside extended an opportunity to meet to discuss the proposed activity. • On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.29). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	No additional measures or controls are required.
National Energy Resource Australia (NERA) Collaborative Seismic Environment Plan Project (CSEP)		
<p>Woodside considers it has discharged its obligations for consultation under Regulation 11A(1). Sufficient time, information and opportunity has been provided as summarised below:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2021. • Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. • Consultation information provided to NERA on 11 November 2022 based on their function, interest, and activities. • Woodside has addressed and responded to NERA over a 9 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 11 November 2022 Woodside emailed NERA advising of the proposed activity (Appendix F, reference 2.14) and provided a link to the Consultation Information Sheet. • On 22 February 2023, Woodside emailed NERA a reminder that consultation is closing soon (Appendix F, reference 5.15). • On 24 February 2023, NERA thanked Woodside for keeping CSEP up to date and confirmed they have no comments and no planned activities for 2023. • On 28 February 2023, Woodside emailed and confirmed they will provide NERA with commencement and cessation of activity notifications relating to the proposed activities. 		

<ul style="list-style-type: none"> On 1 May 2023, NERA emailed Woodside on a separate project advising the Collaborative Seismic EP had been withdrawn and will no longer go ahead. NERA requested that the CSEP be removed from relevant person consultation. On 2 May 2023, Woodside emailed NERA to thank NERA for advice that the Collaborative Seismic EP has been withdrawn and will no longer go ahead. Woodside confirmed it will remove the CSEP from its relative person consultation for future EPs on this basis. 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>NERA has no comments but would like to be kept up to date.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>Woodside has consulted NERA in the course of preparing this EP. Woodside has assessed the claims or objections raised by NERA. No additional measures or controls have been put in place.</p> <p>Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on NERA's functions, interests or activities.</p>
University of Western Australia (UWA)		
<p>Woodside considers it has discharged its obligations under regulation 11A by providing consultation materials and conducting various forms of engagement as set out in Section 5.8 and below.</p> <ul style="list-style-type: none"> Consultation Information Sheet publicly available on the Woodside website since August 2021. Woodside published advertisements in a national, state, and relevant local newspapers on 19 October 2022 advising of the proposed activities and requesting comments or feedback. Consultation information provided to UWA on 11 November 2022 based on their function, interest, or activities. Woodside addressed and responded to UWA over a 9 month period. <p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> On 11 November 2022, Woodside emailed UWA advising of the other proposed Scarborough activities Woodside asked for details of any research activities UWA is undertaking that may overlap with the proposed activities (Appendix F, reference 2.13) On 17 November 2022, UWA responded and noted: UWA undertook a Multibeam Survey of the Madeline Shoals and although it captured most of the area, the geology appears to continue north into the Dampier Marine Park; <ul style="list-style-type: none"> The northern tip of UWA's MBES survey mapped outcropping igneous rock on the seabed is 1.3 km south of the Borrow Grounds SW boundary; and UWA has heard from Oceanic Offshore that they know of other hardgrounds north of the Madeline Shoals but they did not have the time to follow up on their lead. 		

<ul style="list-style-type: none"> - UWA also noted it has a Parks Australia Grant to undertake habitat mapping of the Dampier Marine Park (early 2023) and it is to investigate the extent of the hard rocky terrains within this zone. • On 18 November 2022, UWA emailed Woodside: <ul style="list-style-type: none"> - UWA also shared that the Madeleine Shoals have been added to the cultural landscape boundaries of the World heritage nomination dossier. • On 14 December 2022, Woodside emailed UWA and arranged a time to meet. • On 15 December 2022, Woodside met with representatives from UWA via video conference to provide a briefing on the broader Scarborough Project activities and related EPs. During its meeting UWA confirmed: <ul style="list-style-type: none"> - In general, Woodside’s offshore activities are out of the scope of interest for UWA; however, it has a particular interest in the Madeleine Shoals and the adjacent borrow ground in Commonwealth waters - There is a lack of data on terrain outside of the current mapping on Madeleine Shoals that, while unlikely, may extend north (towards the borrow ground area) - The full extent of the terrain was not captured given time and cost constrains, and - The current mapping has the Shoals mapped ~100 m from the marine park boundary and ~1.3 km from the borrow ground boundary - UWA also acknowledged Woodside may already have mapping of the borrow ground that indicates no exposed rock or hard material - Woodside confirmed extensive studies of the borrow ground and adjacent marine park found no hard material and a substantial depth of sand - UWA concluded it has submitted for additional funding for further exploration of Madeleine Shoals. Woodside responded to the organisation’s feedback during the meeting. • On 6 February 2023, Woodside emailed UWA advising of the proposed activity (Appendix F, reference 4.40) and provided an updated Consultation Information Sheet. 		
Summary of Feedback, Objection or Claim	Woodside Energy’s Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>UWA and Woodside have met to discuss the broader Scarborough activities and UWA has advised that the proposed activities are predominantly outside the scope of interest for UWA.</p> <p>Whilst feedback has been received, there were no objections or claims.</p>	<p>UWA has advised that the proposed Scarborough activities are predominantly outside the scope of interest for UWA.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on UWA’s functions, interests or activities.</p> <p>No additional measures or controls are required.</p>

Table 2: Engagement Report with Persons or Organisations Assessed as Not Relevant

Commonwealth Commercial fisheries and representative bodies		
<i>Australian Southern Bluefin Tuna Industry Association (ASBTIA)</i>		
<p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> On 31 August 2021, Woodside emailed ASBTIA advising of the proposed activity (Appendix F, reference 1.16) and provided a Consultation Information Sheet and fisheries maps (Appendix F, reference 1.22 and 1.23). On 3 February 2023, Woodside emailed ASBTIA on the proposed activity (Appendix F, reference 4.34) and provided a Consultation Information Sheet and fisheries maps. On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.11). 		
<i>Summary of Feedback, Objection or Claim</i>	<i>Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response</i>	<i>Environment Plan Controls</i>
No feedback, objections or claims received despite follow up.	<p>Woodside has provided consultation information to AFMA, DAFF – Fisheries, CFA, ASBTIA, Tuna Australia, WAFIC and individual relevant licence holders.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>Woodside has assessed the potential for interaction with Commonwealth and State managed commercial fisheries in Section 4.9.2 of this EP.</p> <p>Woodside will provide notifications to AFMA, DAFF – Fisheries, DPIRD, WAFIC, CFA, Recfishwest and relevant Fishery Licence Holders that have the potential to be directly impacted by planned activities in the Operational Area (see Table 4-28) prior to the commencement and at the end of the activity, as referenced as PS 1.4 in this EP.</p> <p>No additional measures or controls are required.</p>
<i>Pearl Producers Association</i>		
<p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> On 31 August 2021, Woodside emailed Pearl Producers Association advising of the proposed activity (Appendix F, reference 1.13) and provided a Consultation Information Sheet and fisheries maps (Appendix F, reference 1.23). 		
<i>Summary of Feedback, Objection or Claim</i>	<i>Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response</i>	<i>Environment Plan Controls</i>
No feedback, objections or claims received despite follow up.	<p>Woodside engages in ongoing consultation throughout the life of an EP. 		Fishery Licence Holders that have the potential to be directly impacted by planned activities in the Operational Area (see Table 4-28) prior to the commencement and at the end of the activity, as referenced as PS 1.4 in this EP. No additional measures or controls are required.
Other non-government groups or organisations		
Australasian Centre for Corporate Responsibility (ACCR)		
Summary of information provided and record of consultation:		
<ul style="list-style-type: none"> On 30 September 2022, Woodside emailed ACCR advising of the proposed activity (Appendix F, reference 2.4) and provided a Consultation Information Sheet. Woodside also provided specific information relevant to the proposed activity based on the claims and objections raised on the ACCR public website. Woodside noted: <ul style="list-style-type: none"> It has reviewed ACCR's online public campaign in relation to the activity defined in the SITI EP and notes that content generally relates to impacts and risks of the Scarborough Project to climate change and greenhouse gas (GHG) emissions. It confirms concerns related to carbon and the impact on climate change from Scarborough gas are not relevant to the SITI EP which assesses both direct and indirect impacts and risks associated with the proposed Petroleum Activities Program, having regard to the nature and scale of the proposed PAP. The extraction of Scarborough gas for onshore processing is not within the scope of the activity described in the SITI EP. Therefore, indirect impacts and risks arising from the onshore processing of Scarborough gas are not considered indirect impacts/risks of the Petroleum Activities Program for the SITI EP but may be evaluated in Scarborough EPs as appropriate. GHG emissions associated with the SITI activity (i.e. fuel combustion from project vessels) are considered in Section 6.6.5 of the SITI EP. Woodside extended an opportunity to meet to discuss the proposed activity. On 7 October 2022, Woodside sent a follow up email. 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside has assessed claims and objections raised on the ACCR public website that cover topics relevant to the proposed activity, where appropriate and provided responses to ACCR (shown above). Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	No additional measures or controls are required.

The Climate Council (TCC)

Summary of information provided and record of consultation:

- On 30 September 2022, Woodside emailed TCC advising of the proposed activity (Appendix F, reference 2.11) and provided a Consultation Information Sheet. Woodside also provided specific information relevant to the proposed activity based on the claims and objections raised on the TCC’s public website that addressed the following topics relevant to the proposed activity, where appropriate:
 - Impacts and risks related to climate change and GHGs:
 - Woodside confirmed concerns related to carbon and the impact on climate change from Scarborough gas are not relevant to the SITI EP which assesses both direct and indirect impacts and risks associated with the proposed Petroleum Activities Program, having regard to the nature and scale of the proposed PAP. The extraction of Scarborough gas for onshore processing is not within the scope of the activity described in the SITI EP. Therefore, indirect impacts and risks arising from the onshore processing of Scarborough gas are not considered indirect impacts/risks of the Petroleum Activities Program for this EP but may be evaluated in Scarborough EPs as appropriate.
 - GHG emissions associated with the SITI activity (i.e., fuel combustion from project vessels) are considered in Section 6.6.5 of the EP.
 - Woodside extended an opportunity to meet to discuss the proposed activity.
- On 7 October 2022, Woodside sent a follow up email.

Summary of Feedback, Objection or Claim

Woodside Energy’s Assessment of Merits of Feedback, Objection or Claim and its Response

Environment Plan Controls

No feedback, objections or claims received despite follow up.

Woodside has assessed claims and objections raised on the TCC public website that cover topics relevant to the proposed activity, where appropriate and provided responses to TCC (shown above).
 Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see **Section 7**).

No additional measures or controls are required.

Doctors for the Environment Australia (DEA)

Summary of information provided and record of consultation:

- On 1 February 2022 during the course of preparing the EP, DEA self-identified and provided comment on the broader Scarborough development and requested to be consulted on the proposed activity:

- DEA believes it is a relevant organisation due to its membership being comprised of medical professionals who deal with people impacted directly and indirectly by climate change e.g. youth, elderly, First Nations people, people from low socioeconomic backgrounds, disabled people, those with disabilities, pre-existing medical conditions and people who live in remote and rural communities.
- DEA believe that climate change is being called “the greatest global health threat of the 21st century”. In Australia, the Australian Medical Association and the Australian College of Nursing have said climate change is health emergency and that health impacts of climate change threaten to undermine the last centuries progress in public and global health.
- DEA believe that gas is also recognised as a health threat e.g. gas in domestic premises has been shown to contribute to childhood asthma.
- DEA believe that gas processing on the Burrup Peninsula will also increase existing levels of nitrogen dioxide, sulphur dioxide, ozone, mercury, other heavy metals and many thousands of tonnes of volatile organic compounds. Air pollutants of this type can cause serious health impacts, including heart disease, stroke, lung cancer, asthma and diabetes, even at low levels of exposure.
- On 25 February 2022, Woodside provided a response to DEA which included advice that Woodside has determined there is no potential for the functions, interests or activities of DEA to be affected by the activities to be carried out under the Environment Plan, or the revision of the Plan.
- Woodside advised that it will assess the self-identification by DEA and the comments received to determine relevancy for the purposes of consultation for future Scarborough EPs when those EPs are being prepared.
- Woodside provided a link to the publicly available draft EP on the NOPSEMA website which has been available since 13 January 2022.
- Woodside invited DEA to provide further feedback on the proposed activity.

Summary of Feedback, Objection or Claim	Woodside Energy’s Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>DEA self-identified, provided comment on the broader Scarborough development and requested to be consulted on the proposed activity.</p> <p>Themes from comments include:</p> <ul style="list-style-type: none"> • Climate change and global impacts to human health • Pollutants produced by gas processing. • Whilst feedback has been received, there were no objections or claims. 	<p>Feedback has been assessed on merit as it applies to this EP and a summary of responses has been provided to address specific claims and objections raised on the proposed activity, where appropriate.</p> <p>Based on Woodside’s methodology for the Assessment of Additional Persons (see Section 5.3.1) Woodside has determined there is no potential for the functions, interests or activities of DEA to be affected by the activities to be carried out under the Environment Plan, or the revision of the Plan.</p> <p>Woodside confirms the SITI EP assesses both direct and indirect impacts and risks associated with the proposed Petroleum Activities Program, having regard to the nature and scale of the proposed Petroleum Activities Program.</p> <p>The extraction of Scarborough gas for onshore processing is not within the scope of the activity described in the SITI EP. Therefore, indirect impacts and risks arising from the onshore processing of Scarborough gas are not considered indirect</p>	<p>No additional measures or controls are required.</p>

	<p>impacts/risks of the Petroleum Activities Program for the SITI EP but may be evaluated in Scarborough EPs as appropriate.</p> <p>GHG emissions associated with the SITI activity (i.e., fuel combustion from project vessels) are considered in Section 6.7.5 of the publicly available SITI EP.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	
--	---	--

Extinction Rebellion WA (XRWA)

Summary of information provided and record of consultation:

- On 30 September 2022, Woodside emailed XRWA advising of the proposed activity (Appendix F, reference 2.10) and provided a Consultation Information Sheet. Woodside also provided specific information relevant to the proposed activity based on the claims and objections raised on the XRWA public website that addressed the following topics relevant to the proposed activity, where appropriate:
 - Carbon and the impact on climate change:
 - Woodside confirmed that XRWA's concerns related to carbon and the impact on climate change from Scarborough gas are not relevant to this EP. The SITI EP assesses both direct and indirect impacts and risks associated with the proposed Petroleum Activities Program, having regard to the nature and scale of the proposed Petroleum Activities Program. The extraction of Scarborough gas for onshore processing is not within the scope of the activity described in the SITI EP. Therefore, indirect impacts and risks arising from the onshore processing of Scarborough gas are not considered indirect impacts/risks of the Petroleum Activities Program for the SITI EP but may be evaluated in Scarborough EPs as appropriate.
 - GHG emissions:
 - GHG emissions associated with the SITI activity (i.e. fuel combustion from project vessels) are considered in Section 6.6.5 of the publicly available SITI EP.
 - Marine life and trunkline installation activities:
 - Woodside confirms that impact assessments for receptors such as marine fauna are provided in Section 6.6 and Section 6.7 of the SITI EP. Impact assessment shows that potential consequence for marine fauna across the potential risks is maximum 'D' (Ref Figure 2-2 in the EP) which is a Minor short-term impact, with the most common consequences being Slight short-term or no lasting effect. Potential for any mortality in marine fauna as a result of the Petroleum Activities Program is unlikely, highly unlikely or remote.
 - Rock art and cultural heritage:
 - Woodside confirms emissions from the activities covered by the SITI EP are of a scale and physical remoteness from Murujuga's rock art that no credible impact pathway is foreseen. Damage to heritage sites is not anticipated as a result of the proposed Petroleum Activities Program. Woodside has undertaken archaeological assessments and ethnographic surveys to identify cultural heritage that may be impacted by the Scarborough development. These works have not identified any

heritage places, objects or values which will be impacted by the activities covered by the SITI EP. A summary of this work and its results are provided in Section 4.9.1 of the EP. No rock art will be displaced as a result of the proposed Petroleum Activities Program.

- Woodside extended an opportunity to meet to discuss the proposed activity.
- On 7 October 2022, Woodside sent a follow up email.

Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside has assessed claims and objections raised on the XRWA public website that cover topics relevant to the proposed activity, where appropriate and provided responses to XRWA (shown above). Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	No additional measures or controls are required.

Friends of Australian Rock Art. Inc (FARA)

Summary of information provided and record of consultation:

- On 14 January 2022 during the course of preparing the EP, FARA self-identified and emailed Woodside on the broader Scarborough development:
 - FARA believes it is a 'relevant organisation' due to being involved for many years in the preservation and conservation of the Murujuga rock art and surrounding landscape.
 - FARA raised concerns about the broader impacts of the Scarborough Project including climate change impacts and socio-economic pressures on remote and Indigenous communities in the Pilbara.
 - FARA raised concerns regarding damage to the cultural landscape and rock art and impacts on Traditional custodians of Murujuga and the Dampier Archipelago who will be directly impacted (emissions, facilities) and indirectly impacted (noise, view, dust).
 - FARA believes that increased industrial emissions on the Burrup Peninsula will almost certainly compromise the application to have the site added as a World Heritage place.
 - FARA believes its members (local workers in the gas industry and community members) will be affected by atmospheric emissions from offshore drilling, along associated pipelines, during processing, production, transport of the Scarborough gas, and gas used by Perdaman and others on the Burrup Peninsula.
 - FARA raised concerns regarding the marine environment and endangered species. FARA's members want to know:
 - that the Scarborough EPs have considered the impacts from all pollution sources on all potential receptors, and include stringent monitoring and pollution-response programs,

- that there is a robust decommissioning plan with funds set aside.
- On 25 February 2022, Woodside emailed FARA:
 - Woodside included advice that Woodside has determined there is no potential for the functions, interests or activities of FARA to be affected by the activities to be carried out under the Environment Plan, or the revision of the Plan.
 - Woodside advised that it will assess the self-identification by FARA and the comments received to determine relevancy for the purposes of consultation for future Scarborough EPs when those EPs are being prepared.
 - Woodside provided a link to the publicly available draft EP on the NOPSEMA website which has been available since 13 January 2022.
 - Woodside invited FARA to provide further feedback on the proposed activity
- On 5 April 2022, FARA responded noting it had since consulted with NOPSEMA and understands Woodside's assessment of FARA's relevance.
 - FARA also commented that it understands it is appropriate for Woodside to consult with FARA for the Scarborough Operations EP.
- On 22 June 2022, FARA emailed Woodside:
 - FARA endorses and supports the request made by Murujuga custodians [REDACTED] and [REDACTED] that they are 'relevant persons' to be consulted by Woodside on the Scarborough gas project.
 - FARA stated it also has relevant person status as Murujuga's rock art will be indirectly impacted by the proposed development.
 - FARA claimed acidic emissions from Woodside's JV site at Karratha Gas Plant have been impacting on the fragile patina of the adjoining petroglyphs and emissions from Scarborough activities will further increase this impact. Using scrubber technology advocated by FARA has never been adopted by Woodside due to costs.
 - With the proposal to process additional gas for another 25 years using the aging infrastructure of the Karratha Gas Plant, FARA sees it as extremely urgent that Woodside's emissions-control technology, and that of the two Pluto plants, is updated to world standards in order to substantially reduce its toxic NOx and SOx emissions.
 - FARA wishes to be consulted by Woodside on all EPs pertaining to developments which would cause or lead to damage (both direct and indirect impacts) to Murujuga's rock art.
- On 22 July 2022, Woodside advised FARA that its previous advice provided on 25 February 2022 still applies.
 - Woodside confirmed it makes information on each of its EPs publicly available via its website. Woodside also confirmed it continues to accept feedback on the EPs which are made publicly available by the regulator upon initial submission and final acceptance and remain available online following final acceptance.
- On 18 July 2023, after raising it in the 5 July 2023 NOPSEMA correspondence, Woodside requested that NOPSEMA forward correspondence from FARA which had been provided to NOPSEMA on 25 March 2023. NOPSEMA forwarded it to Woodside on the same day.
- On 26 July 2023, Woodside responded to FARA acknowledging its comments and thanking it for its letter and research paper. Woodside advised it would assess the self-identification by FARA for the purposes of consultation with future Scarborough EPs.

Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
<p>FARA self-identified, provided comment on the broader Scarborough development.</p> <p>FARA's concerns include:</p> <ul style="list-style-type: none"> • Murujuga rock art and surrounding landscape • Climate change • Socio-economic pressures on remote and Indigenous communities • Direct and indirect impacts on Traditional custodians of Murujuga and the Dampier Archipelago • Burrup Peninsula's World Heritage listing application • Impacts of emissions from Scarborough activities • Impacts to marine environment and endangered species • Impacts from all pollution sources on all potential receptors • Decommissioning. 	<p>Feedback has been assessed on merit as it applies to this EP and a summary of responses has been provided to address specific claims and objections raised on the proposed activity, where appropriate.</p> <p>Based on Woodside's methodology for the Assessment of Additional Persons (see Section 5.3.1) Woodside has determined there is no potential for the functions, interests or activities of FARA to be affected by the activities to be carried out under the Environment Plan, or the revision of the Plan.</p> <p>Woodside confirms the SITI EP assesses both direct and indirect impacts and risks associated with the proposed Petroleum Activities Program, having regard to the nature and scale of the proposed Petroleum Activities Program.</p> <p>The extraction of Scarborough gas for onshore processing is not within the scope of the activity described in the SITI EP. Therefore, indirect impacts and risks arising from the onshore processing of Scarborough gas are not considered indirect impacts/risks of the Petroleum Activities Program for the SITI EP but may be evaluated in Scarborough EPs as appropriate.</p> <p>GHG emissions associated with the SITI activity (i.e., fuel combustion from project vessels) are considered in Section 6.7.5 of the publicly available SITI EP.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	<p>Woodside has consulted FARA in the course of preparing this EP. Woodside has assessed the claims or objections raised by FARA. No additional measures or controls have been put in place.</p>
International Fund for Animal Welfare (IFAW)		
<p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 30 September 2022, Woodside emailed IFAW advising of the proposed activity (Appendix F, reference 2.7) and provided a Consultation Information Sheet. <ul style="list-style-type: none"> - Woodside extended an opportunity to meet to discuss the proposed activity. • On 7 October 2022, Woodside sent a follow up email. 		

Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	No additional measures or controls are required.
Lock The Gate Alliance (LTGA)		
<p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> • On 4 February 2022 during the course of preparing the EP, LTGA self-identified and provided comment on the broader Scarborough development and requested to be consulted on the proposed activity: <ul style="list-style-type: none"> - LTGA believes it is a relevant organisation which will be affected by the Scarborough development. Its members, especially those who live in the Pilbara and Kimberley, those who depend on groundwater, and those who live in areas subject to flooding (especially the Kimberley), will be affected by climate change which will be increased by the project. - LTGA commented that the development will produce carbon emissions over the next 25 years, impacting climate change and socioeconomic pressures which will directly affect LTGA and its supporters. - LTGA believe that the Scarborough development will lead to damage to the National Heritage values of the Burrup Peninsula. • On 25 February 2022 Woodside provided a response to LTGA which included advice that Woodside has determined there is no potential for the functions, interests or activities of LTGA to be affected by the activities to be carried out under the Environment Plan, or the revision of the Plan. <ul style="list-style-type: none"> - Woodside advised it will assess the self-identification by LTGA and the comments received to determine relevancy for the purposes of consultation for future Scarborough EPs when those EPs are being prepared. - Woodside provided a link to the publicly available draft EP on the NOPSEMA website which has been available since 31 August 2021. - Woodside invited LTGA to provide further feedback on the proposed activity. 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
LTGA self-identified, provided comment on the broader Scarborough development and requested to be consulted on the proposed activity. Themes from comments include:	Feedback has been assessed on merit as it applies to this EP and a summary of responses has been provided to address specific claims and objections raised on the proposed activity, where appropriate. Based on Woodside's methodology for the Assessment of Additional Persons (see Section 5.3.1) Woodside has	No additional measures or controls are required.

<ul style="list-style-type: none"> • Socio-economic impacts of climate change and carbon emissions on its members • Damage to National Heritage values of the Burrup Peninsula. <p>Whilst feedback has been received, there were no objections or claims.</p>	<p>determined there is no potential for the functions, interests or activities of LTGA to be affected by the activities to be carried out under the Environment Plan, or the revision of the Plan.</p> <p>Woodside confirms the SITI EP assesses both direct and indirect impacts and risks associated with the proposed Petroleum Activities Program, having regard to the nature and scale of the proposed Petroleum Activities Program.</p> <p>The extraction of Scarborough gas for onshore processing is not within the scope of the activity described in the SITI EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	
---	--	--

Market Forces

Summary of information provided and record of consultation:

- On 30 September 2022, Woodside emailed Market Forces advising of the proposed activity (Appendix F, reference 2.9) and provided a Consultation Information Sheet. Woodside also provided specific information relevant to the proposed activity based on the claims and objections raised on the Market Forces public website that addressed the following topics relevant to the proposed activity, where appropriate:
 - Assessment of climate change from activity:
 - Woodside confirmed that the SITI EP assesses both direct and indirect impacts and risks associated with the proposed Petroleum Activities Program, having regard to the nature and scale of the proposed Petroleum Activities Program. The extraction of Scarborough gas for onshore processing is not within the scope of the activity described in the SITI EP. Therefore, indirect impacts and risks arising from the onshore processing of Scarborough gas are not considered indirect

impacts/risks of the Petroleum Activities Program for the SITI EP but may be evaluated in Scarborough EPs as appropriate. GHG emissions associated with the SITI activity (ie fuel combustion from project vessels) are considered in Section 6.7.5 of the EP.

- Rock art and cultural heritage:
- Emissions from the activities covered by the EP are of a scale and physical remoteness from Murujuga’s rock art that no credible impact pathway is foreseen. Damage to heritage sites is not anticipated as a result of the proposed Petroleum Activities Program.
- Woodside has undertaken archaeological assessments and ethnographic surveys to identify cultural heritage that may be impacted by the Scarborough development. These works have not identified any heritage places, objects or values which will be impacted by the activities covered by the SITI EP. A summary of this work and its results are provided in Section 4.9.1 of the EP.
- No rock art will be displaced as a result of the proposed Petroleum Activities Program.
- Assessment on marine diesel spill risk:
- Unplanned Activities (Accidents, Incidents, Emergency Situations) from the Trunkline installation and associated activities are assessed in Section 6.7 of the EP. Section 4 of the EP describes the EMBA which is the largest spatial extent where unplanned events could have an environmental consequence on the surrounding environment. For this EP, the EMBA is the potential spatial extent of surface and in-water hydrocarbons at concentrations above ecological impact thresholds, in the event of the worst-case credible marine diesel spill.
- Ecological impact thresholds used to delineate the EMBA are defined in Section 6.7.1. The worst-case credible spill scenario for this EP is a vessel collision resulting in hydrocarbon release of 2,000 m3 of marine diesel. The EMBA and the size of the worst-case credible spill scenario align with the Scarborough OPP. The EMBA presented does not represent the predicted coverage of any one marine diesel spill or a depiction of a slick or plume at any particular point in time. Rather, the areas are a composite of a large number of theoretical paths, integrated over the full duration of the simulations under various metocean conditions.
- The best response to a marine pollution event is considered to be prevention. Woodside and its contractors have agreed operating procedures and management plans in the unlikely event of a marine diesel release, to minimise loss of hydrocarbons to the environment.
- In the unlikely event of a marine diesel release, a NOPSEMA approved Oil Pollution Emergency Plan (OPEP) will be in place for all activities to be managed under this EP. The OPEP supports timely implementation of pre-determined response strategies through defined organisational structures, human and physical resource requirements, and alignment with applicable government and industry oil spill response plans and requirements.
- Woodside extended an opportunity to meet to discuss the proposed activity.
- On 7 October 2022, Woodside sent a follow up email.

Summary of Feedback, Objection or Claim	Woodside Energy’s Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside has assessed claims and objections raised on the Market Forces public website that cover topics relevant to the proposed activity, where appropriate and provided responses to Market Forces (shown above).	No additional measures or controls are required.

	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	
World Wildlife Fund (WWF) Australia		
Summary of information provided and record of consultation:		
<ul style="list-style-type: none"> On 30 September 2022, Woodside emailed WWF advising of the proposed activity (Appendix F, reference 2.6) and provided a Consultation Information Sheet. Woodside extended an opportunity to meet to discuss the proposed activity. On 7 October 2022, Woodside sent a follow up email. 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	No additional measures or controls are required.
Research institutes and local conservation groups or organisations		
Western Australian Marine Science Institution (WAMSI)		
Summary of information provided and record of consultation:		
<ul style="list-style-type: none"> On 3 February 2023, Woodside emailed WAMSI advising of the proposed activity (Appendix F, reference 4.39) and provided an updated Consultation Information Sheet. <ul style="list-style-type: none"> Woodside also asked for details of any research activities WAMSI is undertaking that may overlap with the proposed activity. On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.3). 		
Summary of Feedback, Objection or Claim	Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	No additional measures or controls are required.

Commonwealth Scientific and Industrial Research Organisation (CSIRO)

Summary of information provided and record of consultation:

- On 11 November 2022, Woodside emailed CSIRO advising of the proposed activity (Appendix F, reference 2.17).
 - Woodside provided a link to the Consultation Information Sheet and asked for advice regarding any research activities CSIRO may be undertaking that may overlap with Woodside’s proposed activities.
- On 6 February 2023, Woodside emailed CSIRO advising of the proposed activity (Appendix F, reference 4.41) and provided an updated Consultation Information Sheet.
 - Woodside also asked for details of any research activities CSIRO is undertaking that may overlap with the proposed activity.
- On 22 February 2023, Woodside sent a follow up email (Appendix F, reference 5.10).

Summary of Feedback, Objection or Claim	Woodside Energy’s Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).	No additional measures or controls are required.

Australian Institute of Marine Science (AIMS)

Summary of information provided and record of consultation:

- On 11 November 2022, Woodside emailed AIMS advising of the proposed activity (Appendix F, reference 2.15).
 - Woodside provided a link to the Consultation Information Sheet and asked for advice regarding any research activities AIMS may be undertaking that may overlap with Woodside’s proposed activities.
- On 6 February 2023, Woodside emailed AIMS advising of the proposed activity (Appendix F, reference 2.18) and provided an updated Consultation Information Sheet.
 - Woodside also asked for details of any research activities AIMS is undertaking that may overlap with the proposed activity.
- On 9 February 2023, AIMS emailed Woodside thanking it for the opportunity to consider the proposed activity. AIMS confirmed there are no overlaps with planned AIMS science activities in the area.

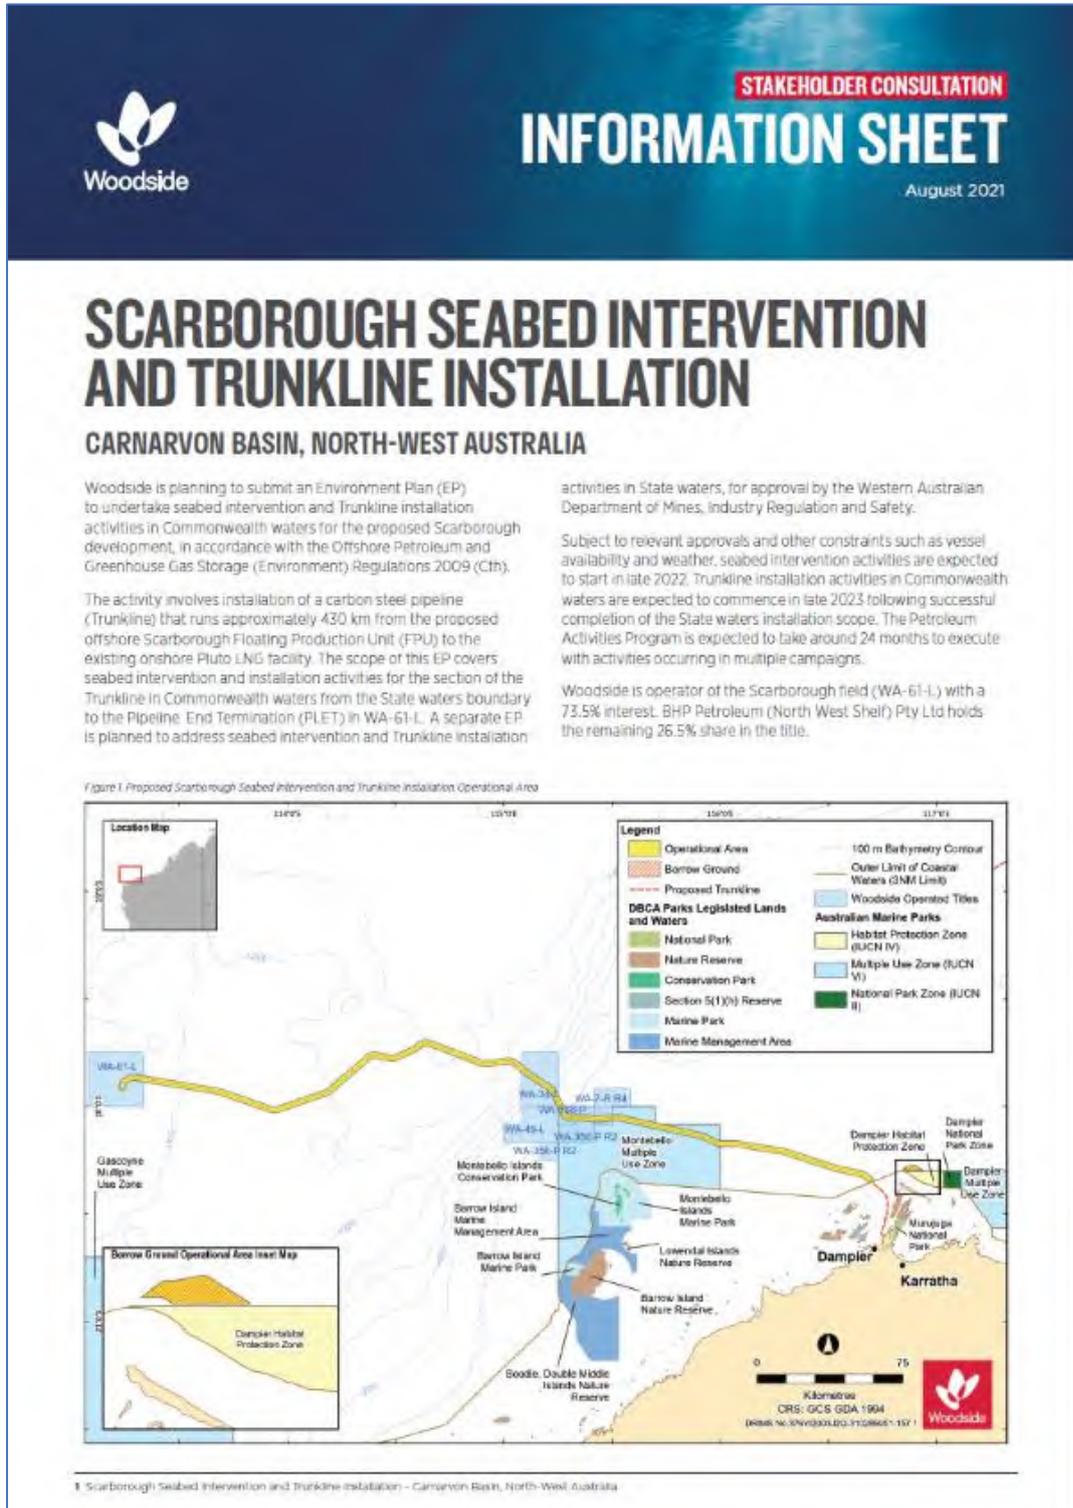

Summary of Feedback, Objection or Claim	Woodside Energy’s Assessment of Merits of Feedback, Objection or Claim and its Response	Environment Plan Controls
AIMS has responded and confirmed there are no overlaps with planned AIMS science activities in the area.	AIMS has confirmed there are no overlaps with planned AIMS science activities in the area.	No additional measures or controls are required.

<p>Whilst feedback has been received, there were no objections or claims.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7).</p>	
---	---	--

APPENDIX F

1 CONSULTATION (2021)

1.1 Woodside Consultation Information Sheet (sent to all relevant stakeholders) (August 2021)

Proposed Activity

Table 1 – Activity summary and project vessels

Item	Description
Location	<ul style="list-style-type: none"> • Carnarvon Basin, North-West Australia
Water depth	<ul style="list-style-type: none"> • Approximately 32 m (Trunkline route at State waters boundary) to 1400 m (deepest point approximately 275 km along the Trunkline route)
Earliest commencement date	<ul style="list-style-type: none"> • Seabed intervention activities: Q4 2022 pending approvals, vessel availability and weather constraints • Trunkline installation activities: Q4 2023 pending successful completion of State waters installation scope, approvals, vessel availability and weather constraints
Estimated duration	<ul style="list-style-type: none"> • Approximately 24 months across multiple campaigns
Distance from Operational Area to nearest port/marina	<ul style="list-style-type: none"> • Eastern end of the Trunkline route overlaps with the Pilbara Port Authority Dampier Port Limits
Distance from Operational Area to nearest marine park	<ul style="list-style-type: none"> • The trunkline corridor runs through the Montebello Marine Park - Multiple Use Zone (Cwith), close to the northern boundary • Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone
Seabed Intervention	
Key Vessels	<ul style="list-style-type: none"> • Trailing suction hopper dredge (TSHD) • Offshore construction vessel (OCV) • Fall pipe vessel (rock dump) • Survey vessels • Support vessels • Fuel bunkering vessels
Key Activities	<ul style="list-style-type: none"> • Surveys: <ul style="list-style-type: none"> ➢ Geophysical (including hydrographic surveys) ➢ Geotechnical ➢ Pre-lay survey before pipelay (visual and multibeam echo sounder) • Trenching along the Trunkline route and material disposal at existing Spoil Ground 5A • Borrow ground dredging and backfill along the trunkline • Continental slope crossing seabed preparation • Trunkline and infrastructure crossing supports installation, using rock and mattresses • Trunkline pre and post lay span rectification • Contingent seabed intervention activities including maintenance, dredging/excavation of resettled material in the trench prior to pipelay, post lay dredging, grout bags and rock dumping
Trunkline Installation	
Key Vessels	<ul style="list-style-type: none"> • Primary Installation Vessel (PIV) multi-joint operation • Shallow Water Lay Barge (SWLB) • Anchor handling vessel/tug • Pipe supply vessels • Offshore construction vessel (OCV) • Survey vessels • Fuel bunkering vessels
Key activities	<ul style="list-style-type: none"> • Surveys: <ul style="list-style-type: none"> ➢ Pre-lay survey of the trunkline route prior to commencement of pipelay (visual and multibeam echo sounder) ➢ Post-lay as-built survey of the completed trunkline (visual and multibeam echo sounder) • Installation of the Trunkline by a SWLB in the shallow water section of the route where the DP pipelay vessel may not be able to access due to water depth restrictions • Setting of SWLB anchors with anchor handling vessel/tug • Installation of the Trunkline by the PIV • Installation of PLET and ancillary structures as required through design by the PIV • Continuous delivery of pipe to the SWLB and PIV by pipe supply vessels • Installation of the foundations for the PLET structure by a construction vessel prior to the installation of the PLET • Dry pre-commissioning of the trunkline by a construction vessel • Contingent activities including wet commissioning, wet buckle recovery and Flood, Clean, Gauge, Testing

2 Scarborough seabed intervention and trunkline installation – Carnarvon Basin, North-West Australia

Proposed Locations

The Operational Area includes the following Project Areas:

- **Scarborough Trunkline Project Area:** The proposed Trunkline from the Scarborough FPU (approximately 430 km north-west of the Burrup) to the State waters boundary and 1.5 km either side of the proposed Trunkline centreline to allow for the movement and positioning of vessels (includes Spoil Ground 5A which is included in the Trunkline operational area).
- **Offshore Borrow Ground Project Area:** Offshore Borrow Ground (location where sand will be sourced to assist with Trunkline stabilisation).

Within Commonwealth waters, the Scarborough Trunkline will extend from the FPU towards the existing Pluto offshore platform and infrastructure, approximately 200 km offshore north-west of the Burrup. The Scarborough Trunkline will then deviate to the south to avoid the existing facilities and minimise environmental, technical and safety risks. From approximately 20 km south-east of the Pluto platform, the Trunkline will be routed alongside the Pluto Trunkline until it reaches Mermaid Sound.

Sand may be required to assist with stabilisation along a -20 km section of the Scarborough Trunkline from the State waters boundary. This sand is proposed to be obtained from the Offshore Borrow Ground Project Area in Commonwealth waters, as shown in Figure 1. The Offshore Borrow Ground is approximately 17 km², located 20 km to the east of the proposed Trunkline route and adjacent to the Dampier Marine Park. A minimum 250 m buffer will be in place from the Marine Park boundaries.

Communications with Mariners

Safety exclusion zones will apply around the seabed intervention and the Trunkline installation vessels. Marine notices will be issued prior to activity commencement to alert vessels which may be operating in waters nearby.

Implications for Stakeholders

Woodside will consult relevant stakeholders whose interests, functions, and activities may be affected by the proposed activities. We will also keep informed other stakeholders who have an identified interest in the planned activities. Woodside has undertaken an assessment to identify potential risks to the marine environment and relevant stakeholders, considering timing, duration, location and potential impacts arising from the construction and installation activities. This EP approval falls under the primary environmental approval of the Scarborough Offshore Project Proposal (OPP) and the activities will be conducted in line with relevant requirements of the OPP. A number of mitigation and management measures will be implemented and are summarised in Table 2. These measures will continue to be developed in conjunction with the EP, including impact assessments and controls to reduce impacts to an ALARP and acceptable level. Further details will be provided in the EP.

About Scarborough

The Scarborough gas resource is located offshore, approximately 375 km west-northwest of the Burrup Peninsula and is part of the Greater Scarborough gas fields which are estimated to hold 13.0 Tcf (2C, 100%) of dry gas.

Woodside, as operator of the Scarborough Joint Venture, is proposing to develop the Scarborough gas resource through new offshore facilities connected by an approximately 430 km pipeline to a proposed expansion of the existing Pluto LNG onshore facility (Pluto Train 2).

For more information about the proposed Scarborough development, visit woodside.com.au.

Table 2 - Summary of key risks and/or impacts and management measures.

Potential Risk and/or Impact	Mitigation and/or Management Measure
Planned activities	
Interests of relevant stakeholders with respect to:	<ul style="list-style-type: none"> • Consultation with relevant petroleum titleholders, commercial fishers and their representative organisations, and government departments and agencies to inform decision making for the proposed activity and development of the EP. • Advice to relevant stakeholders prior to the commencement of activities. • All vessels within the Scarborough activity area will adhere to the navigation safety requirements including the Navigation Act 2012 and any subsequent Marine Orders.
• Defence activities	
• Petroleum activities	
• Commercial fishing activities	
• Shipping activities	
Marine fauna interactions	<ul style="list-style-type: none"> • Vessel masters will implement interaction management actions in accordance with the EPBC Regulations 2000. • The dredging vessel will have trained crew as marine fauna observers and adhere to the observation and exclusion zones for marine fauna.
Marine discharges	<ul style="list-style-type: none"> • All routine marine discharges will be managed according to legislative and regulatory requirements and Woodside's Environmental Performance Standards where applicable.
Seabed disturbance	<ul style="list-style-type: none"> • Infrastructure will be positioned on the seabed within design footprint to reduce seabed disturbance. • Bathymetric and other surveys will be undertaken to monitor seabed characteristics before and after activities. • A management framework for dredging and backfill activities based on water quality will be developed. • Dredging and spoil disposal activities will be undertaken in compliance with a sea dumping permit. • A minimum 250 m buffer from the Dampier Marine Park boundaries will be in place for the borrow ground dredging activities.
Vessel interaction	<ul style="list-style-type: none"> • Woodside will notify relevant fishery stakeholders and government maritime safety agencies of specific start and end dates, specific vessel-on-location dates and any exclusion zones prior to commencement of the activity.

Potential Risk and/or Impact	Mitigation and/or Management Measure
Waste management	<ul style="list-style-type: none"> Waste generated on the vessels will be managed in accordance with legislative requirements and a Waste Management Plan. Wastes will be managed and disposed of in a safe and environmentally responsible manner that prevents accidental loss to the environment. Wastes transported onshore will be sent to appropriate recycling or disposal facilities by a licensed waste contractor.
Unplanned activities	
Hydrocarbon release	<ul style="list-style-type: none"> Appropriate spill response plans, equipment and materials will be in place and maintained. Appropriate refuelling procedures and equipment will be used to prevent spills to the marine environment.
Introduction of Invasive marine species	<ul style="list-style-type: none"> All vessels will be assessed and managed as appropriate to prevent the introduction of Invasive marine species. Compliance with Australian biosecurity requirements and guidance. Contracted vessels comply with Australian ballast water requirements.

Providing Feedback

Our intent is to minimise environmental and social impacts associated with the proposed activities, and we are seeking any interest or comments you may have to inform our decision making. If you would like to comment on the proposed activities outlined in this information sheet, or would like additional information, please contact Woodside before 30 September 2021.

Please note that your feedback and our response will be included in our Environment Plan for the proposed activity, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan for this information to remain confidential to NOPSEMA.

Woodside Energy Ltd
 E: Feedback@woodside.com.au | Toll free: 1800 442 977

Please note that stakeholder feedback will be communicated to NOPSEMA as required under legislation. Woodside will communicate any material changes to the proposed activity to affected stakeholders as they arise.

1.2 Email sent to Australian Border Force (ABF), Department of Transport (DoT), Department of Biosecurity, Conservation and Attractions (DBCA), Department of Industry, Science and Resources (DISR), Department of Mines, Industry Regulation and Safety (DMIRS), Australian Petroleum Production and Exploration Association (APPEA), Marine Tourism WA, Recfishwest – 31 August 2021

Dear stakeholder

Woodside is planning to submit an Environment Plan (EP) to undertake seabed intervention and Trunkline installation activities in Commonwealth waters for the Scarborough development, in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth).

A Consultation Information Sheet is attached, which provides background on the proposed activity, including a summary of potential key risk and associated management measures. It is also available on our [website](#).

This EP falls under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP) and will be conducted in line with relevant requirements of the OPP. The OPP includes a detailed description of activities and an assessment of impacts; with controls to develop acceptability criteria. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process. Woodside is proposing four Commonwealth EPs for the Scarborough development to be submitted to NOPSEMA in the next two years, and will consult with all relevant stakeholders ahead of each EP.

A separate EP is planned to address Trunkline installation and seabed intervention activities in State waters, for approval by the Western Australian Department of Mines, Industry Regulation and Safety. The location of the proposed Trunkline in State waters is shown on the Consultation Information Sheet.

More information on the Scarborough development can be found [here](#).

Activity:

Summary:

Seabed intervention and Trunkline installation activities in Commonwealth waters for the Scarborough development.

Location:

Activities run from the Commonwealth – State waters boundary approximately 32 km north of Dampier to the Scarborough gas field located at Woodside-operated title block WA-61-L, approximately 375 km west-northwest of the Burrup Peninsula.

Approx. Water Depth (m):

~ 32 m – 1400 m

Earliest commencement date:

Seabed intervention activities: Q4 2022 pending approvals, vessel availability and weather constraints

Trunkline installation activities: Q4 2023 pending successful completion of State waters installation scope, approvals, vessel availability and weather constraints.

Estimated duration:

Approximately 24 months across multiple campaigns

Distance from Operational Area to nearest port/marina

Eastern end of the Trunkline route overlaps with the Pilbara Port Authority Dampier Port Limits

Distance from Operational Area to nearest marine park

- The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cth), close to the northern boundary.
- Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone. A minimum 250 m buffer will be in place from the Marine Park boundaries.

Operational Areas

- **Scarborough Trunkline Project Area:** The proposed Trunkline from the Scarborough FPU (approximately 430 km north-west of the Burrup) to the State waters boundary and 1.5 km either side of the proposed Trunkline centreline to allow for the movement and positioning of vessels. This also includes Spoil Ground 5A, which is approximately 300 m wide and runs ~17 km from the State waters boundary.
- **Offshore Borrow Ground Project Area:** Offshore Borrow Ground (location where sand will be sourced). The Offshore Borrow Ground is approximately 17 km², located 20 km to the east of the proposed Trunkline route and adjacent to the Dampier Marine Park.

Vessels:

- Trailing suction hopper dredge (TSHD)
- Offshore construction vessel (OCV)
- Fall pipe vessel (rock dump)
- Primary Installation Vessel (PIV) multi-joint operation
- Shallow Water Lay Barge (SWLB)
- Anchor handling vessel/tug
- Pipe supply vessels
- Survey vessels
- Support vessels
- Fuel bunkering vessels

Feedback:

If you have any issues or concerns with these activities, any other issues relevant to this location then please respond to Woodside at:

Feedback@woodside.com.au or 1800 442 977.

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

We look forward to hearing from you.

Many thanks,

Description of activity, including the intended schedule, location (including coordinates), distance to nearest landfall and map.	Included in the consultation information sheet		
Worst case spill volumes.	Included in Appendix A of the First Strike Plan		
Known or indicative oil type/properties.	Included in Appendix A of the First Strike Plan		
Amenability of oil to dispersants and window of opportunity for dispersant efficacy.	Dispersant is not deemed to be suitable for marine diesel spill.		
Description of existing environment and protection priorities.	Included in section 4 of the First Strike Plan		
Details of the environmental risk assessment related to marine oil pollution - describe the process and key outcomes around risk identification, risk analysis, risk evaluation and risk treatment. For further information see the Oil Pollution Risk Management Information Paper (NOPSEMA 2017).	<p>Unplanned loss of containment events from the Petroleum Activities Program have been identified during the risk assessment process (presented in Section 6 of the EP). Further descriptions of risk, impacts and mitigation measures (which are not related to hydrocarbon preparedness and response) are provided in Section 6 of the EP. Three unplanned events or credible spill scenarios for the Petroleum Activities Program have been selected as representative across types, sources and incident/response levels, up to and including the WCCS.</p> <p>Table 2-1 of the OSPRMA presents the credible scenarios for the Petroleum Activities Program. One worst-case credible scenario (CS-01) has been used for response planning purposes for the activity as all other scenarios are of a lesser scale and extent. By demonstrating capability to meet and manage an event of this size and timescale, Woodside assumes relevant scenarios that are smaller in nature and scale can also be managed by the same capability.</p> <p>Response performance outcomes have been defined based on a response to the WCCS.</p>		
Outcomes of oil spill trajectory modelling, including predicted	<table border="1"> <tr> <td data-bbox="687 1823 874 1926"></td> <td data-bbox="874 1823 1396 1926">Credible Scenario-01: a short-term (instantaneous) surface release of 2,000 m³ of marine diesel from a</td> </tr> </table>		Credible Scenario-01: a short-term (instantaneous) surface release of 2,000 m ³ of marine diesel from a
	Credible Scenario-01: a short-term (instantaneous) surface release of 2,000 m ³ of marine diesel from a		

times to enter State waters and contact shorelines.		vessel collision outside Mermaid Sound – residue of 100 m ³ (5%) Minimum time to shoreline contact (above 100 g/m ²) in days
	Dampier Archipelago	53 hours (2.2 days) – 3 m ³
Details on initial response actions and key activation timeframes.	Included in Section 2 and 3 of the First Strike Plan	
Potential Incident Control Centre arrangements.	Included in Appendix E and F of the First Strike Plan	
Potential staging areas / Forward Operating Base.	A Forward Operating Base can be established at Exmouth and/ or Dampier.	
Details on response strategies.	Included in Section 2 and 3 of the First Strike Plan	
Use of DoT equipment resources	Woodside has access to its own and contracted stockpiles of response equipment and acknowledges that potential use of DoT resources cannot be assumed and is at the discretion of DoT.	
Details and diagrams on proposed IMT structure including integration of DoT arrangements as per this IGN.	Included in Appendix E and F of the First Strike Plan	
Details on testing of arrangements of OPEP/OSCP.	<ul style="list-style-type: none"> • Level 1 Response – one Level 1 ‘First Strike’ drill conducted within two weeks of commencing activity and then at least every 6 month hire period thereafter. • Level 2 Response – a minimum of one Emergency Management exercise conducted within one month of commencing activity and then at least every 6 month hire period thereafter. • Level 3 Response – the number of CMT exercises conducted each year is determined by the Chief Executive Officer, in consultation with the Vice President of Security and Emergency Management. <p>Testing of Oil Spill Response Arrangements There are a number of arrangements which in the event of a spill will underpin Woodside’s ability to implement a response across its petroleum activities. In order to ensure each of these arrangements is adequately tested, the Hydrocarbon Spill Preparedness Capability and Competency Coordinator ensures tests are conducted in alignment with the Hydrocarbon Spill Arrangements Testing Schedule. Woodside’s Hydrocarbon Spill Preparedness & Response Testing Schedule aligns with international good practice for spill preparedness & response management; the testing is compatible with the IPIECA Good Practice Guide and the Australian Emergency Management Institute Handbook.</p>	

	<p>The Hydrocarbon Spill Arrangements Testing Schedule (Woodside Doc No. 10058092) identifies the type of test which will be conducted annually for each arrangement, and how this type will vary over a five year rolling schedule. Testing methods may include (but are not limited to): audits, drills, field exercises, functional workshops, assurance reporting, assurance monitoring and reviews of key external dependencies.</p> <p>Activity specific Oil Spill Pollution First Strike Plans are developed to meet the response needs of that particular activity's Worst Credible Spill Scenario (WCCS). The ability to implement these plans may rely on specific arrangements or those common to other Woodside activities. Regardless of their commonality each arrangement will be tested in at least one of the methods annually. This ensures that personnel are familiar with spill response procedures, reporting requirements, and roles/responsibilities.</p> <p>At the completion of testing a report is produced to demonstrate the outcomes achieved against the tested objectives. The report will include the lessons learned, any improvement actions and a list of the participants. Alternatively, an assurance report, assurance records, or audit report may be produced. These reports record findings and include any recommendations for improvement. Improvement actions and their close-out are actively recorded and managed.</p> <p>This is over and above the emergency management exercises conducted.</p>
Additional comments	Please note some of the links in the document are still being finalised, and as such may show a reference error in the attached version.

1.3 Email sent to Director of National Parks (DNP) (31 August 2021)

Dear Director of National Parks,

Woodside is planning to submit an Environment Plan (EP) to undertake seabed intervention and trunkline installation activities in Commonwealth waters for the Scarborough development, in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth).

This EP falls under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP) and will be conducted in line with relevant requirements of the OPP. The OPP includes a detailed description of activities and an assessment of impacts; with controls to develop acceptability criteria. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process. Woodside is proposing four Commonwealth EPs for

the Scarborough development to be submitted to NOPSEMA in the next two years, and will consult with all relevant stakeholders ahead of each EP.

Table 1 – Key project risks relevant to Commonwealth Marine Parks

Activity	Impact / Risk	Marine Park	Controls*
Planned:			
Borrow Ground Dredging	Turbidity, Seabed disturbance	Adjacent to Dampier Marine Park	<ul style="list-style-type: none"> • A 250 m buffer zone will be implemented between the offshore borrow ground and the Dampier AMP • Compliance with sea dumping permit SD2019-3982 • Tiered monitoring and management framework for dredging and backfill activities based on water quality. *Note telemetered water quality monitoring site on marine park boundary. • EPBC Regulations 2000 Part 8 Division 8.1 Interacting with Cetaceans • During daylight hours, trained vessel crew onboard the dredge will visually assess marine fauna and observation and exclusion zones will be adhered to for dredging and backfill operations • Turtle deflection chains installed on the TSHD drag head.
Trunkline installation & infrastructure crossings	Seabed disturbance / footprint	Montebello Marine Park	<ul style="list-style-type: none"> • Infrastructure will be positioned on the seabed within design footprint to reduce seabed disturbance.
Vessel presence	Lighting & underwater noise	Montebello & Dampier Marine Parks	<ul style="list-style-type: none"> • Lighting will be limited the minimum required for navigational and safety requirements, except for emergency events.

			<ul style="list-style-type: none"> • EPBC Regulations 2000 Part 8 Division 8.1 Interacting with cetaceans.
Unplanned:			
Vessel presence	Invasive Marine Species (IMS)	Montebello & Dampier Marine Parks	<ul style="list-style-type: none"> • Compliance with the Woodside Invasive Marine Species Management Plan. • Requirements of the Australian Ballast Water Management guidelines to be met.
Vessel collision	Hydrocarbon release	All parks within EMBA	<ul style="list-style-type: none"> • All vessels and facilities (appropriate to class) will comply with MARPOL 73/78, the Navigation Act 2012, the Protection of the Sea (Prevention of Pollution from Ships Act 1983 and subsequent Marine Orders • Relevant Stakeholders will be notified of activities prior to commencement • Vessels will have in place a valid and appropriate Shipboard Oil Pollution Emergency Plan and/or Shipboard Marine Pollution Emergency Plan. Emergency response activities will be implemented in accordance with the SOPEP/SMPEP • Environment Plans and Oil Pollution Emergency Plans will be accepted and in place, appropriate to the credible hydrocarbon spill scenario associated with activities during the development of Scarborough. • Emergency response activities will be implemented in accordance with the OPEP • Emergency response capability will be maintained in accordance with EP, OPEP and related documentation.

*Further controls commensurate with residual risk level to be proposed during EP development.

1.4 Email sent to Australian Maritime Safety Authority (AMSA) – Marine Safety and Australian Hydrographic Office (AHO) (31 August 2021)

Dear AMSA / AHO

Woodside is planning to submit an Environment Plan (EP) to undertake seabed intervention and trunkline installation activities in Commonwealth waters for the Scarborough development, in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth).

A Consultation Information Sheet is attached, which provides background on the proposed activity, including a summary of potential key risk and associated management measures. The Information Sheet is also available on our [website](#). A shipping channel map is also attached.

This EP falls under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP) and will be conducted in line with relevant requirements of the OPP. The OPP includes a detailed description of activities and an assessment of impacts; with controls to develop acceptability criteria. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process. Woodside is proposing four Commonwealth EPs for the Scarborough development to be submitted to NOPSEMA in the next two years, and will consult with all relevant stakeholders ahead of each EP.

A separate EP is planned to address Trunkline installation and seabed intervention activities in State waters, for approval by the Western Australian Department of Mines, Industry Regulation and Safety. The location of the proposed Trunkline in State waters is shown on the Consultation Information Sheet.

More information on the Scarborough development can be found [here](#).

Activity:

Summary:

Seabed intervention and Trunkline installation activities in Commonwealth waters for the Scarborough development.

Location:

Activities run from the Commonwealth – State waters boundary approximately 32 km north of Dampier to the Scarborough gas field located at Woodside-operated title block WA-61-L, approximately 375 km west-northwest of the Burrup Peninsula.

Approx. Water Depth (m):

~ 32 m – 1400 m

Earliest commencement date:

Seabed intervention activities: Q4 2022 pending approvals, vessel availability and weather constraints

Trunkline installation activities: Q4 2023 pending successful completion of State waters installation scope, approvals, vessel availability and weather constraints.

- Estimated duration:** Approximately 24 months across multiple campaigns
- Distance from Operational Area to nearest port/marina** Eastern end of the Trunkline route overlaps with the Pilbara Port Authority Dampier Port Limits
- Distance from Operational Area to nearest marine park**
- The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cth), close to the northern boundary.
 - Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone. A minimum 250 m buffer will be in place from the Marine Park boundaries.
- Operational Areas**
- **Scarborough Trunkline Project Area:** The proposed Trunkline from the Scarborough FPU (approximately 430 km north-west of the Burrup) to the State waters boundary and 1.5 km either side of the proposed Trunkline centreline to allow for the movement and positioning of vessels. This also includes Spoil Ground 5A, which is approximately 300 m wide and runs ~17 km from the State waters boundary.
 - **Offshore Borrow Ground Project Area:** Offshore Borrow Ground (location where sand will be sourced). The Offshore Borrow Ground is approximately 17 km², located 20 km to the east of the proposed Trunkline route and adjacent to the Dampier Marine Park.
- Vessels:**
- Trailing suction hopper dredge (TSHD)
 - Offshore construction vessel (OCV)
 - Fall pipe vessel (rock dump)
 - Primary Installation Vessel (PIV) multi-joint operation
 - Shallow Water Lay Barge (SWLB)
 - Anchor handling vessel/tug
 - Pipe supply vessels
 - Survey vessels
 - Support vessels
 - Fuel bunkering vessels

Feedback:

If you have any issues or concerns with these activities, any other issues relevant to this location then please respond to Woodside at: Feedback@woodside.com.au or 1800 442 977.

Your feedback and our response will be included in our Environment Plan which will be submitted to submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

- The *Scarborough Subsea Infrastructure and Trunkline Installation First Strike Plan* is attached. This will form part of the approval submission in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth).

Woodside propose to submit an EP in December 2021. Should you require additional information or have a comment to make about the First Strike Plan, please contact me by close of business 6 December to allow us sufficient time to inform our activity planning and EP development.

Feedback can be submitted via email or letter to: feedback@woodside.com.au or by phone at [REDACTED]

Your feedback and our response will be included in our Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

We look forward to hearing from you.

Many thanks,
[REDACTED]

1.5 Email sent to Department of Climate Change, Energy, the Environment and Water Agriculture (DCCEEW) / Department of Agriculture, Fisheries and Forestry (DAFF) – Fisheries (formerly DAWE) (31 August 2021)

Dear DAWE

Woodside is planning to submit an Environment Plan (EP) to undertake seabed intervention and trunkline installation activities in Commonwealth waters for the Scarborough development, in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth).

A Consultation Information Sheet is attached, which provides background on the proposed activity, including a summary of potential key risk and associated management measures. The Information Sheet is also available on our [website](#). A map of relevant fisheries is also attached.

This EP falls under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP) and will be conducted in line with relevant requirements of the OPP. The OPP includes a detailed description of activities and an assessment of impacts; with controls to develop acceptability criteria. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process. Woodside is proposing four Commonwealth EPs for the Scarborough development to be submitted to NOPSEMA in the next two years, and will consult with all relevant stakeholders ahead of each EP.

A separate EP is planned to address Trunkline installation and seabed intervention activities in State waters, for approval by the Western Australian Department of Mines, Industry Regulation and Safety. The location of the proposed Trunkline in State waters is shown on the Consultation Information Sheet.

More information on the Scarborough development can be found [here](#).

Implications for DAWE’s interests:

We have identified and assessed potential risks and impacts to active Commonwealth commercial fishers, biosecurity matters and the marine environment that overlap the proposed Operational Area in the development of the proposed Environment Plan for this activity.

Woodside has endeavoured to reduce these risks to an as low as reasonably practicable (ALARP) level.

Commercial fishing implications:

Based on recent advice from the Australian Fishing Management Authority, Woodside will consult with licence holders in the following fisheries (on the basis of fishing licence overlap with the Operational Area) and will provide a fact sheet containing information relevant to commercial fishing interests:

- North-West Slope Trawl Fishery
- Western Deepwater Trawl Fishery
- Western Skipjack Fishery
- Southern Bluefin Tuna Fishery
- Western Tuna and Billfish Fishery

Biosecurity implications:

With respect to the biosecurity matters, please note the following information below.

Potential IMS risk	IMS mitigation management
Introduction and establishment of IMS.	Vessels are required to comply with the Australian Biosecurity Act 2015, specifically the Australian Ballast Water Management Requirements (as defined under the Biosecurity Act 2015) (aligned with the International Convention for the Control and Management of Ships’ Ballast Water and Sediments) to prevent introducing IMS. Vessels will be assessed and managed to prevent the introduction of invasive marine species in accordance with Woodside’s Invasive Marine Species Management Plan. Woodside’s Invasive Marine Species Management Plan includes a risk assessment process that is applied to vessels undertaking Activities. Based on

the outcomes of each IMS risk assessment, Management measures commensurate with the risk (such as the treatment of internal systems, IMS inspections or cleaning) will be implemented to minimise the likelihood of IMS being introduced.

Feedback:

If you have any issues or concerns with these activities, any other issues relevant to this location then please respond to Woodside at: Feedback@woodside.com.au or 1800 442 977.

Your feedback and our response will be included in our Environment Plans which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth)*.

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

Please provide your views by 30 September 2021.

Regards

[Redacted signature]

1.6 Email sent to Department of Defence (DoD) (31 August 2021)

Dear Department of Defence,

Woodside is planning to submit an Environment Plan (EP) to undertake seabed intervention and trunkline installation activities in Commonwealth waters for the Scarborough development, in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth)*.

A Consultation Information Sheet is attached, which provides background on the proposed activity, including a summary of potential key risk and associated management measures. The Information Sheet is also available on our [website](#). A map of practice and training defence areas is also attached.

This EP falls under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP) and will be conducted in line with relevant requirements of the OPP. The OPP includes a detailed description of activities and an assessment of impacts; with controls to develop acceptability criteria. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process. Woodside is proposing four Commonwealth EPs for the Scarborough development to be submitted to NOPSEMA in the next two years, and will consult with all relevant stakeholders ahead of each EP.

A separate EP is planned to address Trunkline installation and seabed intervention activities in State waters, for approval by the Western Australian Department of Mines, Industry

Regulation and Safety. The location of the proposed Trunkline in State waters is shown on the Consultation Information Sheet.

More information on the Scarborough development can be found [here](#).

Activity:

Summary:

Seabed intervention and Trunkline installation activities in Commonwealth waters for the Scarborough development.

Location:

Activities run from the Commonwealth – State waters boundary approximately 32 km north of Dampier to the Scarborough gas field located at Woodside-operated title block WA-61-L, approximately 375 km west-northwest of the Burrup Peninsula.

Approx. Water Depth (m):

~ 32 m – 1400 m

Earliest commencement date:

Seabed intervention activities: Q4 2022 pending approvals, vessel availability and weather constraints

Trunkline installation activities: Q4 2023 pending successful completion of State waters installation scope, approvals, vessel availability and weather constraints.

Estimated duration:

Approximately 24 months across multiple campaigns

Distance from Operational Area to nearest port/marina

Eastern end of the Trunkline route overlaps with the Pilbara Port Authority Dampier Port Limits

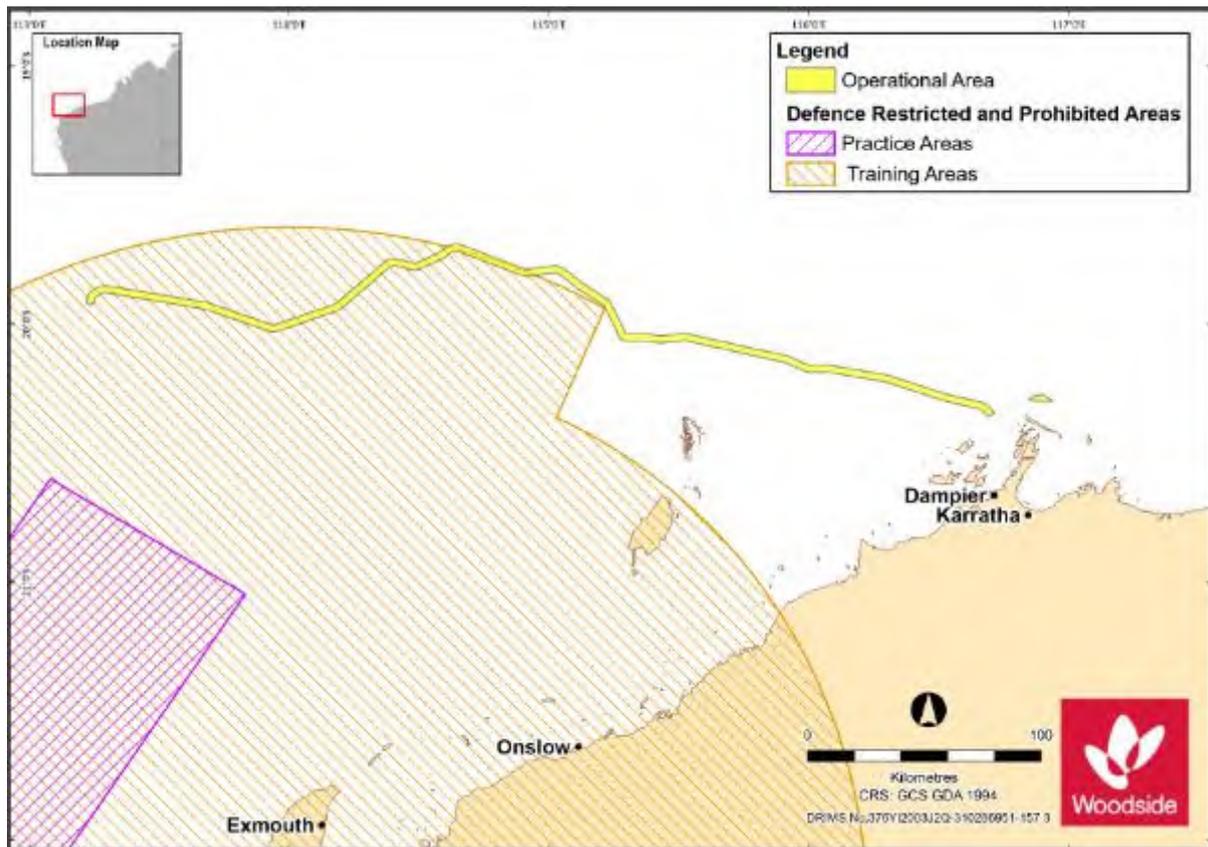

Distance from Operational Area to nearest marine park

- The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cth), close to the northern boundary.
- Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone. A minimum 250 m buffer will be in place from the Marine Park boundaries.

Operational Areas

- **Scarborough Trunkline Project Area:** The proposed Trunkline from the Scarborough FPU (approximately 430 km north-west of the Burrup) to the State waters boundary and 1.5 km either side of the proposed Trunkline centreline to allow for the movement and positioning of vessels. This also includes Spoil Ground 5A, which is approximately 300 m wide and runs ~17 km from the State waters boundary.
- **Offshore Borrow Ground Project Area:** Offshore Borrow Ground (location where sand will be sourced). The Offshore Borrow Ground is approximately 17 km², located 20 km to the east of the proposed Trunkline route and adjacent to the Dampier Marine Park.

1.6.1 Defence areas map sent to Department of Defence (DoD) (31 August 2021)

1.7 Email sent to WAFIC (31 August 2021)

Dear [REDACTED]

Woodside is planning to submit an Environment Plan (EP) to undertake seabed intervention and trunkline installation activities in Commonwealth waters for the Scarborough development, in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth).

We have identified potential impacts to commercial fishers and the environment and are currently working to reduce these risks to as low as reasonably practicable as we develop the EP. Fisheries have been identified as being relevant based on fishing area overlap with the activity area, assessment of government fishing effort data from recent years, fishing methods and water depth. We also note AFMA's recent advice and will consult with all Commonwealth fishery licences that overlap the Operational Area.

An information sheet (also on our [website](#)) and map of relevant fisheries are attached.

This EP falls under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP) and will be conducted in line with relevant requirements of the OPP. The OPP includes a detailed description of activities and an assessment of impacts; with controls to develop acceptability criteria. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process. Woodside is proposing four Commonwealth EPs for the Scarborough development to be submitted to NOPSEMA in the next two years, and will consult with all relevant stakeholders ahead of each EP.

A separate EP is planned to address Trunkline installation and seabed intervention activities in State waters, for approval by the Western Australian Department of Mines, Industry Regulation and Safety. The location of the proposed Trunkline in State waters is shown on the Consultation Information Sheet.

More information on the Scarborough development can be found [here](#).

Commonwealth: North-West Slope Trawl Fishery

State: Mackerel Managed Fishery (Area 2 and 3), Pilbara Crab Managed Fishery, Nickol Bay Prawn Managed Fishery, Pilbara Trawl Fishery, Pilbara Trap Fishery, Pilbara Line Fishery, Marine Aquarium Fishery and Specimen Shell Fishery

Note: We note previous WAFIC advice that the Marine Aquarium Fishery and Specimen Shell Fishery are dive and wade fisheries at shallow water depth. We have taken a 'cautionary' approach given the water depth of the proposed activity (~ 32 m) and catch and effort data.

Additional Fisheries

(*Consultation based on AFMA advice to consult all fisheries with entitlements to fish in the area)

Commonwealth: Western Deepwater Trawl Fishery, Western Skipjack Fishery, Southern Bluefin Tuna Fishery, Western Tuna and Billfish Fishery

Exclusionary/Cautious Zone:

Temporary safety exclusion zones will be confirmed prior to the activity commencing and will be issued with notifications to mariners at the time of the activity. The temporary exclusion zones will likely range between 500 – 1500 m depending on the vessel type and activity being carried out.

Vessels:

- Trailing suction hopper dredge (TSHD)
- Offshore construction vessel (OCV)
- Fall pipe vessel (rock dump)
- Primary Installation Vessel (PIV) multi-joint operation
- Shallow Water Lay Barge (SWLB)
- Anchor handling vessel/tug
- Pipe supply vessels
- Survey vessels
- Support vessels
- Fuel bunkering vessels

Potential risks to commercial fishing and proposed mitigation measures:

Potential Risk and/or Impact	Mitigation and/or Management Measure
Planned activities	
<p>Interests of relevant stakeholders with respect to:</p> <ul style="list-style-type: none"> • Defence activities • Petroleum activities • Commercial fishing activities • Shipping activities 	<ul style="list-style-type: none"> • Consultation with relevant petroleum titleholders, commercial fishers and their representative organisations, and government departments and agencies to inform decision making for the proposed activity and development of the EP. • Advice to relevant stakeholders prior to the commencement of activities. • All vessels within the Scarborough activity area will adhere to the navigation safety requirements including the Navigation Act 2012 and any subsequent Marine Orders.
<p>Marine fauna interactions</p>	<ul style="list-style-type: none"> • Vessel masters will implement interaction management actions in accordance with the EPBC Regulations 2000. • The dredging vessel will have trained crew as marine fauna observers and adhere to the observation and exclusion zones.
<p>Marine discharges</p>	<ul style="list-style-type: none"> • All routine marine discharges will be managed according to legislative and regulatory requirements and Woodside's Environmental Performance Standards where applicable.
<p>Seabed disturbance</p>	<ul style="list-style-type: none"> • Infrastructure will be positioned on the seabed within design footprint to reduce seabed disturbance. • Bathymetric and other surveys will be undertaken to monitor seabed characteristics before and after activities. • A management framework for dredging and backfill activities based on water quality will be developed. • Dredging and spoil disposal activities will be undertaken in compliance with a sea dumping permit. • A minimum 250 m buffer from the Dampier Marine Park boundaries will be in place for the borrow ground dredging activities.
<p>Vessel interaction</p>	<ul style="list-style-type: none"> • Woodside will notify relevant fishery stakeholders and government maritime safety agencies of specific start and end dates, specific vessel-on-location dates and any exclusion zones prior to commencement of the activity.
<p>Waste management</p>	<ul style="list-style-type: none"> • Waste generated on the vessels will be managed in accordance with legislative requirements and a Waste Management Plan. • Wastes will be managed and disposed of in a safe and environmentally responsible manner that prevents accidental loss to the environment.

to develop acceptability criteria. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process. Woodside is proposing four Commonwealth EPs for the Scarborough development to be submitted to NOPSEMA in the next two years, and will consult with all relevant stakeholders ahead of each EP.

A separate EP is planned to address Trunkline installation and seabed intervention activities in State waters, for approval by the Western Australian Department of Mines, Industry Regulation and Safety. The location of the proposed Trunkline in State waters is shown on the Consultation Information Sheet.

Seabed intervention activities are planned to commence in 2022 and trunkline installation activities in 2023, pending approvals, vessel availability and weather constraints, in water depths ranging from approximately 32 m to 1400 m.

We have identified potential impacts to active commercial fishers and the environment, which are summarised below. We have endeavoured to reduce these risks to an as low as reasonably practicable level.

An information sheet (also on our [website](#)) and map of relevant fisheries is attached. Fisheries have been identified as being relevant based on fishing licence overlap with the activity area, assessment of government fishing effort data (including Fishcube and AFMA) from recent years, fishing methods and water depth.

More information on the Scarborough development can be found [here](#).

Activity:

<i>Summary:</i>	Seabed intervention and Trunkline installation activities in Commonwealth waters for the Scarborough development.
<i>Location:</i>	Activities run from the Commonwealth – State waters boundary approximately 32 km north of Dampier to the Scarborough gas field located at Woodside-operated title block WA-61-L, approximately 375 km west-northwest of the Burrup Peninsula.
<i>Approx. Water Depth (m):</i>	~ 32 m – 1400 m
<i>Earliest commencement date:</i>	Seabed intervention activities: Q4 2022 pending approvals, vessel availability and weather constraints. Trunkline installation activities: Q4 2023 pending successful completion of State waters installation scope, approvals, vessel availability and weather constraints.
<i>Estimated duration:</i>	Approximately 24 months across multiple campaigns.
<i>Distance from Operational Area to nearest port/marina</i>	Eastern end of the Trunkline route overlaps with the Pilbara Port Authority Dampier Port Limits
<i>Distance from Operational Area to nearest marine park</i>	<ul style="list-style-type: none">The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cth), close to the northern boundary.

- Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone. A minimum 250 m buffer will be in place from the Marine Park boundaries.

Operational Areas

- **Scarborough Trunkline Project Area:** The proposed Trunkline from the Scarborough FPU (approximately 430 km north-west of the Burrup) to the State waters boundary and 1.5 km either side of the proposed Trunkline centreline to allow for the movement and positioning of vessels. This also includes Spoil Ground 5A, which is approximately 300 m wide and runs ~17 km from the State waters boundary.
- **Offshore Borrow Ground Project Area:** Offshore Borrow Ground (location where sand will be sourced). The Offshore Borrow Ground is approximately 17 km², located 20 km to the east of the proposed Trunkline route and adjacent to the Dampier Marine Park.

Relevant Fisheries

Commonwealth: North-West Slope Trawl Fishery

State: Mackerel Managed Fishery (Area 2 and 3), Pilbara Crab Managed Fishery, Nickol Bay Prawn Managed Fishery, Pilbara Trawl Fishery, Pilbara Trap Fishery, Pilbara Line Fishery, Marine Aquarium Fishery and Specimen Shell Fishery

Note: We note previous WAFIC advice that the Marine Aquarium Fishery and Specimen Shell Fishery are dive and wade fisheries at shallow water depth. We have taken a 'cautionary' approach given the water depth of the proposed activity (~ 32 m) and catch and effort data.

Commonwealth: Western Deepwater Trawl Fishery, Western Skipjack Fishery, Southern Bluefin Tuna Fishery, Western Tuna and Billfish Fishery

Additional Fisheries

(*Consultation based on AFMA advice to consult all fisheries with entitlements to fish in the area)

Exclusionary/Cautionary Zone:

Temporary safety exclusion zones will be confirmed prior to the activity commencing and will be issued with notifications to mariners at the time of the activity. The temporary exclusion zones will likely range between 500 – 1500 m depending on the vessel type and activity being carried out.

Vessels:

1.10 Letter sent to licence holders (Mackerel Areas 2 and 3, Pilbara Crab, Marine Aquarium, Specimen Shell, Nickol Bay Prawn, Southern Bluefin Tuna) (1 September 2021)

31 August 2021

Dear Licence Holder

WOODSIDE CONSULTATION - SCARBOROUGH SEABED INTERVENTION AND TRUNKLINE INSTALLATION ENVIRONMENT PLAN

Woodside is planning to submit an Environment Plan (EP) to undertake seabed intervention and trunkline installation activities in Commonwealth waters for the Scarborough development, in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth).

This EP falls under the primary environmental approval of the Scarborough Offshore Project Proposal (OPP) and will be conducted in line with relevant requirements of the OPP. The OPP includes a detailed description of activities and an assessment of impacts; with controls to develop acceptability criteria. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process. Woodside is proposing four Commonwealth EPs for the Scarborough development to be submitted to NOPSEMA in the next two years, and will consult with all relevant stakeholders ahead of each EP.

A separate EP is planned to address Trunkline installation and seabed intervention activities in State waters, for approval by the Western Australian Department of Mines, Industry Regulation and Safety. The location of the proposed Trunkline in State waters is shown on the Consultation Information Sheet.

Seabed intervention activities are planned to commence in 2022 and trunkline installation activities in 2023, pending approvals, vessel availability and weather constraints, in water depths ranging from approximately 32 m to 1400 m.

We have identified potential impacts to active commercial fishers and the environment, which are summarised below. We have endeavoured to reduce these risks to an as low as reasonably practicable level.

An information sheet (also on our website) and map of relevant fisheries is attached.

Fisheries have been identified as being relevant based on fishing licence overlap with the activity area, assessment of government fishing effort data (including Fishcube and AFMA) from recent years, fishing methods and water depth. Based on AFMA advice, Woodside is consulting with all Commonwealth fishery licence holders with entitlements to fish in the area.

More information on the Scarborough development can be found on our website.

Activity:

<i>Summary:</i>	Seabed intervention and Trunkline installation activities in Commonwealth waters for the Scarborough development.
<i>Location:</i>	Activities run from the Commonwealth – State waters boundary approximately 32 km north of Dampier to the Scarborough gas field located at Woodside-operated title block WA-61-L, approximately 375 km west-northwest of the Burrup Peninsula.
<i>Approx. Water Depth (m):</i>	~ 32 m – 1400 m
<i>Earliest commencement date:</i>	Seabed intervention activities: Q4 2022 pending approvals, vessel availability and weather constraints. Trunkline installation activities: Q4 2023 pending successful completion of State waters installation scope, approvals, vessel availability and weather constraints.
<i>Estimated duration:</i>	Approximately 24 months across multiple campaigns.
<i>Distance from Operational Area to nearest port/marina</i>	Eastern end of the Trunkline route overlaps with the Pilbara Port Authority Dampier Port Limits
<i>Distance from Operational Area to nearest marine park</i>	<ul style="list-style-type: none">• The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cth), close to the northern boundary.• Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone. A minimum 250 m buffer will be in place from the Marine Park boundaries.

1.12 Email sent to Karratha Recreational Marine Users and WA Game Fishing Association (31 August 2021)

Dear Stakeholder

Woodside is planning to submit an Environment Plan (EP) to undertake seabed intervention and trunkline installation activities in Commonwealth waters for the Scarborough development, in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth).

A Consultation Information Sheet is attached, which provides background on the proposed activity, including a summary of potential key risk and associated management measures. It is also available on our [website](#).

This EP falls under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP) and will be conducted in line with relevant requirements of the OPP. The OPP includes a detailed description of activities and an assessment of impacts; with controls to develop acceptability criteria. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process. Woodside is proposing four Commonwealth EPs for the Scarborough development to be submitted to NOPSEMA in the next two years, and will consult with all relevant stakeholders ahead of each EP.

A separate EP is planned to address Trunkline installation and seabed intervention activities in State waters, for approval by the Western Australian Department of Mines, Industry Regulation and Safety. The location of the proposed Trunkline in State waters is shown on the Consultation Information Sheet.

More information on the Scarborough development can be found [here](#).

Activity:

Summary:	Seabed intervention and Trunkline installation activities in Commonwealth waters for the Scarborough development.
Location:	Activities run from the Commonwealth – State waters boundary approximately 32 km north of Dampier to the Scarborough gas field located at Woodside-operated title block WA-61-L, approximately 375 km west-northwest of the Burrup Peninsula.
Approx. Water Depth (m):	~ 32 m – 1400 m
Earliest commencement date:	Seabed intervention activities: Q4 2022 pending approvals, vessel availability and weather constraints Trunkline installation activities: Q4 2023 pending successful completion of State waters installation scope, approvals, vessel availability and weather constraints.
Estimated duration:	Approximately 24 months across multiple campaigns
Distance from Operational Area to nearest port/marina	Eastern end of the Trunkline route overlaps with the Pilbara Port Authority Dampier Port Limits
Distance from Operational Area to nearest marine park	<ul style="list-style-type: none">The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cth), close to the northern boundary.

- Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone. A minimum 250 m buffer will be in place from the Marine Park boundaries.

Operational Areas

- **Scarborough Trunkline Project Area:** The proposed Trunkline from the Scarborough FPU (approximately 430 km north-west of the Burrup) to the State waters boundary and 1.5 km either side of the proposed Trunkline centreline to allow for the movement and positioning of vessels. This also includes Spoil Ground 5A, which is approximately 300 m wide and runs ~17 km from the State waters boundary.
- **Offshore Borrow Ground Project Area:** Offshore Borrow Ground (location where sand will be sourced). The Offshore Borrow Ground is approximately 17 km², located 20 km to the east of the proposed Trunkline route and adjacent to the Dampier Marine Park.

Vessels:

- Trailing suction hopper dredge (TSHD)
- Offshore construction vessel (OCV)
- Fall pipe vessel (rock dump)
- Primary Installation Vessel (PIV) multi-joint operation
- Shallow Water Lay Barge (SWLB)
- Anchor handling vessel/tug
- Pipe supply vessels
- Survey vessels
- Support vessels
- Fuel bunkering vessels

Feedback:

If you have any issues or concerns with these activities, any other issues relevant to this location then please respond to Woodside at:

Feedback@woodside.com.au or 1800 442 977.

Your feedback and our response will be included in our Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

Please provide your views by 30 September 2021.

1.13 Email sent to Pearl Producers Association (31 August 2021)

Dear [REDACTED]

Woodside is planning to submit an Environment Plan (EP) to undertake seabed intervention and trunkline installation activities in Commonwealth waters for the Scarborough development, in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth).

A Consultation Information Sheet is attached, which provides background on the proposed activity, including a summary of potential key risk and associated management measures. It is also available on our [website](#).

This EP falls under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP) and will be conducted in line with relevant requirements of the OPP. The OPP includes a detailed description of activities and an assessment of impacts; with controls to develop acceptability criteria. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process. Woodside is proposing four Commonwealth EPs for the Scarborough development to be submitted to NOPSEMA in the next two years, and will consult with all relevant stakeholders ahead of each EP.

A separate EP is planned to address Trunkline installation and seabed intervention activities in State waters, for approval by the Western Australian Department of Mines, Industry Regulation and Safety. The location of the proposed Trunkline in State waters is shown on the Consultation Information Sheet.

More information on the Scarborough development can be found [here](#).

Activity:

Summary:

Seabed intervention and Trunkline installation activities in Commonwealth waters for the Scarborough development.

Location:

Activities run from the Commonwealth – State waters boundary approximately 32 km north of Dampier to the Scarborough gas field located at Woodside-operated title block WA-61-L, approximately 375 km west-northwest of the Burrup Peninsula.

Approx. Water Depth (m):

~ 32 m – 1400 m

Earliest commencement date:

Seabed intervention activities: Q4 2022 pending approvals, vessel availability and weather constraints

Trunkline installation activities: Q4 2023 pending successful completion of State waters installation scope, approvals, vessel availability and weather constraints.

Estimated duration:	Approximately 24 months across multiple campaigns
Distance from Operational Area to nearest port/marina	Eastern end of the Trunkline route overlaps with the Pilbara Port Authority Dampier Port Limits
Distance from Operational Area to nearest marine park	<ul style="list-style-type: none">• The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cth), close to the northern boundary.• Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone. A minimum 250 m buffer will be in place from the Marine Park boundaries.
Operational Areas	<ul style="list-style-type: none">• Scarborough Trunkline Project Area: The proposed Trunkline from the Scarborough FPU (approximately 430 km north-west of the Burrup) to the State waters boundary and 1.5 km either side of the proposed Trunkline centreline to allow for the movement and positioning of vessels. This also includes Spoil Ground 5A, which is approximately 300 m wide and runs ~17 km from the State waters boundary.• Offshore Borrow Ground Project Area: Offshore Borrow Ground (location where sand will be sourced). The Offshore Borrow Ground is approximately 17 km², located 20 km to the east of the proposed Trunkline route and adjacent to the Dampier Marine Park.
Exclusionary/Cautious Zone:	Temporary safety exclusion zones will be confirmed prior to the activity commencing and will be issued with notifications to mariners at the time of the activity. The temporary exclusion zones will likely range between 500 – 1500 m depending on the vessel type and activity being carried out.
Vessels:	<ul style="list-style-type: none">• Trailing suction hopper dredge (TSHD)• Offshore construction vessel (OCV)• Fall pipe vessel (rock dump)• Primary Installation Vessel (PIV) multi-joint operation• Shallow Water Lay Barge (SWLB)• Anchor handling vessel/tug• Pipe supply vessels• Survey vessels• Support vessels• Fuel bunkering vessels

1.14 Email sent to Australian Fisheries Management Authority (AFMA) and CFA (31 August 2021)

Dear Stakeholder

Woodside is planning to submit an Environment Plan (EP) to undertake seabed intervention and trunkline installation activities in Commonwealth waters for the Scarborough development, in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth).

We have identified potential impacts to commercial fishers and the environment and are currently working to reduce these risks to as low as reasonably practicable as we develop the EP. These risks are summarised below.

An information sheet (also on our [website](#)) and map of relevant fisheries are attached. This EP falls under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP) and will be conducted in line with relevant requirements of the OPP. The OPP includes a detailed description of activities and an assessment of impacts; with controls to develop acceptability criteria. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process. Woodside is proposing four Commonwealth EPs for the Scarborough development to be submitted to NOPSEMA in the next two years, and will consult with all relevant stakeholders ahead of each EP.

A separate EP is planned to address Trunkline installation and seabed intervention activities in State waters, for approval by the Western Australian Department of Mines, Industry Regulation and Safety. The location of the proposed Trunkline in State waters is shown on the Consultation Information Sheet.

More information on the Scarborough development can be found [here](#).

1.17 Email sent to Murujuga Aboriginal Corporation (31 August 2021)

Dear ██████████

Further to our brief discussion this morning on this matter, Woodside is planning to submit an Environment Plan (EP) to undertake seabed intervention and Trunkline installation activities in Commonwealth waters for the Scarborough development, in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth). Consultation regarding this matter forms part of the consultation between Woodside and MAC agreed in the 2 June 2021 letter. The information here is for your awareness. A Consultation Information Sheet is attached, which provides background on the proposed activity, including a summary of potential key risk and associated management measures. It is also available on our [website](#).

This EP falls under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP) and will be conducted in line with relevant requirements of the OPP. The OPP includes a detailed description of activities and an assessment of impacts; with controls to develop acceptability criteria. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process. Woodside is proposing four Commonwealth EPs for the Scarborough development to be submitted to NOPSEMA in the next two years, and will consult with all relevant stakeholders ahead of each EP.

A separate EP is planned to address Trunkline installation and seabed intervention activities in State waters, for approval by the Western Australian Department of Mines, Industry Regulation and Safety. The location of the proposed Trunkline in State waters is shown on the Consultation Information Sheet.

More information on the Scarborough development can be found [here](#).

Activity:

Summary:	Seabed intervention and Trunkline installation activities in Commonwealth waters for the Scarborough development.
Location:	Activities run from the Commonwealth – State waters boundary approximately 32 km north of Dampier to the Scarborough gas field located at Woodside-operated title block WA-61-L, approximately 375 km west-northwest of the Burrup Peninsula.
Approx. Water Depth (m):	~ 32 m – 1400 m
Earliest commencement date:	Seabed intervention activities: Q4 2022 pending approvals, vessel availability and weather constraints Trunkline installation activities: Q4 2023 pending successful completion of State waters installation scope, approvals, vessel availability and weather constraints.
Estimated duration:	Approximately 24 months across multiple campaigns
Distance from Operational Area to nearest port/marina	Eastern end of the Trunkline route overlaps with the Pilbara Port Authority Dampier Port Limits
Distance from Operational Area to nearest marine park	<ul style="list-style-type: none">• The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cth), close to the northern boundary.• Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone. 1.18.1 Oil Pollution First Strike Plan emailed to Pilbara Ports Authority – 5 November 2021

Dear [REDACTED]

As part of Woodside's ongoing consultation for its current and planned activities, and as agreed during a recent meeting between the Woodside Scarborough Project Team and Pilbara Ports Authority (PPA), I would like to advise PPA that Woodside is preparing the *Scarborough Subsea Intervention and Trunkline Installation Environment Plan* to undertake seabed intervention and trunkline installation activities in Commonwealth waters for the proposed Scarborough development and would like to offer PPA the opportunity to provide feedback on the First Strike Plan.

Information is presented as follows:

- A Consultation Information Sheet providing information on the proposed activities is available on Woodside's website [here](#).
- The *Scarborough Subsea Infrastructure and Trunkline Installation First Strike Plan* is attached. This will form part of the approval submission in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth).

Woodside propose to submit an EP in December 2021. Should you require additional information or have a comment to make about the First Strike Plan, please contact me by close of business 6 December to allow us sufficient time to inform our activity planning and EP development.

Feedback can be submitted via email or letter to: feedback@woodside.com.au or by phone at [REDACTED].

Your feedback and our response will be included in our Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

We look forward to hearing from you.

Many thanks,

[REDACTED]

Woodside Feedback

1.19 Email sent to KDCCI (31 August 2021)

Dear [REDACTED]

Woodside is planning to submit an Environment Plan (EP) to undertake seabed intervention and Trunkline installation activities in Commonwealth waters for the Scarborough development, in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth).

As part of this process, Woodside is consulting the Karratha and District Chamber of Commerce individually and as a member of the Karratha Community Liaison Group. A Consultation Information Sheet is attached, which provides background on the proposed activity, including a summary of potential key risk and associated management measures. It is also available on our [website](#).

This EP falls under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP) and will be conducted in line with relevant requirements of the OPP. The OPP includes a detailed description of activities and an assessment of impacts; with controls to develop acceptability criteria. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process. Woodside is proposing four Commonwealth EPs for the Scarborough development to be submitted to NOPSEMA in the next two years, and will consult with all relevant stakeholders ahead of each EP.

A separate EP is planned to address Trunkline installation and seabed intervention activities in State waters, for approval by the Western Australian Department of Mines, Industry Regulation and Safety. The location of the proposed Trunkline in State waters is shown on the Consultation Information Sheet.

More information on the Scarborough development can be found [here](#).

Activity:

Summary:	Seabed intervention and Trunkline installation activities in Commonwealth waters for the Scarborough development.
Location:	Activities run from the Commonwealth – State waters boundary approximately 32 km north of Dampier to the Scarborough gas field located at Woodside-operated title block WA-61-L, approximately 375 km west-northwest of the Burrup Peninsula.
Approx. Water Depth (m):	~ 32 m – 1400 m
Earliest commencement date:	Seabed intervention activities: Q4 2022 pending approvals, vessel availability and weather constraints Trunkline installation activities: Q4 2023 pending successful completion of State waters installation scope, approvals, vessel availability and weather constraints.

- Estimated duration:** Approximately 24 months across multiple campaigns
- Distance from Operational Area to nearest port/marina** Eastern end of the Trunkline route overlaps with the Pilbara Port Authority Dampier Port Limits
- Distance from Operational Area to nearest marine park**
- The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cth), close to the northern boundary.
 - Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone. A minimum 250 m buffer will be in place from the Marine Park boundaries.
- Operational Areas**
- **Scarborough Trunkline Project Area:** The proposed Trunkline from the Scarborough FPU (approximately 430 km north-west of the Burrup) to the State waters boundary and 1.5 km either side of the proposed Trunkline centreline to allow for the movement and positioning of vessels. This also includes Spoil Ground 5A, which is approximately 300 m wide and runs ~17 km from the State waters boundary.
 - **Offshore Borrow Ground Project Area:** Offshore Borrow Ground (location where sand will be sourced). The Offshore Borrow Ground is approximately 17 km², located 20 km to the east of the proposed Trunkline route and adjacent to the Dampier Marine Park.
- Vessels:**
- Trailing suction hopper dredge (TSHD)
 - Offshore construction vessel (OCV)
 - Fall pipe vessel (rock dump)
 - Primary Installation Vessel (PIV) multi-joint operation
 - Shallow Water Lay Barge (SWLB)
 - Anchor handling vessel/tug
 - Pipe supply vessels
 - Survey vessels
 - Support vessels
 - Fuel bunkering vessels

Feedback:

If you have any issues or concerns with these activities, any other issues relevant to this location then please respond to Woodside at: Feedback@woodside.com.au or 1800 442 977.

Your feedback and our response will be included in our Environment Plan which will be submitted to submitted to the National Offshore Petroleum Safety and Environmental

Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

Please provide your views by 30 September 2021.

Best regards,

1.20 Email sent to City of Karratha (31 August 2021)

Dear [Redacted]

Woodside is planning to submit an Environment Plan (EP) to undertake seabed intervention and Trunkline installation activities in Commonwealth waters for the Scarborough development, in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth).

As part of this process, Woodside is consulting the City of Karratha individually and as a member of the Karratha Community Liaison Group. A Consultation Information Sheet is attached, which provides background on the proposed activity, including a summary of potential key risk and associated management measures. It is also available on our [website](#).

This EP falls under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP) and will be conducted in line with relevant requirements of the OPP. The OPP includes a detailed description of activities and an assessment of impacts; with controls to develop acceptability criteria. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process. Woodside is proposing four Commonwealth EPs for the Scarborough development to be submitted to NOPSEMA in the next two years, and will consult with all relevant stakeholders ahead of each EP.

A separate EP is planned to address Trunkline installation and seabed intervention activities in State waters, for approval by the Western Australian Department of Mines, Industry Regulation and Safety. The location of the proposed Trunkline in State waters is shown on the Consultation Information Sheet.

More information on the Scarborough development can be found [here](#).

Activity:

Summary:

Seabed intervention and Trunkline installation activities in Commonwealth waters for the Scarborough development.

Location:

Activities run from the Commonwealth – State waters boundary approximately 32 km north of Dampier to the Scarborough gas field located at Woodside-operated title

block WA-61-L, approximately 375 km west-northwest of the Burrup Peninsula.

Approx. Water Depth (m): ~ 32 m – 1400 m

Earliest commencement date: Seabed intervention activities: Q4 2022 pending approvals, vessel availability and weather constraints
Trunkline installation activities: Q4 2023 pending successful completion of State waters installation scope, approvals, vessel availability and weather constraints.

Estimated duration: Approximately 24 months across multiple campaigns

Distance from Operational Area to nearest port/marina Eastern end of the Trunkline route overlaps with the Pilbara Port Authority Dampier Port Limits

Distance from Operational Area to nearest marine park

- The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cth), close to the northern boundary.
- Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone. A minimum 250 m buffer will be in place from the Marine Park boundaries.

Operational Areas

- **Scarborough Trunkline Project Area:** The proposed Trunkline from the Scarborough FPU (approximately 430 km north-west of the Burrup) to the State waters boundary and 1.5 km either side of the proposed Trunkline centreline to allow for the movement and positioning of vessels. This also includes Spoil Ground 5A, which is approximately 300 m wide and runs ~17 km from the State waters boundary.
- **Offshore Borrow Ground Project Area:** Offshore Borrow Ground (location where sand will be sourced). The Offshore Borrow Ground is approximately 17 km², located 20 km to the east of the proposed Trunkline route and adjacent to the Dampier Marine Park.

Vessels:

- Trailing suction hopper dredge (TSHD)
- Offshore construction vessel (OCV)
- Fall pipe vessel (rock dump)
- Primary Installation Vessel (PIV) multi-joint operation
- Shallow Water Lay Barge (SWLB)
- Anchor handling vessel/tug

- Pipe supply vessels
- Survey vessels
- Support vessels
- Fuel bunkering vessels

Feedback:

If you have any issues or concerns with these activities, any other issues relevant to this location then please respond to Woodside at:

Feedback@woodside.com.au or 1800 442 977.

Your feedback and our response will be included in our Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth)*.

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

Please provide your views by 30 September 2021.

Best regards,

2.1 Updated Consultation Information Sheet (January 2023)

STAKEHOLDER CONSULTATION

INFORMATION SHEET

January 2023

SCARBOROUGH SEABED INTERVENTION AND TRUNKLINE INSTALLATION

CARNARVON BASIN, NORTH-WEST AUSTRALIA

Woodside is planning to undertake seabed intervention and Trunkline Installation activities in Commonwealth waters for the proposed Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. In accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (OEG).

The activity involves installation of a carbon steel pipeline (Trunkline) that runs approximately 450 km from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. The scope of this Environment Plan (EP) covers seabed intervention and installation activities for the section of the Trunkline in Commonwealth waters from the State waters boundary to the Pipeline End Termination (PET) in WA-61-L. A separate EP is

planned to address seabed intervention and Trunkline installation activities in State waters, for approval by the Western Australian Department of Mines, Industry Regulation and Safety.

Subject to relevant approvals and other constraints such as vessel availability and weather, seabed intervention activities are expected to start in mid 2023. Trunkline installation activities in Commonwealth waters are expected to commence in late 2023 following successful completion of the State waters installation scope. The Petroleum Activities Program is expected to take around 24 months to execute with activities occurring in multiple campaigns.

Proposed activity

Table 1 – Activity summary and project vessels

Item	Details
Location	<ul style="list-style-type: none"> • Carnarvon Basin, North-West Australia
Water depth	<ul style="list-style-type: none"> • Approximately 32 m (Trunkline route of State waters boundary) to 1400 m (deepest point approximately 275 km along the Trunkline route)
Earliest commencement date	<ul style="list-style-type: none"> • Seabed intervention activities: mid 2023 pending approvals, vessel availability and weather constraints • Trunkline installation activities: Q4 2023 pending successful completion of State waters installation scope, approvals, vessel availability and weather constraints
Estimated duration	<ul style="list-style-type: none"> • Approximately 24 months across multiple campaigns
Distance from Operational Area to nearest port/marina	<ul style="list-style-type: none"> • Eastern end of the Trunkline route overlaps with the Pilbara Port Authority Dampier Pen. Limits
Distance from Operational Area to nearest marine park	<ul style="list-style-type: none"> • The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cwith), close to the northern boundary • Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone
Seabed Intervention	
Key Vessels	<ul style="list-style-type: none"> • Trailing suction hopper dredge (TSHD) • Offshore construction vessel (OCV) • Rock Installation Vessel (RIV) • Survey vessels • Support vessels • Fuel bunkering vessels
Key Activities	<ul style="list-style-type: none"> • Surveys: <ul style="list-style-type: none"> • Geophysical (including hydrographic surveys) • Geotechnical • Pre-lay survey before pipelay (visual and multibeam echo sounder) • Trenching along the Trunkline route and material disposal at existing Spoil Ground 5A • Borrow ground dredging and backfill along the Trunkline • Continental slope crossing seabed preparation • Trunkline and infrastructure crossing supports installation, using rock and mattresses • Trunkline pre and post lay span rectification • Contingent seabed intervention activities including maintenance, dredging/excavation of resettled material in the trench prior to pipelay, post lay dredging, gravel bags and rock placement
Trunkline Installation	
Key Vessels	<ul style="list-style-type: none"> • Pipelay Vessel (PV) multi-joint operation • Shallow Water Lay Barge (SWLB) • Anchor handling vessel/tug • Pipe supply vessels • Offshore construction vessel (OCV) • Survey vessels • Fuel bunkering vessels
Key activities	<ul style="list-style-type: none"> • Surveys: <ul style="list-style-type: none"> • Pre-lay survey of the trunkline route prior to commencement of pipelay (visual and multibeam echo sounder) • Post-lay as built survey of the completed trunkline (visual and multibeam echo sounder) • Installation of the Trunkline by a SWLB in the shallow water section of the route where the DP pipelay vessel may not be able to access due to water depth restrictions • Setting of SWLB anchors with anchor handling vessel/tug • Installation of the Trunkline by the PV, including over other operator pipelines • Installation of PLEI and in-line tee assembly, hot tap tee assembly and ancillary structures as required through design by the PV • Continuous delivery of pipe to the SWLB and PV by pipe supply vessels • Installation of the foundations for the PLEI structure by a construction vessel prior to the installation of the PLET • Dry pre-commissioning of the trunkline by a construction vessel • Contingent activities including wet buckle recovery and Flood, Clean, Gauge, Testing

2 Scarborough Seabed Intervention and Trunkline Installation

Proposed locations

The Operational Area includes the following Project Areas:

- **Scarborough Trunkline Project Area:** The proposed Trunkline from the Scarborough FPSU (approximately 430 km north-west of the Burrup) to the State waters boundary and 1.5 km either side of the proposed Trunkline centreline to allow for the movement and positioning of vessels (includes Spoil Ground 5A which is included in the Trunkline operational area).
- **Offshore Borrow Ground Project Area:** Offshore Borrow Ground (location where sand will be sourced to assist with Trunkline stabilisation).

Within Commonwealth waters, the Scarborough Trunkline will extend from the FPSU towards the existing Pluto offshore platform and infrastructure, approximately 200 km offshore north-west of the Burrup. The Scarborough Trunkline will then deviate to the south to avoid the existing facilities and minimise environmental, technical and safety risks. From approximately 20 km south-east of the Pluto platform, the Trunkline will be routed alongside the Pluto Trunkline until it reaches Mermaid Sound.

Sand may be required to assist with stabilisation along a ~20 km section of the Scarborough Trunkline from the State waters boundary. This sand is proposed to be obtained from the Offshore Borrow Ground Project Area in Commonwealth waters, as shown in Figure 1. The Offshore Borrow Ground is approximately 17 km², located 20 km to the east of the proposed Trunkline route and adjacent to the Dampier Marine Park. A minimum 250 m buffer will be in place from the Marine Park boundaries.

Communications with mariners

Safety exclusion zones will apply around applicable seabed intervention and the Trunkline installation vessels. Marine notices will be issued prior to activity commencement to alert vessels which may be operating in waters nearby.

Implications for stakeholders

Woodside will consult relevant stakeholders whose interests, functions, and activities may be affected by the proposed activities. We will also keep informed other stakeholders who have an identified interest in the planned activities. Woodside has undertaken an assessment to identify potential risks to the marine environment and relevant stakeholders, considering timing, duration, location and potential impacts arising from the construction and installation activities. This EIP approval falls under the primary environmental approval of the Scarborough Offshore Project Proposal (OPP) and the activities will be conducted in line with relevant requirements of the OPP. A number of mitigation and management measures will be implemented and are summarised in Table 2. These measures will continue to be developed in conjunction with the OP, including impact assessments and controls to reduce impacts to an ALARP and acceptable level. Further details will be provided in the EIP.

About Scarborough

The Scarborough gas resource is located offshore, approximately 375 km west-northwest of the Burrup Peninsula and is part of the Greater Scarborough gas fields which are estimated to hold 15.0 tcf (20, 100%) of dry gas.

Woodside, as operator of the Scarborough Joint Venture, is proposing to develop the Scarborough gas resource through new offshore facilities connected by an approximately 430 km pipeline to a proposed expansion of the existing Pluto LNG onshore facility (Pluto Train 2).

For more information about the proposed Scarborough development, visit woodside.com.au.

Environment That May Be Affected (EMBA)

The environment that may be affected (EMBA) is the largest spatial extent where the Scarborough Seabed Intervention and Trunkline Installation Activity could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this Environment Plan (EP) is determined by a highly unlikely release of marine diesel to the environment as a result of vessel collision. This is depicted in Figure 2.

The EMBA does not represent the extent of predicted impact of the highly unlikely marine diesel release. Rather, the EMBA represents the merged area of many possible paths a highly unlikely hydrocarbon release could travel depending on the weather and ocean conditions at the time of the release.

This means in the highly unlikely event a hydrocarbon release does occur, the entire EMBA will not be affected and the specific and minimal part of the EMBA that is affected will only be known at the time of the release.

The three hydrocarbon spill modeling sites are representative of the range of locations where vessel collision could occur in the Operational Area and are summarised below. The EMBA has been defined using a combination of all three locations:

- **Outside Mermaid Sound (Location 1):** Near the State Waters Boundary, this site represents the closest location to shore activities that will occur under this EP.
- **Montebello Marine Park Multiple Use Zone (Location 2):** This location was chosen to represent worst-case potential impact potential to sensitive environmental receptors and is almost half-way along the trunkline length.
- **Scarborough Field (Location 3):** This location is representative of a spill in the deep-water open-ocean environment in permit area WA-61-L, close to the pipeline end termination (PIET) and activities at the most western end of the Operational Area.

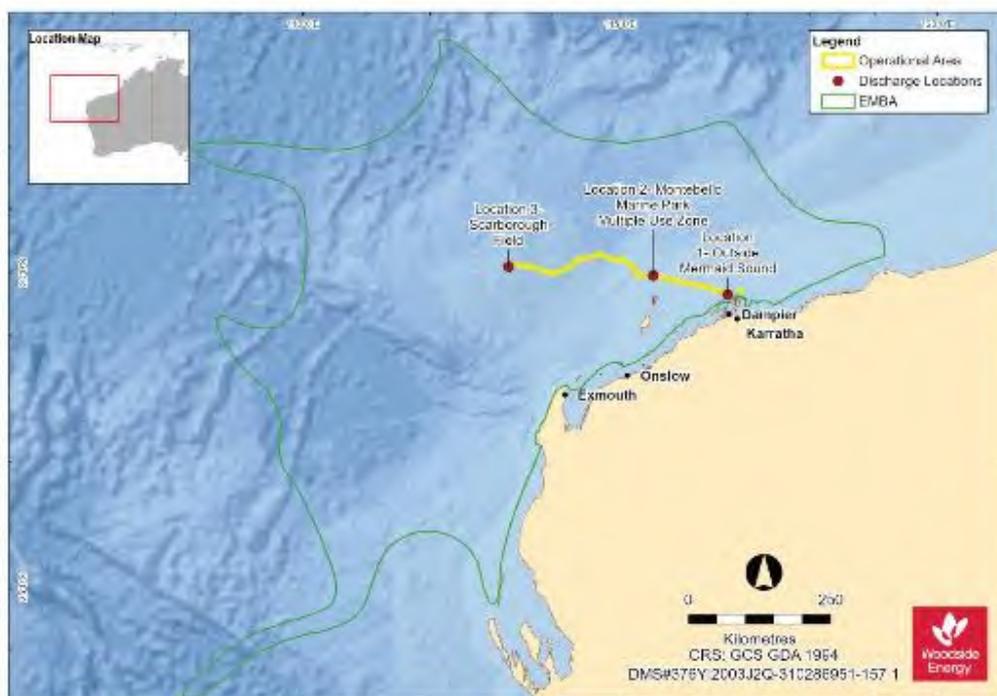

Figure 2. Environment that May Be Affected by the Scarborough Seabed Intervention and Trunkline Installation Activity

Mitigation and management measures

Woodside has undertaken an assessment to identify potential impacts and risks to the environment arising from the Scarborough Seabed Intervention and Trunkline Installation Activity.

A number of mitigation and management measures for the Scarborough Seabed Intervention and Trunkline Installation Activity are outlined in **Table 2**.

Table 2 - Summary of key risks and/or impacts and preliminary management measures for the Scarborough Seabed Intervention and Trunkline Installation Activity

Potential Impact/Risk	Description of Source of Potential Impact/Risk	Description of Potential Impact/Risk	Preliminary Mitigation and/or Management Measures ¹
Planned			
Physical presence and interactions with other marine users	<ul style="list-style-type: none"> Several vessel types will be required to complete the activity, including a Trailing Suction Hopper Dredge (TSHD), Rock Installation Vessel (RIV), Pilelay Vessel (PV), Offshore Construction Vessel (OSV) and other support and survey vessels. Vessels will not usually anchor within the Operational Area. The physical presence and movement of project vessels within the Operational Area has the potential to displace other marine users. Vessels will typically be moving continually. PV will move at a rate of around 3 km per day. Helicopters will be used to transport personnel. Transport will occur on a regular basis, potentially with multiple flights per day for larger vessels such as the PV, and up to six days a week. The activity may not be executed as a single campaign or in a consecutive sequence. 	<ul style="list-style-type: none"> Fishing vessels will not be excluded from the entire Operational Area for the total duration of the Scarborough Seabed Intervention and Trunkline Installation Activity. Displacement of fishing activities will be temporary and have no lasting effect. Impact to commercial shipping is limited to the temporary presence of activity vessels. Several Australian Maritime Safety Authority (AMSA) marine fairways intersect with the Operational Area. The presence of vessels and exclusion zones around them, will be limited to specific areas of the Operational Area at any one time, therefore resulting in a minor interference and localised displacement/avoidance by shipping. Potential impacts to tourism and recreational activities would likely be a minor interference (i.e. navigational hazard) and temporary, localised displacement/avoidance. Several oil and gas facilities are located in proximity to the Operational Area. Activities associated with the physical presence of vessels may result in localised, short-term interference to industry vessels requiring minor course alteration or readjustment in vessel management. 	<ul style="list-style-type: none"> Vessels adhere to regulatory requirements for navigational safety. Establish temporary 500 m exclusion zones around applicable vessels which are communicated to marine users. Notify relevant government departments, fishing industry representative bodies and licence holders of activities prior to commencement and upon completion of activities. Notify the Australian Hydrographic Service (AHS) prior to commencement of the activity to enable them to update maritime charts, so that marine users are aware of the activity. Consult with relevant persons so that they are informed of the proposed activities.

¹ This EP is currently under assessment - these mitigation and management measures are subject to change through the consultation and assessment process and may not represent content in the publicly available EP or in the final plan once accepted.

Potential Impact/Risk	Description of Source of Potential Impact/Risk	Description of Potential Impact/Risk	Preliminary Mitigation and/or Management Measures ¹
<p>Physical presence – seabed disturbance (trenching, spoil disposal, borrow ground dredging and trunkline backfill)</p>	<ul style="list-style-type: none"> To help stabilise the trunkline, seabed trenching and sand backfill over the trunkline will occur no further than 50 km offshore. Spoil from trenching will be placed in an existing spoil ground, consistent with a Sea Dumping Permit (502019/39852). Sand for trunkline backfill will be sourced from an offshore borrow ground area with dredging and backfill activities being carried out by a TSHD. 	<ul style="list-style-type: none"> Seabed disturbance has the potential to result in change in habitat, water quality and sediment quality, which may in turn affect fauna. Water quality change occurs when seabed sediments enter the water column (turbidity). Turbidity may occur during an activity which requires contact with, or occurs in proximity to, the seabed. After a period, the suspended sediments settle and the turbidity in the water column returns to pre-disturbance levels. The mobilisation of sediments along the trunkline during trenching and installation, and during borrow ground dredging activities may alter the seabed habitats over which the activities occur, resulting in community changes. Given the habitats likely to be present along the trunkline and within the borrow ground area, and the temporary nature of the elevations in turbidity, the potential impacts from seabed disturbance on epifauna and infauna is considered to be slight. Sediment dispersion modelling has indicated indirect impacts to coral habitat of the Dampier Archipelago are not predicted from seabed intervention activities in Commonwealth waters. Seabed disturbance is not expected to impact adversely on biologically important behaviours or biologically important habitat of marine turtles, including habitat critical to survival. Displacement of individuals from areas utilised as foraging habitat will not result in significant impacts at a population level. The project area has been subject to ethnographic surveys, which have found no cultural heritage values that will be affected by the development. Sediment dispersion modelling has indicated that detectable water quality changes are not predicted within the National Park Zone (I) of the Dampier Australian Marine Park (AMP). 	<ul style="list-style-type: none"> Comply with Sea Dumping Permit so that dredged material isn't placed outside approved spoil ground and bathymetric survey of the disposal sites is undertaken as required. Implement the water quality monitoring program and Tiered Monitoring and Management Framework to manage water quality associated with Commonwealth dredging, spoil disposal and backfill activities to avoid reversible impacts to coral communities as the most sensitive receptor in Mermaid Sound and sponges in the offshore waters. Implement 250 m buffer zone between the offshore borrow ground and the Dampier Australian Marine Park (AMP). TSHD draghead will be positioned within approved footprints prior to and during trenching, borrow ground dredging and backfill activities. TSHD controls in place to minimise to sediment loss from the dredge.

¹ Scarborough Seabed Intervention and Trunkline Installation

Potential Impact/Risk	Description of Source of Potential Impact/Risk	Description of Potential Impact/Risk	Preliminary Mitigation and/or Management Measures ¹
Physical presence - seabed disturbance (Intervention and Trunkline Installation)	<ul style="list-style-type: none"> Seabed disturbance may result from: <ul style="list-style-type: none"> Trunkline and ancillary structures installation, Pipeline and infrastructure crossings; and Other intervention works such as continental slope excavation, PLCT and foundation installation and Remotely Operated Vehicle (ROV)/survey activities. 	<ul style="list-style-type: none"> Seabed disturbance has the potential to result in change in habitat, water quality and sediment quality, which may in turn affect fauna. However, impacts from seabed disturbance will be highly localised and temporary in nature. The mobilisation of sediments along the trunkline during installation, and placement of infrastructure may alter the seabed habitats over which the activities occur, resulting in epifauna and infauna community changes. The potential impacts from seabed disturbance on epifauna and infauna is considered to be slight based on the localised footprint of disturbance and temporary nature of the elevations in turbidity. It is unlikely interesting turtles will occur in the Trunkline Project Area near the Montebello Islands, and seabed disturbance adjacent to the Dampier Archipelago is not expected to impact adversely on biologically important behaviours or biologically important habitat, including habitat critical to the survival of marine turtles. The project area has been subject to ethnographic surveys which have found no cultural heritage values will be affected by the development. Impacts from seabed disturbance within the Montebello Australian Marine Park (AMP) are considered to be minor and are not inconsistent with the objectives of the North-West Marine Parks Network Management Plan or the zoning of the Montebello AMP. Impacts to Key Ecological Features (KEFs) are considered to be minor as the disturbance will occur in a small proportion of each of the KEFs and avoids important or substantial areas of habitat, including hard substrates of the Ancient Coastline at 125 m Depth Contour KEF. 	<ul style="list-style-type: none"> Infrastructure will be placed on the seabed within the predefined design footprint using positioning technology to limit seabed disturbance. Design for the continental slope crossing is engineered to minimise seabed excavation. Excavated material for the continental slope crossing will be placed in designated areas near the trench to limit seabed disturbance. If rock placement test dumps are required, they will be conducted within the indicative 30 m trunkline corridor to limit the seabed disturbance. No planned temporary placement of equipment on the seabed will occur within the Montebello AMP. Additional analysis of seabed mapping data of the outer shelf area to identify archaeological values, and conduct significance, impact and mitigation assessments required for new values identified.

Potential Impact/Risk	Description of Source of Potential Impact/Risk	Description of Potential Impact/Risk	Preliminary Mitigation and/or Management Measures*
Light emissions	<ul style="list-style-type: none"> Project vessels will use external lighting to navigate and conduct safe operations at night. Vessel lighting will also be used to communicate vessels' presence to other marine users (i.e. navigation/warning lights). The activity may not be executed as a single campaign or in a consecutive sequence, therefore light emissions may occur at any time during the period of the OP. Once the activities are completed, no permanent ongoing project lighting will occur in these localities. 	<ul style="list-style-type: none"> Light emissions can affect fauna (such as marine turtles and birds) in two main ways: <ol style="list-style-type: none"> Behaviour: artificial lighting has the potential to create a constant level of light at night that can override natural levels and cycles. Orientalion: if an artificial light source is brighter than a natural source, the artificial light may override natural cues, leading to disorientation. Light emissions from project vessels are unlikely to result in more than localised, behavioural disturbance to isolated transient marine turtle individuals, with no lasting effect to the species. The distance between turtle nesting beaches and the Operational Area at the closest point (6.6 km to Legendre Island and >10 km to closest nesting beach on Legendre Island and 11 km to Rosemary Island) are greater than the zone where behavioural impacts from vessel lighting are possible. Therefore, impacts to nesting female turtles, including discouraging females from nesting, or affecting nest site selection and site-finding behaviour, are not predicted, and females are not expected to be displaced from nesting habitat. Potential impacts to seabirds and migratory shorebirds are expected to be localised within the vicinity of vessels. It is highly unlikely adult nocturnal seabird foraging will be disturbed given the localised light emissions from actively vessels. Diurnal lighting impacts to diurnal seabirds on the islands of the Dampier Archipelago are not expected based on the maximum extent of lighting emissions from the modeling and behaviour of diurnal seabirds as they roost on islands and mainland habitat from dusk to dawn. For activities occurring within the Monaballa Marine Park, and adjacent to the Dampier Marine Park, the short-term and transient nature of activities associated with vessel light emissions will not be inconsistent with the objectives of the management plan for the North-West Marine Park Network. 	<ul style="list-style-type: none"> Lighting will be limited to the minimum required for navigation and safety requirements except in emergency circumstances. Implement the Woodside Seabird Management Plan. Relevant crew will be trained in light reduction measures when operating within 20 km of Islands between December and April. Crew transfers which require direction of floodlights outside the vessel will preferentially occur during daylight hours, when vessels are within 20 km of Islands between December and April.
Atmospheric emissions and greenhouse gas (GHG) emissions	<ul style="list-style-type: none"> Atmospheric Emissions and Greenhouse Gas (GHG) Emissions 	<ul style="list-style-type: none"> Emissions from project vessels could result in temporary, localised reductions in air quality in the immediate vicinity of the vessels. Although the Offshore Borrow Ground Project Area and part of the Trunkline Project Area are located closer to the shore, they remain in open ocean and well removed from nearest residential or sensitive populations of the Western Australian coast. Given the short duration and exposed location of project vessels, low volumes of atmospheric emissions will be dispersed rapidly, therefore biodiversity, ecological integrity, social amenities and human health will not be impacted. Given the nature and scale of GHG emissions from vessel fuel usage for this activity, the potential GHG impact and risk from this activity is considered negligible. 	<ul style="list-style-type: none"> Comply with regulatory requirements for marine air pollution and GHG emissions reporting. Vessel operations planned, where practicable, to minimise fuel consumption and associated GHG/air emissions. Fuel types will be selected to reduce expected GHG emissions. Project vessels will not use heavy fuel oil (HFO) or intermediate fuel oil (IFO). Contractors engaged on energy/GHG emissions efficiencies and opportunities identified and implemented where reasonably practicable. Track and review GHG emissions during the activity with the objective to identify further opportunities to improve efficiencies.

8 Scarborough Seabed Intervention and Trunkline Installation

Potential Impact/Risk	Description of Source of Potential Impact/Risk	Description of Potential Impact/Risk	Preliminary Mitigation and/or Management Measures ¹
<p>Routine acoustic emissions</p>	<ul style="list-style-type: none"> Project vessels will generate noise in the air and underwater due to the operation of thruster engines, propellers, and on-board machinery etc. Underwater noise may also be generated by geophysical sources during surveys, positioning equipment (transponders), Dynamic Positioning (DP) systems on vessels, and helicopters. 	<ul style="list-style-type: none"> Elevated underwater noise can affect marine fauna, including marine mammals, turtles and fish in three main ways: <ol style="list-style-type: none"> By causing direct physical effects, including injury or hearing impairment. Hearing impairment may be temporary or permanent. Through disturbance leading to behavioural changes or displacement from important areas. The occurrence and intensity of disturbance is highly variable and depends on a range of factors relating to the animal and situation. By masking or interfering with other biologically important sounds (including vocal communication, and location, signals and sounds produced by predators or prey). It is not credible that permanent and temporary thresholds would be exceeded for pygmy blue whales transiting through the Operational Area during migration seasons. Vessel related activities occurring within the migration Biologically Important Areas (BIAs) during migration seasons for pygmy blue whales and humpback whales, may result in a behavioral response from individuals or groups of whales transiting in proximity to vessels. Marine turtles within the Operational Area are expected to be transient and unlikely to remain within 150 m of the vessels for 24-hours, and therefore permanent and temporary thresholds are not expected to be reached. Behavioural impacts to marine turtles from continuous noise sources are expected to be short-term and localised. Potential impacts from acoustic emissions on fish, sharks and rays are likely to be restricted to localised and temporary avoidance behaviour, and individuals impacted are unlikely to represent a significant proportion of the population within the Operational Area and the region overall. 	<ul style="list-style-type: none"> Comply with regulatory requirements for interactions with marine megafauna to prevent adverse interactions. The use of trained vessel crew to carry out observations for marine megafauna on relevant primary installation vessels. Limit the number of pipe supply vessels using DP alongside the pipelay vessel during certain times of the year and at certain locations, based on the likelihood of pygmy blue whale encounter. Manage vessel speed in the humpback whale and pygmy blue whale BIAs during migratory seasons within the Operational Area to minimise vessel noise. Periodic inspection and/or maintenance to ensure optimal performance to minimise extraneous noise emissions of critical equipment onboard relevant primary installation vessels.

Potential Impact/Risk	Description of Source of Potential Impact/Risk	Description of Potential Impact/Risk	Preliminary Mitigation and/or Management Measures ¹
Routine and non-routine discharges - project vessels and seabed intervention	<ul style="list-style-type: none"> Sewage, greywater and macerated food waste will be discharged from project vessels. Blige water, deck drainage and brine and cooling water may also be discharged. Cement and grout from seabed intervention activities may be discharged. 	<ul style="list-style-type: none"> The main impact associated with ocean disposal of sewage and other organic wastes (i.e. putrescible waste) is eutrophication. Eutrophication occurs when the addition of nutrients, such as nitrates and phosphates, causes adverse changes to the ecosystem including short-term, localised impacts to water quality. Impacts on water quality will have no lasting effect due to the transient nature of vessels, high level of dilution with little continuous discharge in a stationary location. Cement discharges can result in turbidity in the water column. Reduction in water quality will be temporary (limited to the cement operational discharges) and due to small volumes are likely to be subject to rapid dispersion and dilution by prevailing currents. It is possible marine fauna transiting the localised area may come in contact with vessel discharges. While the likely presence of marine fauna varies at different times of the year depending on migration, foraging and breeding patterns in the region, the potential for impact remains low due to the localised nature of discharges and rapid dilution. Planktonic productivity in the North-West Marine Region is low. No significant impacts from the planned routine discharges are expected because of the minor quantities involved, the expected localised mixing zone, and high level of dilution into the open water marine environment. Impacts to plankton from greywater, sewerage or brine and cooling water discharges are not expected. 	<ul style="list-style-type: none"> Marine discharges will be managed according to regulatory requirements. Chemicals will be selected with the lowest practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process. Project vessels (excluding PV) operating in the Montebello Marine Park will avoid making vessel discharges of sewage, greywater and food waste, until outside the Montebello Marine Park Multiple Use Zone, unless vessel safety is compromised.
Unplanned hydrocarbon release – vessel collision	<ul style="list-style-type: none"> Project vessels will use marine diesel fuel, meaning a vessel collision involving a project vessel or third party during the activity may result in the release of marine diesel. For a collision to result in the worst-case scenario diesel release, several factors must occur as follows: <ul style="list-style-type: none"> Identified causes of vessel interaction must result in a collision. The collision has enough force to penetrate the vessel hull and in the exact location of the fuel tank. The fuel tank must be full or at least of volume which is higher than the point of penetration. 	<ul style="list-style-type: none"> Marine diesel is a relatively volatile, non-persistent nature hydrocarbon with up to 35% evaporating within the first 24 hours. Potential impacts across the DMBA were assessed including receptors such as plankton, mangroves, seabirds and migratory shorebirds, saltmarshes, coral, tourism, recreation and cultural heritage (for example). Taking into account receptor sensitivity, the highest consequence rating for this unplanned event was 'Major' for potential change in coral habitat. Other receptors were rated as having a potential consequence level of 'Minor' or less (Slight or Negligible). 	<p>Preventing vessel collision:</p> <ul style="list-style-type: none"> Comply with regulatory requirements for the prevention of vessel collisions and safety and emergency arrangements. Consult with relevant persons so that other marine users are informed and aware, reducing the likelihood of a collision. Notify relevant government departments, fishing industry representative bodies and licence holders of activities prior to commencement and on completion of activities. Notify the Australian Hydrographic Service (AHS) prior to commencement of the activity to enable them to update maritime charts, so that marine users are aware of the activity. Establish temporary exclusion zones around vessels which are communicated to marine users to reduce the likelihood of collision. Develop a management plan for simultaneous operations when working in vicinity of other Woodside operations/activities. <p>Spill response arrangements:</p> <ul style="list-style-type: none"> Develop a project specific Oil Pollution Emergency Preparation document (OPEP) including first strike response plan. Arrangements supporting the Oil Pollution Emergency Preparation document (OPEP) will be tested to ensure the OPEP can be implemented as planned. Emergency response activities would be implemented in line with the OPEP.

¹⁰ Scarborough Seabed Intervention and Trunkline Installation

Potential Impact/Risk	Description of Source of Potential Impact/Risk	Description of Potential Impact/Risk	Preliminary Mitigation and/or Management Measures ¹
Unplanned hydrocarbon release - bunkering	<ul style="list-style-type: none"> Accidental loss of hydrocarbons to the marine environment during bunkering/refueling may occur, caused by partial or total failure of a bulk transfer hose, or fittings due to operational stress, or other integrity issues. 	<ul style="list-style-type: none"> The marine diesel surface release is expected to be confined to within several kilometers of the release site, and well within the EMRA identified for the vessel collision scenario. An unplanned marine diesel release has the potential to result in changes in water quality and fauna behaviour. Receptors considered in the risk assessment for this unplanned event included marine mammals, marine reptiles, fish, sharks, and rays. Receptors were rated as having a potential consequence level of slight or negligible due to the low spill volume and characteristics of the fuel oil which is largely non-persistent. 	<ul style="list-style-type: none"> Comply with regulatory requirements for the prevention of vessel collisions and safety and emergency arrangements. Appropriate bunkering equipment kept and maintained. Comply with contractor procedures for management of bunkering/refueling operations to reduce the likelihood of a spill occurring. Preference for PV to avoid refueling in the Montpelier Marine Park Multiple Use Zone. No other project vessels to be refueled in this zone. <p>Spill response arrangements:</p> <ul style="list-style-type: none"> Maintain and locate spill kits in proximity to hydrocarbon storage and deck areas for use to contain and recover deck spills. <p>Arrangements supporting the Oil Pollution Emergency Preparation document (OPEP) will be tested so that the OPEP can be implemented as planned.</p> <ul style="list-style-type: none"> Emergency response activities would be implemented in line with the OPEP.
Unplanned discharge - deck and subsea spills	<ul style="list-style-type: none"> Accidental discharge of hydrocarbons/chemicals from project vessels' deck activities and equipment, and from subsea ROW hydraulic leaks. 	<ul style="list-style-type: none"> Unplanned discharges of non-process chemicals and hydrocarbons may decrease the water quality in the immediate vicinity of the release. Only small volumes (<50 L) are anticipated, resulting in very short-term impacts to water quality, and limited to the immediate release location. As a result of a change in water quality, further impacts to receptors may occur, however impacts to marine fauna are expected to be limited to temporary irritation of sensitive membranes to individuals and are considered negligible. 	<ul style="list-style-type: none"> Comply with regulatory requirements for the prevention of marine pollution. Liquid chemical and fuel storage areas are bundled or secondarily contained when they are not being handled/moved temporarily. Spill kits positioned in high-risk locations around the vessel (near potential spill points such as transfer stations). Implement waste management procedures which provide for safe handling and transportation, segregation and storage and appropriate classification of all waste generated. Chemicals will be selected with the lowest practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process.
Unplanned discharge of solid hazardous, non-hazardous solid waste/equipment	<ul style="list-style-type: none"> Accidental, unplanned loss of hazardous or non-hazardous solid wastes/equipment to the marine environment may occur if dropped or blown overboard. 	<ul style="list-style-type: none"> The potential impacts of hazardous or non-hazardous solid wastes and equipment accidentally discharged to the marine environment include contamination of the environment as well as secondary impacts relating to potential contact of marine fauna with wastes. The temporary or permanent loss of waste materials/equipment into the marine environment is not likely to have a significant environmental impact, based on the location of the Operational Area, the types, size and frequency of wastes that could occur, and species present. 	<ul style="list-style-type: none"> Comply with regulatory requirements for the prevention of marine pollution and handling of hazardous wastes. Implement waste management procedures to enable the safe handling and transportation, segregation and storage and appropriate classification of waste generated. Solid waste/equipment dropped to the marine environment will be recovered where safe and practicable to do so.

¹ Scarborough Seabed Intervention and Trunkline Installation

Potential Impact/Risk	Description of Source of Potential Impact/Risk	Description of Potential Impact/Risk	Preliminary Mitigation and/or Management Measures ¹
Unplanned seabed disturbance	<ul style="list-style-type: none"> Unplanned disturbance to seabed may occur if the activities in the Operational Area are carried out outside of the design footprint (i.e. trenching, spoil disposal and backfill) activities outside designated areas or dredging outside of the Offshore Borrow Ground Project Area. Dropped objects may also result in unplanned disturbance of benthic habitat contingent activities such as trunkline abandonment and temporary mooring could also result in unplanned seabed disturbance. 	<ul style="list-style-type: none"> Unplanned seabed disturbance may result in localised changes to water and sediment quality or a localised temporary impact to benthic communities. Potential impacts to Kefs which intersect the Operational Area of the activity are limited to the footprint of a dropped object, resulting in potential highly localised and temporary change in habitat. The offshore borrow ground dredging will occur adjacent to the Dampier Marine Park. A planned 250 m buffer is in place. Should dredging occur outside the designated areas, it is not anticipated to be at a significant distance and impacts will remain within this buffer zone (i.e. seabed disturbance will not be within the Dampier Marine Park). 	<ul style="list-style-type: none"> Comply with the Sea Dumping Permit, including disposing of dredged material in the designated disposal site. Designated 'No dredge' out of zone alarms will be installed and used on the dredging vessel navigation system. Implement 250 m buffer zone between the offshore borrow ground and the Dampier AMP. Infrastructure placed on the seabed within the predefined design footprint using positioning technology to limit seabed disturbance. The trunkline touchdown point must be over during operations so that the trunkline is installed correctly. All lifts, bulk transfers and cargo loading conducted in accordance with applicable vessels' work procedures to limit potential for dropped objects, with dropped object prevention awareness provided to vessel crew. Different rigging designs assessed to reduce likelihood of dropped pipe from issues such as sling slippage and will consider the use of spreader bars. Lifting activities between vessels to be carried out in accordance with requirements of third party crossing agreement/permitting. Objects dropped to the marine environment to be recovered, where safe and practicable to do so.
Unplanned interaction with marine fauna	<ul style="list-style-type: none"> Vessel movements have the potential to result in collisions between the vessel (hull and propellers) and marine fauna. The factors contributing to the frequency and severity of impacts vary greatly due to vessel type, vessel operation (specific activity, speed), physical environment (e.g. water depth) and the type of animal potentially present and their behaviours. This activity presents an unlikely risk of accidental entrainment of marine fauna from pre-lay trenching and dredging in offshore borrow ground area, and accidental smothering/burial of marine fauna from spoil disposal and backfill. 	<ul style="list-style-type: none"> The risk of vessel collision with marine mammals is present year-round but is elevated seasonally for species such as humpback whales and pygmy blue whales during migration periods and within migration BIAs. Whilst a portion of the Operational Area overlaps the humpback whale migration BIA in the NWMR, this overlap represents a very small proportion of the overall area of the BIA (0.22%). Given this limited spatial overlap with the humpback whale migration BIA, the short duration of activities within the Operational Area, and the slow speeds at which project vessels operate (required to be 10 km or less), collisions with humpback whales are considered highly unlikely. It is expected marine turtles will respond to vessel presence by avoiding the immediate vicinity of the vessels, and combined with low vessel speed, this will reduce the likelihood of a vessel-turtle collision or entrainment during dredging activities. In addition, activities within sensitive turtle areas (BIAs and critical habitat) will be conducted over a period of months, further reducing the potential for impact at the individual and population level. It is expected whale shark presence within the Operational Area would not comprise significant numbers and their presence would be transitory and of short duration. Given the short duration of activities within the Operational Area and the slow speeds at which project vessels operate, vessel collisions with whale sharks are considered highly unlikely. 	<ul style="list-style-type: none"> Comply with regulatory requirements for interactions with marine megafauna. Comply with Sea Dumping Permit to reduce the likelihood of interaction with marine megafauna during spoil disposal. Installation of turtle deflection chains in front of the dredge vessel drag head to reduce likelihood of entrainment. Use of trained vessel crew as Marine Fauna Observers on relevant vessels while operating in the pygmy blue whale migration BIA during migration periods. Management of vessel speed in the humpback and pygmy blue whale BIAs in migration seasons within the Operational Area (excluding Pillbara Port). During daylight hours, trained vessel crew onboard the dredge will visually assess marine megafauna and specified observation and exclusion zones will be adhered to during dredging and spoil disposal. Project vessels will not travel greater than 6 km within 100 m of a turtle (observation zone) and not approach closer than 50 m. If a turtle shows signs of disruption, project vessels will immediately withdraw from the observation zone at a constant speed of less than 6 km. At completion of dredge run (i.e. fill of hopper), stop dredge pumps as soon as practicable after the dredge drag head is lifted from the seafloor to reduce the likelihood of impact to turtles.

¹² Scarborough Seabed Intervention and Trunkline Installation

Potential Impact/Risk	Description of Source of Potential Impact/Risk	Description of Potential Impact/Risk	Preliminary Mitigation and/or Management Measures ¹
Accidental Introduction of invasive marine species (IMS)	<ul style="list-style-type: none"> Vessels for the activity may be transiting to and from the Operational Area from local ports (i.e. Damper), or from international or international waters. IMS could be present as biofouling on the vessel hull or on immersible equipment and could be translocated to the Operational Area and transferred directly to the seafloor or subsea structures where they could establish. Organisms can also be drawn into ballast tanks during onboarding of ballast water as cargo is loaded or to balance vessels under load. 	<ul style="list-style-type: none"> The deeper offshore open waters of the Operational Area are not conducive to the settlement and establishment of IMS. The Trunkline Project Area and Offshore Borrow/Ground Project Area in shallower waters (30 – 40 m) present a slightly increased risk of IMS establishment, however, IMS require hard substrate/features on the seabed to attach to, none of which is present within the Operational Area. Therefore, the risk of establishment, whilst credible, is remote. Given the low likelihood of IMS translocation to and colonisation within the Operational Area, project activities are unlikely to result in establishment of IMS, and as such will not adversely affect other marine user activities in the region. 	<ul style="list-style-type: none"> Ballast water and biofouling will be managed according to regulatory requirements, including the Australian Ballast Water Management Requirements, and the Australian Biofouling Management Requirements, as applicable. Woodside's IMS risk assessment process will be applied to project vessels and immersible equipment entering the Operational Area.

Feedback

If you would like to comment on the proposed activities outlined in this information sheet, or would like additional information, please contact Woodside before **17 February 2023** via:

E: Feedback@woodside.com.au
Toll free: 1800 442 977

You can subscribe on our website to receive Consultation Information Sheets for proposed activities: www.woodside.com/sustainability/consultation-activities.

Please note that stakeholder feedback will be communicated to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) as required under legislation. Woodside will communicate any material changes to the proposed activity to affected stakeholders as they arise.

Please note that your feedback and our response will be included in our Environment Plan for the proposed activity, which will be submitted to NOPSEMA for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (OEGSR)*.

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

2.1.1 Simplified Overview Information Sheet (January 2023)

STAKEHOLDER CONSULTATION

OVERVIEW INFORMATION SHEET

January 2023

SCARBOROUGH PROJECT

Introduction

This is a summary of some of the work Woodside will be doing for its Scarborough Project. Most of this work will take place in the ocean approximately 300 km northwest of Karratha.

Woodside

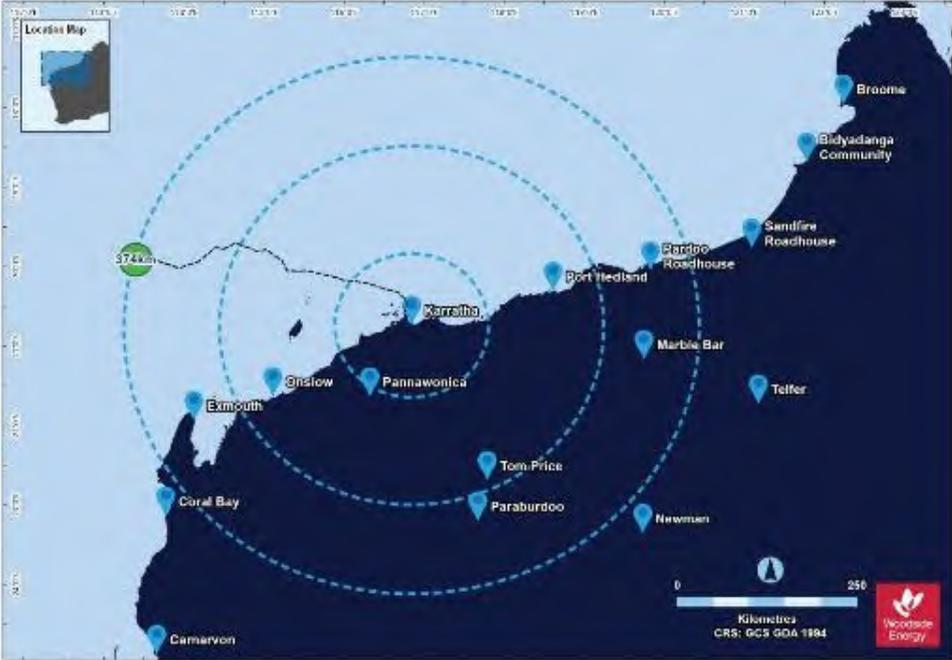

Woodside has been operating safely for over 35 years, delivering gas and oil to customers in Australia and around the world safely, reliably, and without any major environmental incidents. Woodside is very proud of this record.

You can find more information about Woodside on our website: www.woodside.com

Scarborough Project

Scarborough is a gas field under the sea floor about 375 km northwest of Karratha. Woodside plans to bring this gas from Scarborough to Muruga (The Ramap Peninsula) through a pipeline (called a trunkline) that is approximately 420 km long, to Woodside's Pluto gas plant.

The map below shows where the Scarborough project, including the trunkline, is located.

You can find more information about the Scarborough project on Woodside's website: <https://www.woodside.com/what-we-do/growth-projects/scarborough>

© Woodside Energy Ltd (Woodside) December 2022. No part of this document may be reproduced, copied, transmitted, stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Work for the Scarborough Project

This is an overview of some of the programs which make up the Scarborough project. Woodside is planning to commence work on these programs once the environmental conditions are favourable. There will be further work programs that will form part of the Scarborough project.

The current work programs are:

1. Laying the pipeline from the Scarborough gas field to the shore at Murujig (Surup Peninsula). The pipeline is called a **Trunkline** it is approximately 470 kilometres long. This is called **Seabed Intervention and Trunkline Installation**.
2. A survey of what is under the seabed. These are called **Seismic Surveys**.

3. Drilling and installing between 2 and 10 subsea gas wells on the sea floor to extract gas from the Scarborough gas field. This is called **Drilling and Completions**.
4. Installing pipes and other equipment on the sea floor so gas can be carried to shore via a Floating Production, Storage and Offloading (FPSO). This is called **Subsea Infrastructure Installation**.

Information sheets for these work programs are available on our website:

<https://www.woodside.com/sustainability/consultation-activities>.

2.1.2 Bespoke Consultation Information Sheet (January 2023)

SUMMARY INFORMATION SHEET

STAKEHOLDER CONSULTATION

January 2023

SCARBOROUGH SEABED INTERVENTION AND TRUNKLINE INSTALLATION

This is a summary of the activity in plain English. More detailed information is included in the Scarborough Seabed Intervention and Trunkline Installation Information Sheet.

Overview

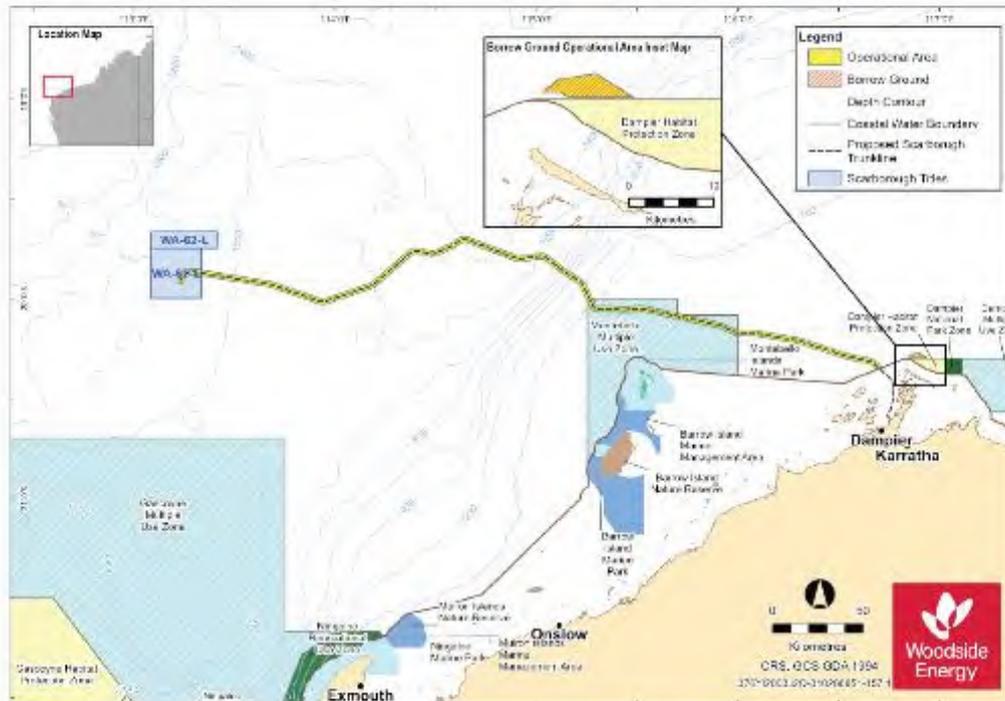

Woodside plans to install an approximately 430km long pipeline (called a trunkline) that will transport gas from the Scarborough gas field to the Pluto Gas Plant on Murujuga (Burrup Peninsula). The activity will be divided into the following parts:

- 1. Seabed Intervention** - involves preparing the seabed for pipe installation by placing rock for pipe and cable crossing, and clearing out sand, deposits, and debris.
- 2. Trunkline Installation** - involves laying down the pipeline on the seabed using vessels and a barge.

The trunkline is almost a metre wide and approximately 430km long, of which around 400km will be in Commonwealth Waters. Below is a map showing the location of the trunkline in Commonwealth Waters and Woodside's operational area for this work.

Woodside is planning to start the Seabed Intervention and Trunkline Installation work upon the acceptance of the Environment Plan, and the aim is to start work around mid-2023. The activity is expected to take up to around 2 years to complete.

A map showing the location of this work is below.

© Woodside Energy Ltd (Woodside), February 2005. No part of this document may be reproduced, adapted, transmitted, or stored in any form, by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Work Method

Seabed Intervention - To support the trunkline installation, seabed preparation is required at some locations along the trunkline route. In shallow Commonwealth waters a narrow trench, up to 20 km long, will be created using a dredge vessel. The trunkline will be laid in the trench, with sand then placed on top to stabilise it. The sand will come from the Offshore Scour Ground, located about 20 km to the east of the proposed trunkline route and near the Dampier Marine Park. Further offshore, other seabed preparation activities are planned at some locations along the trunkline route, such as the placement of rock for the trunkline to cross other pipelines and cables, and excavation and other methods to ensure the trunkline lies suitably on the seabed.

Trunkline Installation - Woodside will lay the trunkline down on the seabed using pipe lay ships, barges and support boats and install other pipe support structures. The activity will also include testing of the trunkline for potential leaks.

To support these activities, Woodside will also conduct surveys to monitor the activities. An overview of the seabed intervention and trunkline installation activity is shown in the illustration below:

Figure 1 Dredge creating a trench for trunkline to sit in

Figure 2 Placement of rock for pipe and cable crossings

Figure 3 Laying of the trunkline by pipe lay vessel

Environmental Impacts and Management

This work program includes Planned Activities but may also result in Unplanned Activities. Both Planned and Unplanned Activities may impact the environment. Woodside manages the work program to reduce impacts and risks to as low as practical.

Planned Activities are activities that Woodside knows will happen as part of this work program. For example, Planned Activities include other marine users being temporarily stopped from accessing the work area, and the marine vessels used for the work may generate underwater noise, light emissions, atmospheric emissions, and routine discharges (such as sewage, waste, and deck drainage), and other authorised waste. Water testing of the trunkline may result in discharge of treated seawater. The dredging, sand backfill, pipeline installation and other intervention activities may also result in seabed disturbance.

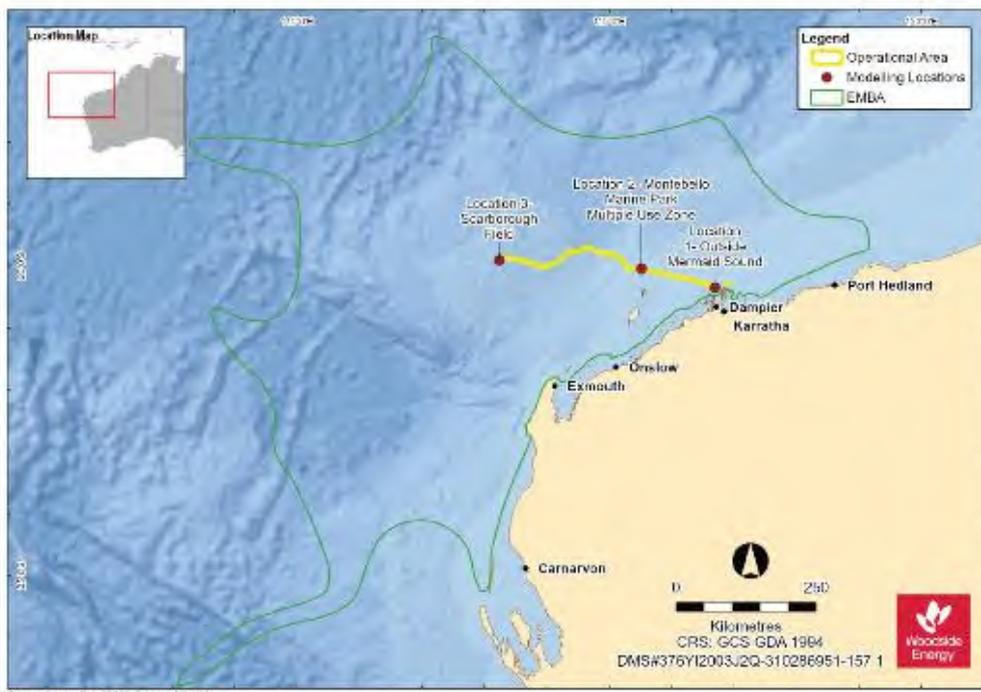

Unplanned Activities are not planned as part of the work program, but may be the result of an accident, incident, or emergency situation. It is highly unlikely that there will be an Unplanned Activity. Unplanned

Activities might include a spill of fuel or oil from a vessel collision, a spill on the deck of a vessel (such as during refuelling), unplanned seabed disturbance, accidental collision with marine animals, waste entering the environment and accidental introduction of invasive species from outside the region.

A table showing all planned and unplanned activities, potential impacts, and management measures for each is included in the attached Information Sheet, Table 2.

The total area over which unplanned events could have environmental impacts is shown in the map below. This is referred to as the environment that may be affected (EMBA). The location in which the Seabed Intervention and Trunkline Installation activities will occur, known as the Operational Area, is also shown on the map below. In the highly unlikely event such as a fuel spill from a vessel collision, the entire EMBA will not be affected. The part of the EMBA that is affected will only be known at the time of the event.

2 © Woodside Energy Ltd (Woodside), February 2009. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Providing feedback

If you have an interest in the area of the "environment that may be affected" (EMBA) by this work program and would like more information or have any concerns, you can tell Woodside by calling **1800 442 977** or sending an email to feedback@woodside.com.au. Please contact Woodside before **20th February 2023** so your questions or concerns can be considered during the environmental approval process.

If you would prefer to speak to the government directly, they can be contacted on **+61 (0)8 6188 8700** or send an email to communications@npsma.gov.au.

Conclusion

Woodside produces energy that Western Australia, Australia, and the world needs. Woodside has made this energy from its oil and gas projects in Western Australia for over 35 years safely, reliably, and without any major environmental incident. Woodside is very proud of this legacy.

There are always potential risks with projects like this. Woodside has carefully planned this work program so that the risk of environmental impact is reduced to as low as reasonably practical and of an acceptable level. There are also strict government laws in place to protect the environment. Woodside complies with these laws and has systems in place to keep following these laws and rules for each project it undertakes.

If you would like information about Woodside's work to study and care for the environment, you can find it at <https://www.woodside.com/sustainability/environment>.

Further Information

You can find the details Consultation Information Sheet for proposed activity on our website: <https://www.woodside.com/sustainability/consultation-activities>.

2.2 Email sent to The Wilderness Society (TWS) (30 September 2022)

Dear Wilderness Society

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.
 Controlled Ref No: SA0006AH0000004 Revision: 6 Page 383 of 737
 Uncontrolled when printed. Refer to electronic version for most up to date information.

Please be advised that Woodside has submitted an [Environment Plan](#) to NOPSEMA to undertake seabed intervention and trunkline installation activities in Commonwealth waters for the Scarborough development, in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth).

The activity involves installation of a carbon steel pipeline that runs approximately 430 km from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. Activities are planned to commence in H2 2022 for a period of approximately 24 months across multiple campaigns.

A Consultation Information Sheet is attached, which provides background on the proposed activity, including a summary of potential key risks and associated management measures. The Information Sheet has been available on [Woodside's website](#) since August 2021, inviting comments on the proposed activities or requests for additional information. Revision 0 of the EP has been available on the NOPSEMA website since December 2021 (https://info.nopsema.gov.au/environment_plans/575/show_public).

Noting consultation material has been available since August 2021 and feedback was sought by 30 September 2021, we understand that Wilderness Society has not commented on the proposed activity or sought further information on it. Should you have feedback on the proposed Scarborough Seabed Intervention and Trunkline Installation Environment Plan, please provide your views by **14 October 2022**.

If it would assist with consultation, Woodside would welcome the opportunity to meet with you prior to 14 October 2022, to discuss the Scarborough Seabed Intervention and Trunkline Installation Environment Plan. Should you wish to meet with Woodside, please advise as soon as possible. Beyond this timeframe, consultation is ongoing and feedback is accepted throughout the life of the EP, including while it is being prepared, while it is under assessment as well as after acceptance, while the EP remains in force.

Please note that there will be further consultation opportunities for the other activities undertaken as part of the Scarborough Project. For further information, you can subscribe to Woodside's consultation activities on our [website](#).

Activity:

Summary:

Seabed intervention and Trunkline installation activities in Commonwealth waters for the Scarborough development.

Location:

Activities run from the Commonwealth – State waters boundary approximately 32 km north of Dampier to the Scarborough gas field located at Woodside-operated title block WA-61-L, approximately 375 km west-northwest of the Burrup Peninsula.

Approx. Water Depth (m):

~ 32 m – 1400 m

Earliest commencement date:

Seabed intervention activities: Q4 2022 pending approvals, vessel availability and weather constraints

Trunkline installation activities: Q4 2023 pending successful completion of State waters installation scope, approvals, vessel availability and weather constraints.

Estimated duration:

Approximately 24 months across multiple campaigns

Distance from Operational Area to nearest port/marina

Eastern end of the Trunkline route overlaps with the Pilbara Port Authority Dampier Port Limits

Distance from Operational Area to nearest marine park

- The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cth), close to the northern boundary.
- Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone. A minimum 250 m buffer will be in place from the Marine Park boundaries.

Operational Areas

- **Scarborough Trunkline Project Area:** The proposed Trunkline from the Scarborough FPU (approximately 430 km north-west of the Burrup) to the State waters boundary and 1.5 km either side of the proposed Trunkline centreline to allow for the movement and positioning of vessels. This also includes Spoil Ground 5A, which is approximately 300 m wide and runs ~17 km from the State waters boundary.
- **Offshore Borrow Ground Project Area:** Offshore Borrow Ground (location where sand will be sourced). The Offshore Borrow Ground is approximately 17 km², located 20 km to the east of the proposed Trunkline route and adjacent to the Dampier Marine Park.

Vessels:

- Trailing suction hopper dredge (TSHD)
- Offshore construction vessel (OCV)
- Fall pipe vessel (rock dump)
- Primary Installation Vessel (PIV) multi-joint operation
- Shallow Water Lay Barge (SWLB)
- Anchor handling vessel/tug
- Pipe supply vessels
- Survey vessels
- Support vessels
- Fuel bunkering vessels

Feedback:

If you have any issues or concerns with the proposed seabed intervention and trunkline installation activities, then please respond to Woodside at: Feedback@woodside.com.au or 1800 442 977.

Your feedback and our response will be included in our Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

Please provide your views by **14 October 2022**.

Regards,

Woodside Feedback

2.3 Email sent to Say No to Scarborough Gas – 30 September 2022

Dear Say No to Scarborough Gas

Woodside has identified that Say No to Scarborough Gas has referred to the Scarborough Project in an online public campaign.

Please be advised that Woodside has submitted an [Environment Plan](#) to NOPSEMA to undertake seabed intervention and trunkline installation activities in Commonwealth waters for the Scarborough development, in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth).

The activity involves installation of a carbon steel pipeline that runs approximately 430 km from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. Activities are planned to commence in H2 2022 for a period of approximately 24 months across multiple campaigns.

A Consultation Information Sheet is attached, which provides background on the proposed activity, including a summary of potential key risks and associated management measures. The Information Sheet has been available on [Woodside's website](#) since August 2021, inviting comments on the proposed activities or requests for additional information. Revision 0 of the EP has been available on the NOPSEMA website since December 2021 (https://info.nopsema.gov.au/environment_plans/575/show_public).

Noting consultation material has been available since August 2021 and feedback was sought by 30 September 2021, we understand that Say No to Scarborough Gas has not commented on the proposed activity or sought further information on it. Should you have feedback on the proposed Scarborough Seabed Intervention and Trunkline Installation Environment Plan, please provide your views by **14 October 2022**.

Woodside has assessed your online public campaign and has provided detailed response at **Attachment A**.

If it would assist with consultation, Woodside would welcome the opportunity to meet with you prior to 14 October 2022, to discuss the Scarborough Seabed Intervention and Trunkline Installation Environment Plan. Should you wish to meet with Woodside, please advise as soon as possible. Beyond this timeframe, consultation is ongoing and feedback is accepted throughout the life of the EP, including while it is being prepared, while it is under assessment as well as after acceptance, while the EP remains in force.

Please note that there will be further consultation opportunities for the other activities undertaken as part of the Scarborough Project. For further information, you can subscribe to Woodside's consultation activities on our [website](#).

Activity:

Summary:	Seabed intervention and Trunkline installation activities in Commonwealth waters for the Scarborough development.
Location:	Activities run from the Commonwealth – State waters boundary approximately 32 km north of Dampier to the Scarborough gas field located at Woodside-operated title block WA-61-L, approximately 375 km west-northwest of the Burrup Peninsula.
Approx. Water Depth (m):	~ 32 m – 1400 m
Earliest commencement date:	Seabed intervention activities: Q4 2022 pending approvals, vessel availability and weather constraints Trunkline installation activities: Q4 2023 pending successful completion of State waters installation scope, approvals, vessel availability and weather constraints.
Estimated duration:	Approximately 24 months across multiple campaigns
Distance from Operational Area to nearest port/marina	Eastern end of the Trunkline route overlaps with the Pilbara Port Authority Dampier Port Limits
Distance from Operational Area to nearest marine park	<ul style="list-style-type: none">• The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cth), close to the northern boundary.• Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone. A minimum 250 m buffer will be in place from the Marine Park boundaries.
Operational Areas	<ul style="list-style-type: none">• Scarborough Trunkline Project Area: The proposed Trunkline from the Scarborough FPU (approximately 430 km north-west of the Burrup) to the State waters boundary and 1.5 km either side of the proposed Trunkline centreline to allow

for the movement and positioning of vessels. This also includes Spoil Ground 5A, which is approximately 300 m wide and runs ~17 km from the State waters boundary.

- **Offshore Borrow Ground Project Area:** Offshore Borrow Ground (location where sand will be sourced). The Offshore Borrow Ground is approximately 17 km², located 20 km to the east of the proposed Trunkline route and adjacent to the Dampier Marine Park.

Vessels:

- Trailing suction hopper dredge (TSHD)
- Offshore construction vessel (OCV)
- Fall pipe vessel (rock dump)
- Primary Installation Vessel (PIV) multi-joint operation
- Shallow Water Lay Barge (SWLB)
- Anchor handling vessel/tug
- Pipe supply vessels
- Survey vessels
- Support vessels
- Fuel bunkering vessels

Feedback:

If you have any issues or concerns with the proposed seabed intervention and trunkline installation activities, then please respond to Woodside at:

Feedback@woodside.com.au or 1800 442 977.

Your feedback and our response will be included in our Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth)*.

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

Please provide your views by **14 October 2022**.

Regards,

Woodside Feedback

Attachment A – Scarborough Seabed Intervention and Trunkline Installation – 30 September 2022

Woodside has reviewed the Say no to Scarborough Gas online public campaign in relation to the activity defined in the Scarborough Seabed Intervention and Trunkline Installation Environment Plan, and notes that content generally relates to the themes outlined in the below table

Theme	Woodside response
Assessment of climate change from activity	<p>Concerns related to carbon and the impact on climate change from Scarborough gas are not relevant to the Scarborough Seabed Intervention and Trunkline Installation Environment Plan (the SITI EP)</p> <p>Woodside confirms that the SITI EP assesses both direct and indirect impacts and risks associated with the proposed Petroleum Activities Program (PAP), having regard to the nature and scale of the proposed PAP. The extraction of Scarborough gas for onshore processing is not within the scope of the activity described in the SITI EP. Therefore, indirect impacts and risks arising from the onshore processing of Scarborough gas are not considered indirect impacts/risks of the PAP for the SITI EP but may be evaluated in Scarborough EPs as appropriate. GHG emissions associated with the SITI activity (ie fuel combustion from project vessels) are considered in Section 6.8.5 (Revision 1) of the publicly available SITI EP.</p>
Trunkline installation through Montebello Multiple Use Zone	<p>The proposed activity will include works through the Montebello Marine Park Multiple Use Zone. In accordance with the North-west Marine Parks Network Management Plan, petroleum activities including transportation of minerals by pipeline, and oil spill response are permissible subject to approval in Multiple Use Zone (IUCN category VI) and Special Purpose Zone Trawl (IUCN category VI).</p> <p>Environmental Performance Outcomes (EPOs) from the Scarborough OPP relating to maintenance of the Montebello multiple use zone values have been cascaded to the SITI EP. Specifically the EPOs:</p> <ul style="list-style-type: none"> • Undertake Scarborough Trunkline Installation within the Montebello AMP in a manner that will be not be inconsistent with the objective of the multiple use zone. • Changes to water quality in the Montebello Marine Park as a result of the trunkline installation will be not be inconsistent with the objective of the multiple use zone. <p>Impact assessments in Section 6 of the SITI EP include impact potential to AMPs such as the Montebello Multiple Use Zone where applicable. Receptors such as dolphins, turtles, sharks, rays and sea snakes are also included in the impact assessments where relevant (i.e. 6.6.6 Routine Acoustic Emissions is relevant to reptiles, fish and cetaceans; 6.7.7. Interaction with Marine Fauna is relevant to marine mammals, reptiles, fish, sharks and rays)</p> <p>Impact assessment shows that potential consequence for marine fauna across the risk factors is maximum 'D' (Ref Figure 2-2 in the EP) which is a Minor short-term impact, with the most common consequences being Slight short-term or no lasting effect. Potential for any mortality in marine fauna as a result of the PAP is unlikely, highly unlikely or remote.</p>
Rock art and Aboriginal cultural heritage	<p>Emissions from the activities covered by the SITI EP are of a scale and physical remoteness from Murujuga's rock art that no credible impact pathway is foreseen. Damage to heritage sites is not anticipated as a result of the proposed Petroleum Activities Program (PAP). Woodside has undertaken archaeological assessments</p>

	<p>and ethnographic surveys to identify cultural heritage that may be impacted by the Scarborough development. These works have not identified any heritage places, objects or values which will be impacted by the activities covered by the SITI EP.</p> <p>A summary of this work and its results are provided in Section 4.9.1 of the EP.</p> <p>No rock art will be displaced as a result of the proposed Petroleum Activities Program (PAP).</p>

2.4 Email sent to Australasian Centre for Corporate Responsibility (ACCR) (30 September 2022)

Dear Australasian Centre for Corporate Responsibility

Woodside has identified that Australasian Centre for Corporate Responsibility (ACCR) has referred to the Scarborough Project in an online public campaign.

Please be advised that Woodside has submitted an [Environment Plan](#) to NOPSEMA to undertake seabed intervention and trunkline installation activities in Commonwealth waters for the Scarborough development, in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth).

The activity involves installation of a carbon steel pipeline that runs approximately 430 km from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. Activities are planned to commence in H2 2022 for a period of approximately 24 months across multiple campaigns.

A Consultation Information Sheet is attached, which provides background on the proposed activity, including a summary of potential key risks and associated management measures. The Information Sheet has been available on [Woodside's website](#) since August 2021, inviting comments on the proposed activities or requests for additional information. Revision 0 of the EP has been available on the NOPSEMA website since December 2021 (https://info.nopsema.gov.au/environment_plans/575/show_public).

Noting consultation material has been available since August 2021 and feedback was sought by 30 September 2021, we understand that ACCR has not commented on the proposed activity or sought further information on it. Should you have feedback on the proposed Scarborough Seabed Intervention and Trunkline Installation Environment Plan, please provide your views by **14 October 2022**.

Woodside has reviewed your online public campaign in relation to the activity defined in the Scarborough Seabed Intervention and Trunkline Installation Environment Plan, and notes that content generally relates to impacts and risks of the Scarborough Project to climate change and greenhouse gas (GHG) emissions.

We confirm that concerns related to carbon and the impact on climate change from Scarborough gas are not relevant to the Scarborough Seabed Intervention and Trunkline Installation Environment Plan (the SITI EP).

Woodside confirms that the SITI EP assesses both direct and indirect impacts and risks associated with the proposed Petroleum Activities Program (PAP), having regard to the nature and scale of the proposed PAP. The extraction of Scarborough gas for onshore processing is not within the scope of the activity described in the SITI EP. Therefore, indirect impacts and risks arising from the onshore processing of Scarborough gas are not considered indirect impacts/risks of the PAP for the SITI EP but may be evaluated in Scarborough EPs as appropriate.

GHG emissions associated with the SITI activity (ie fuel combustion from project vessels) are considered in Section 6.6.5 (Revision 1) of the publicly available SITI EP.

If it would assist with consultation, Woodside would welcome the opportunity to meet with you prior to 14 October 2022, to discuss the Scarborough Seabed Intervention and Trunkline Installation Environment Plan. Should you wish to meet with Woodside, please advise as soon as possible. Beyond this timeframe, consultation is ongoing and feedback is accepted throughout the life of the EP, including while it is being prepared, while it is under assessment as well as after acceptance, while the EP remains in force.

Please note that there will be further consultation opportunities for the other activities undertaken as part of the Scarborough Project. For further information, you can subscribe to Woodside's consultation activities on our [website](#).

Activity:

Summary:	Seabed intervention and Trunkline installation activities in Commonwealth waters for the Scarborough development.
Location:	Activities run from the Commonwealth – State waters boundary approximately 32 km north of Dampier to the Scarborough gas field located at Woodside-operated title block WA-61-L, approximately 375 km west-northwest of the Burrup Peninsula.
Approx. Water Depth (m):	~ 32 m – 1400 m
Earliest commencement date:	Seabed intervention activities: Q4 2022 pending approvals, vessel availability and weather constraints Trunkline installation activities: Q4 2023 pending successful completion of State waters installation scope, approvals, vessel availability and weather constraints.
Estimated duration:	Approximately 24 months across multiple campaigns

Distance from Operational Area to nearest port/marina

Eastern end of the Trunkline route overlaps with the Pilbara Port Authority Dampier Port Limits

Distance from Operational Area to nearest marine park

- The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cth), close to the northern boundary.
- Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone. A minimum 250 m buffer will be in place from the Marine Park boundaries.

Operational Areas

- **Scarborough Trunkline Project Area:** The proposed Trunkline from the Scarborough FPU (approximately 430 km north-west of the Burrup) to the State waters boundary and 1.5 km either side of the proposed Trunkline centreline to allow for the movement and positioning of vessels. This also includes Spoil Ground 5A, which is approximately 300 m wide and runs ~17 km from the State waters boundary.
- **Offshore Borrow Ground Project Area:** Offshore Borrow Ground (location where sand will be sourced). The Offshore Borrow Ground is approximately 17 km², located 20 km to the east of the proposed Trunkline route and adjacent to the Dampier Marine Park.

Vessels:

- Trailing suction hopper dredge (TSHD)
- Offshore construction vessel (OCV)
- Fall pipe vessel (rock dump)
- Primary Installation Vessel (PIV) multi-joint operation
- Shallow Water Lay Barge (SWLB)
- Anchor handling vessel/tug
- Pipe supply vessels
- Survey vessels
- Support vessels
- Fuel bunkering vessels

Feedback:

If you have any issues or concerns with the proposed seabed intervention and trunkline installation activities, then please respond to Woodside at:

Feedback@woodside.com.au or 1800 442 977.

Your feedback and our response will be included in our Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

Please provide your views by **14 October 2022**.

Regards,

Woodside Feedback

2.5 Email sent to Sea Shepherd Australia (SSA) (30 September 2022)

Dear Sea Shepherd Australia

Woodside has identified that Sea Shepherd Australia has referred to the Scarborough Project in an online public campaign.

Please be advised that Woodside has submitted an [Environment Plan](#) to NOPSEMA to undertake seabed intervention and trunkline installation activities in Commonwealth waters for the Scarborough development, in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth).

The activity involves installation of a carbon steel pipeline that runs approximately 430 km from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. Activities are planned to commence in H2 2022 for a period of approximately 24 months across multiple campaigns.

A Consultation Information Sheet is attached, which provides background on the proposed activity, including a summary of potential key risks and associated management measures. Regards,

Woodside Feedback

Attachment A – Scarborough Seabed Intervention and Trunkline Installation – 30 September 2022

Woodside has reviewed the Sea Shepherd Australia online public campaign in relation to the activity defined in the Scarborough Seabed Intervention and Trunkline Installation Environment Plan, and notes that content generally relates to the themes outlined in the below table. **Theme**

Assessment of climate change from activity

Concerns related to carbon and the impact on climate change from Scarborough gas are not relevant to the Scarborough Seabed Intervention and Trunkline Installation Environment Plan (the SITI EP).

Woodside confirms that the SITI EP assesses both direct and indirect impacts and risks associated with the proposed Petroleum Activities Program (PAP), having regard to the nature and scale of the proposed PAP. The extraction of Scarborough gas for onshore processing is not within the scope of the activity described in the SITI EP. Therefore, indirect impacts and risks arising from the onshore processing of Scarborough gas are not considered indirect impacts/risks of the PAP for the SITI EP but may be evaluated in Scarborough EPs as appropriate. GHG emissions associated with the SITI activity (ie fuel combustion from project vessels) are considered in Section 6.6.5 (Revision 1) of the publicly available SITI EP.

Trunkline installation through Montebello Multiple Use Zone

The proposed activity will include works through the Montebello Marine Park Multiple Use Zone. In accordance with the North-west Marine Parks Network Management Plan, petroleum activities including transportation of minerals by pipeline, and oil spill response are permissible subject to approval in Multiple Use Zone (IUCN category VI) and Special Purpose Zone Trawl (IUCN category VI).

Environmental Performance Outcomes (EPOs) from the Scarborough OPP relating to maintenance of the Montebello multiple use zone values have been cascaded to the SITI EP. Specifically the EPO's:

- Undertake Scarborough Trunkline Installation within the Montebello AMP in a manner that will be not be inconsistent with the objective of the multiple use zone.
- Changes to water quality in the Montebello Marine Park as a result of the trunkline installation will be not be inconsistent with the objective of the multiple use zone.

Impact assessments in Section 6 of the SITI EP include impact potential to AMP's such as the Montebello Multiple Use Zone where applicable. Receptors such as dolphins, turtles, sharks, rays and sea snakes are also included in the impact assessments where relevant (i.e. 6.6.6 Routine Acoustic Emissions is relevant to reptiles, fish and cetaceans; 6.7.7. Interaction with Marine Fauna is relevant to marine mammals, reptiles, fish, sharks and rays).

Impact assessment shows that potential consequence for marine fauna across the risk factors is maximum 'D' (Ref Figure 2-2 in the EP) which is a Minor short-term impact, with the most common consequences being Slight short-term or no lasting effect. Potential for any mortality in marine fauna as a result of the PAP is unlikely, highly unlikely or remote.

Rock art and Aboriginal cultural heritage Emissions from the activities covered by the SITI EP are of a scale and physical remoteness from Murujuga's rock art that no credible impact pathway is foreseen. Damage to heritage sites is not anticipated as a result of the proposed Petroleum Activities Program (PAP). Woodside has undertaken archaeological assessments

2.6 Email sent to World Wildlife Fund (WWF) (30 September 2022)

Dear World Wildlife Fund

Please be advised that Woodside has submitted an [Environment Plan](#) to NOPSEMA to undertake seabed intervention and trunkline installation activities in Commonwealth waters for the Scarborough development, in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth).

The activity involves installation of a carbon steel pipeline that runs approximately 430 km from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. Activities are planned to commence in H2 2022 for a period of approximately 24 months across multiple campaigns.

A Consultation Information Sheet is attached, which provides background on the proposed activity, including a summary of potential key risks and associated management measures. The Information Sheet has been available on [Woodside's website](#) since August 2021, inviting comments on the proposed activities or requests for additional information. Revision 0 of the EP has been available on the NOPSEMA website since December 2021 (https://info.nopsema.gov.au/environment_plans/575/show_public).

Noting consultation material has been available since August 2021 and feedback was sought by 30 September 2021, we understand that WWF has not commented on the proposed activity or sought further information on it. Should you have feedback on the proposed Scarborough Seabed Intervention and Trunkline Installation Environment Plan, please provide your views by **14 October 2022**.

If it would assist with consultation, Woodside would welcome the opportunity to meet with you prior to 14 October 2022, to discuss the Scarborough Seabed Intervention and Trunkline Installation Environment Plan. A Consultation Information Sheet is attached, which provides background on the proposed activity, including a summary of potential key risks and associated management measures. The Information Sheet has been available on [Woodside's website](#) since August 2021, inviting comments on the proposed activities or requests for additional information. Revision 0 of the EP has been available on the NOPSEMA website since December 2021 (https://info.nopsema.gov.au/environment_plans/575/show_public).

Noting consultation material has been available since August 2021 and feedback was sought by 30 September 2021, we understand that AMCS has not commented on the proposed activity or sought further information on it. Should you have feedback on the proposed Scarborough Seabed Intervention and Trunkline Installation Environment Plan, please provide your views by **14 October 2022**.

Woodside has assessed your online public campaign and has provided detailed response at **Attachment A**.

If it would assist with consultation, Woodside would welcome the opportunity to meet with you prior to 14 October 2022, to discuss the Scarborough Seabed Intervention and Trunkline Installation Environment Plan. Should you wish to meet with Woodside, please advise as soon as possible. Beyond this timeframe, consultation is ongoing and feedback is accepted throughout the life of the EP, including while it is being prepared, while it is under assessment as well as after acceptance, while the EP remains in force.

Please note that there will be further consultation opportunities for the other activities undertaken as part of the Scarborough Project. For further information, you can subscribe to Woodside's consultation activities on our [website](#).

Activity:

Summary:	Seabed intervention and Trunkline installation activities in Commonwealth waters for the Scarborough development.
Location:	Activities run from the Commonwealth – State waters boundary approximately 32 km north of Dampier to the Scarborough gas field located at Woodside-operated title block WA-61-L, approximately 375 km west-northwest of the Burrup Peninsula.
Approx. Water Depth (m):	~ 32 m – 1400 m
Earliest commencement date:	Seabed intervention activities: Q4 2022 pending approvals, vessel availability and weather constraints Trunkline installation activities: Q4 2023 pending successful completion of State waters installation scope, approvals, vessel availability and weather constraints.
Estimated duration:	Approximately 24 months across multiple campaigns
Distance from Operational Area to nearest port/marina	Eastern end of the Trunkline route overlaps with the Pilbara Port Authority Dampier Port Limits
Distance from Operational Area to nearest marine park	<ul style="list-style-type: none">• The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cth), close to the northern boundary.• Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone. A minimum 250 m buffer will be in place from the Marine Park boundaries.

Operational Areas

- **Scarborough Trunkline Project Area:** The proposed Trunkline from the Scarborough FPU (approximately 430 km north-west of the Burrup) to the State waters boundary and 1.5 km either side of the proposed Trunkline centreline to allow for the movement and positioning of vessels. This also includes Spoil Ground 5A, which is approximately 300 m wide and runs ~17 km from the State waters boundary.
- **Offshore Borrow Ground Project Area:** Offshore Borrow Ground (location where sand will be sourced). The Offshore Borrow Ground is approximately 17 km², located 20 km to the east of the proposed Trunkline route and adjacent to the Dampier Marine Park.

Vessels:

- Trailing suction hopper dredge (TSHD)
- Offshore construction vessel (OCV)
- Fall pipe vessel (rock dump)
- Primary Installation Vessel (PIV) multi-joint operation
- Shallow Water Lay Barge (SWLB)
- Anchor handling vessel/tug
- Pipe supply vessels
- Survey vessels
- Support vessels
- Fuel bunkering vessels

Feedback:

If you have any issues or concerns with the proposed seabed intervention and trunkline installation activities,

then please respond to Woodside at:

Feedback@woodside.com.au or 1800 442 977.

Your feedback and our response will be included in our Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

Please provide your views by **14 October 2022**.

Regards,

Woodside Feedback

Attachment A – Scarborough Seabed Intervention and Trunkline Installation – 30 September 2022

Woodside has reviewed the Australian Marine Conservation Society's, online public campaign in relation to the activity defined in the Scarborough Seabed Intervention and Trunkline Installation, and notes that content generally relates to the themes outlined in the below table. **Theme** Assessment of climate change from activity

Woodside response

Concerns related to carbon and the impact on climate change from Scarborough gas are not relevant to the Scarborough Seabed Intervention and Trunkline Installation Environment Plan (the SITI EP).

Woodside confirms that the SITI EP assesses both direct and indirect impacts and risks associated with the proposed Petroleum Activities Program (PAP), having regard to the nature and scale of the proposed PAP.

The extraction of Scarborough gas for onshore processing is not within the scope of the activity described in the SITI EP.

Therefore, indirect impacts and risks arising from the onshore processing of Scarborough gas are not considered indirect impacts/risks of the PAP for the SITI EP but may be evaluated in Scarborough EPs as appropriate.

GHG emissions associated with the SITI activity (ie fuel combustion from project vessels) are considered in Section 6.6.5 (Revision 1) of the publicly available SITI EP.

Marine life and trunkline installation activities

Impact assessment for receptors such as marine fauna are provided in Section 6.6 and Section 6.7 of the SITI EP (Rev 1 publicly available).

Impact assessment shows that potential consequence for marine fauna across the potential risks is maximum 'D' (Ref Figure 2-2 in the EP) which is a minor short-term impact, with the most common consequences being slight short-term or no lasting effect.

Potential for any mortality in marine fauna as a result of the PAP is unlikely, highly unlikely or remote.

Assessment of light emissions

Routine Light Emissions from Project Vessels are considered in Section 6.6.4 (Rev 1) of the publicly available EP.

Assessment on vessel noise and strikes	The risk assessment on vessel noise and marine fauna is addressed in Section 6.6.6 (Rev 1) of the publicly available EP. The risks associated with vessel collision with marine fauna during the PAP are addressed in Section 6.7.2 (Rev 1) of the publicly available EP.
Assessment of impacts on Biologically Important Areas (BIAs) for turtles and other marine fauna	Tables 4-5 and Section 4.6 of the SITI EP (Rev 1 publicly available) list the relevant protected species and habitats or BIAs that overlap the Operational Area and Environment which May Be Affected (EMBA). Table 4-5 shows that within the Operational Area coral habitats may be present, however mangroves, saltmarsh and seagrass beds are only present within the broader EMBA and thus impact potential would only result from an unplanned marine diesel release due to vessel collision. In addition, potential impacts to BIAs, are described in the impact assessment in Section 6 (Revision 1) of the publicly available SITI EP.
Assessment on marine diesel spill risk	Unplanned Activities (Accidents, Incidents, Emergency Situations) from the Trunkline installation and associated activities are assessed in Section 6.7 (Rev 1) of the publicly available EP. Section 4 (Rev 1) of the publicly available EP describes the Environment that May Be Affected (EMBA) which is the largest spatial extent where unplanned events could have an environmental consequence on the surrounding

2.9 Email sent to Market Forces (30 September 2022)

Dear Market Forces

Woodside has identified that Market Forces has referred to the Scarborough Project in an online public campaign.

Please be advised that Woodside has submitted an Environment Plan to NOPSEMA to undertake seabed intervention and trunkline installation activities in Commonwealth waters for the Scarborough development, in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth).

The activity involves installation of a carbon steel pipeline that runs approximately 430 km from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing

onshore Pluto LNG facility. Activities are planned to commence in H2 2022 for a period of approximately 24 months across multiple campaigns.

A Consultation Information Sheet is attached, which provides background on the proposed activity, including a summary of potential key risks and associated management measures. The Information Sheet has been available on Woodside's website since August 2021, inviting comments on the proposed activities or requests for additional information. Revision 0 of the EP has been available on the NOPSEMA website since December 2021 (https://info.nopsema.gov.au/environment_plans/575/show_public).

Noting consultation material has been available since August 2021 and feedback was sought by 30 September 2021, we understand that Market Forces has not commented on the proposed activity or sought further information on it. Should you have feedback on the proposed Scarborough Seabed Intervention and Trunkline Installation Environment Plan, please provide your views by 14 October 2022.

Woodside has reviewed your online public campaign in relation to the activity defined in the Scarborough Seabed Intervention and Trunkline Installation Environment Plan, and notes that content generally relates to impacts and risks of the Scarborough Project to climate change, greenhouse gas (GHG) emissions, rock art, Aboriginal cultural heritage and an unplanned oil spill.

Woodside has assessed your online public campaign and has provided detailed response at Attachment A.

If it would assist with consultation, Woodside would welcome the opportunity to meet with you prior to 14 October 2022, to discuss the Scarborough Seabed Intervention and Trunkline Installation Environment Plan. Should you wish to meet with Woodside, please advise as soon as possible. Beyond this timeframe, consultation is ongoing and feedback is accepted throughout the life of the EP, including while it is being prepared, while it is under assessment as well as after acceptance, while the EP remains in force.

Please note that there will be further consultation opportunities for the other activities undertaken as part of the Scarborough Project. For further information, you can subscribe to Woodside's consultation activities on our website.

Woodside Feedback

Attachment A – Scarborough Seabed Intervention and Trunkline Installation – 30 September 2022

Woodside has reviewed Market Forces online public campaign in relation to the activity defined in the Scarborough Seabed Intervention and Trunkline Installation, and notes that content generally relates to the themes outlined in the below table. **Theme**
Assessment of climate change from activity

Woodside response

Concerns related to carbon and the impact on climate change from Scarborough gas are not relevant to the Scarborough Seabed Intervention and Trunkline Installation Environment Plan (the SITI EP).

Woodside confirms that the SITI EP assesses both direct and indirect impacts and risks associated with the proposed Petroleum Activities Program (PAP), having regard to the nature and scale of the proposed PAP. The extraction of Scarborough gas for onshore processing is not within the scope of the activity described in the SITI EP. Therefore, indirect impacts and risks arising from the onshore processing of Scarborough gas are not considered indirect impacts/risks of the PAP for the SITI EP but may be evaluated in Scarborough EPs as appropriate. GHG emissions associated with the SITI activity (ie fuel combustion from project vessels) are considered in

Section 6.6.5 (Revision 1) of the publicly available SITI EP.

Rock art and cultural heritage

Emissions from the activities covered by the SITI EP are of a scale and physical remoteness from Murujuga's rock art that no credible impact pathway is foreseen. Damage to heritage sites is not anticipated as a result of the proposed Petroleum Activities Program (PAP).

Woodside has undertaken archaeological assessments and ethnographic surveys to identify cultural heritage that may be impacted by the Scarborough development.

These works have not identified any heritage places, objects or values which will be impacted by the activities covered by the SITI EP.

A summary of this work and its results are provided in Section 4.9.1 of the EP.

No rock art will be displaced as a result of the proposed Petroleum Activities Program (PAP).

Assessment on marine diesel spill risk

Unplanned Activities (Accidents, Incidents, Emergency Situations) from the Trunkline installation and associated activities are assessed in Section 6.7 (Rev 1) of the publicly available EP.

Section 4 (Rev 1) of the publicly available EP describes the Environment that May Be Affected (EMBA) which is the largest spatial extent where unplanned events could have an environmental consequence on the surrounding environment. For this EP, the EMBA is the potential spatial extent of surface and in-water hydrocarbons at concentrations above ecological impact thresholds, in the event of the worst-case credible marine diesel spill.

Ecological impact thresholds used to delineate the EMBA are defined in Section 6.7.1. The worst-case credible spill scenario for this EP is a vessel collision resulting in hydrocarbon release of 2,000 m³ of marine diesel.

The EMBA and the size of the worst-case credible spill scenario align with the Scarborough OPP.

The EMBA presented does not represent the predicted coverage of any one marine diesel spill or a depiction of a slick or plume at any particular point in time. Rather, the areas are a composite of a large number of theoretical paths,

2.10 Email sent to Extinction Rebellion WA (XRWA) (30 September 2022)

Dear Extinction Rebellion WA

Woodside has identified that Extinction Rebellion WA has referred to the Scarborough Project in an online public campaign.

Please be advised that Woodside has submitted an [Environment Plan](#) to NOPSEMA to undertake seabed intervention and trunkline installation activities in Commonwealth waters for the Scarborough development, in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth).

The activity involves installation of a carbon steel pipeline that runs approximately 430 km from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. Activities are planned to commence in H2 2022 for a period of approximately 24 months across multiple campaigns.

A Consultation Information Sheet is attached, which provides background on the proposed activity, including a summary of potential key risks and associated management measures. The Information Sheet has been available on [Woodside's website](#) since August 2021, inviting comments on the proposed activities or requests for additional information. Revision 0 of the EP has been available on the NOPSEMA website since December 2021 (https://info.nopsema.gov.au/environment_plans/575/show_public).

Noting consultation material has been available since August 2021 and feedback was sought by 30 September 2021, we understand that Extinction Rebellion WA has not commented on the proposed activity or sought further information on it. Should you have feedback on the proposed Scarborough Seabed Intervention and Trunkline Installation Environment Plan, please provide your views by **14 October 2022**.

Woodside has reviewed your online public campaign in relation to the activity defined in the Scarborough Seabed Intervention and Trunkline Installation Environment Plan, and notes that content generally relates to impacts and risks of the Scarborough Project to climate change, greenhouse gas (GHG) emissions, marine life and trunkline installation activities, rock art and Aboriginal cultural heritage.

We confirm that concerns related to carbon and the impact on climate change from Scarborough gas are not relevant to the Scarborough Seabed Intervention and Trunkline Installation Environment Plan (the SITI EP).

Woodside confirms that the SITI EP assesses both direct and indirect impacts and risks associated with the proposed Petroleum Activities Program (PAP), having regard to the nature and scale of the proposed PAP. The extraction of Scarborough gas for onshore processing is not within the scope of the activity described in the SITI EP. Therefore, indirect impacts and risks arising from the onshore processing of Scarborough gas are not considered indirect impacts/risks of the PAP for the SITI EP but may be evaluated in Scarborough EPs as appropriate.

GHG emissions associated with the SITI activity (ie fuel combustion from project vessels) are considered in Section 6.6.5 (Revision 1) of the publicly available SITI EP.

Regarding marine life and trunkline installation activities – Woodside confirms that impact assessments for receptors such as marine fauna are provided in Section 6.6 and Section 6.7 of the SITI EP (Rev 1 publicly available). Impact assessment shows that potential consequence for marine fauna across the potential risks is maximum ‘D’ (Ref Figure 2-2 in the EP) which is a Minor short-term impact, with the most common consequences being Slight short-term or no lasting effect. Potential for any mortality in marine fauna as a result of the PAP is unlikely, highly unlikely or remote.

On rock art and Aboriginal cultural heritage – Woodside confirms emissions from the activities covered by the SITI EP are of a scale and physical remoteness from Murujuga’s rock art that no credible impact pathway is foreseen. Damage to heritage sites is not anticipated as a result of the proposed Petroleum Activities Program (PAP).

Woodside has undertaken archaeological assessments and ethnographic surveys to identify cultural heritage that may be impacted by the Scarborough development. These works have not identified any heritage places, objects or values which will be impacted by the activities covered by the SITI EP. A summary of this work and its results are provided in Section 4.9.1 of the EP

No rock art will be displaced as a result of the proposed Petroleum Activities Program (PAP).

If it would assist with consultation, Woodside would welcome the opportunity to meet with you prior to 14 October 2022, to discuss the Scarborough Seabed Intervention and Trunkline Installation Environment Plan. Should you wish to meet with Woodside, please advise as soon as possible. Beyond this timeframe, consultation is ongoing and feedback is accepted throughout the life of the EP, including while it is being prepared, while it is under assessment as well as after acceptance, while the EP remains in force.

Please note that there will be further consultation opportunities for the other activities undertaken as part of the Scarborough Project. For further information, you can subscribe to Woodside’s consultation activities on our [website](#).

Activity:

Summary:

Seabed intervention and Trunkline installation activities in Commonwealth waters for the Scarborough development.

Location:

Activities run from the Commonwealth – State waters boundary approximately 32 km north of Dampier to the Scarborough gas field located at Woodside-operated title

block WA-61-L, approximately 375 km west-northwest of the Burrup Peninsula.

Approx. Water Depth (m):

~ 32 m – 1400 m

Earliest commencement date:

Seabed intervention activities: Q4 2022 pending approvals, vessel availability and weather constraints

Trunkline installation activities: Q4 2023 pending successful completion of State waters installation scope, approvals, vessel availability and weather constraints.

Estimated duration:

Approximately 24 months across multiple campaigns

Distance from Operational Area to nearest port/marina

Eastern end of the Trunkline route overlaps with the Pilbara Port Authority Dampier Port Limits

Distance from Operational Area to nearest marine park

- The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cth), close to the northern boundary.
- Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone. A minimum 250 m buffer will be in place from the Marine Park boundaries.

Operational Areas

- **Scarborough Trunkline Project Area:** The proposed Trunkline from the Scarborough FPU (approximately 430 km north-west of the Burrup) to the State waters boundary and 1.5 km either side of the proposed Trunkline centreline to allow for the movement and positioning of vessels. This also includes Spoil Ground 5A, which is approximately 300 m wide and runs ~17 km from the State waters boundary.
- **Offshore Borrow Ground Project Area:** Offshore Borrow Ground (location where sand will be sourced). The Offshore Borrow Ground is approximately 17 km², located 20 km to the east of the proposed Trunkline route and adjacent to the Dampier Marine Park.

Vessels:

- Trailing suction hopper dredge (TSHD)
- Offshore construction vessel (OCV)
- Fall pipe vessel (rock dump)
- Primary Installation Vessel (PIV) multi-joint operation
- Shallow Water Lay Barge (SWLB)
- Anchor handling vessel/tug
- Pipe supply vessels

- Survey vessels
- Support vessels
- Fuel bunkering vessels

Feedback:

If you have any issues or concerns with the proposed seabed intervention and trunkline installation activities, then please respond to Woodside at:

Feedback@woodside.com.au or 1800 442 977.

Your feedback and our response will be included in our Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth)*.

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

Please provide your views by **14 October 2022**.

Regards,

Woodside Feedback

2.11 Email sent to Climate Council (30 September 2022)

Dear Climate Council

Woodside has identified that Climate Council has referred to the Scarborough Project in an online public campaign.

Please be advised that Woodside has submitted an [Environment Plan](#) to NOPSEMA to undertake seabed intervention and trunkline installation activities in Commonwealth waters for the Scarborough development, in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth).

The activity involves installation of a carbon steel pipeline that runs approximately 430 km from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. Activities are planned to commence in H2 2022 for a period of approximately 24 months across multiple campaigns.

A Consultation Information Sheet is attached, which provides background on the proposed activity, including a summary of potential key risks and associated management measures. The Information Sheet has been available on [Woodside's website](#) since August 2021, inviting comments on the proposed activities or requests for additional information. Revision 0 of the EP has been available on the NOPSEMA website since December 2021 (https://info.nopsema.gov.au/environment_plans/575/show_public).

Noting consultation material has been available since August 2021 and feedback was sought by 30 September 2021, we understand that Climate Council has not commented on the proposed activity or sought further information on it. Should you have feedback on the

proposed Scarborough Seabed Intervention and Trunkline Installation Environment Plan, please provide your views by **14 October 2022**.

Woodside has reviewed your online public campaign in relation to the activity defined in the Scarborough Seabed Intervention and Trunkline Installation Environment Plan, and notes that content generally relates to impacts and risks of the Scarborough Project to climate change and greenhouse gas (GHG) emissions.

We confirm that concerns related to carbon and the impact on climate change from Scarborough gas are not relevant to the Scarborough Seabed Intervention and Trunkline Installation Environment Plan (the SITI EP).

Woodside confirms that the SITI EP assesses both direct and indirect impacts and risks associated with the proposed Petroleum Activities Program (PAP), having regard to the nature and scale of the proposed PAP. The extraction of Scarborough gas for onshore processing is not within the scope of the activity described in the SITI EP. Therefore, indirect impacts and risks arising from the onshore processing of Scarborough gas are not considered indirect impacts/risks of the PAP for the SITI EP but may be evaluated in Scarborough EPs as appropriate.

GHG emissions associated with the SITI activity (i.e., fuel combustion from project vessels) are considered in Section 6.6.5 (Revision 1) of the publicly available SITI EP.

If it would assist with consultation, Woodside would welcome the opportunity to meet with you prior to 14 October 2022, to discuss the Scarborough Seabed Intervention and Trunkline Installation Environment Plan. Should you wish to meet with Woodside, please advise as soon as possible. Beyond this timeframe, consultation is ongoing and feedback is accepted throughout the life of the EP, including while it is being prepared, while it is under assessment as well as after acceptance, while the EP remains in force.

Please note that there will be further consultation opportunities for the other activities undertaken as part of the Scarborough Project. For further information, you can subscribe to Woodside's consultation activities on our [website](#).

Woodside Feedback

2.12 Email sent to Buurabalayji Thalanyji Aboriginal Corporation (BTAC) (20 January 2023)

Good afternoon [REDACTED]

I hope this email finds you well. I note your recent communications with Ben Garwood and attach information in relation to Woodside's proposed Scarborough gas project.

The Scarborough gas field is located in the Carnarvon Basin, approximately 375 km off the coast of Western Australia. Woodside plans to bring gas from Scarborough to Murujuga (the Burrup Peninsula) through a pipeline that is approximately 430km long, to Woodside's Pluto gas plant. The development of the Scarborough project involves different work programs. An overview of those work programs is included in the attached documents.

In preparation for this work, Woodside has undertaken an assessment to identify potential impacts and risks to the marine environment arising from both planned and unplanned activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

We have a number of detailed Consultation Information Sheets, available on [our website](#), which provide further background on the proposed approaches, including a summary of potential key risks and associated management measures for the primary activity and alternative options.

Woodside is seeking to understand the nature of the interests that Buurabalayji Thalanyji Aboriginal Corporation (BTAC) and its members may have in the 'environment that may be affected' (EMBA) by this activity. The EMBA is the total area over which unplanned events could have environmental impacts, as set out in the Summary Information sheet attached.

If you would like to speak with us, please let us know by **20 February 2023**. Please also let us know how you would like us to engage with you as soon as possible.

If there is any support or specific information that BTAC requires to prepare for a meeting, please let me know. In the meantime, I have attached for BTAC's review:

- A Summary Overview of the Scarborough project; and
- Respective Summary Information sheets

BTAC can also provide feedback directly to [REDACTED] on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and, the attached documents to BTAC members as required. Woodside would be pleased to speak with BTAC members in addition to the BTAC Board / office holders.

We look forward to hearing from you.

Kind regards

[REDACTED] on behalf of [REDACTED]
Consultant to First Nations & Communities | Corporate Affairs

2.13 Email sent to the University of Western Australia (UWA) (11 November 2022)

Dear [REDACTED]

Please be advised that Woodside has submitted the following environment plans to undertake seabed intervention and trunkline installation activities for the proposed Scarborough Project:

- Seabed intervention and trunkline installation within Commonwealth waters which will be managed under the [Scarborough Seabed Installation Intervention and Trunkline Installation Environment Plan](#) (SITI EP) and which has been submitted to NOPSEMA as the Commonwealth regulator for assessment.
- Trunkline installation within State waters which will be managed under the [Scarborough Trunkline Installation \(State Waters\) Environment Plan](#) (State EP) and which has been submitted to DMIRS as the State regulator for assessment.

A Consultation Information Sheet for each of the activities is linked above, which provides background on the proposed activity, including a summary of potential key risk and associated management measures. They are also available on our [website](#).

Woodside is seeking your advice regarding any research activities that UWA may be undertaking that may overlap with our proposed activities.

We would be grateful for your advice and any other feedback UWA may have on the proposed activities by **25 November 2022**.

More information on the Scarborough Project can be found [here](#).

Your feedback and our response will be included in our Environment Plan which will be submitted to NOPSEMA or DMIRS for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth) or the *Petroleum (Submerged Lands) (Environment) Regulations 2012*.

Please let us know if your feedback for these activities is sensitive and we will make this known to NOPSEMA or DMIRS upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA or DMIRS.

Regards,

Woodside Feedback

Regarding The Wildmess Society's queries in relation to Woodside's engagement with Traditional Owners on the relevant EPs, Woodside confirmed it has undertaken extensive engagement with the relevant Traditional Owners and Traditional Owner representative groups with respect to the proposed activities. Woodside confirmed this engagement included archaeological and ethnographic surveys, which have informed the Scarborough EPs.

In response to general queries which were not specific to the relevant EPs, Woodside confirmed the Scarborough reservoir contains dry gas and negligible levels of carbon dioxide. Woodside also confirmed employees are not financially incentivised (by way of bonus for example) to achieve acceptance of EPs.

In relation to The Wildmess Society's query regarding zooplankton and any potential impacts from the proposed activities on the broader food chain, Woodside confirmed scientific studies and modelling have been used to assess and ensure an ALARP and acceptable approach to activities. Further to Woodside's response during the meeting, Woodside can confirm the risk assessments in the Seismic EP conclude that impacts to zooplankton are likely to be localised (≤ 110 m from the seismic source) and localised changes in zooplankton abundance are likely to be replenished and indistinguishable from natural levels and distributions within hours of a seismic survey vessel passing.

During the meeting, Woodside agreed to provide The Wildmess Society with details on the comparison of the proposed Scarborough seismic activity with previously completed seismic surveys. Woodside can confirm that the key characteristics of the Scarborough 4D B1 Marine Seismic Survey are within the range of other recent surveys completed in the area. Table 6-10 of the Seismic EP details seismic surveys undertaken in the last five years (2016-2021), within 150 km of the proposed activity.

Woodside also agreed to share with The Wildmess Society additional information on whether it is considering alternatives to seismic for future activities over the next 10 to 15 years. As discussed during the meeting, within the Subsea EP, Woodside is proposing to acquire a seabed gravimetry survey in permit areas WA-61-L and WA-62-L as a complementary geophysical technology to the new seismic data. This technique delivers a field-wide measurement of gravity, providing direct measurement of water movement or saturation and reservoir compaction or subsidence in the Scarborough reservoir.

Woodside has and continues to closely follow the development of marine seismic vibrator technology and has participated in technical forums held with seismic contractors. However, this technology is still in research and development phase and is yet to be offered commercially by seismic contractors.

Woodside considered the trial of a small-scale ocean bottom node survey, using emerging technology with autonomous underwater vehicles, as part of the Scarborough seismic survey. This was included in the initial Seismic EP; however, due to technical issues with this technology, the scope was removed from the EP (Revision 5).

Woodside confirms it remains interested in the use of autonomous seismic nodes as an alternative to towed streamers. The use of autonomous seismic nodes may reduce the acoustic energy source required, reduce the time taken to acquire the survey and minimise the sea surface footprint.

Lastly, Woodside noted The Wildness Society's interest in understanding Woodside's embedded science approach to address knowledge gaps and scientific uncertainty relating to the impacts of marine seismic survey on marine life. Woodside confirms that it continues to support scientific research on the impacts of marine seismic surveys including a funding contribution to assessing seismic impacts on demersal fishes in tropical shelf environments. [Meekan et al. \(2021\)](#) found that a large-scale experiment seismic survey did not alter fish abundance or behaviour in multiple before-after-control-impact and dose-response experimental frameworks. The study was conducted as part of Australian Institute of Marine Science's (AIMS) North West Shoals to Shore Research Program.

Woodside recognises and supports the work of the International Association of Oil & Gas Producers' (IOGP) Sound and Marine Life Joint Industry Programme (JIP). The JIP is currently planning Phase 4 of the research program. Six priority areas of new projects within the program include alternative seismic sound sources and reduction and physical impacts and behavioural reactions of industry sound on marine life.

Woodside also supports the Australian Government's development of a National Guideline on Management of Underwater Noise and a re-drafting of EPBC Policy 2.1 (Interaction between offshore seismic exploration and whales: Industry guidelines). Woodside and the wider industry are participating in the consultation process for these pieces of work.

Woodside thanks The Wilderness Society again for an informative and open discussion. This letter serves as confirmation that Woodside consulted The Wilderness Society on the Seismic EP, the D&C EP, the SITI EP, State Waters EP and the Subsea EP. A consultation summary will continue to be included in each of the EPs and will be updated to reflect recent discussions.

Woodside notes that no new concerns or queries have been raised by The Wilderness Society directly to Woodside that have not already been addressed by Woodside in each of the EPs.

Should The Wilderness Society have additional feedback on the proposed activities discussed during the meeting or in response to the information provided, Woodside will continue to engage with The Wilderness Society in line with Woodside's ongoing engagement approach throughout the life of the relevant environment plans.

Noting The Wilderness Society's more general interest in carbon offsets, biodiversity and native vegetation, though outside of the scope of the Scarborough Project consultation, Woodside would welcome the opportunity for The Wilderness Society to meet with subject matter advisers from Woodside to discuss the work that is being undertaken in this space.

Kind regards,

[Redacted signature]

2.14 Email sent to National Energy Resource Australia (NERA) Collaborative Seismic Environment Plan Project (CSEP) (11 November 2022)

Dear [Redacted],

Further to the below correspondence regarding Woodside's Scarborough 4D B1 Marine Seismic Survey, please be advised that Woodside has submitted an Environment Plan (EP) to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for the following proposed activities:

- [Scarborough Seabed Intervention and Trunkline Installation Environment Plan](#) (SITI EP)
- [WA-61-L Scarborough Drilling and Completions](#) (D&C EP)

Woodside has previously submitted Revision 1 of the SITI EP to NOPSEMA. This revision of the EP has been available on the NOPSEMA website since January 2022 (https://info.nopsema.gov.au/environment_plans/575/show_public). Woodside has also previously submitted Revision 0 of the D&C EP to NOPSEMA. This revision of the EP has been available on the NOPSEMA website since November 2021 (https://info.nopsema.gov.au/environment_plans/565/show_public).

Woodside is preparing an updated revision of the SITI EP and D&C EP for submission to NOPSEMA. We confirm the activities, location and duration described in these revisions remain the same, with no material changes.

Woodside is also proposing to undertake seabed site surveys and installation of subsea production infrastructure within Permit Areas WA-61-L and WA-62-L, about 374 km west-northwest of Dampier, Western Australia under the [WA-61-L and WA-62-L Subsea Infrastructure Installation Environment Plan](#) (Subsea EP). This EP has not yet been submitted to NOPSEMA.

A Consultation Information Sheet for each of the activities is linked above, which provides background on the proposed activity, including a summary of potential key risk and associated management measures. They are also available on our [website](#).

The proposed activities under the SITI EP, D&C EP and Subsea EP are planned to be undertaken within a subset of the activity area for the Scarborough Seismic Survey and may be of interest to you.

Each of these EPs fall under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP) and will be conducted in line with relevant requirements of the OPP. The OPP includes a detailed description of activities and an assessment of impacts; with controls to develop acceptability criteria. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

Should NERA CESP have feedback on the SITI EP, D&C EP or Subsea EP, please provide your views by **25 November 2022**.

Your feedback and our response will be included in our Environment Plan which will be submitted to NOPSEMA for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

Regards,
Woodside Feedback

2.15 Email sent to Australian Institute of Marine Science (AIMS) (11 November 2022)

Dear [REDACTED]

Please be advised that Woodside has submitted the following environment plans to undertake seabed intervention and trunkline installation activities for the proposed Scarborough Project:

- Seabed intervention and trunkline installation within Commonwealth waters which will be managed under the Scarborough Seabed Installation Intervention and Trunkline Installation Environment Plan (SITI EP) and which has been submitted to NOPSEMA as the Commonwealth regulator for assessment.
- Trunkline installation within State waters which will be managed under the Scarborough Trunkline Installation (State Waters) Environment Plan (State EP) and which has been submitted to DMIRS as the State regulator for assessment.

A Consultation Information Sheet for each of the activities is linked above, which provides background on the proposed activity, including a summary of potential key risk and associated management measures. They are also available on our website.

Woodside is seeking your advice regarding any research activities that AIMS may be undertaking that may overlap with our proposed activities.

We would be grateful for your advice and any other feedback AIMS may have on the proposed activities by 25 November 2022.

More information on the Scarborough Project can be found [here](#).

Your feedback and our response will be included in our Environment Plan which will be submitted to NOPSEMA or DMIRS for acceptance in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth) or the Petroleum (Submerged Lands) (Environment) Regulations 2012.

Please let us know if your feedback for these activities is sensitive and we will make this known to NOPSEMA or DMIRS upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA or DMIRS.

Regards,

Woodside Feedback

2.16 Email sent to Coastal Oil and Gas (11 November 2022)

Dear Titleholder,

Woodside has submitted an Environment Plan (EP) to undertake seabed intervention and trunkline installation activities in Commonwealth waters for the Scarborough development, in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth).

A Consultation Information Sheet is attached, which provides background on the proposed activity, including a summary of potential key risk and associated management measures. The Information Sheet is also available on our [website](#). A map showing the proposed activity relevant to adjacent petroleum titles is also attached.

Woodside has previously submitted Revision 1 of the Scarborough Seabed Intervention and Trunkline Installation Environment Plan (SITI EP) to NOPSEMA. This revision of the EP has been available on the NOPSEMA website since January 2022

(https://info.nopsema.gov.au/environment_plans/575/show_public). Woodside is preparing a Revision 3 of the SITI EP for submission to NOPSEMA. We confirm the activities, location and duration described in Revision 1 of the publicly available SITI EP remain the same, with no material changes.

This EP falls under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP) and will be conducted in line with relevant requirements of the OPP. The OPP includes a detailed description of activities and an assessment of impacts; with controls to develop acceptability criteria. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

Please provide your views by **25 November 2022**.

Activity:

Summary:

Seabed intervention and Trunkline installation activities in Commonwealth waters for the Scarborough development.

Location:	Activities run from the Commonwealth – State waters boundary approximately 32 km north of Dampier to the Scarborough gas field located at Woodside-operated title block WA-61-L, approximately 375 km west-northwest of the Burrup Peninsula.
Approx. Water Depth (m):	~ 32 m – 1400 m
Earliest commencement date:	Seabed intervention activities: Q4 2022 pending approvals, vessel availability and weather constraints Trunkline installation activities: Q4 2023 pending successful completion of State waters installation scope, approvals, vessel availability and weather constraints.
Estimated duration:	Approximately 24 months across multiple campaigns
Distance from Operational Area to nearest port/marina	Eastern end of the Trunkline route overlaps with the Pilbara Port Authority Dampier Port Limits
Distance from Operational Area to nearest marine park	<ul style="list-style-type: none">• The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cth), close to the northern boundary.• Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone. A minimum 250 m buffer will be in place from the Marine Park boundaries.
Operational Areas	<ul style="list-style-type: none">• Scarborough Trunkline Project Area: The proposed Trunkline from the Scarborough FPU (approximately 430 km north-west of the Burrup) to the State waters boundary and 1.5 km either side of the proposed Trunkline centreline to allow for the movement and positioning of vessels. This also includes Spoil Ground 5A, which is approximately 300 m wide and runs ~17 km from the State waters boundary.• Offshore Borrow Ground Project Area: Offshore Borrow Ground (location where sand will be sourced). The Offshore Borrow Ground is approximately 17 km², located 20 km to the east of the proposed Trunkline route and adjacent to the Dampier Marine Park.
Vessels:	<ul style="list-style-type: none">• Trailing suction hopper dredge (TSHD)• Offshore construction vessel (OCV)• Fall pipe vessel (rock dump)• Primary Installation Vessel (PIV) multi-joint operation• Shallow Water Lay Barge (SWLB)

- Anchor handling vessel/tug
- Pipe supply vessels
- Survey vessels
- Support vessels
- Fuel bunkering vessels

Feedback:

If you have any issues or concerns with these activities, any other issues relevant to this location then please respond to Woodside at:
Feedback@woodside.com.au or 1800 442 977.

Your feedback and our response will be included in our Environment Plans which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

Please provide your views by **25 November 2022**.

Regards,

2.17 Email sent to Commonwealth Scientific and Industrial Research Organisation (CSIRO) (11 November 2022)

Dear ■■■

Please be advised that Woodside has submitted the following environment plans to undertake seabed intervention and trunkline installation activities for the proposed Scarborough Project:

- Seabed intervention and trunkline installation within Commonwealth waters which will be managed under the Scarborough Seabed Installation Intervention and Trunkline Installation Environment Plan (SITI EP) and which has been submitted to NOPSEMA as the Commonwealth regulator for assessment.
- Trunkline installation within State waters which will be managed under the Scarborough Trunkline Installation (State Waters) Environment Plan (State EP) and which has been submitted to DMIRS as the State regulator for assessment.

A Consultation Information Sheet for each of the activities is linked above, which provides background on the proposed activity, including a summary of potential key risk and associated management measures. They are also available on our website.

Woodside is seeking your advice regarding any research activities that CSIRO may be undertaking that may overlap with our proposed activities.

We would be grateful for your advice and any other feedback CSIRO may have on the proposed activities by 25 November 2022.

More information on the Scarborough Project can be found here.

Your feedback and our response will be included in our Environment Plan which will be submitted to NOPSEMA or DMIRS for acceptance in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth) or the Petroleum (Submerged Lands) (Environment) Regulations 2012.

Please let us know if your feedback for these activities is sensitive and we will make this known to NOPSEMA or DMIRS upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA or DMIRS.

Regards,

Woodside Feedback

2.18 Email sent to Australian Institute of Marine Science (AIMS) (6 February 2022)

Dear [REDACTED]

Woodside has submitted Environment Plans (EPs) to undertake the following activities in Commonwealth waters for the Scarborough development:

- drilling and subsea tree installation activities for eight planned development wells and the potential for a further two additional contingency wells under the WA-61-L Scarborough Drilling and Completions EP (**D&C EP**);
- 4D baseline marine seismic survey (MSS) activities over the Scarborough and Jupiter field under the Scarborough 4D Baseline Marine Seismic Survey EP (**Seismic EP**); and
- seabed site surveys and installation of subsea production infrastructure under the Subsea Infrastructure Installation EP (**Subsea EP**).

Updated consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#).

As we are inviting consultation with you on each of the EPs above, for ease of reference, we have attached the information in this one email. In an effort to simplify feedback, we have also included a feedback template (Appendix A) which you may wish to use to provide your feedback specific to the proposed EPs.

Revision 0 of the **D&C EP** has been available on the NOPSEMA website since November 2021 (https://info.nopsema.gov.au/environment_plans/565/show_public). Revision 0 of the **Seismic EP** has been available on the NOPSEMA website since 18 October 2021 (https://info.nopsema.gov.au/environment_plans/559/show_public).

Woodside is preparing to submit a further revision of the D&C EP and Seismic EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in these revisions remain the same, with no material changes. The Subsea EP has not yet been submitted to NOPSEMA.

The D&C EP and Subsea EP fall under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of

activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

Woodside is seeking your advice regarding any research activities that AIMS may be undertaking that may overlap with our proposed activities.

If you have feedback specific to each of the proposed activities described under the relevant EPs, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **8 March 2023**.

Activity:

	D&C EP	Seismic EP	Subsea EP
Summary:	Drilling and Completions activities in Commonwealth waters, including drilling and subsea tree installation activities for eight planned development wells and the potential for a further two contingency wells. Woodside may need to intervene, workover or re-drill the wells. Subsea inspection, monitoring, maintenance and subsea infrastructure repair activities may also be undertaken.	4D baseline seismic survey over the Scarborough and Jupiter fields. The proposed survey will be conducted over areas where seismic data has previously been acquired. The objective for the proposed activity is to acquire a new 3D seismic survey data that will provide the baseline for future 'time lapse' reservoir surveillance (or technically termed 4D baseline survey).	Seabed site surveys and installation of subsea production infrastructure. Activities include visual pre- and post-installation surveys, and installation of flowlines, umbilicals and risers and ancillary infrastructure, required for the flow and control of hydrocarbons and produced water to the Scarborough Floating Production Unit (FPU). Mooring legs and suction piles will also be installed and a gravimetry survey is also planned.
Location:	Activities are located in Permit Area WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, Western Australia. Approximate development well locations for the eight planned wells are provided in Table 2 of the attached D&C EP Consultation Information Sheet.	The seismic survey will cover the Scarborough and Jupiter fields within Commonwealth waters, located in the Exmouth Plateau, approximately 214 km north west of Exmouth, Western Australia.	Activities are located in permit Areas WA-61-L and WA-62-L, around 374 km west-northwest of Dampier, Western Australia.

Approx. Water Depth (m):	~ 900 m – 955 m	~ 800 m – 1,150 m	~ 900 m – 1000 m
Earliest commencement date:	Activities planned to commence in H2 2023 pending approvals, vessel availability and weather constraints.	Activities planned to commence in H1 2023 pending approvals, vessel availability and weather constraints.	Activities planned to commence in H2 2023 (and estimated to be completed in 18 months with activities occurring in multiple campaigns).
Estimated duration:	~50 – 60 days per well	~55 – 70 days	~18 months (cumulative) for the survey and installation activities
Distance from Operational Area to nearest town	~244 km north-northwest of Exmouth, 374 km west-northwest of Dampier.	~214 km north-west of Exmouth.	~ 244 km north-northwest of Exmouth, ~ 374 km west-northwest of Dampier.
Distance from Operational Area to nearest marine park	<ul style="list-style-type: none"> • ~83 km north of the Gascoyne Marine Park (Cwlth) • ~206 km north-west of Montebello Marine Park (Cwlth) • ~208 km north-northwest of Ningaloo Marine Park (Cwlth) 	<ul style="list-style-type: none"> • ~46 km north of Gascoyne Marine Park Multiple Use Zone 	<ul style="list-style-type: none"> • ~ 77 km north of the Gascoyne Marine Park (Cwlth) • ~ 201 km north-west of Montebello Marine Park (Cwlth) • ~ 180 km north-northwest of Ningaloo Marine Park (Cwlth)
Operational Area and Exclusion Zones	<p>A petroleum safety zone of 500 m will be in place around the MODU and installation vessel for the duration of activities. The Operational Areas are:</p> <ul style="list-style-type: none"> • DP MODU/drillship – 500 m radius from each well centre • Moored MODU – 4,000 m radius from each well centre. • Installation vessel – 1,500 m radius around subsea locations 	<ul style="list-style-type: none"> • Three nautical mile radius safe navigation area around the seismic vessel, streamers and tail buoys during seismic operations • Marine users are requested to avoid this area during the survey to ensure the safety of the seismic vessel and third-party vessels • Refer to Table 3 of the attached Seismic EP Consultation Information Sheet for detailed survey location points 	<p>The Operational Area for activities includes a radius of:</p> <ul style="list-style-type: none"> • 1,000 m around location of the outermost concrete pads. • 1,500 m around location of subsea infrastructure. • 2,000 m around future location of FPU. • Temporary 500 m exclusion zone around vessels to manage vessel movements • An interactive map showing the location of the proposed activities will be available on the Woodside website and will be updated

			throughout the proposed activities
Vessels:	<ul style="list-style-type: none"> • Installation vessels for installing the subsea infrastructure • Light well intervention vessel as an option for well intervention, subsea hardware installation or contingent activities • Support vessels including installation vessel(s), anchor handling vessel(s) and general supply/support vessels 	<ul style="list-style-type: none"> • A purpose-built seismic vessel • One support vessel • A potential chase vessel, and • An additional spotter vessel (May to June) 	<ul style="list-style-type: none"> • Light construction vessels • Heavy construction vessels • Heavy lift vessels • Derrick lay vessel • Reel-lay vessels • Survey vessels • Support vessels

Feedback:

If you have any issues or concerns with these activities, or any other issues relevant to this location, please respond to Woodside at: Feedback@woodside.com.au or 1800 442 977.

Your feedback and our response will be included in our Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth)*.

Please let us know if your feedback for any of the activities proposed under an Environment Plan is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan to ensure this information remains confidential to NOPSEMA.

Please provide your views by 8 **March 2023**.

2.19 Emails sent to Malgana Aboriginal Corporation (MAC) – 20 January 2023

Good afternoon [redacted] and [redacted]

I had a bounce back from the [redacted] address that was listed on ORIC so am resending to info@malgana.org.au. Please see email below.

Please feel free to reach out to me or [redacted] (copied) any time.

Kind regards
[redacted]

Good afternoon [redacted] and [redacted]

Please find attached information in relation to Woodside's proposed Scarborough gas project. The Scarborough gas field is located in the Carnarvon Basin, approximately 375 km

off the coast of Western Australia. Woodside plans to bring gas from Scarborough to Murujuga (the Burrup Peninsula) through a pipeline that is approximately 430km long, to Woodside's Pluto gas plant. The development of the Scarborough project involves different work programs. An overview of those work programs is included in the attached documents.

In preparation for this work, Woodside has undertaken an assessment to identify potential impacts and risks to the marine environment arising from both planned and unplanned activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

We have a number of detailed Consultation Information Sheets, available on [our website](#), which provide further background on the proposed approaches, including a summary of potential key risks and associated management measures for the primary activity and alternative options.

Woodside is seeking to understand the nature of the interests that Malgana Aboriginal Corporation (MAC) and its members may have in the 'environment that may be affected' (EMBA) by this activity. The EMBA is the total area over which unplanned events could have environmental impacts, as set out in the Summary Information sheet attached.

If you would like to speak with us, please let us know by **20 February 2023**. Please also let us know how you would like us to engage with you as soon as possible.

If there is any support or specific information that MAC requires to prepare for a meeting, please let me know. In the meantime, I have attached for MAC's review:

- A Summary Overview of the Scarborough project; and
- Respective Summary Information sheets

I have copied in [REDACTED] who will reach out to you next week to follow up. MAC can also provide feedback directly to [REDACTED] or me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and, the attached documents to MAC members as required. Woodside would be pleased to speak with MAC members in addition to the MAC Board / office holders.

We look forward to hearing from you.

Kind regards

[REDACTED]
[REDACTED]

3 CONSULTATION (2023)

3.1 Email sent to Yinggarda Aboriginal Corporation (YAC) – 20 January 2023

Good afternoon [REDACTED]

Further to recent communications, please find attached information in relation to Woodside's proposed Scarborough gas project.

The Scarborough gas field is located in the Carnarvon Basin, approximately 375 km off the coast of Western Australia. Woodside plans to bring gas from Scarborough to Murujuga (the Burrup Peninsula) through a pipeline that is approximately 430km long, to Woodside's Pluto gas plant. The development of the Scarborough project involves different work programs. An overview of those work programs is included in the attached documents.

In preparation for this work, Woodside has undertaken an assessment to identify potential impacts and risks to the marine environment arising from both planned and unplanned activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

We have a number of detailed Consultation Information Sheets, available on [our website](#), which provide further background on the proposed approaches, including a summary of potential key risks and associated management measures for the primary activity and alternative options.

Woodside is seeking to understand the nature of the interests that Yinggarda Aboriginal Corporation (YAC) and its members may have in the 'environment that may be affected' (EMBA) by this activity. The EMBA is the total area over which unplanned events could have environmental impacts, as set out in the Summary Information sheet attached.

If you would like to speak with us, please let us know by **20 February 2023**. Please also let us know how you would like us to engage with you as soon as possible.

If there is any support or specific information that YAC requires to prepare for a meeting, please let me know. In the meantime, I have attached for YAC's review:

1. A Summary Overview of the Scarborough project; and
2. Respective Summary Information sheets

YAC can also provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and, the attached documents to YAC members as required. Woodside would be pleased to speak with YAC members in addition to the YAC Board / office holders.

We look forward to hearing from you.

Kind regards

[Redacted signature block]

3.2 Email sent to Nanda Aboriginal Corporation – 20 January 2023)

Good afternoon [REDACTED]

I hope this email finds you well.

Please find attached information in relation to Woodside's proposed Scarborough gas project. The Scarborough gas field is located in the Carnarvon Basin, approximately 375 km off the coast of Western Australia. Woodside plans to bring gas from Scarborough to Murujuga (the Burrup Peninsula) through a pipeline that is approximately 430km long, to Woodside's Pluto gas plant. The development of the Scarborough project involves different work programs. An overview of those work programs is included in the attached documents.

In preparation for this work, Woodside has undertaken an assessment to identify potential impacts and risks to the marine environment arising from both planned and unplanned activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

We have a number of detailed Consultation Information Sheets, available on [our website](#), which provide further background on the proposed approaches, including a summary of potential key risks and associated management measures for the primary activity and alternative options.

Woodside is seeking to understand the nature of the interests that Nanda Aboriginal Corporation (NAC) and its members may have in the 'environment that may be affected' (EMBA) by this activity. The EMBA is the total area over which unplanned events could have environmental impacts, as set out in the Summary Information sheet attached.

If you would like to speak with us, please let us know by **20 February 2023**. Please also let us know how you would like us to engage with you as soon as possible.

If there is any support or specific information that NAC requires to prepare for a meeting, please let me know. In the meantime, I have attached for NAC's review:

2. A Summary Overview of the Scarborough project; and
3. Respective Summary Information sheets

I have copied in [REDACTED] who will reach out to you next week to follow up. NAC can also provide feedback directly to [REDACTED] or me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and, the attached documents to NAC members as required. Woodside would be pleased to speak with NAC members in addition to the NAC Board / office holders.

We look forward to hearing from you.

Kind regards

[REDACTED]

3.3 Email sent to Nganhurra Thanardi Garrbu Aboriginal Corporation (NTGAC) – 20 January 2023

Good afternoon [REDACTED]

Thank you again for your time to speak with Woodside staff over the last couple of weeks and for making arrangements for Woodside and Nganhurra Thanardi Garrbu Aboriginal Corporation RNTBC (NTGAC) to meet on 16 February. As discussed, please see attached information in relation to Woodside's proposed Scarborough gas project.

The Scarborough gas field is located in the Carnarvon Basin, approximately 375 km off the coast of Western Australia. Woodside plans to bring gas from Scarborough to Murujuga (the Burrup Peninsula) through a pipeline that is approximately 430km long, to Woodside's Pluto gas plant. The development of the Scarborough project involves different work programs. An overview of those work programs is included in the attached documents.

In preparation for this work, Woodside has undertaken an assessment to identify potential impacts and risks to the marine environment arising from both planned and unplanned activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

We have a number of detailed Consultation Information Sheets, available on [our website](#), which provide further background on the proposed approaches, including a summary of potential key risks and associated management measures for the primary activity and alternative options.

Woodside is seeking to understand the nature of the interests that the NTGAC and its members may have in the 'environment that may be affected' (EMBA) by this activity. The EMBA is the total area over which unplanned events could have environmental impacts, as set out in the Summary Information sheet attached.

If there is any support or specific information that NTGAC requires to prepare for a meeting, please let me know. We are also happy to discuss appropriate mechanisms for consultation. In the meantime, I have attached for NTGAC's review:

3. A Summary Overview of the Scarborough project; and
4. Respective Summary Information sheets

NTGAC can also provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and, the attached documents to NTGAC members as required. Woodside would be pleased to speak with NTGAC members in addition to the NTGAC Board / office holders.

We look forward to hearing from you.

Kind regards

3.4 Email sent to Yindjibarndi Aboriginal Corporation (YAC) – 20 January 2023

Good morning ██████

In follow up to a telephone conversation with my colleague ██████ on 6 January, and her subsequent email correspondence regarding the Nganhurra Riser Turret Mooring (RTM), North West Cape on 18 January, please find attached, and following, information in relation to Woodside's proposed Scarborough gas project.

The Scarborough gas field is located in the Carnarvon Basin, approximately 375 km off the coast of Western Australia. Woodside plans to bring gas from Scarborough to Murujuga (the Burrup Peninsula) through a pipeline that is approximately 430km long, to Woodside's Pluto gas plant. The development of the Scarborough project involves different work programs. An overview of those work programs is included in the attached documents.

In preparation for this work, Woodside has undertaken an assessment to identify potential impacts and risks to the marine environment arising from both planned and unplanned activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

We have a number of detailed Consultation Information Sheets, available on [our website](#), which provide further background on the proposed approaches, including a summary of potential key risks and associated management measures for the primary activity and alternative options.

Woodside is seeking to understand the nature of the interests that Yindjibarndi Aboriginal Corporation (YAC) and its members may have in the 'environment that may be affected' (EMBA) by this activity. The EMBA is the total area over which unplanned events could have environmental impacts, as set out in the Summary Information sheet attached.

If you would like to speak with us, please let us know by **20 February 2023**. Please also let us know how you would like us to engage with you as soon as possible.

If there is any support or specific information that YAC requires to prepare for a meeting, please let me know. In the meantime, I have attached for YAC's review:

4. A Summary Overview of the Scarborough project; and
5. Respective Summary Information sheets

YAC can also provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

1. A Summary Overview of the Scarborough project; and
2. Respective Summary Information sheets

RRKAC can also provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and, the attached documents to RRKAC members as required. Woodside would be pleased to speak with RRKAC members in addition to the RRKAC Board / office holders.

We look forward to hearing from you.

Kind regards

3.8 Email sent to Wirrawandi Aboriginal Corporation (WAC) – 20 January 2023

Good morning ██████████

In follow up to previous email correspondence from my colleague ██████████, please find attached, and following, information in relation to Woodside's proposed Scarborough gas project.

The Scarborough gas field is located in the Carnarvon Basin, approximately 375 km off the coast of Western Australia. Woodside plans to bring gas from Scarborough to Murujuga (the Burrup Peninsula) through a pipeline that is approximately 430km long, to Woodside's Pluto gas plant. The development of the Scarborough project involves different work programs. An overview of those work programs is included in the attached documents.

In preparation for this work, Woodside has undertaken an assessment to identify potential impacts and risks to the marine environment arising from both planned and unplanned activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

We have a number of detailed Consultation Information Sheets, available on [our website](#), which provide further background on the proposed approaches, including a summary of potential key risks and associated management measures for the primary activity and alternative options.

Woodside is seeking to understand the nature of the interests that Wirrawandi Aboriginal Corporation (Wirrawandi) and its members may have in the 'environment that may be affected' (EMBA) by this activity. The EMBA is the total area over which unplanned events could have environmental impacts, as set out in the Summary Information sheet attached.

I understand you would like to speak with us, on this and in relation to the Nganhurra Riser Turret Mooring (RTM) information that ██████████ has already shared. I will reach out to you by phone, on **Monday 23 January** to discuss where you, and your board members would like to meet and to discuss the soonest possible date/time to do so.

If there is any support or specific information that Wirrawandi requires to prepare for the meeting, please let me know. In the meantime, I have attached for Wirrawandi's review:

1. A Summary Overview of the Scarborough project; and
2. Respective Summary Information sheets

WAC can also provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and, the attached documents to Wirrawandi members as required. Woodside would be pleased to speak with Wirrawandi members in addition to the WAC Board / office holders.

I look forward to connecting with you on Monday, to arrange a meeting and to discuss the logistics of such.

Kind regards

3.9 Email sent to Nyangumarta Warrarn Aboriginal Corporation (23 January 2023)

Dear ██████████

Woodside are reaching out to Nyangumarta Warrarn Aboriginal Corporation (RNTBC) to provide information in relation to Woodside's proposed Scarborough gas project.

The Scarborough gas field is located in the Carnarvon Basin, approximately 375 km off the coast of Western Australia. Woodside plans to bring gas from Scarborough to Murujuga (the Burrup Peninsula) through a pipeline that is approximately 430km long, to Woodside's Pluto gas plant. The development of the Scarborough project involves different work programs. An overview of those work programs is attached.

In preparation for this work, Woodside has undertaken an assessment to identify potential impacts and risks to the marine environment arising from both planned and unplanned activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

We have a number of detailed Consultation Information Sheets, available on [our website](#), which provide further background on the proposed approaches, including a summary of potential key risks and associated management measures for the primary activity and alternative options.

Woodside is seeking to understand the nature of the interests that Nyangumarta Warrarn Aboriginal Corporation and its members may have in the 'environment that may be affected' (EMBA) by this activity. The EMBA is the total area over which unplanned events could have

environmental impacts, as set out in the Summary Information ‘Scarborough Seabed Intervention and Trunkline Installation’ sheet attached.

If you would like to speak with us, please let us know by **20 February 2023**. Please also let us know how you would like us to engage with you as soon as possible.

If there is any support or specific information that Nyangumarta Warrarn Aboriginal Corporation requires to prepare for a meeting, please let me know. In the meantime, I have attached for Nyangumarta Warrarn Aboriginal Corporation’s review:

- A Summary Overview of the Scarborough project; and
- Summary Information Sheet – Scarborough Seabed Intervention and Trunkline Installation

Nyangumarta Warrarn Aboriginal Corporation can also provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government’s National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and, the attached documents to Nyangumarta Warrarn Aboriginal Corporation members as required. Woodside would be pleased to speak with Nyangumarta Warrarn Aboriginal Corporation members in addition to the Nyangumarta Warrarn Aboriginal Corporation Board / office holders.

We look forward to hearing from you.

Sincerely,

██████████

3.10 Email sent to Wanparta Aboriginal Corporation – 23 January 2023

Dear ██████

Woodside are reaching out to Wanparta Aboriginal Coporation to provide information in relation to Woodside’s proposed Scarborough gas project.

The Scarborough gas field is located in the Carnarvon Basin, approximately 375 km off the coast of Western Australia. Woodside plans to bring gas from Scarborough to Murujuga (the Burrup Peninsula) through a pipeline that is approximately 430km long, to Woodside’s Pluto gas plant. The development of the Scarborough project involves different work programs. An overview of those work programs is attached.

In preparation for this work, Woodside has undertaken an assessment to identify potential impacts and risks to the marine environment arising from both planned and unplanned activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

We have a number of detailed Consultation Information Sheets, available on [our website](#), which provide further background on the proposed approaches, including a summary of potential key risks and associated management measures for the primary activity and alternative options.

Woodside is seeking to understand the nature of the interests that Wanparta Aboriginal Corporation and its members may have in the 'environment that may be affected' (EMBA) by this activity. The EMBA is the total area over which unplanned events could have environmental impacts, as set out in the Summary Information 'Scarborough Seabed Intervention and Trunkline Installation' sheet attached.

If you would like to speak with us, please let us know by **20 February 2023**. Please also let us know how you would like us to engage with you as soon as possible.

If there is any support or specific information that Wanparta Aboriginal Corporation requires to prepare for a meeting, please let me know. In the meantime, I have attached for Wanparta Aboriginal Corporation's review:

2. A Summary Overview of the Scarborough project; and
3. Summary Information Sheet – Scarborough Seabed Intervention and Trunkline Installation

Wanparta Aboriginal Corporation can also provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

3.11 Emails sent to Kariyarra Aboriginal Corporation – 23 January 2023

Good morning

Please see the email below which bounced back this morning from the address for ██████████. It would be greatly appreciated if you were able to please share this information with the relevant representatives within the Kariyarra Aboriginal Corporation.

Thank you in advance

██████████

Good morning ██████████

I hope my email finds you well. I tried calling the office of the Kariyarra Aboriginal Corporation (KAC) on the phone listed on the website but have not been able to connect in person, hence following up with this email.

Woodside are reaching out to KAC to provide information in relation to Woodside's proposed Scarborough gas project.

The Scarborough gas field is located in the Carnarvon Basin, approximately 375 km off the coast of Western Australia. Woodside plans to bring gas from Scarborough to Murujuga (the Burrup Peninsula) through a pipeline that is approximately 430km long, to Woodside's Pluto gas plant. The development of the Scarborough project involves different work programs. An overview of those work programs is attached.

In preparation for this work, Woodside has undertaken an assessment to identify potential impacts and risks to the marine environment arising from both planned and unplanned activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

We have a number of detailed Consultation Information Sheets, available on [our website](#), which provide further background on the proposed approaches, including a summary of potential key risks and associated management measures for the primary activity and alternative options.

Woodside is seeking to understand the nature of the interests that Kariyarra Aboriginal Corporation (KAC) and its members may have in the 'environment that may be affected' (EMBA) by this activity. The EMBA is the total area over which unplanned events could have environmental impacts, as set out in the Summary Information 'Scarborough Seabed Intervention and Trunkline Installation' sheet attached.

If you would like to speak with us, please let us know by **20 February 2023**. Please also let us know how you would like us to engage with you as soon as possible.

If there is any support or specific information that KAC requires to prepare for a meeting, please let me know. In the meantime, I have attached for KAC's review:

3. A Summary Overview of the Scarborough project; and
4. Summary Information Sheet – Scarborough Seabed Intervention and Trunkline Installation

KAC can also provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and, the attached documents to KAC members as required. Woodside would be pleased to speak with KAC members in addition to the KAC Board / office holders.

We look forward to hearing from you.

Sincerely,

3.12 Email sent to Karajarri Traditional Lands Association (23 January 2023)

Dear [REDACTED]

In follow up to a voice message I left for the Karajarri Traditional Lands Association (KTLA) this morning, I wanted to follow up with the email and information I referred to.

Woodside are reaching out to KTLA to provide information in relation to Woodside's proposed Scarborough gas project.

The Scarborough gas field is located in the Carnarvon Basin, approximately 375 km off the coast of Western Australia. Woodside plans to bring gas from Scarborough to Murujuga (the Burrup Peninsula) through a pipeline that is approximately 430km long, to Woodside's Pluto gas plant. The development of the Scarborough project involves different work programs. An overview of those work programs is attached.

In preparation for this work, Woodside has undertaken an assessment to identify potential impacts and risks to the marine environment arising from both planned and unplanned activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

We have a number of detailed Consultation Information Sheets, available on [our website](#), which provide further background on the proposed approaches, including a summary of potential key risks and associated management measures for the primary activity and alternative options.

Woodside is seeking to understand the nature of the interests that KTLA and its members may have in the 'environment that may be affected' (EMBA) by this activity. The EMBA is the total area over which unplanned events could have environmental impacts, as set out in the Summary Information 'Scarborough Seabed Intervention and Trunkline Installation' sheet attached.

If you would like to speak with us, please let us know by **20 February 2023**. Please also let us know how you would like us to engage with you as soon as possible.

If there is any support or specific information that KTLA requires to prepare for a meeting, please let me know. In the meantime, I have attached for KTLA's review:

4. A Summary Overview of the Scarborough project; and
5. Summary Information Sheet – Scarborough Seabed Intervention and Trunkline Installation

KTLA can also provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and, the attached documents to KTLA members as required. Woodside would be pleased to speak with KTLA members in addition to the KTLA Board / office holders.

We look forward to hearing from you.

3.13 Email sent to Kariyarra Aboriginal Corporation – 24 January 2023

Dear [REDACTED]

I have been provided your details by [REDACTED] who promptly responded to my original email which was sent to the incorrect addressee. Sincere apologies for this.

[REDACTED], Woodside are reaching out to provide information in relation to Woodside's proposed Scarborough gas project.

The Scarborough gas field is located in the Carnarvon Basin, approximately 375 km off the coast of Western Australia. Woodside plans to bring gas from Scarborough to Murujuga (the Burrup Peninsula) through a pipeline that is approximately 430km long, to Woodside's Pluto gas plant. The development of the Scarborough project involves different work programs. An overview of those work programs is attached.

In preparation for this work, Woodside has undertaken an assessment to identify potential impacts and risks to the marine environment arising from both planned and unplanned activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

We have a number of detailed Consultation Information Sheets, available on [our website](#), which provide further background on the proposed approaches, including a summary of potential key risks and associated management measures for the primary activity and alternative options.

Woodside is seeking to understand the nature of the interests that Kariyarra Aboriginal Corporation (KAC) and its members may have in the 'environment that may be affected' (EMBA) by this activity. The EMBA is the total area over which unplanned events could have environmental impacts, as set out in the Summary Information 'Scarborough Seabed Intervention and Trunkline Installation' sheet attached.

If you would like to speak with us, please let us know by **20 February 2023**. Please also let us know how you would like us to engage with you as soon as possible.

If there is any support or specific information that KAC requires to prepare for a meeting, please let me know. In the meantime, I have attached for KAC's review:

5. A Summary Overview of the Scarborough project; and
6. Summary Information Sheet – Scarborough Seabed Intervention and Trunkline Installation

KAC can also provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and, the attached documents to KAC members as required. Woodside would be pleased to speak with KAC members in addition to the KAC Board / office holders.

We look forward to hearing from you.

Sincerely,

[REDACTED]

3.14 Email sent to Buurabalayji Thalanyji Aboriginal Corporation (BTAC) – 27 January 2023

Dear [REDACTED]

Firstly, thank you for your correspondence of 20 February regarding consultations about the Scarborough project. We will respond to this correspondence in the coming days and would be most grateful for the opportunity to meet with you to discuss the matters raised in your letter and our relationship more broadly.

Further to my correspondence of 18 January regarding Woodside's plan to remove the Nganhurra Riser Turret Mooring (RTM), and of 20 January regarding Woodside's Scarborough project, please find attached information about Woodside's decommissioning and drilling activities that we are seeking to consult with Buurabalayji Thalanyji Aboriginal Corporation (BTAC) about.

With the exception of removing the Nganhurra RTM and the Scarborough project, for which Woodside is seeking BTAC's feedback as soon as possible, Woodside is seeking BTAC's feedback on these decommissioning and drilling activities by 17 March. The plain English summary of each of these activities is attached, and I have provided a link to the more detailed consultation information sheets below. These activities are:

Decommissioning Activities:

- Removal of the Nganhurra Riser Turret Mooring (RTM). Information about the RTM was previously emailed on 18 January. For ease of reference, the summary information is attached and the consultation information sheet for the RTM can be found at the link below.
 - [consultation-information-sheet---nganhurra-operations-cessation-environment-plan-revision.pdf \(woodside.com\)](#)

- Stybarrow. This involves two work activities that are subject to separate environment plans; plug and abandonment (P&A) of the wells and decommissioning the infrastructure.
 - [consultation-information-sheet---stybarrow-plug-and-abandonment-environment-plan.pdf \(woodside.com\)](#)
 - [Consultation Information Sheet - Stybarrow Decommissioning Environment Plans \(woodside.com\)](#)
- Griffin decommissioning.
 - [consultation-information-sheet---griffin-decommissioning-environment-plans.pdf \(woodside.com\)](#)

Drilling Activities:

- TPA03 Well Intervention.
 - [Consultation Information Sheet - TPA03 Well Intervention Environment Plan \(woodside.com\)](#)
- WA-34-L Pyxis Drilling and Subsea Installation.
 - [Consultation Information Sheet - WA-34-L Pyxis Drilling and Subsea Installation Environment Plan \(woodside.com\)](#)
- Julimar Appraisal Drilling.
 - [Consultation Information Sheet - Julimar Appraisal Drilling and Survey Environment Plan \(woodside.com\)](#)

We look forward to meeting with you to discuss and respond to the matters raised in your letter, this correspondence, and to discuss other matters important to BTAC and Woodside.

Thank you, [REDACTED], for yours and [REDACTED] consideration and work to progress these important consultations. We are looking forward to working with BTAC.

As always, please feel free to contact me on the details below if you require further information or assistance.

Yours sincerely

[REDACTED]

3.15 Email sent to Nyangumarta Karajarri Aboriginal Corporation (23 January 2023)

Dear [REDACTED]

Woodside are reaching out to you as the listed contact person for the Nyangumarta Karajarri Aboriginal Coporation (RNTBC) to provide information in relation to Woodside's proposed Scarborough gas project.

The Scarborough gas field is located in the Carnarvon Basin, approximately 375 km off the coast of Western Australia. Woodside plans to bring gas from Scarborough to Murujuga (the Burrup Peninsula) through a pipeline that is approximately 430km long, to Woodside's Pluto gas plant. The development of the Scarborough project involves different work programs. An overview of those work programs is attached.

In preparation for this work, Woodside has undertaken an assessment to identify potential impacts and risks to the marine environment arising from both planned and unplanned

activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

We have a number of detailed Consultation Information Sheets, available on [our website](#), which provide further background on the proposed approaches, including a summary of potential key risks and associated management measures for the primary activity and alternative options.

Woodside is seeking to understand the nature of the interests that Nyangumarta Karajarri Aboriginal Corporation and its members may have in the 'environment that may be affected' (EMBA) by this activity. The EMBA is the total area over which unplanned events could have environmental impacts, as set out in the Summary Information 'Scarborough Seabed Intervention and Trunkline Installation' sheet attached.

If you would like to speak with us, please let us know by **20 February 2023**. Please also let us know how you would like us to engage with you as soon as possible.

If there is any support or specific information that Nyangumarta Karajarri Aboriginal Corporation requires to prepare for a meeting, please let me know. In the meantime, I have attached for Nyangumarta Karajarri Aboriginal Corporation's review:

6. A Summary Overview of the Scarborough project; and
7. Summary Information Sheet – Scarborough Seabed Intervention and Trunkline Installation

Nyangumarta Karajarri Aboriginal Corporation can also provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and, the attached documents to Nyangumarta Karajarri Aboriginal Corporation members as required. Woodside would be pleased to speak with Nyangumarta Karajarri Aboriginal Corporation members in addition to the Nyangumarta Karajarri Aboriginal Corporation Board / office holders.

We look forward to hearing from you.

Sincerely,

██████████

4 ACTIVITY UPDATE (2023)

4.1 Email sent to Australian Border Force (ABF), Director of National Parks (DNP), Australian Maritime Safety Authority (AMSA) – Marine Pollution, Department of Transport (DoT), Department of Biosecurity, Conservation and Attractions (DBCA), Department of Industry, Science and Resources (DISR), Department of

**Mines, Industry Regulation and Safety (DMIRS), Australian Petroleum
Production and Exploration Association (APPEA) – (27 January 2023)**

Dear Stakeholder

Woodside previously consulted you on its submitted Environment Plans (EPs) to undertake the following activities in Commonwealth waters for the Scarborough development:

- seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**);
- drilling and subsea tree installation activities for eight planned development wells and the potential for a further two additional contingency wells under the WA-61-L Scarborough Drilling and Completions EP (**D&C EP**);
- 4D baseline marine seismic survey (MSS) activities over the Scarborough and Jupiter field under the Scarborough 4D Baseline Marine Seismic Survey EP (**Seismic EP**); and
- seabed site surveys and installation of subsea production infrastructure under the Subsea Infrastructure Installation EP (**Subsea EP**).

Updated consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#).

As we are inviting consultation with you on each of the EPs above, for ease of reference, we have attached the information in this one email. In an effort to simplify feedback, we have also included a feedback template (Appendix A) which you may wish to use to provide your feedback specific to the proposed EPs.

Woodside has previously submitted Revision 1 of the **SITI EP** to NOPSEMA which has been available on the NOPSEMA website since January 2022 (https://info.nopsema.gov.au/environment_plans/575/show_public). Revision 0 of the **D&C EP** has been available on the NOPSEMA website since November 2021 (https://info.nopsema.gov.au/environment_plans/565/show_public). Revision 0 of the **Seismic EP** has been available on the NOPSEMA website since 18 October 2021 (https://info.nopsema.gov.au/environment_plans/559/show_public).

Woodside is preparing to submit a further revision of the SITI EP, D&C EP and Seismic EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in these revisions remain the same, with no material changes. The Subsea EP has not yet been submitted to NOPSEMA.

The SITI EP, D&C EP and Subsea EP fall under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

If you have feedback specific to each of the proposed activities described under the relevant EPs, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **26 February 2023**.

Activity:

	SITI EP	D&C EP	Seismic EP	Subsea EP
Summary:	Seabed intervention and trunkline installation activities in Commonwealth waters associated with the installation of a carbon steel pipeline (Trunkline) that runs approximately 430 km from the from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. This EP covers activities for the approximately 400 km section of the Trunkline in Commonwealth waters. A separate EP covers activities in State waters.	Drilling and Completions activities in Commonwealth waters, including drilling and subsea tree installation activities for eight planned development wells and the potential for a further two contingency wells. Woodside may need to intervene, workover or re-drill the wells. Subsea inspection, monitoring, maintenance and subsea infrastructure repair activities may also be undertaken.	4D baseline seismic survey over the Scarborough and Jupiter fields. The proposed survey will be conducted over areas where seismic data has previously been acquired. The objective for the proposed activity is to acquire a new 3D seismic survey data that will provide the baseline for future 'time lapse' reservoir surveillance (or technically termed 4D baseline survey).	Seabed site surveys and installation of subsea production infrastructure. Activities include visual pre- and post-installation surveys, and installation of flowlines, umbilicals and risers and ancillary infrastructure, required for the flow and control of hydrocarbons and produced water to the Scarborough Floating Production Unit (FPU). Mooring legs and suction piles will also be installed and a gravimetry survey is also planned.
Location:	Activities run from the Scarborough FPU in WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, to the State waters boundary at the northern extent of the Dampier Archipelago.	Activities are located in Permit Area WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, Western Australia. Approximate development well locations for the eight planned wells are provided in Table 2 of the attached D&C EP Consultation Information Sheet.	The seismic survey will cover the Scarborough and Jupiter fields within Commonwealth waters, located in the Exmouth Plateau, approximately 214 km north west of Exmouth, Western Australia.	Activities are located in permit Areas WA-61-L and WA-62-L, around 374 km west-northwest of Dampier, Western Australia.
Approx. Water Depth (m):	~ 32 m – 1400 m	~ 900 m – 955 m	~ 800 m – 1,150 m	~ 900 m – 1000 m

Feedback:

If you have any issues or concerns with these activities, or any other issues relevant to this location, please respond to Woodside at: Feedback@woodside.com.au or 1800 442 977.

Your feedback and our response will be included in our Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental

Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth).

Please let us know if your feedback for any of the activities proposed under an Environment Plan is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan to ensure this information remains confidential to NOPSEMA.

Please provide your views by **26 February 2023**.

Woodside Feedback

4.2 Email sent to Australian Hydrographic Office (AHO) and Australian Maritime Safety Authority (AMSA) – Marine Safety (27 January 2023)

Dear AHO and AMSA

Woodside previously consulted you on its submitted Environment Plans (EPs) to undertake the following activities in Commonwealth waters for the Scarborough development:

- seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**);
- drilling and subsea tree installation activities for eight planned development wells and the potential for a further two additional contingency wells under the WA-61-L Scarborough Drilling and Completions EP (**D&C EP**);
- 4D baseline marine seismic survey (MSS) activities over the Scarborough and Jupiter field under the Scarborough 4D Baseline Marine Seismic Survey EP (**Seismic EP**); and
- seabed site surveys and installation of subsea production infrastructure under the Subsea Infrastructure Installation EP (**Subsea EP**).

Updated consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#).

Woodside will make available a shipping lane figure as soon as possible.

As we are inviting consultation with you on each of the EPs above, for ease of reference, we have attached the information in this one email. In an effort to simplify feedback, we have also included a feedback template (Appendix A) which you may wish to use to provide your feedback specific to the proposed EPs.

Woodside has previously submitted Revision 1 of the **SITI EP** to NOPSEMA which has been available on the NOPSEMA website since January 2022

(https://info.nopsema.gov.au/environment_plans/575/show_public). Revision 0 of the **D&C EP** has been available on the NOPSEMA website since November 2021

(https://info.nopsema.gov.au/environment_plans/565/show_public). Revision 0 of the

Seismic EP has been available on the NOPSEMA website since 18 October 2021

(https://info.nopsema.gov.au/environment_plans/559/show_public).

Woodside is preparing to submit a further revision of the SITI EP, D&C EP and Seismic EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in these revisions remain the same, with no material changes. The Subsea EP has not yet been submitted to NOPSEMA.

The SITI EP, D&C EP and Subsea EP fall under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

If you have feedback specific to each of the proposed activities described under the relevant EPs, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **26 February 2023**.

Activity:

	SITI EP	D&C EP	Seismic EP	Subsea EP
Summary:	Seabed intervention and trunkline installation activities in Commonwealth waters associated with the installation of a carbon steel pipeline (Trunkline) that runs approximately 430 km from the from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. This EP covers activities for the approximately 400 km section of the	Drilling and Completions activities in Commonwealth waters, including drilling and subsea tree installation activities for eight planned development wells and the potential for a further two contingency wells. Woodside may need to intervene, workover or re-drill the wells. Subsea inspection, monitoring, maintenance and subsea infrastructure	4D baseline seismic survey over the Scarborough and Jupiter fields. The proposed survey will be conducted over areas where seismic data has previously been acquired. The objective for the proposed activity is to acquire a new 3D seismic survey data that will provide the baseline for future 'time lapse' reservoir surveillance (or	Seabed site surveys and installation of subsea production infrastructure. Activities include visual pre- and post-installation surveys, and installation of flowlines, umbilicals and risers and ancillary infrastructure, required for the flow and control of hydrocarbons and produced water to the Scarborough

	Trunkline in Commonwealth waters. A separate EP covers activities in State waters.	repair activities may also be undertaken.	technically termed 4D baseline survey).	Floating Production Unit (FPU). Mooring legs and suction piles will also be installed and a gravimetry survey is also planned.
Location:	Activities run from the Scarborough FPU in WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, to the State waters boundary at the northern extent of the Dampier Archipelago.	Activities are located in Permit Area WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, Western Australia. Approximate development well locations for the eight planned wells are provided in Table 2 of the attached D&C EP Consultation Information Sheet.	The seismic survey will cover the Scarborough and Jupiter fields within Commonwealth waters, located in the Exmouth Plateau, approximately 214 km north west of Exmouth, Western Australia.	Activities are located in permit Areas WA-61-L and WA-62-L, around 374 km west-northwest of Dampier, Western Australia.
Approx. Water Depth (m):	~ 32 m – 1400 m	~ 900 m – 955 m	~ 800 m – 1,150 m	~ 900 m – 1000 m
Earliest commencement date:	Seabed intervention activities: Mid 2023 pending approvals, vessel availability and weather constraints. Trunkline installation activities: Q4 2023 pending successful completion approvals, vessel availability and weather constraints.	Activities planned to commence in H2 2023 pending approvals, vessel availability and weather constraints.	Activities planned to commence in H1 2023 pending approvals, vessel availability and weather constraints.	Activities planned to commence in H2 2023 (and estimated to be completed in 18 months with activities occurring in multiple campaigns).
Estimated duration:	~24 months across multiple campaigns	~50 – 60 days per well	~55 – 70 days	~18 months (cumulative) for the survey and installation activities
Distance from Operational Area to nearest town	The closest Commonwealth section of the trunkline on the State waters boundary is ~32 km north-west of Dampier.	~244 km north-northwest of Exmouth, 374 km west-northwest of Dampier.	~214 km north-west of Exmouth.	~ 244 km north-northwest of Exmouth, ~ 374 km west-northwest of Dampier.

Woodside Feedback

4.3 Email sent to Department of Defence (DoD) (27 January 2023)

Woodside previously consulted you on its submitted Environment Plans (EPs) to undertake the following activities in Commonwealth waters for the Scarborough development:

- seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**);
- drilling and subsea tree installation activities for eight planned development wells and the potential for a further two additional contingency wells under the WA-61-L Scarborough Drilling and Completions EP (**D&C EP**); and
- 4D baseline marine seismic survey (MSS) activities over the Scarborough and Jupiter field under the Scarborough 4D Baseline Marine Seismic Survey EP (**Seismic EP**).

Woodside is also planning to undertake seabed site surveys and installation of subsea production infrastructure under the Subsea Infrastructure Installation EP (**Subsea EP**).

Updated consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#).

Woodside is also seeking access to sufficient data or a map of Defence Restricted and Prohibited Areas to inform Woodside's development of defence zone maps and figures for DoD's use.

As we are inviting consultation with you on each of the EPs above, for ease of reference, we have attached the information in this one email. In an effort to simplify feedback, we have also included a feedback template (Appendix A) which you may wish to use to provide your feedback specific to the proposed EPs.

Woodside has previously submitted Revision 1 of the **SITI EP** to NOPSEMA which has been available on the NOPSEMA website since January 2022

(https://info.nopsema.gov.au/environment_plans/575/show_public). Revision 0 of the **D&C EP** has been available on the NOPSEMA website since November 2021

APPENDIX A

FEEDBACK	SITI EP	D&C EP	Seismic EP	Subsea EP

4.4 Email sent to Recfishwest, Marine Tourism WA and WA Game Fishing Association – 27 January 2023

Dear Stakeholder

Woodside has submitted Environment Plans (EPs) to undertake the following activities in Commonwealth waters for the Scarborough development:

- seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**);
- drilling and subsea tree installation activities for eight planned development wells and the potential for a further two additional contingency wells under the WA-61-L Scarborough Drilling and Completions EP (**D&C EP**);
 - 4D baseline marine seismic survey (MSS) activities over the Scarborough and Jupiter field under the Scarborough 4D Baseline Marine Seismic Survey EP (**Seismic EP**); and
- seabed site surveys and installation of subsea production infrastructure under the Subsea Infrastructure Installation EP (**Subsea EP**).

Updated consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#).

As we are inviting consultation with you on each of the EPs above, for ease of reference, we have attached the information in this one email. In an effort to simplify feedback, we have also included a feedback template (Appendix A) which you may wish to use to provide your feedback specific to the proposed EPs.

Woodside has previously submitted Revision 1 of the **SITI EP** to NOPSEMA which has been available on the NOPSEMA website since January 2022 (https://info.nopsema.gov.au/environment_plans/575/show_public). Revision 0 of the **D&C EP** has been available on the NOPSEMA website since November 2021 (https://info.nopsema.gov.au/environment_plans/565/show_public). Revision 0 of the **Seismic EP** has been available on the NOPSEMA website since 18 October 2021 (https://info.nopsema.gov.au/environment_plans/559/show_public).

Woodside is preparing to submit a further revision of the SITI EP, D&C EP and Seismic EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in these revisions remain the same, with no material changes. The Subsea EP has not yet been submitted to NOPSEMA.

The SITI EP, D&C EP and Subsea EP fall under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

If you have feedback specific to each of the proposed activities described under the relevant EPs, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **26 February 2023**.

Activity:

	SITI EP	D&C EP	Seismic EP	Subsea EP
Summary:	Seabed intervention and trunkline installation activities in Commonwealth waters associated with the installation of a carbon steel pipeline (Trunkline) that runs approximately 430 km from the from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. This EP covers activities for the approximately 400 km section of the Trunkline in Commonwealth waters. A separate EP covers activities in State waters.	Drilling and Completions activities in Commonwealth waters, including drilling and subsea tree installation activities for eight planned development wells and the potential for a further two contingency wells. Woodside may need to intervene, workover or re-drill the wells. Subsea inspection, monitoring, maintenance and subsea infrastructure repair activities may also be undertaken.	4D baseline seismic survey over the Scarborough and Jupiter fields. The proposed survey will be conducted over areas where seismic data has previously been acquired. The objective for the proposed activity is to acquire a new 3D seismic survey data that will provide the baseline for future 'time lapse' reservoir surveillance (or technically termed 4D baseline survey).	Seabed site surveys and installation of subsea production infrastructure. Activities include visual pre- and post-installation surveys, and installation of flowlines, umbilicals and risers and ancillary infrastructure, required for the flow and control of hydrocarbons and produced water to the Scarborough Floating Production Unit (FPU). Mooring legs and suction piles will also be installed and a gravimetry

				survey is also planned.
Location:	Activities run from the Scarborough FPU in WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, to the State waters boundary at the northern extent of the Dampier Archipelago.	Activities are located in Permit Area WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, Western Australia. Approximate development well locations for the eight planned wells are provided in Table 2 of the attached D&C EP Consultation Information Sheet.	The seismic survey will cover the Scarborough and Jupiter fields within Commonwealth waters, located in the Exmouth Plateau, approximately 214 km north west of Exmouth, Western Australia.	Activities are located in permit Areas WA-61-L and WA-62-L, around 374 km west-northwest of Dampier, Western Australia.
Approx. Water Depth (m):	~ 32 m – 1400 m	~ 900 m – 955 m	~ 800 m – 1,150 m	~ 900 m – 1000 m
Earliest commencement date:	Seabed intervention activities: Mid 2023 pending approvals, vessel availability and weather constraints. Trunkline installation activities: Q4 2023 pending successful completion approvals, vessel availability and weather constraints.	Activities planned to commence in H2 2023 pending approvals, vessel availability and weather constraints.	Activities planned to commence in H1 2023 pending approvals, vessel availability and weather constraints.	Activities planned to commence in H2 2023 (and estimated to be completed in 18 months with activities occurring in multiple campaigns).
Estimated duration:	~24 months across multiple campaigns	~50 – 60 days per well	~55 – 70 days	~18 months (cumulative) for the survey and installation activities
Distance from Operational Area to nearest town	The closest Commonwealth section of the trunkline on the State waters boundary is ~32 km north-west of Dampier.	~244 km north-northwest of Exmouth, 374 km west-northwest of Dampier.	~214 km north-west of Exmouth.	~ 244 km north-northwest of Exmouth, ~ 374 km west-northwest of Dampier.
Distance from Operational Area to nearest marine park	<ul style="list-style-type: none"> The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cwth), close 	<ul style="list-style-type: none"> ~83 km north of the Gascoyne Marine Park (Cwlth) ~206 km north-west of Montebello Marine Park (Cwlth) 	<ul style="list-style-type: none"> ~46 km north of Gascoyne Marine Park Multiple Use Zone 	<ul style="list-style-type: none"> ~ 77 km north of the Gascoyne Marine Park (Cwlth) ~ 201 km north-west of

Feedback:

If you have any issues or concerns with these activities, or any other issues relevant to this location, please respond to Woodside at: Feedback@woodside.com.au or 1800 442 977.

Your feedback and our response will be included in our Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth)*.

Please let us know if your feedback for any of the activities proposed under an Environment Plan is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan to ensure this information remains confidential to NOPSEMA.

Please provide your views by **26 February 2023**.

Regards,

APPENDIX A

FEEDBACK	SITI EP	D&C EP	Seismic EP	Subsea EP

4.5 Email sent to Chevron Australia and Osaka Gas Gorgon, Tokyo Gas Gorgon, JERA Gorgon via Chevron Australia – 27 January 2023

Dear [redacted] and [redacted]

Woodside has submitted Environment Plans (EPs) to undertake the following activities in Commonwealth waters for the Scarborough development:

- seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**);
- drilling and subsea tree installation activities for eight planned development wells and the potential for a further two additional contingency wells under the WA-61-L Scarborough Drilling and Completions EP (**D&C EP**);
 - 4D baseline marine seismic survey (MSS) activities over the Scarborough and Jupiter field under the Scarborough 4D Baseline Marine Seismic Survey EP (**Seismic EP**); and
- seabed site surveys and installation of subsea production infrastructure under the Subsea Infrastructure Installation EP (**Subsea EP**).

Updated consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#).

As we are inviting consultation with you on each of the EPs above, for ease of reference, we have attached the information in this one email. In an effort to simplify feedback, we have also included a feedback template (Appendix A) which you may wish to use to provide your feedback specific to the proposed EPs.

Woodside has previously submitted Revision 1 of the **SITI EP** to NOPSEMA which has been available on the NOPSEMA website since January 2022 (https://info.nopsema.gov.au/environment_plans/575/show_public). Revision 0 of the **D&C EP** has been available on the NOPSEMA website since November 2021 (https://info.nopsema.gov.au/environment_plans/565/show_public). Revision 0 of the **Seismic EP** has been available on the NOPSEMA website since 18 October 2021 (https://info.nopsema.gov.au/environment_plans/559/show_public).

Woodside is preparing to submit a further revision of the SITI EP, D&C EP and Seismic EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in these revisions remain the same, with no material changes. The Subsea EP has not yet been submitted to NOPSEMA.

The SITI EP, D&C EP and Subsea EP fall under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

If you have feedback specific to each of the proposed activities described under the relevant EPs, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **26 February 2023**.

We would be grateful if you could please forward this consultation information to your Joint Venture participants Osaka Gas Gorgon, Tokyo Gas Gorgon and JERA Gorgon for feedback.

FEEDBACK	SITI EP	D&C EP	Seismic EP	Subsea EP

4.6 Email sent to Western Gas, Santos, Exxon Mobil Australia Resources Company, Shell Australia, FINDER Energy, KUFPEC, OMV Australia / Sapura OMV Upstream (WA) – 27 January 2022

Dear Titleholder

Woodside has submitted Environment Plans (EPs) to undertake the following activities in Commonwealth waters for the Scarborough development:

- seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**);
- drilling and subsea tree installation activities for eight planned development wells and the potential for a further two additional contingency wells under the WA-61-L Scarborough Drilling and Completions EP (**D&C EP**);
 - 4D baseline marine seismic survey (MSS) activities over the Scarborough and Jupiter field under the Scarborough 4D Baseline Marine Seismic Survey EP (**Seismic EP**); and
- seabed site surveys and installation of subsea production infrastructure under the Subsea Infrastructure Installation EP (**Subsea EP**).

Updated consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#).

As we are inviting consultation with you on each of the EPs above, for ease of reference, we have attached the information in this one email. In an effort to simplify

feedback, we have also included a feedback template (Appendix A) which you may wish to use to provide your feedback specific to the proposed EPs.

Woodside has previously submitted Revision 1 of the **SITI EP** to NOPSEMA which has been available on the NOPSEMA website since January 2022 (https://info.nopsema.gov.au/environment_plans/575/show_public). Revision 0 of the **D&C EP** has been available on the NOPSEMA website since November 2021 (https://info.nopsema.gov.au/environment_plans/565/show_public). Revision 0 of the **Seismic EP** has been available on the NOPSEMA website since 18 October 2021 (https://info.nopsema.gov.au/environment_plans/559/show_public).

Woodside is preparing to submit a further revision of the SITI EP, D&C EP and Seismic EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in these revisions remain the same, with no material changes. The Subsea EP has not yet been submitted to NOPSEMA.

The SITI EP, D&C EP and Subsea EP fall under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

If you have feedback specific to each of the proposed activities described under the relevant EPs, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **26 February 2023**.

FEEDBACK	SITI EP	D&C EP	Seismic EP	Subsea EP

4.7 Email sent to Jadestone, Coastal Oil and Gas, Bounty Oil and Gas, Vermilion Oil and Gas, KATO Energy (27 January 2023)

Dear Titleholder

Woodside has submitted an Environment Plan (EP) to undertake seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**) for the Scarborough development.

An updated consultation Information Sheet is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. This is also available on our [website](#).

Woodside has previously submitted Revision 1 of the **SITI EP** to NOPSEMA which has been available on the NOPSEMA website since January 2022 (https://info.nopsema.gov.au/environment_plans/575/show_public).

Woodside is preparing to submit a further revision of the SITI EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in this revision remain the same, with no material changes.

The SITI EP falls under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

If you have feedback specific to each of the proposed activities described under the relevant EP, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **26 February 2023**.

Activity:

	SITI EP
Summary:	Seabed intervention and trunkline installation activities in Commonwealth waters associated with the installation of a carbon steel pipeline (Trunkline) that runs approximately 430 km from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. This EP covers activities for the approximately 400 km section of the Trunkline in Commonwealth waters. A separate EP covers activities in State waters.
Location:	Activities run from the Scarborough FPU in WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, to the State waters boundary at the northern extent of the Dampier Archipelago.
Approx. Water Depth (m):	~ 32 m – 1400 m

Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth).

Please let us know if your feedback for any of the activities proposed under an Environment Plan is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan to ensure this information remains confidential to NOPSEMA.

Please provide your views by **26 February 2023**.

Regards,

4.8 Email sent to BP Developments Australia, Carnarvon Energy, PE Wheatstone, Kyushu Electric Wheatstone, Eni Australia Ltd, Fugro Exploration, JX Nippon O&G Expln (Australia) (27 January 2023)

Dear Titleholder

Woodside has submitted Environment Plans (EPs) to undertake the following activities in Commonwealth waters for the Scarborough development:

- seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**);
- 4D baseline marine seismic survey (MSS) activities over the Scarborough and Jupiter field under the Scarborough 4D Baseline Marine Seismic Survey EP (**Seismic EP**); and
- seabed site surveys and installation of subsea production infrastructure under the Subsea Infrastructure Installation EP (**Subsea EP**).

Updated consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#).

As we are inviting consultation with you on each of the EPs above, for ease of reference, we have attached the information in this one email. In an effort to simplify feedback, we have also included a feedback template (Appendix A) which you may wish to use to provide your feedback specific to the proposed EPs.

Woodside has previously submitted Revision 1 of the **SITI EP** to NOPSEMA which has been available on the NOPSEMA website since January 2022 (https://info.nopsema.gov.au/environment_plans/575/show_public). Revision 0 of the **Seismic EP** has been available on the NOPSEMA website since 18 October 2021 (https://info.nopsema.gov.au/environment_plans/559/show_public).

Woodside is preparing to submit a further revision of the SITI EP and Seismic EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in these revisions remain the same, with no material changes. The Subsea EP has not yet been submitted to NOPSEMA.

The SITI EP and Subsea EP fall under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management

measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

If you have feedback specific to each of the proposed activities described under the relevant EPs, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **26 February 2023**.

Activity:

	SITI EP	Seismic EP	Subsea EP
Summary:	Seabed intervention and trunkline installation activities in Commonwealth waters associated with the installation of a carbon steel pipeline (Trunkline) that runs approximately 430 km from the from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. This EP covers activities for the approximately 400 km section of the Trunkline in Commonwealth waters. A separate EP covers activities in State waters.	4D baseline seismic survey over the Scarborough and Jupiter fields. The proposed survey will be conducted over areas where seismic data has previously been acquired. The objective for the proposed activity is to acquire a new 3D seismic survey data that will provide the baseline for future 'time lapse' reservoir surveillance (or technically termed 4D baseline survey).	Seabed site surveys and installation of subsea production infrastructure. Activities include visual pre- and post-installation surveys, and installation of flowlines, umbilicals and risers and ancillary infrastructure, required for the flow and control of hydrocarbons and produced water to the Scarborough Floating Production Unit (FPU). Mooring legs and suction piles will also be installed and a gravimetry survey is also planned.
Location:	Activities run from the Scarborough FPU in WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, to the State waters boundary at the northern extent of the Dampier Archipelago.	The seismic survey will cover the Scarborough and Jupiter fields within Commonwealth waters, located in the Exmouth Plateau, approximately 214 km north west of Exmouth, Western Australia.	Activities are located in permit Areas WA-61-L and WA-62-L, around 374 km west-northwest of Dampier, Western Australia.
Approx. Water Depth (m):	~ 32 m – 1400 m	~ 800 m – 1,150 m	~ 900 m – 1000 m

Feedback:

If you have any issues or concerns with these activities, or any other issues relevant to this location, please respond to Woodside at:

Feedback@woodside.com.au or 1800 442 977.

Your feedback and our response will be included in our Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth).

Please let us know if your feedback for any of the activities proposed under an Environment Plan is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan to ensure this information remains confidential to NOPSEMA.

Please provide your views by **26 February 2023**.

Regards,

APPENDIX A

FEEDBACK	SITI EP	Seismic EP	Subsea EP

4.9 Email sent to INPEX Alpha (27 January 2023)

Dear Titleholder

Woodside has submitted Environment Plans (EPs) to undertake the following activities in Commonwealth waters for the Scarborough development:

- seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**);
- drilling and subsea tree installation activities for eight planned development wells and the potential for a further two additional contingency wells under the WA-61-L Scarborough Drilling and Completions EP (**D&C EP**); and
- 4D baseline marine seismic survey (MSS) activities over the Scarborough and Jupiter field under the Scarborough 4D Baseline Marine Seismic Survey EP (**Seismic EP**).

Updated consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#).

As we are inviting consultation with you on each of the EPs above, for ease of reference, we have attached the information in this one email. In an effort to simplify feedback, we have also included a feedback template (Appendix A) which you may wish to use to provide your feedback specific to the proposed EPs.

Woodside has previously submitted Revision 1 of the **SITI EP** to NOPSEMA which has been available on the NOPSEMA website since January 2022 (https://info.nopsema.gov.au/environment_plans/575/show_public). Revision 0 of the **D&C EP** has been available on the NOPSEMA website since November 2021 (https://info.nopsema.gov.au/environment_plans/565/show_public). Revision 0 of the **Seismic EP** has been available on the NOPSEMA website since 18 October 2021 (https://info.nopsema.gov.au/environment_plans/559/show_public).

Woodside is preparing to submit a further revision of the SITI EP, D&C EP and Seismic EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in these revisions remain the same, with no material changes.

The SITI EP and D&C EP fall under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

If you have feedback specific to each of the proposed activities described under the relevant EPs, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **26 February 2023**.

Activity:

	SITI EP	D&C EP	Seismic EP
Summary:	Seabed intervention and trunkline installation activities in Commonwealth waters associated with the installation of a carbon steel pipeline (Trunkline) that runs approximately 430 km from the from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. This EP covers activities for the approximately 400 km section of the Trunkline in Commonwealth waters. A separate EP covers activities in State waters.	Drilling and Completions activities in Commonwealth waters, including drilling and subsea tree installation activities for eight planned development wells and the potential for a further two contingency wells. Woodside may need to intervene, workover or re-drill the wells. Subsea inspection, monitoring, maintenance and subsea infrastructure repair activities may also be undertaken.	4D baseline seismic survey over the Scarborough and Jupiter fields. The proposed survey will be conducted over areas where seismic data has previously been acquired. The objective for the proposed activity is to acquire a new 3D seismic survey data that will provide the baseline for future 'time lapse' reservoir surveillance (or technically termed 4D baseline survey).
Location:	Activities run from the Scarborough FPU in WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, to the State waters boundary at the northern extent of the Dampier Archipelago.	Activities are located in Permit Area WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, Western Australia. Approximate development well locations for the eight planned wells are provided in Table 2 of the attached D&C EP	The seismic survey will cover the Scarborough and Jupiter fields within Commonwealth waters, located in the Exmouth Plateau, approximately 214 km north west of Exmouth, Western Australia.

		Consultation Information Sheet.	
Approx. Water Depth (m):	~ 32 m – 1400 m	~ 900 m – 955 m	~ 800 m – 1,150 m
Earliest commencement date:	<p>Seabed intervention activities: Mid 2023 pending approvals, vessel availability and weather constraints.</p> <p>Trunkline installation activities: Q4 2023 pending successful completion approvals, vessel availability and weather constraints.</p>	Activities planned to commence in H2 2023 pending approvals, vessel availability and weather constraints.	Activities planned to commence in H1 2023 pending approvals, vessel availability and weather constraints.
Estimated duration:	~24 months across multiple campaigns	~50 – 60 days per well	~55 – 70 days
Distance from Operational Area to nearest town	The closest Commonwealth section of the trunkline on the State waters boundary is ~32 km north-west of Dampier.	~244 km north-northwest of Exmouth, 374 km west-northwest of Dampier.	~214 km north-west of Exmouth.
Distance from Operational Area to nearest marine park	<ul style="list-style-type: none"> • The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cwth), close to the northern boundary • Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone 	<ul style="list-style-type: none"> • ~83 km north of the Gascoyne Marine Park (Cwlth) • ~206 km north-west of Montebello Marine Park (Cwlth) • ~208 km north-northwest of Ningaloo Marine Park (Cwlth) 	<ul style="list-style-type: none"> • ~46 km north of Gascoyne Marine Park Multiple Use Zone

APPENDIX A

FEEDBACK	SITI EP	Seismic EP

4.11 Email sent to Ningaloo Coast World Heritage Advisory Committee (NCWHAC) (27 January 2023)

Dear [REDACTED] / Ningaloo Coast World Heritage Advisory Committee

Woodside has submitted an Environment Plan (EP) to undertake seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**) for the Scarborough development.

An updated consultation Information Sheet is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. This is also available on our [website](#).

Woodside has previously submitted Revision 1 of the **SITI EP** to NOPSEMA which has been available on the NOPSEMA website since January 2022 (https://info.nopsema.gov.au/environment_plans/575/show_public).

Woodside is preparing to submit a further revision of the SITI EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in this revision remain the same, with no material changes.

The SITI EP falls under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

If you have feedback specific to each of the proposed activities described under the relevant EP, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **26 February 2023**.

Activity:

	SITI EP
Summary:	Seabed intervention and trunkline installation activities in Commonwealth waters associated with the installation of a carbon steel pipeline (Trunkline) that runs approximately 430 km from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. This EP covers activities for the approximately 400 km section of the Trunkline in Commonwealth waters. A separate EP covers activities in State waters.
Location:	Activities run from the Scarborough FPU in WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, to the State waters boundary at the northern extent of the Dampier Archipelago.
Approx. Water Depth (m):	~ 32 m – 1400 m
Earliest commencement date:	Seabed intervention activities: Mid 2023 pending approvals, vessel availability and weather constraints. Trunkline installation activities: Q4 2023 pending successful completion approvals, vessel availability and weather constraints.
Estimated duration:	~24 months across multiple campaigns
Distance from Operational Area to nearest town	The closest Commonwealth section of the trunkline on the State waters boundary is ~32 km north-west of Dampier.
Distance from Operational Area to nearest marine park	<ul style="list-style-type: none"> • The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cwth), close to the northern boundary • Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone

<p>Operational Area and Exclusion Zones</p>	<p>Temporary 500 m exclusion zones will apply around applicable seabed intervention and the Trunkline installation vessels. The Operational Areas are:</p> <ul style="list-style-type: none"> • Trunkline Project Area: The proposed trunkline from around KP 32 (Commonwealth – State Boundary) to KP 435 and 1.5 km either side of the proposed trunkline centreline. • Offshore Borrow Ground Project Area: Offshore Borrow Ground located in Commonwealth waters.
<p>Vessels:</p>	<p>Seabed intervention:</p> <ul style="list-style-type: none"> • Trailing suction hopper dredge • Offshore construction vessel • Rock Installation Vessel • Survey vessels • Support vessels • Fuel bunkering vessels <p>Trunkline installation:</p> <ul style="list-style-type: none"> • Pipelay Vessel multi-joint operation • Shallow Water Lay Barge • Anchor handling vessel/tug • Pipe supply vessels • Offshore construction vessel • Survey vessels • Fuel bunkering vessels

Feedback:

If you have any issues or concerns with these activities, or any other issues relevant to this location, please respond to Woodside at: Feedback@woodside.com.au or 1800 442 977.

Your feedback and our response will be included in our Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth)*.

Please let us know if your feedback for any of the activities proposed under an Environment Plan is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan to ensure this information remains confidential to NOPSEMA.

Please provide your views by **26 February 2023**.

Regards,

4.12 Email sent to Karratha Community Liaison Group (including City of Karratha) (27 January 2023)

Dear Karratha Community Liaison Group

Woodside has submitted Environment Plans (EPs) to undertake the following activities in Commonwealth waters for the Scarborough development:

- seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**);
- drilling and subsea tree installation activities for eight planned development wells and the potential for a further two additional contingency wells under the WA-61-L Scarborough Drilling and Completions EP (**D&C EP**);
 - 4D baseline marine seismic survey (MSS) activities over the Scarborough and Jupiter field under the Scarborough 4D Baseline Marine Seismic Survey EP (**Seismic EP**); and
- seabed site surveys and installation of subsea production infrastructure under the Subsea Infrastructure Installation EP (**Subsea EP**).

Updated consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#).

As we are inviting consultation with you on each of the EPs above, for ease of reference, we have attached the information in this one email. In an effort to simplify feedback, we have also included a feedback template (Appendix A) which you may wish to use to provide your feedback specific to the proposed EPs.

Woodside has previously submitted Revision 1 of the **SITI EP** to NOPSEMA which has been available on the NOPSEMA website since January 2022 (https://info.nopsema.gov.au/environment_plans/575/show_public). Revision 0 of the **D&C EP** has been available on the NOPSEMA website since November 2021 (https://info.nopsema.gov.au/environment_plans/565/show_public). Revision 0 of the **Seismic EP** has been available on the NOPSEMA website since 18 October 2021 (https://info.nopsema.gov.au/environment_plans/559/show_public).

Woodside is preparing to submit a further revision of the SITI EP, D&C EP and Seismic EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in these revisions remain the same, with no material changes. The Subsea EP has not yet been submitted to NOPSEMA.

The SITI EP, D&C EP and Subsea EP fall under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

If you have feedback specific to each of the proposed activities described under the relevant EPs, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **26 February 2023**.

Activity:

	SITI EP	D&C EP	Seismic EP	Subsea EP
Summary:	Seabed intervention and trunkline installation activities in Commonwealth waters associated with the installation of a carbon steel pipeline (Trunkline) that runs approximately 430 km from the from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. This EP covers activities for the approximately 400 km section of the Trunkline in Commonwealth waters. A separate EP covers activities in State waters.	Drilling and Completions activities in Commonwealth waters, including drilling and subsea tree installation activities for eight planned development wells and the potential for a further two contingency wells. Woodside may need to intervene, workover or re-drill the wells. Subsea inspection, monitoring, maintenance and subsea infrastructure repair activities may also be undertaken.	4D baseline seismic survey over the Scarborough and Jupiter fields. The proposed survey will be conducted over areas where seismic data has previously been acquired. The objective for the proposed activity is to acquire a new 3D seismic survey data that will provide the baseline for future 'time lapse' reservoir surveillance (or technically termed 4D baseline survey).	Seabed site surveys and installation of subsea production infrastructure. Activities include visual pre- and post-installation surveys, and installation of flowlines, umbilicals and risers and ancillary infrastructure, required for the flow and control of hydrocarbons and produced water to the Scarborough Floating Production Unit (FPU). Mooring legs and suction piles will also be installed and a gravimetry survey is also planned.
Location:	Activities run from the Scarborough FPU in WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, to the State waters boundary at the northern extent of the Dampier Archipelago.	Activities are located in Permit Area WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, Western Australia. Approximate development well locations for the eight planned wells are provided in Table 2 of the attached D&C EP Consultation Information Sheet.	The seismic survey will cover the Scarborough and Jupiter fields within Commonwealth waters, located in the Exmouth Plateau, approximately 214 km north west of Exmouth, Western Australia.	Activities are located in permit Areas WA-61-L and WA-62-L, around 374 km west-northwest of Dampier, Western Australia.
Approx. Water Depth (m):	~ 32 m – 1400 m	~ 900 m – 955 m	~ 800 m – 1,150 m	~ 900 m – 1000 m
Earliest commencement date:	Seabed intervention activities: Mid 2023 pending approvals, vessel availability and weather constraints.	Activities planned to commence in H2 2023 pending approvals, vessel availability and weather constraints.	Activities planned to commence in H1 2023 pending approvals, vessel	Activities planned to commence in H2 2023 (and estimated to be completed in 18 months with

	<p>Trunkline installation activities: Q4 2023 pending successful completion approvals, vessel availability and weather constraints.</p>		availability and weather constraints.	activities occurring in multiple campaigns).
Estimated duration:	~24 months across multiple campaigns	~50 – 60 days per well	~55 – 70 days	~18 months (cumulative) for the survey and installation activities
Distance from Operational Area to nearest town	The closest Commonwealth section of the trunkline on the State waters boundary is ~32 km north-west of Dampier.	~244 km north-northwest of Exmouth, 374 km west-northwest of Dampier.	~214 km north-west of Exmouth.	~ 244 km north-northwest of Exmouth, ~ 374 km west-northwest of Dampier.
Distance from Operational Area to nearest marine park	<ul style="list-style-type: none"> • The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cwth), close to the northern boundary • Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone 	<ul style="list-style-type: none"> • ~83 km north of the Gascoyne Marine Park (Cwlth) • ~206 km north-west of Montebello Marine Park (Cwlth) • ~208 km north-northwest of Ningaloo Marine Park (Cwlth) 	<ul style="list-style-type: none"> • ~46 km north of Gascoyne Marine Park Multiple Use Zone 	<ul style="list-style-type: none"> • ~ 77 km north of the Gascoyne Marine Park (Cwlth) • ~ 201 km north-west of Montebello Marine Park (Cwlth) • ~ 180 km north-northwest of Ningaloo Marine Park (Cwlth)

Feedback:

If you have any issues or concerns with these activities, or any other issues relevant to this location, please respond to Woodside at: Feedback@woodside.com.au or 1800 442 977.

Your feedback and our response will be included in our Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth)*.

Please let us know if your feedback for any of the activities proposed under an Environment Plan is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan to ensure this information remains confidential to NOPSEMA.

Please provide your views by **26 February 2023**.

Regards,

APPENDIX A

FEEDBACK	SITI EP	D&C EP	Seismic EP	Subsea EP

4.13 Email sent to Shire of Ashburton (27 January 2023)

Dear [REDACTED]

Woodside has submitted an Environment Plan (EP) to undertake seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**) for the Scarborough development.

An updated consultation Information Sheet is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. This is also available on our [website](#).

Woodside has previously submitted Revision 1 of the **SITI EP** to NOPSEMA which has been available on the NOPSEMA website since January 2022 (https://info.nopsema.gov.au/environment_plans/575/show_public).

Woodside is preparing to submit a further revision of the SITI EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in this revision remain the same, with no material changes.

The SITI EP falls under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

If you have feedback specific to each of the proposed activities described under the relevant EP, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **26 February 2023**.

Activity:

	SITI EP
Summary:	Seabed intervention and trunkline installation activities in Commonwealth waters associated with the installation of a carbon steel pipeline (Trunkline) that runs approximately 430 km from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. This EP covers activities for the approximately 400 km section of the Trunkline in Commonwealth waters. A separate EP covers activities in State waters.
Location:	Activities run from the Scarborough FPU in WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, to the State waters boundary at the northern extent of the Dampier Archipelago.
Approx. Water Depth (m):	~ 32 m – 1400 m
Earliest commencement date:	Seabed intervention activities: Mid 2023 pending approvals, vessel availability and weather constraints. Trunkline installation activities: Q4 2023 pending successful completion approvals, vessel availability and weather constraints.
Estimated duration:	~24 months across multiple campaigns
Distance from Operational Area to nearest town	The closest Commonwealth section of the trunkline on the State waters boundary is ~32 km north-west of Dampier.
Distance from Operational Area to nearest marine park	<ul style="list-style-type: none"> • The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cwth), close to the northern boundary • Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone
Operational Area and Exclusion Zones	Temporary 500 m exclusion zones will apply around applicable seabed intervention and the Trunkline installation vessels. The Operational Areas are: <ul style="list-style-type: none"> • Trunkline Project Area: The proposed trunkline from around KP 32 (Commonwealth – State Boundary) to KP 435 and 1.5 km either side of the proposed trunkline centreline. • Offshore Borrow Ground Project Area: Offshore Borrow Ground located in Commonwealth waters.
Vessels:	Seabed intervention: <ul style="list-style-type: none"> • Trailing suction hopper dredge • Offshore construction vessel • Rock Installation Vessel • Survey vessels • Support vessels • Fuel bunkering vessels

	<p>Trunkline installation:</p> <ul style="list-style-type: none">• Pipelay Vessel multi-joint operation• Shallow Water Lay Barge• Anchor handling vessel/tug• Pipe supply vessels• Offshore construction vessel• Survey vessels• Fuel bunkering vessels

Regards,

4.14 Email sent to Town of Port Hedland (27 January 2023)

Dear Town of Port Hedland

Woodside has submitted an Environment Plan (EP) to undertake seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**) for the Scarborough development.

An updated consultation Information Sheet is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. This is also available on our [website](#).

Woodside has previously submitted Revision 1 of the **SITI EP** to NOPSEMA which has been available on the NOPSEMA website since January 2022

(https://info.nopsema.gov.au/environment_plans/575/show_public).

Woodside is preparing to submit a further revision of the SITI EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in this revision remain the same, with no material changes.

The SITI EP falls under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

If you have feedback specific to each of the proposed activities described under the relevant EP, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **26 February 2023**.

Activity:

	SITI EP
Summary:	Seabed intervention and trunkline installation activities in Commonwealth waters associated with the installation of a carbon steel pipeline (Trunkline) that runs approximately 430 km from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. This EP covers activities for the approximately 400 km section of the Trunkline in Commonwealth waters. A separate EP covers activities in State waters.
Location:	Activities run from the Scarborough FPU in WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, to the State waters boundary at the northern extent of the Dampier Archipelago.
Approx. Water Depth (m):	~ 32 m – 1400 m
Earliest commencement date:	Seabed intervention activities: Mid 2023 pending approvals, vessel availability and weather constraints. Trunkline installation activities: Q4 2023 pending successful completion approvals, vessel availability and weather constraints.
Estimated duration:	~24 months across multiple campaigns
Distance from Operational Area to nearest town	The closest Commonwealth section of the trunkline on the State waters boundary is ~32 km north-west of Dampier.
Distance from Operational Area to nearest marine park	<ul style="list-style-type: none"> • The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cwth), close to the northern boundary • Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone

Regards,

4.17 Email sent Port Hedland Chamber of Commerce and Industry (27 January 2023)

Dear Port Hedland Chamber of Commerce and Industry

Woodside has submitted an Environment Plan (EP) to undertake seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**) for the Scarborough development.

An updated consultation Information Sheet is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. This is also available on our [website](#).

Woodside has previously submitted Revision 1 of the **SITI EP** to NOPSEMA which has been available on the NOPSEMA website since January 2022 (https://info.nopsema.gov.au/environment_plans/575/show_public).

Woodside is preparing to submit a further revision of the SITI EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in this revision remain the same, with no material changes.

The SITI EP falls under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

If you have feedback specific to each of the proposed activities described under the relevant EP, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **26 February 2023**.

Activity:

	SITI EP
Summary:	Seabed intervention and trunkline installation activities in Commonwealth waters associated with the installation of a carbon steel pipeline (Trunkline) that runs approximately 430 km from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. This EP covers activities for the approximately 400 km section of the Trunkline in Commonwealth waters. A separate EP covers activities in State waters.
Location:	Activities run from the Scarborough FPU in WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, to the State waters boundary at the northern extent of the Dampier Archipelago.
Approx. Water Depth (m):	~ 32 m – 1400 m
Earliest commencement date:	Seabed intervention activities: Mid 2023 pending approvals, vessel availability and weather constraints. Trunkline installation activities: Q4 2023 pending successful completion approvals, vessel availability and weather constraints.
Estimated duration:	~24 months across multiple campaigns
Distance from Operational Area to nearest town	The closest Commonwealth section of the trunkline on the State waters boundary is ~32 km north-west of Dampier.
Distance from Operational Area to nearest marine park	<ul style="list-style-type: none"> • The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cwth), close to the northern boundary • Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone
Operational Area and Exclusion Zones	Temporary 500 m exclusion zones will apply around applicable seabed intervention and the Trunkline installation vessels. The Operational Areas are: <ul style="list-style-type: none"> • Trunkline Project Area: The proposed trunkline from around KP 32 (Commonwealth – State Boundary) to KP 435 and 1.5 km either side of the proposed trunkline centreline. • Offshore Borrow Ground Project Area: Offshore Borrow Ground located in Commonwealth waters.

Vessels:	<p>Seabed intervention:</p> <ul style="list-style-type: none"> • Trailing suction hopper dredge • Offshore construction vessel • Rock Installation Vessel • Survey vessels • Support vessels • Fuel bunkering vessels <p>Trunkline installation:</p> <ul style="list-style-type: none"> • Pipelay Vessel multi-joint operation • Shallow Water Lay Barge • Anchor handling vessel/tug • Pipe supply vessels • Offshore construction vessel • Survey vessels • Fuel bunkering vessels

If you have any issues or concerns with these activities, or any other issues relevant to this location, please respond to Woodside at:

Feedback@woodside.com.au or 1800 442 977.

Your feedback and our response will be included in our Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth)*.

Please let us know if your feedback for any of the activities proposed under an Environment Plan is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan to ensure this information remains confidential to NOPSEMA.

Please provide your views by **26 February 2023**.

Regards,

4.18 Email sent Carnarvon Chamber of Commerce and Industry (27 January 2023)

Dear Carnarvon Chamber of Commerce and Industry

Woodside has submitted an Environment Plan (EP) to undertake seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**) for the Scarborough development.

An updated consultation Information Sheet is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. This is also available on our [website](#).

Woodside has previously submitted Revision 1 of the **SITI EP** to NOPSEMA which has been available on the NOPSEMA website since January 2022

(https://info.nopsema.gov.au/environment_plans/575/show_public).

Woodside is preparing to submit a further revision of the SITI EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in this revision remain the same, with no material changes.

The SITI EP falls under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

If you have feedback specific to each of the proposed activities described under the relevant EP, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **26 February 2023**.

Activity:

	SITI EP
Summary:	Seabed intervention and trunkline installation activities in Commonwealth waters associated with the installation of a carbon steel pipeline (Trunkline) that runs approximately 430 km from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. This EP covers activities for the approximately 400 km section of the Trunkline in Commonwealth waters. A separate EP covers activities in State waters.
Location:	Activities run from the Scarborough FPU in WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, to the State waters boundary at the northern extent of the Dampier Archipelago.
Approx. Water Depth (m):	~ 32 m – 1400 m
Earliest commencement date:	Seabed intervention activities: Mid 2023 pending approvals, vessel availability and weather constraints. Trunkline installation activities: Q4 2023 pending successful completion approvals, vessel availability and weather constraints.
Estimated duration:	~24 months across multiple campaigns
Distance from Operational Area to nearest town	The closest Commonwealth section of the trunkline on the State waters boundary is ~32 km north-west of Dampier.

<p>Distance from Operational Area to nearest marine park</p>	<ul style="list-style-type: none"> • The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cwth), close to the northern boundary • Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone
<p>Operational Area and Exclusion Zones</p>	<p>Temporary 500 m exclusion zones will apply around applicable seabed intervention and the Trunkline installation vessels. The Operational Areas are:</p> <ul style="list-style-type: none"> • Trunkline Project Area: The proposed trunkline from around KP 32 (Commonwealth – State Boundary) to KP 435 and 1.5 km either side of the proposed trunkline centreline. • Offshore Borrow Ground Project Area: Offshore Borrow Ground located in Commonwealth waters.
<p>Vessels:</p>	<p>Seabed intervention:</p> <ul style="list-style-type: none"> • Trailing suction hopper dredge • Offshore construction vessel • Rock Installation Vessel • Survey vessels • Support vessels • Fuel bunkering vessels <p>Trunkline installation:</p> <ul style="list-style-type: none"> • Pipelay Vessel multi-joint operation • Shallow Water Lay Barge • Anchor handling vessel/tug • Pipe supply vessels • Offshore construction vessel • Survey vessels • Fuel bunkering vessels

Feedback:

If you have any issues or concerns with these activities, or any other issues relevant to this location, please respond to Woodside at:

Feedback@woodside.com.au or 1800 442 977.

Your feedback and our response will be included in our Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth)*.

Please let us know if your feedback for any of the activities proposed under an Environment Plan is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan to ensure this information remains confidential to NOPSEMA.

Regards,

4.19 Email sent to Exmouth Community Reference Group (ECRG) (including Shire of Exmouth) (1 February 2023)

Dear Exmouth Community Reference Group

Woodside has submitted Environment Plans (EPs) to undertake the following activities in Commonwealth waters for the Scarborough development:

- seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**);
- drilling and subsea tree installation activities for eight planned development wells and the potential for a further two additional contingency wells under the WA-61-L Scarborough Drilling and Completions EP (**D&C EP**);
 - 4D baseline marine seismic survey (MSS) activities over the Scarborough and Jupiter field under the Scarborough 4D Baseline Marine Seismic Survey EP (**Seismic EP**); and
- seabed site surveys and installation of subsea production infrastructure under the Subsea Infrastructure Installation EP (**Subsea EP**).

Updated consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#).

As we are inviting consultation with you on each of the EPs above, for ease of reference, we have attached the information in this one email. In an effort to simplify feedback, we have also included a feedback template (Appendix A) which you may wish to use to provide your feedback specific to the proposed EPs.

Woodside has previously submitted Revision 1 of the **SITI EP** to NOPSEMA which has been available on the NOPSEMA website since January 2022

(https://info.nopsema.gov.au/environment_plans/575/show_public). Revision 0 of the **D&C EP** has been available on the NOPSEMA website since November 2021

(https://info.nopsema.gov.au/environment_plans/565/show_public). Revision 0 of the **Seismic EP** has been available on the NOPSEMA website since 18 October 2021

(https://info.nopsema.gov.au/environment_plans/559/show_public).

Woodside is preparing to submit a further revision of the SITI EP, D&C EP and Seismic EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in these revisions remain the same, with no material changes. The Subsea EP has not yet been submitted to NOPSEMA.

The SITI EP, D&C EP and Subsea EP fall under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

If you have feedback specific to each of the proposed activities described under the relevant EPs, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **3 March 2023**.

Activity:

	SITI EP	D&C EP	Seismic EP	Subsea EP
Summary:	Seabed intervention and trunkline installation activities in Commonwealth waters associated with the installation of a carbon steel pipeline (Trunkline) that runs approximately 430 km from the from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. This EP covers activities for the approximately 400 km section of the Trunkline in Commonwealth waters. A separate EP covers activities in State waters.	Drilling and Completions activities in Commonwealth waters, including drilling and subsea tree installation activities for eight planned development wells and the potential for a further two contingency wells. Woodside may need to intervene, workover or re-drill the wells. Subsea inspection, monitoring, maintenance and subsea infrastructure repair activities may also be undertaken.	4D baseline seismic survey over the Scarborough and Jupiter fields. The proposed survey will be conducted over areas where seismic data has previously been acquired. The objective for the proposed activity is to acquire a new 3D seismic survey data that will provide the baseline for future 'time lapse' reservoir surveillance (or technically termed 4D baseline survey).	Seabed site surveys and installation of subsea production infrastructure. Activities include visual pre- and post-installation surveys, and installation of flowlines, umbilicals and risers and ancillary infrastructure, required for the flow and control of hydrocarbons and produced water to the Scarborough Floating Production Unit (FPU). Mooring legs and suction piles will also be installed and a gravimetry survey is also planned.
Location:	Activities run from the Scarborough FPU in WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, to the State waters boundary at the northern extent of the Dampier Archipelago.	Activities are located in Permit Area WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, Western Australia. Approximate development well locations for the eight planned wells are provided in Table 2 of the attached D&C EP Consultation Information Sheet.	The seismic survey will cover the Scarborough and Jupiter fields within Commonwealth waters, located in the Exmouth Plateau, approximately 214 km north west of Exmouth, Western Australia.	Activities are located in permit Areas WA-61-L and WA-62-L, around 374 km west-northwest of Dampier, Western Australia.
Approx. Water Depth (m):	~ 32 m – 1400 m	~ 900 m – 955 m	~ 800 m – 1,150 m	~ 900 m – 1000 m

<p>Earliest commencement date:</p>	<p>Seabed intervention activities: Mid 2023 pending approvals, vessel availability and weather constraints.</p> <p>Trunkline installation activities: Q4 2023 pending successful completion approvals, vessel availability and weather constraints.</p>	<p>Activities planned to commence in H2 2023 pending approvals, vessel availability and weather constraints.</p>	<p>Activities planned to commence in H1 2023 pending approvals, vessel availability and weather constraints.</p>	<p>Activities planned to commence in H2 2023 (and estimated to be completed in 18 months with activities occurring in multiple campaigns).</p>
<p>Estimated duration:</p>	<p>~24 months across multiple campaigns</p>	<p>~50 – 60 days per well</p>	<p>~55 – 70 days</p>	<p>~18 months (cumulative) for the survey and installation activities</p>
<p>Distance from Operational Area to nearest town</p>	<p>The closest Commonwealth section of the trunkline on the State waters boundary is ~32 km north-west of Dampier.</p>	<p>~244 km north-northwest of Exmouth, 374 km west-northwest of Dampier.</p>	<p>~214 km north-west of Exmouth.</p>	<p>~ 244 km north-northwest of Exmouth, ~ 374 km west-northwest of Dampier.</p>
<p>Distance from Operational Area to nearest marine park</p>	<ul style="list-style-type: none"> • The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cwth), close to the northern boundary • Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone 	<ul style="list-style-type: none"> • ~83 km north of the Gascoyne Marine Park (Cwlth) • ~206 km north-west of Montebello Marine Park (Cwlth) • ~208 km north-northwest of Ningaloo Marine Park (Cwlth) 	<ul style="list-style-type: none"> • ~46 km north of Gascoyne Marine Park Multiple Use Zone 	<ul style="list-style-type: none"> • ~ 77 km north of the Gascoyne Marine Park (Cwlth) • ~ 201 km north-west of Montebello Marine Park (Cwlth) • ~ 180 km north-northwest of Ningaloo Marine Park (Cwlth)
<p>Operational Area and Exclusion Zones</p>	<p>Temporary 500 m exclusion zones will apply around applicable seabed intervention and the Trunkline installation vessels. The Operational Areas are:</p> <ul style="list-style-type: none"> • Trunkline Project Area: The proposed trunkline from around KP 32 	<p>A petroleum safety zone of 500 m will be in place around the MODU and installation vessel for the duration of activities. The Operational Areas are:</p> <ul style="list-style-type: none"> • DP MODU/drillship – 500 m radius from each well centre 	<ul style="list-style-type: none"> • Three nautical mile radius safe navigation area around the seismic vessel, streamers and tail buoys during seismic operations • Marine users are requested to avoid this area during the survey to ensure the safety of the 	<p>The Operational Area for activities includes a radius of:</p> <ul style="list-style-type: none"> • 1,000 m around location of the outermost concrete pads. • 1,500 m around location of subsea infrastructure. • 2,000 m around future location of FPU.

Vessels:	<p>Seabed intervention:</p> <ul style="list-style-type: none"> Trailing suction hopper dredge Offshore construction vessel Rock Installation Vessel Survey vessels Support vessels Fuel bunkering vessels <p>Trunkline installation:</p> <ul style="list-style-type: none"> Pipelay Vessel multi-joint operation Shallow Water Lay Barge Anchor handling vessel/tug Pipe supply vessels Offshore construction vessel Survey vessels Fuel bunkering vessels 	<ul style="list-style-type: none"> Installation vessels for installing the subsea infrastructure Light well intervention vessel as an option for well intervention, subsea hardware installation or contingent activities Support vessels including installation vessel(s), anchor handling vessel(s) and general supply/support vessels 	<ul style="list-style-type: none"> A purpose-built seismic vessel One support vessel A potential chase vessel, and An additional spotter vessel (May to June) 	<ul style="list-style-type: none"> Light construction vessels Heavy construction vessels Heavy lift vessels Derrick lay vessel Reel-lay vessels Survey vessels Support vessels

Feedback:

If you have any issues or concerns with these activities, or any other issues relevant to this location, please respond to Woodside at: Feedback@woodside.com.au or 1800 442 977.

Your feedback and our response will be included in our Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental

Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth).

Please let us know if your feedback for any of the activities proposed under an Environment Plan is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan to ensure this information remains confidential to NOPSEMA.

Please provide your views by **3 March 2023**.

Regards,

APPENDIX A

FEEDBACK	SITI EP	D&C EP	Seismic EP	Subsea EP

4.20 Email sent to Cape Conservation Group (1 February 2023)

Dear [REDACTED]

Woodside has submitted an Environment Plan (EP) to undertake seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**) for the Scarborough development.

An updated consultation Information Sheet is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. This is also available on our [website](#).

Woodside has previously submitted Revision 1 of the **SITI EP** to NOPSEMA which has been available on the NOPSEMA website since January 2022 (https://info.nopsema.gov.au/environment_plans/575/show_public).

Woodside is preparing to submit a further revision of the SITI EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in this revision remain the same, with no material changes.

The SITI EP falls under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

If you have feedback specific to each of the proposed activities described under the relevant EP, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **3 March 2023**.

Activity:

	SITI EP
Summary:	Seabed intervention and trunkline installation activities in Commonwealth waters associated with the installation of a carbon steel pipeline (Trunkline) that runs approximately 430 km from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. This EP covers activities for the approximately 400 km section of the Trunkline in Commonwealth waters. A separate EP covers activities in State waters.
Location:	Activities run from the Scarborough FPU in WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, to the State waters boundary at the northern extent of the Dampier Archipelago.
Approx. Water Depth (m):	~ 32 m – 1400 m
Earliest commencement date:	Seabed intervention activities: Mid 2023 pending approvals, vessel availability and weather constraints. Trunkline installation activities: Q4 2023 pending successful completion approvals, vessel availability and weather constraints.
Estimated duration:	~24 months across multiple campaigns
Distance from Operational Area to nearest town	The closest Commonwealth section of the trunkline on the State waters boundary is ~32 km north-west of Dampier.

4.23 Email sent to Malgana Aboriginal Corporation (1 February 2023)

Good afternoon [REDACTED] and [REDACTED]

I wanted to follow up on the below email.

I would like to be able to speak with one or both of you to ensure that you have been receiving my emails, to chat through the attached information and seek an understanding of whether on behalf of the Malgana Aboriginal Corporation (RNTBC) you would like to discuss any of the information in more detail. In relation to the Scarborough project I again attach the Summary Overview sheet. Woodside is specifically seeking to understand the nature of the interests that Malgana Aboriginal Corporation (MAC) and its members may have in the 'environment that may be affected' (EMBA) by this activities outlined in the two Summary Information Sheets for Scarborough Seabed Intervention and Trunkline Installation and Scarborough Subsea Infrastructure Installation.

1. A Summary Overview of the Scarborough project;
2. Summary Information Sheet – Scarborough Seabed Intervention and Trunkline Installation
3. Summary Information Sheet – Scarborough Subsea Infrastructure Installation

Please don't hesitate to reach out in response to the email or by contacting me on my mobile in the signature below.

Kind regards

[REDACTED]
[REDACTED]

4.24 Email sent to Nanda Aboriginal Corporation via Yamatji Marlpa Aboriginal Corporation (YMAC) (1 February 2023)

Good afternoon [REDACTED]

I wanted to follow up on the below email and confirm you are the correct contact for the Nanda Aboriginal Corporation (NAC) at YMAC.

I would like to be able to speak with the relevant representative for NAC to ensure that NAC are receiving the relevant information and seek an understanding of whether they would like to discuss any of the information in more detail.

In relation to the Scarborough project, I again attach the Summary Overview sheet. Woodside is specifically seeking to understand the nature of the interests that NAC and its members may have in the 'environment that may be affected' (EMBA) by this activities outlined in the two Summary Information Sheets for Scarborough Seabed Intervention and Trunkline Installation and Scarborough Subsea Infrastructure Installation.

4. A Summary Overview of the Scarborough project;
5. Summary Information Sheet – Scarborough Seabed Intervention and Trunkline Installation
6. Summary Information Sheet – Scarborough Subsea Infrastructure Installation

Please don't hesitate to reach out in response to the email or by contacting me on my mobile in the signature below.

Kind Regards,
[REDACTED]

4.25 Email sent to Department of Planning, Lands and Heritage (DPLH) – 1 February 2023

Dear Department of Planning, Lands and Heritage (DPLH)

Woodside has submitted Environment Plans (EPs) to undertake the following activities in Commonwealth waters for the Scarborough development:

- seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**);
- seabed site surveys and installation of subsea production infrastructure under the Subsea Infrastructure Installation EP (**Subsea EP**).

Updated consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#).

Woodside advises there are a number of historical shipwrecks which have been recorded within the 'environment that may be affected' (EMBA) for the proposed activities. Please find a list relevant to each EP attached.

As we are inviting consultation with you on each of the EPs above, for ease of reference, we have attached the information in this one email. In an effort to simplify feedback, we have also included a feedback template (Appendix A) which you may wish to use to provide your feedback specific to the proposed EPs.

Woodside has previously submitted Revision 1 of the **SITI EP** to NOPSEMA which has been available on the NOPSEMA website since January 2022 (https://info.nopsema.gov.au/environment_plans/575/show_public). Woodside is preparing to submit a further revision of the SITI EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in this revision remains the same, with no material changes. The Subsea EP has not yet been submitted to NOPSEMA.

The SITI EP and Subsea EP fall under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

If you have feedback specific to each of the proposed activities described under the relevant EPs, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **3 March 2023**.

Activity:

	SITI EP	Subsea EP
Summary:	Seabed intervention and trunkline installation activities in Commonwealth waters associated with the installation of a carbon steel pipeline (Trunkline) that runs approximately 430 km from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. This EP covers activities for the approximately 400 km section of the Trunkline in Commonwealth waters. A separate EP covers activities in State waters.	Seabed site surveys and installation of subsea production infrastructure. Activities include visual pre- and post-installation surveys, and installation of flowlines, umbilicals and risers and ancillary infrastructure, required for the flow and control of hydrocarbons and produced water to the Scarborough Floating Production Unit (FPU). Mooring legs and suction piles will also be installed and a gravimetry survey is also planned.
Location:	Activities run from the Scarborough FPU in WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, to the State waters boundary at the northern extent of the Dampier Archipelago.	Activities are located in permit Areas WA-61-L and WA-62-L, around 374 km west-northwest of Dampier, Western Australia.
Approx. Water Depth (m):	~ 32 m – 1400 m	~ 900 m – 1000 m
Earliest commencement date:	Seabed intervention activities: Mid 2023 pending approvals, vessel availability and weather constraints.	Activities planned to commence in H2 2023 (and estimated to be completed in 18 months with activities occurring in multiple campaigns).

	Trunkline installation activities: Q4 2023 pending successful completion approvals, vessel availability and weather constraints.	
Estimated duration:	~24 months across multiple campaigns	~18 months (cumulative) for the survey and installation activities
Distance from Operational Area to nearest town	The closest Commonwealth section of the trunkline on the State waters boundary is ~32 km north-west of Dampier.	~ 244 km north-northwest of Exmouth, ~ 374 km west-northwest of Dampier.
Distance from Operational Area to nearest marine park	<ul style="list-style-type: none"> The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cwth), close to the northern boundary Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone 	<ul style="list-style-type: none"> ~ 77 km north of the Gascoyne Marine Park (Cwlth) ~ 201 km north-west of Montebello Marine Park (Cwth) ~ 180 km north-northwest of Ningaloo Marine Park (Cwlth)
Operational Area and Exclusion Zones	<p>Temporary 500 m exclusion zones will apply around applicable seabed intervention and the Trunkline installation vessels.</p> <p>The Operational Areas are:</p> <ul style="list-style-type: none"> Trunkline Project Area: The proposed trunkline from around KP 32 (Commonwealth – State Boundary) to KP 435 and 1.5 km either side of the proposed trunkline centreline. Feedback:

If you have any issues or concerns with these activities, or any other issues relevant to this location, please respond to Woodside at:

Feedback@woodside.com.au or 1800 442 977.

Your feedback and our response will be included in our Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth)*.

Please let us know if your feedback for any of the activities proposed under an Environment Plan is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan to ensure this information remains confidential to NOPSEMA.

Please provide your views by **3 March 2023**.

Regards,

APPENDIX A

FEEDBACK	SITI EP	Subsea EP

4.26 Email sent to Western Australian Museum (1 February 2023)

Dear Western Australian Museum

Woodside has submitted Environment Plans (EPs) to undertake the following activities in Commonwealth waters for the Scarborough development:

- seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**);
- seabed site surveys and installation of subsea production infrastructure under the Subsea Infrastructure Installation EP (**Subsea EP**).

Updated consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#).

Woodside advises there are a number of historical shipwrecks which have been recorded within the 'environment that may be affected' (EMBA) for the proposed activities. Please find a list relevant to each EP attached.

As we are inviting consultation with you on each of the EPs above, for ease of reference, we have attached the information in this one email. In an effort to simplify feedback, we have also included a feedback template (Appendix A) which you may wish to use to provide your feedback specific to the proposed EPs.

Woodside has previously submitted Revision 1 of the **SITI EP** to NOPSEMA which has been available on the NOPSEMA website since January 2022 (https://info.nopsema.gov.au/environment_plans/575/show_public). Woodside is preparing to submit a further revision of the SITI EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in this revision remains the same, with no material changes. The Subsea EP has not yet been submitted to NOPSEMA.

The SITI EP and Subsea EP fall under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

If you have feedback specific to each of the proposed activities described under the relevant EPs, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **3 March 2023**.

4.28 Email sent to Australian Fisheries Management Authority (AFMA) – 3 February 2023

Dear AFMA

Woodside previously consulted you on its submitted Environment Plans (EPs) to undertake the following activities in Commonwealth waters for the Scarborough development:

- seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**);
- drilling and subsea tree installation activities for eight planned development wells and the potential for a further two additional contingency wells under the WA-61-L Scarborough Drilling and Completions EP (**D&C EP**);
- 4D baseline marine seismic survey (MSS) activities over the Scarborough and Jupiter field under the Scarborough 4D Baseline Marine Seismic Survey EP (**Seismic EP**); and
- seabed site surveys and installation of subsea production infrastructure under the Subsea Infrastructure Installation EP (**Subsea EP**).

Updated consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#). Also attached are Commonwealth fishery figures.

As we are inviting consultation with you on each of the EPs above, for ease of reference, we have attached the information in this one email. In an effort to simplify feedback, we have also included a feedback template (Appendix A) which you may wish to use to provide your feedback specific to the proposed EPs.

Woodside has previously submitted Revision 1 of the **SITI EP** to NOPSEMA which has been available on the NOPSEMA website since January 2022 (https://info.nopsema.gov.au/environment_plans/575/show_public). Revision 0 of the **D&C**

EP has been available on the NOPSEMA website since November 2021 (https://info.nopsema.gov.au/environment_plans/565/show_public). Revision 0 of the **Seismic EP** has been available on the NOPSEMA website since 18 October 2021 (https://info.nopsema.gov.au/environment_plans/559/show_public).

Woodside is preparing to submit a further revision of the SITI EP, D&C EP and Seismic EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in these revisions remain the same, with no material changes. The Subsea EP has not yet been submitted to NOPSEMA.

The SITI EP, D&C EP and Subsea EP fall under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

If you have additional feedback specific to each of the proposed activities described under the relevant EPs, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **5 March 2023**.

Activity:

	SITI EP	D&C EP	Seismic EP	Subsea EP
Summary:	Seabed intervention and trunkline installation activities in Commonwealth waters associated with the installation of a carbon steel pipeline (Trunkline) that runs approximately 430 km from the from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. This EP covers activities for the approximately 400 km section of the Trunkline in Commonwealth waters. A separate EP covers activities in State waters.	Drilling and Completions activities in Commonwealth waters, including drilling and subsea tree installation activities for eight planned development wells and the potential for a further two contingency wells. Woodside may need to intervene, workover or re-drill the wells. Subsea inspection, monitoring, maintenance and subsea infrastructure repair activities may also be undertaken.	4D baseline seismic survey over the Scarborough and Jupiter fields. The proposed survey will be conducted over areas where seismic data has previously been acquired. The objective for the proposed activity is to acquire a new 3D seismic survey data that will provide the baseline for future 'time lapse' reservoir surveillance (or technically termed 4D baseline survey).	Seabed site surveys and installation of subsea production infrastructure. Activities include visual pre- and post-installation surveys, and installation of flowlines, umbilicals and risers and ancillary infrastructure, required for the flow and control of hydrocarbons and produced water to the Scarborough Floating Production Unit (FPU). Mooring legs and suction piles will also be installed and a gravimetry survey is also planned.

Location:	Activities run from the Scarborough FPU in WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, to the State waters boundary at the northern extent of the Dampier Archipelago.	Activities are located in Permit Area WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, Western Australia. Approximate development well locations for the eight planned wells are provided in Table 2 of the attached D&C EP Consultation Information Sheet.	The seismic survey will cover the Scarborough and Jupiter fields within Commonwealth waters, located in the Exmouth Plateau, approximately 214 km north west of Exmouth, Western Australia.	Activities are located in permit Areas WA-61-L and WA-62-L, around 374 km west-northwest of Dampier, Western Australia.
Approx. Water Depth (m):	~ 32 m – 1400 m	~ 900 m – 955 m	~ 800 m – 1,150 m	~ 900 m – 1000 m
Earliest commencement date:	Seabed intervention activities: Mid 2023 pending approvals, vessel availability and weather constraints. Trunkline installation activities: Q4 2023 pending successful completion approvals, vessel availability and weather constraints.	Activities planned to commence in H2 2023 pending approvals, vessel availability and weather constraints.	Activities planned to commence in H1 2023 pending approvals, vessel availability and weather constraints.	Activities planned to commence in H2 2023 (and estimated to be completed in 18 months with activities occurring in multiple campaigns).
Estimated duration:	~24 months across multiple campaigns	~50 – 60 days per well	~55 – 70 days	~18 months (cumulative) for the survey and installation activities
Distance from Operational Area to nearest town	The closest Commonwealth section of the trunkline on the State waters boundary is ~32 km north-west of Dampier.	~244 km north-northwest of Exmouth, 374 km west-northwest of Dampier.	~214 km north-west of Exmouth.	~ 244 km north-northwest of Exmouth, ~ 374 km west-northwest of Dampier.

Woodside Feedback

Scarborough Seabed Intervention and Trunkline Installation EP (SITI EP)

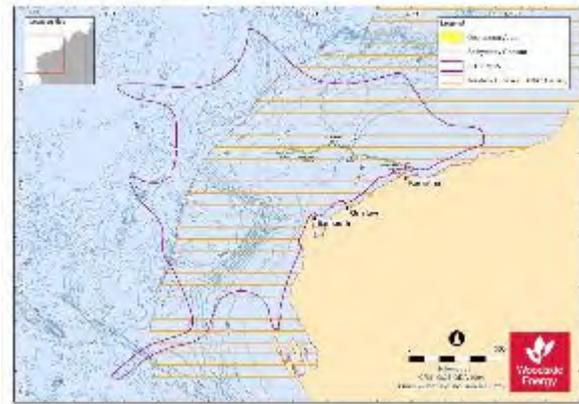

Both West Tuna and British Fisheries

Western Deepwater Trawl Fishery

Western Tuna and British Fishery

4.29 Email sent to Department of Climate Change, Energy, the Environment and Water (DCCEEW) / Department of Agriculture, Fisheries and Forestry (DAFF) (3 February 2023)

Dear Department of Climate Change, Energy, the Environment and Water (DCCEEW) and Department of Agriculture, Fisheries and Forestry (DAFF)

Woodside previously consulted you on its submitted Environment Plans (EPs) to undertake the following activities in Commonwealth waters for the Scarborough development:

- seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**);
- drilling and subsea tree installation activities for eight planned development wells and the potential for a further two additional contingency wells under the WA-61-L Scarborough Drilling and Completions EP (**D&C EP**);
- 4D baseline marine seismic survey (MSS) activities over the Scarborough and Jupiter field under the Scarborough 4D Baseline Marine Seismic Survey EP (**Seismic EP**); and
- seabed site surveys and installation of subsea production infrastructure under the Subsea Infrastructure Installation EP (**Subsea EP**).

Updated consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#).

Woodside advises there are a number of historical shipwrecks which have been recorded within the EMBA for the proposed activities. Please find a list relevant to each EP attached. **Also attached are Commonwealth fishery figures.**

As we are inviting consultation with you on each of the EPs above, for ease of reference, we have attached the information in this one email. In an effort to simplify feedback, we have also included a feedback template (Appendix A) which you may wish to use to provide your feedback specific to the proposed EPs.

Woodside has previously submitted Revision 1 of the **SITI EP** to NOPSEMA which has been available on the NOPSEMA website since January 2022 (https://info.nopsema.gov.au/environment_plans/575/show_public). Revision 0 of the **D&C EP** has been available on the NOPSEMA website since November 2021 (https://info.nopsema.gov.au/environment_plans/565/show_public). Revision 0 of the **Seismic EP** has been available on the NOPSEMA website since 18 October 2021 (https://info.nopsema.gov.au/environment_plans/559/show_public).

Woodside is preparing to submit a further revision of the SITI EP, D&C EP and Seismic EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in these revisions remain the same, with no material changes. The Subsea EP has not yet been submitted to NOPSEMA.

The SITI EP, D&C EP and Subsea EP fall under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

If you have additional feedback specific to each of the proposed activities described under the relevant EPs, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **5 March 2023**.

Please note this consultation information is of relevance to both DCCEEW and DAFF.

Activity:

Activities planned to commence in H2 2023 (and estimated to be completed in 18 months with activities occurring in multiple campaigns).

Estimated duration:	~24 months across multiple campaigns	~50 – 60 days per well	~55 – 70 days	~18 months (cumulative) for the survey and installation activities
Distance from Operational Area to nearest town	The closest Commonwealth section of the trunkline on the State waters boundary is ~32 km north-west of Dampier.	~244 km north-northwest of Exmouth, 374 km west-northwest of Dampier.	~214 km north-west of Exmouth.	~ 244 km north-northwest of Exmouth, ~ 374 km west-northwest of Dampier.
Distance from Operational Area to nearest marine park	<ul style="list-style-type: none"> • The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cwlth), close to the northern boundary • Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone 	<ul style="list-style-type: none"> • ~83 km north of the Gascoyne Marine Park (Cwlth) • ~206 km north-west of Montebello Marine Park (Cwlth) • ~208 km north-northwest of Ningaloo Marine Park (Cwlth) 	<ul style="list-style-type: none"> • ~46 km north of Gascoyne Marine Park Multiple Use Zone 	<ul style="list-style-type: none"> • ~ 77 km north of the Gascoyne Marine Park (Cwlth) • ~ 201 km north-west of Montebello Marine Park (Cwlth) • ~ 180 km north-northwest of Ningaloo Marine Park (Cwlth)
Operational Area and Exclusion Zones	<p>Temporary 500 m exclusion zones will apply around applicable seabed intervention and the Trunkline installation vessels.</p> <p>The Operational Areas are:</p> <ul style="list-style-type: none"> • Trunkline Project Area: The proposed trunkline from around KP 32 (Commonwealth – State Boundary) to KP 435 and 1.5 km either side of the proposed trunkline centreline. • Offshore Borrow Ground Project Area: Offshore Borrow Ground located in Commonwealth waters. 	<p>A petroleum safety zone of 500 m will be in place around the MODU and installation vessel for the duration of activities.</p> <p>The Operational Areas are:</p> <ul style="list-style-type: none"> • DP MODU/drillship – 500 m radius from each well centre • Moored MODU – 4,000 m radius from each well centre. • Installation vessel – 1,500 m radius around subsea locations 	<ul style="list-style-type: none"> • Three nautical mile radius safe navigation area around the seismic vessel, streamers and tail buoys during seismic operations • Marine users are requested to avoid this area during the survey to ensure the safety of the seismic vessel and third-party vessels • Refer to Table 3 of the attached Seismic EP Consultation Information Sheet for detailed survey location points 	<p>The Operational Area for activities includes a radius of:</p> <ul style="list-style-type: none"> • 1,000 m around location of the outermost concrete pads. • 1,500 m around location of subsea infrastructure. • 2,000 m around future location of FPU. • Temporary 500 m exclusion zone around vessels to manage vessel movements • An interactive map showing the location of the proposed activities will be available on the Woodside website and will

				be updated throughout the proposed activities
Vessels:	<p>Seabed intervention:</p> <ul style="list-style-type: none"> • Trailing suction hopper dredge • Offshore construction vessel • Rock Installation Vessel • Survey vessels • Support vessels • Fuel bunkering vessels <p>Trunkline installation:</p> <ul style="list-style-type: none"> • Pipelay Vessel multi-joint operation • Shallow Water Lay Barge • Anchor handling vessel/tug • Pipe supply vessels • Offshore construction vessel • Survey vessels • Fuel bunkering vessels 	<ul style="list-style-type: none"> • Installation vessels for installing the subsea infrastructure • Light well intervention vessel as an option for well intervention, subsea hardware installation or contingent activities • Support vessels including installation vessel(s), anchor handling vessel(s) and general supply/support vessels 	<ul style="list-style-type: none"> • A purpose-built seismic vessel • One support vessel • A potential chase vessel, and • An additional spotter vessel (May to June) 	<ul style="list-style-type: none"> • Light construction vessels • Heavy construction vessels • Heavy lift vessels • Derrick lay vessel • Reel-lay vessels • Survey vessels • Support vessels

Feedback:

If you have any issues or concerns with these activities, or any other issues relevant to this location, please respond to Woodside at: Feedback@woodside.com.au or 1800 442 977.

Your feedback and our response will be included in our Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth)*.

Please let us know if your feedback for any of the activities proposed under an Environment Plan is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan to ensure this information remains confidential to NOPSEMA.

Please provide your views by **5 March 2023**.

Regards,

4.30 Email sent to Department of Primary Industries and Regional Development (DPIRD) (3 February 2023)

Dear [REDACTED]

Woodside previously consulted you on its submitted Environment Plans (EPs) to undertake the following activities in Commonwealth waters for the Scarborough development:

- seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**);
- drilling and subsea tree installation activities for eight planned development wells and the potential for a further two additional contingency wells under the WA-61-L Scarborough Drilling and Completions EP (**D&C EP**);
- 4D baseline marine seismic survey (MSS) activities over the Scarborough and Jupiter field under the Scarborough 4D Baseline Marine Seismic Survey EP (**Seismic EP**); and
- seabed site surveys and installation of subsea production infrastructure under the Subsea Infrastructure Installation EP (**Subsea EP**).

Updated consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#). **Also attached are State fishery figures.**

As we are inviting consultation with you on each of the EPs above, for ease of reference, we have attached the information in this one email. In an effort to simplify feedback, we have also included a feedback template (Appendix A) which you may wish to use to provide your feedback specific to the proposed EPs.

Woodside has previously submitted Revision 1 of the **SITI EP** to NOPSEMA which has been available on the NOPSEMA website since January 2022

(https://info.nopsema.gov.au/environment_plans/575/show_public). Revision 0 of the **D&C EP** has been available on the NOPSEMA website since November 2021

(https://info.nopsema.gov.au/environment_plans/565/show_public). Revision 0 of the

Seismic EP has been available on the NOPSEMA website since 18 October 2021

(https://info.nopsema.gov.au/environment_plans/559/show_public).

Woodside is preparing to submit a further revision of the SITI EP, D&C EP and Seismic EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in these revisions remain the same, with no material changes. The Subsea EP has not yet been submitted to NOPSEMA.

The SITI EP, D&C EP and Subsea EP fall under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

If you have feedback specific to each of the proposed activities described under the relevant EPs, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **5 March 2023**.

Activity:

	SITI EP	D&C EP	Seismic EP	Subsea EP
Summary:	Seabed intervention and trunkline installation activities in Commonwealth waters associated with the installation of a carbon steel pipeline (Trunkline) that runs approximately 430 km from the from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. This EP covers activities for the approximately 400 km section of the	Drilling and Completions activities in Commonwealth waters, including drilling and subsea tree installation activities for eight planned development wells and the potential for a further two contingency wells. Woodside may need to intervene, workover or re-drill the wells. Subsea inspection, monitoring, maintenance and subsea infrastructure	4D baseline seismic survey over the Scarborough and Jupiter fields. The proposed survey will be conducted over areas where seismic data has previously been acquired. The objective for the proposed activity is to acquire a new 3D seismic survey data that will provide the baseline for future 'time lapse' reservoir surveillance (or	Seabed site surveys and installation of subsea production infrastructure. Activities include visual pre- and post-installation surveys, and installation of flowlines, umbilicals and risers and ancillary infrastructure, required for the flow and control of hydrocarbons and produced water to the Scarborough

	Trunkline in Commonwealth waters. A separate EP covers activities in State waters.	repair activities may also be undertaken.	technically termed 4D baseline survey).	Floating Production Unit (FPU). Mooring legs and suction piles will also be installed and a gravimetry survey is also planned.
Location:	Activities run from the Scarborough FPU in WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, to the State waters boundary at the northern extent of the Dampier Archipelago.	Activities are located in Permit Area WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, Western Australia. Approximate development well locations for the eight planned wells are provided in Table 2 of the attached D&C EP Consultation Information Sheet.	The seismic survey will cover the Scarborough and Jupiter fields within Commonwealth waters, located in the Exmouth Plateau, approximately 214 km north west of Exmouth, Western Australia.	Activities are located in permit Areas WA-61-L and WA-62-L, around 374 km west-northwest of Dampier, Western Australia.
Approx. Water Depth (m):	~ 32 m – 1400 m	~ 900 m – 955 m	~ 800 m – 1,150 m	~ 900 m – 1000 m
Earliest commencement date:	Seabed intervention activities: Mid 2023 pending approvals, vessel availability and weather constraints. Trunkline installation activities: Q4 2023 pending successful completion approvals, vessel availability and weather constraints.	Activities planned to commence in H2 2023 pending approvals, vessel availability and weather constraints.	Activities planned to commence in H1 2023 pending approvals, vessel availability and weather constraints.	Activities planned to commence in H2 2023 (and estimated to be completed in 18 months with activities occurring in multiple campaigns).
Estimated duration:	~24 months across multiple campaigns	~50 – 60 days per well	~55 – 70 days	~18 months (cumulative) for the survey and installation activities
Distance from Operational Area to nearest town	The closest Commonwealth section of the trunkline on the State waters boundary is ~32 km north-west of Dampier.	~244 km north-northwest of Exmouth, 374 km west-northwest of Dampier.	~214 km north-west of Exmouth.	~ 244 km north-northwest of Exmouth, ~ 374 km west-northwest of Dampier.

4.32 Email sent to Karratha Recreational Marine Users (9 Licence Holders) (3 February 2023)

Dear Stakeholder

Woodside has submitted Environment Plans (EPs) to undertake the following activities in Commonwealth waters for the Scarborough development:

- seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**);
- seabed site surveys and installation of subsea production infrastructure under the Subsea Infrastructure Installation EP (**Subsea EP**).

Updated consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#).

As we are inviting consultation with you on each of the EPs above, for ease of reference, we have attached the information in this one email. In an effort to simplify feedback, we have also included a feedback template (Appendix A) which you may wish to use to provide your feedback specific to the proposed EPs.

Woodside has previously submitted Revision 1 of the **SITI EP** to NOPSEMA which has been available on the NOPSEMA website since January 2022 (https://info.nopsema.gov.au/environment_plans/575/show_public). Woodside is preparing to submit a further revision of the SITI EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in this revision remains the same, with no material changes. The Subsea EP has not yet been submitted to NOPSEMA.

The SITI EP and Subsea EP fall under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

If you have feedback specific to each of the proposed activities described under the relevant EPs, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **5 March 2023**.

Activity:

	SITI EP	Subsea EP
Summary:	Seabed intervention and trunkline installation activities in Commonwealth waters associated with the installation of a carbon steel pipeline (Trunkline) that runs approximately 430 km from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. This EP covers activities for the approximately 400 km section of the Trunkline in Commonwealth waters. A separate EP covers activities in State waters.	Seabed site surveys and installation of subsea production infrastructure. Activities include visual pre- and post-installation surveys, and installation of flowlines, umbilicals and risers and ancillary infrastructure, required for the flow and control of hydrocarbons and produced water to the Scarborough Floating Production Unit (FPU). Mooring legs and suction piles will also be installed and a gravimetry survey is also planned.
Location:	Activities run from the Scarborough FPU in WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, to the State waters boundary at the northern extent of the Dampier Archipelago.	Activities are located in permit Areas WA-61-L and WA-62-L, around 374 km west-northwest of Dampier, Western Australia.
Approx. Water Depth (m):	~ 32 m – 1400 m	~ 900 m – 1000 m
Earliest commencement date:	Seabed intervention activities: Mid 2023 pending approvals, vessel availability and weather constraints. Trunkline installation activities: Q4 2023 pending successful completion approvals, vessel availability and weather constraints.	Activities planned to commence in H2 2023 (and estimated to be completed in 18 months with activities occurring in multiple campaigns).
Estimated duration:	~24 months across multiple campaigns	~18 months (cumulative) for the survey and installation activities

FEEDBACK	SITI EP	D&C EP	Seismic EP	Subsea EP

4.34 Email sent to Commonwealth Fisheries Association (CFA), Australian Southern Bluefin Tuna Industry Association (ASBTIA) and Tuna Australia, North West Slope and Trawl Fishery (4 Licence Holders), Western Deepwater Trawl Fishery (5 Licence Holders) (3 February 2023)

Dear Fishery Stakeholder

Woodside has submitted Environment Plans (EPs) to undertake the following activities in Commonwealth waters for the Scarborough development:

- seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**);
- drilling and subsea tree installation activities for eight planned development wells and the potential for a further two additional contingency wells under the WA-61-L Scarborough Drilling and Completions EP (**D&C EP**);
 - 4D baseline marine seismic survey (MSS) activities over the Scarborough and Jupiter field under the Scarborough 4D Baseline Marine Seismic Survey EP (**Seismic EP**); and
- seabed site surveys and installation of subsea production infrastructure under the Subsea Infrastructure Installation EP (**Subsea EP**).

Consultation Information Sheets are attached, which provide background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#). **Also attached are Commonwealth fishery figures.**

As we are inviting consultation with you on each of the EPs above, for ease of reference, we have attached the information in this one email. In an effort to simplify feedback, we have also included a feedback template (Appendix A) which you may wish to use to provide your feedback specific to the proposed EPs.

Woodside has previously submitted Revision 1 of the **SITI EP** to NOPSEMA which has been available on the NOPSEMA website since January 2022

(https://info.nopsema.gov.au/environment_plans/575/show_public). Revision 0 of the **D&C EP** has been available on the NOPSEMA website since November 2021

(https://info.nopsema.gov.au/environment_plans/565/show_public). Revision 0 of the **Seismic EP** has been available on the NOPSEMA website since 18 October 2021

(https://info.nopsema.gov.au/environment_plans/559/show_public).

Woodside is preparing to submit a further revision of the SITI EP, D&C EP and Seismic EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in these revisions remain the same, with no material changes. The Subsea EP has not yet been submitted to NOPSEMA.

The SITI EP, D&C EP and Subsea EP fall under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

If you have feedback specific to each of the proposed activities described under the relevant EPs, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **5 March 2023**.

Activity:

	SITI EP	D&C EP	Seismic EP	Subsea EP
Summary:	Seabed intervention and trunkline installation activities in Commonwealth waters associated with the installation of a carbon steel pipeline (Trunkline) that runs approximately 430 km from the from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. This EP covers activities for the approximately 400 km section of the Trunkline in Commonwealth waters. A separate EP covers activities in State waters.	Drilling and Completions activities in Commonwealth waters, including drilling and subsea tree installation activities for eight planned development wells and the potential for a further two contingency wells. Woodside may need to intervene, workover or re-drill the wells. Subsea inspection, monitoring, maintenance and subsea infrastructure repair activities may also be undertaken.	4D baseline seismic survey over the Scarborough and Jupiter fields. The proposed survey will be conducted over areas where seismic data has previously been acquired. Feedback:

If you have any issues or concerns with these activities, or any other issues relevant to this location, please respond to Woodside at: Feedback@woodside.com.au or 1800 442 977.

Your feedback and our response will be included in our Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental

Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth)*.

Please let us know if your feedback for any of the activities proposed under an Environment Plan is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan to ensure this information remains confidential to NOPSEMA.

Please provide your views by **5 March 2023**.

Regards,

FEEDBACK	SITI EP	D&C EP	Seismic EP	Subsea EP

Scarborough Seabed Intervention and Trunkline Installation EP (SITI EP)

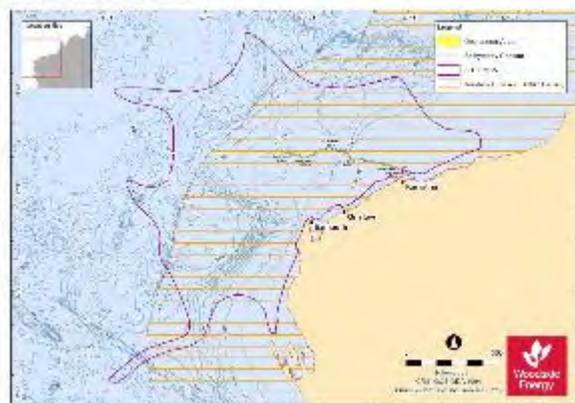

North West Slope and Trawl Fisheries

Western Deepwater Trawl Fisheries

Western Tuna and Blittish Fishery

4.35 Email sent to Western Tuna and Billfish Fishery (3 Licence Holders) (3 February 2023)

Dear Fishery Stakeholder

Woodside has submitted Environment Plans (EPs) to undertake the following activities in Commonwealth waters for the Scarborough development:

- seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**);
- seabed site surveys and installation of subsea production infrastructure under the Subsea Infrastructure Installation EP (**Subsea EP**).

Updated consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#). Also attached are Commonwealth fishery figures.

As we are inviting consultation with you on each of the EPs above, for ease of reference, we have attached the information in this one email. In an effort to simplify feedback, we have also included a feedback template (Appendix A) which you may wish to use to provide your feedback specific to the proposed EPs.

Woodside has previously submitted Revision 1 of the **SITI EP** to NOPSEMA which has been available on the NOPSEMA website since January 2022 (https://info.nopsema.gov.au/environment_plans/575/show_public). Woodside is preparing to submit a further revision of the SITI EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in this revision remains the same, with no material changes. The Subsea EP has not yet been submitted to NOPSEMA.

The SITI EP and Subsea EP fall under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

If you have feedback specific to each of the proposed activities described under the relevant EPs, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **5 March 2023**.

Activity:

	SITI EP	Subsea EP
Summary:	Seabed intervention and trunkline installation activities in Commonwealth waters associated with the installation of a carbon steel pipeline (Trunkline) that runs approximately 430 km from the from the proposed offshore Scarborough Floating	Seabed site surveys and installation of subsea production infrastructure. Activities include visual pre- and post-installation surveys, and installation of flowlines, umbilicals and risers and ancillary infrastructure, required for the

	Production Unit (FPU) to the existing onshore Pluto LNG facility. This EP covers activities for the approximately 400 km section of the Trunkline in Commonwealth waters. A separate EP covers activities in State waters.	flow and control of hydrocarbons and produced water to the Scarborough Floating Production Unit (FPU). Mooring legs and suction piles will also be installed and a gravimetry survey is also planned.
Location:	Activities run from the Scarborough FPU in WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, to the State waters boundary at the northern extent of the Dampier Archipelago.	Activities are located in permit Areas WA-61-L and WA-62-L, around 374 km west-northwest of Dampier, Western Australia.
Approx. Water Depth (m):	~ 32 m – 1400 m	~ 900 m – 1000 m
Earliest commencement date:	<p>Seabed intervention activities: Mid 2023 pending approvals, vessel availability and weather constraints.</p> <p>Trunkline installation activities: Q4 2023 pending successful completion approvals, vessel availability and weather constraints.</p>	Activities planned to commence in H2 2023 (and estimated to be completed in 18 months with activities occurring in multiple campaigns).
Estimated duration:	~24 months across multiple campaigns	~18 months (cumulative) for the survey and installation activities
Distance from Operational Area to nearest town	The closest Commonwealth section of the trunkline on the State waters boundary is ~32 km north-west of Dampier.	~ 244 km north-northwest of Exmouth, ~ 374 km west-northwest of Dampier.
Distance from Operational Area to nearest marine park	<ul style="list-style-type: none"> The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cwth), close to the northern boundary Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone 	<ul style="list-style-type: none"> ~ 77 km north of the Gascoyne Marine Park (Cwth) ~ 201 km north-west of Montebello Marine Park (Cwth) ~ 180 km north-northwest of Ningaloo Marine Park (Cwth)
Operational Area and Exclusion Zones	<p>Temporary 500 m exclusion zones will apply around applicable seabed intervention and the Trunkline installation vessels.</p> <p>The Operational Areas are:</p> <ul style="list-style-type: none"> Trunkline Project Area: The proposed trunkline from around KP 32 (Commonwealth – State Boundary) to KP 435 and 1.5 km either side of the proposed trunkline centreline. FEEDBACK	SITI EP	Subsea EP

Scarborough Seabed Intervention and Trunkline Installation EP (SITI EP)

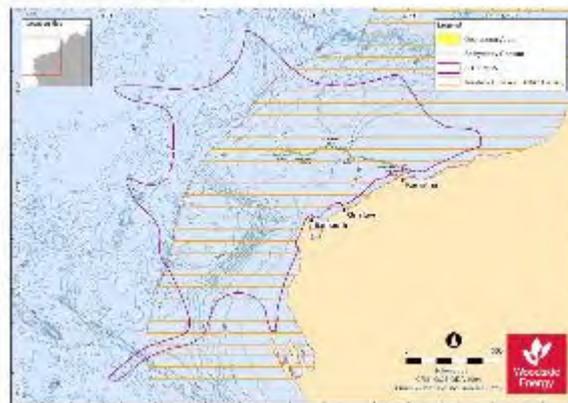

Both West Kings and Great Fishery

Western Deepwater Trawl Fishery

Western Tuna and Bliftish Fishery

4.36 Email sent to Pilbara Line Fishery (8 Licence Holders) (3 February 2023)

Dear Fishery Stakeholder

Woodside previously consulted you on its submitted Environment Plans (EPs) to undertake the following activities in Commonwealth waters for the Scarborough development:

- seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**);
- drilling and subsea tree installation activities for eight planned development wells and the potential for a further two additional contingency wells under the WA-61-L Scarborough Drilling and Completions EP (**D&C EP**);
- 4D baseline marine seismic survey (MSS) activities over the Scarborough and Jupiter field under the Scarborough 4D Baseline Marine Seismic Survey EP (**Seismic EP**); and
- seabed site surveys and installation of subsea production infrastructure under the Subsea Infrastructure Installation EP (**Subsea EP**).

Updated consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#). **Also attached are State fishery figures.**

As we are inviting consultation with you on each of the EPs above, for ease of reference, we have attached the information in this one email. In an effort to simplify feedback, we have also included a feedback template (Appendix A) which you may wish to use to provide your feedback specific to the proposed EPs.

Woodside has previously submitted Revision 1 of the **SITI EP** to NOPSEMA which has been available on the NOPSEMA website since January 2022 (https://info.nopsema.gov.au/environment_plans/575/show_public). Revision 0 of the **D&C EP** has been available on the NOPSEMA website since November 2021 (https://info.nopsema.gov.au/environment_plans/565/show_public). Revision 0 of the **Seismic EP** has been available on the NOPSEMA website since 18 October 2021 (https://info.nopsema.gov.au/environment_plans/559/show_public).

Woodside is preparing to submit a further revision of the SITI EP, D&C EP and Seismic EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in these revisions remain the same, with no material changes. The Subsea EP has not yet been submitted to NOPSEMA.

The SITI EP, D&C EP and Subsea EP fall under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

If you have feedback specific to each of the proposed activities described under the relevant EPs, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **5 March 2023 2023**.

Activity:

	SITI EP	D&C EP	Seismic EP	Subsea EP
Summary:	Seabed intervention and trunkline installation activities in Commonwealth waters associated with the installation of a carbon steel pipeline (Trunkline) that runs approximately 430 km from the from the proposed offshore Scarborough Floating Production Unit (FPU)	Drilling and Completions activities in Commonwealth waters, including drilling and subsea tree installation activities for eight planned development wells and the potential for a further two contingency wells. Woodside may need to intervene, workover or re-drill the	4D baseline seismic survey over the Scarborough and Jupiter fields. The proposed survey will be conducted over areas where seismic data has previously been acquired. The objective for the proposed activity is to acquire a new 3D seismic survey data	Seabed site surveys and installation of subsea production infrastructure. Activities include visual pre- and post-installation surveys, and installation of flowlines, umbilicals and risers and ancillary infrastructure, required for the flow

	to the existing onshore Pluto LNG facility. This EP covers activities for the approximately 400 km section of the Trunkline in Commonwealth waters. A separate EP covers activities in State waters.	wells. Subsea inspection, monitoring, maintenance and subsea infrastructure repair activities may also be undertaken.	that will provide the baseline for future 'time lapse' reservoir surveillance (or technically termed 4D baseline survey).	and control of hydrocarbons and produced water to the Scarborough Floating Production Unit (FPU). Mooring legs and suction piles will also be installed and a gravimetry survey is also planned.
Location:	Activities run from the Scarborough FPU in WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, to the State waters boundary at the northern extent of the Dampier Archipelago.	Activities are located in Permit Area WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, Western Australia. Approximate development well locations for the eight planned wells are provided in Table 2 of the attached D&C EP Consultation Information Sheet.	The seismic survey will cover the Scarborough and Jupiter fields within Commonwealth waters, located in the Exmouth Plateau, approximately 214 km north west of Exmouth, Western Australia.	Activities are located in permit Areas WA-61-L and WA-62-L, around 374 km west-northwest of Dampier, Western Australia.
Approx. Water Depth (m):	~ 32 m – 1400 m	~ 900 m – 955 m	~ 800 m – 1,150 m	~ 900 m – 1000 m

Dear Fishery Stakeholder

Woodside has submitted Environment Plans (EPs) to undertake the following activities in Commonwealth waters for the Scarborough development:

- seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**);
- seabed site surveys and installation of subsea production infrastructure under the Subsea Infrastructure Installation EP (**Subsea EP**).

Updated consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#). Also attached are State fishery figures.

As we are inviting consultation with you on each of the EPs above, for ease of reference, we have attached the information in this one email. In an effort to simplify feedback, we have also included a feedback template (Appendix A) which you may wish to use to provide your feedback specific to the proposed EPs.

Woodside has previously submitted Revision 1 of the **SITI EP** to NOPSEMA which has been available on the NOPSEMA website since January 2022 (https://info.nopsema.gov.au/environment_plans/575/show_public). Woodside is preparing to submit a further revision of the SITI EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in this revision remains the same, with no material changes. The Subsea EP has not yet been submitted to NOPSEMA.

The SITI EP and Subsea EP fall under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

If you have feedback specific to each of the proposed activities described under the relevant EPs, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **5 March 2023**.

Activity:

	SITI EP	Subsea EP
Summary:	Seabed intervention and trunkline installation activities in Commonwealth waters associated with the installation of a carbon steel pipeline (Trunkline) that runs approximately 430 km from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. This EP covers activities for the approximately 400 km section of the Trunkline in Commonwealth waters. A separate EP covers activities in State waters.	Seabed site surveys and installation of subsea production infrastructure. Activities include visual pre- and post-installation surveys, and installation of flowlines, umbilicals and risers and ancillary infrastructure, required for the flow and control of hydrocarbons and produced water to the Scarborough Floating Production Unit (FPU). Mooring legs and suction piles will also be installed and a gravimetry survey is also planned.
Location:	Activities run from the Scarborough FPU in WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, to the State waters boundary at the northern extent of the Dampier Archipelago.	Activities are located in permit Areas WA-61-L and WA-62-L, around 374 km west-northwest of Dampier, Western Australia.

3 February 2023

Dear Fishery Stakeholder

Woodside previously consulted you on its submitted Environment Plans (EPs) to undertake the following activities in Commonwealth waters for the Scarborough development:

- seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP ([SITI EP](#));
- drilling and subsea tree installation activities for eight planned development wells and the potential for a further two additional contingency wells under the WA-61-L Scarborough Drilling and Completions EP ([D&C EP](#));
- 4D baseline marine seismic survey (MSS) activities over the Scarborough and Jupiter field under the Scarborough 4D Baseline Marine Seismic Survey EP ([Seismic EP](#)); and
- seabed site surveys and installation of subsea production infrastructure under the Subsea Infrastructure Installation EP ([Subsea EP](#)).

Updated consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#). Also attached are **State fishery figures**.

As we are inviting consultation with you on each of the EPs above, for ease of reference, we have attached the information in this one email. In an effort to simplify feedback, we have also included a feedback template (Appendix A) which you may wish to use to provide your feedback specific to the proposed EPs.

Woodside has previously submitted Revision 1 of the [SITI EP](#) to NOPSEMA which has been available on the NOPSEMA website since January 2022 (https://info.nopsema.gov.au/environment_plans/575/show_public). Revision 0 of the [D&C EP](#) has been available on the NOPSEMA website since November 2021 (https://info.nopsema.gov.au/environment_plans/565/show_public). Revision 0 of the [Seismic EP](#) has been available on the NOPSEMA website since 18 October 2021 (https://info.nopsema.gov.au/environment_plans/559/show_public).

Woodside is preparing to submit a further revision of the [SITI EP](#), [D&C EP](#) and [Seismic EP](#) to NOPSEMA with recent changes. We confirm the activities, location and duration described in these revisions remain the same, with no material changes. The [Subsea EP](#) has not yet been submitted to NOPSEMA.

The [SITI EP](#), [D&C EP](#) and [Subsea EP](#) fall under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

If you have feedback specific to each of the proposed activities described under the relevant EPs, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **5 March 2023**.

	SITI EP	D&C EP	Seismic EP	Subsea EP
Summary:	Seabed intervention and trunkline installation activities in Commonwealth waters associated with the installation of a carbon steel pipeline (Trunkline) that runs approximately 430 km from the from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. This EP covers activities for the approximately 400 km section of the Trunkline in Commonwealth waters. A separate EP covers activities in State waters.	Drilling and Completions activities in Commonwealth waters, including drilling and subsea tree installation activities for eight planned development wells and the potential for a further two contingency wells. Woodside may need to intervene, workover or re-drill the wells. Subsea inspection, monitoring, maintenance and subsea infrastructure repair activities may also be undertaken.	4D baseline seismic survey over the Scarborough and Jupiter fields. The proposed survey will be conducted over areas where seismic data has previously been acquired. The objective for the proposed activity is to acquire a new 3D seismic survey data that will provide the baseline for future 'time lapse' reservoir surveillance (or technically termed 4D baseline survey).	Seabed site surveys and installation of subsea production infrastructure. Activities include visual pre- and post-installation surveys, and installation of flowlines, umbilicals and risers and ancillary infrastructure, required for the flow and control of hydrocarbons and produced water to the Scarborough Floating Production Unit (FPU). Mooring legs and suction piles will also be installed and a gravimetry survey is also planned.
Location:	Activities run from the Scarborough FPU in WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, to the State waters boundary at the northern extent of the Dampier Archipelago.	Activities are located in Permit Area WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, Western Australia. Approximate development well locations for the eight planned wells are provided in Table 2 of the attached D&C EP Consultation Information Sheet.	The seismic survey will cover the Scarborough and Jupiter fields within Commonwealth waters, located in the Exmouth Plateau, approximately 214 km north west of Exmouth, Western Australia.	Activities are located in permit Areas WA-61-L and WA-62-L, around 374 km west-northwest of Dampier, Western Australia.
Approx. Water Depth (m):	~ 32 m – 1400 m	~ 900 m – 955 m	~ 800 m – 1,150 m	~ 900 m – 1000 m
Earliest commencement date:	Seabed intervention activities: Mid 2023 pending approvals, vessel availability and weather constraints. Trunkline installation activities: Q4 2023 pending successful completion approvals, vessel availability and weather constraints.	Activities planned to commence in H2 2023 pending approvals, vessel availability and weather constraints.	Activities planned to commence in H1 2023 pending approvals, vessel availability and weather constraints.	Activities planned to commence in H2 2023 (and estimated to be completed in 18 months with activities occurring in multiple campaigns).
Estimated duration:	~24 months across multiple campaigns	~50 – 60 days per well	~55 – 70 days	~18 months (cumulative) for the survey and installation activities

Distance from Operational Area to nearest town	The closest Commonwealth section of the trunkline on the State waters boundary is ~32 km north-west of Dampier.	~244 km north-northwest of Exmouth, 374 km west-northwest of Dampier.	~214 km north-west of Exmouth.	~ 244 km north-northwest of Exmouth, ~ 374 km west-northwest of Dampier.
Distance from Operational Area to nearest marine park	<ul style="list-style-type: none"> The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cwth), close to the northern boundary Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone 	<ul style="list-style-type: none"> ~83 km north of the Gascoyne Marine Park (Cwth) ~206 km north-west of Montebello Marine Park (Cwth) ~208 km north-northwest of Ningaloo Marine Park (Cwth) 	<ul style="list-style-type: none"> ~46 km north of Gascoyne Marine Park Multiple Use Zone 	<ul style="list-style-type: none"> ~ 77 km north of the Gascoyne Marine Park (Cwth) ~ 201 km north-west of Montebello Marine Park (Cwth) ~ 180 km north-northwest of Ningaloo Marine Park (Cwth)
Operational Area and Exclusion Zones	<p>Temporary 500 m exclusion zones will apply around applicable seabed intervention and the Trunkline installation vessels. 4.39 Email sent to Western Australian Marine Science Institution (WAMSI) – 3 February 2023

Dear [REDACTED]

Woodside has submitted Environment Plans (EPs) to undertake the following activities in Commonwealth waters for the Scarborough development:

- seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**);
- drilling and subsea tree installation activities for eight planned development wells and the potential for a further two additional contingency wells under the WA-61-L Scarborough Drilling and Completions EP (**D&C EP**);
- 4D baseline marine seismic survey (MSS) activities over the Scarborough and Jupiter field under the Scarborough 4D Baseline Marine Seismic Survey EP (**Seismic EP**); and
- seabed site surveys and installation of subsea production infrastructure under the Subsea Infrastructure Installation EP (**Subsea EP**).

Updated consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#).

As we are inviting consultation with you on each of the EPs above, for ease of reference, we have attached the information in this one email. In an effort to simplify feedback, we have also included a feedback template (Appendix A) which you may wish to use to provide your feedback specific to the proposed EPs.

Woodside has previously submitted Revision 1 of the **SITI EP** to NOPSEMA which has been available on the NOPSEMA website since January 2022 (https://info.nopsema.gov.au/environment_plans/575/show_public). Revision 0 of the **D&C EP** has been available on the NOPSEMA website since November 2021 (https://info.nopsema.gov.au/environment_plans/565/show_public). Revision 0 of the

Seismic EP has been available on the NOPSEMA website since 18 October 2021 (https://info.nopsema.gov.au/environment_plans/559/show_public).

Woodside is preparing to submit a further revision of the SITI EP, D&C EP and Seismic EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in these revisions remain the same, with no material changes. The Subsea EP has not yet been submitted to NOPSEMA.

The SITI EP, D&C EP and Subsea EP fall under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

Woodside is seeking your advice regarding any research activities that WAMSI may be undertaking that may overlap with our proposed activities.

If you have feedback specific to each of the proposed activities described under the relevant EPs, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **5 March 2023**.

Activity:

	SITI EP	D&C EP	Seismic EP	Subsea EP
Summary:	Seabed intervention and trunkline installation activities in Commonwealth waters associated with the installation of a carbon steel pipeline (Trunkline) that runs approximately 430 km from the from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. This EP covers activities for the approximately 400 km section of the Trunkline in Commonwealth waters. A separate EP covers activities in State waters.	Drilling and Completions activities in Commonwealth waters, including drilling and subsea tree installation activities for eight planned development wells and the potential for a further two contingency wells. Woodside may need to intervene, workover or re-drill the wells. Subsea inspection, monitoring, maintenance and subsea infrastructure repair activities may also be undertaken.	4D baseline seismic survey over the Scarborough and Jupiter fields. The proposed survey will be conducted over areas where seismic data has previously been acquired. The objective for the proposed activity is to acquire a new 3D seismic survey data that will provide the baseline for future 'time lapse' reservoir surveillance (or technically termed 4D baseline survey).	Seabed site surveys and installation of subsea production infrastructure. Feedback:

If you have any issues or concerns with these activities, or any other issues relevant to this location, please respond to Woodside at: Feedback@woodside.com.au or 1800 442 977.

Your feedback and our response will be included in our Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth)*.

Please let us know if your feedback for any of the activities proposed under an Environment Plan is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan to ensure this information remains confidential to NOPSEMA.

Please provide your views by **5 March 2023**.

Regards,
Woodside Feedback

APPENDIX A

FEEDBACK	SITI EP	D&C EP	Seismic EP	Subsea EP

4.40 Email sent to UWA (6 February 2023)

Dear ■■■

Woodside appreciated the opportunity to meet with you in December to discuss the Scarborough development and related Environment Plans (Scarborough EPs).

We understand from our meeting in December 2022 that the proposed Scarborough activities are predominantly outside the scope of interest for UWA. For awareness, Woodside wanted to bring to your attention that it has updated its consultation Information Sheets for the Scarborough EPs, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are attached and are also available on our [website](#).

As Woodside will soon be submitting the proposed EP's, should UWA have any additional feedback on the proposed activities, please let us know by **8 March 2023**. More information on the Scarborough Project can be found [here](#).

Your feedback and our response will be included in the Scarborough EPs which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth).

Please let us know if your feedback for any of the activities proposed under an Environment Plan is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan to ensure this information remains confidential to NOPSEMA.

Regards,

4.41 Email sent to Commonwealth Scientific and Industrial Research Organisation (CSIRO) (6 February 2023)

Dear CSIRO Enquiries Team, [REDACTED] and [REDACTED],

Woodside previously noted (see email below) that there will be a number of opportunities to provide feedback on its proposed activities.

Woodside previously consulted you on its submitted Environment Plan (EPs) to undertake seabed intervention and trunkline installation activities under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP – Commonwealth and State components**).

As part of its ongoing consultation with the CSIRO, Woodside is also seeking your advice regarding any research activities that CSIRO may be undertaking that may overlap with our proposed activities regarding:

- drilling and subsea tree installation activities for eight planned development wells and the potential for a further two additional contingency wells under the WA-61-L Scarborough Drilling and Completions EP (**D&C EP**);
- 4D baseline marine seismic survey (MSS) activities over the Scarborough and Jupiter field under the Scarborough 4D Baseline Marine Seismic Survey EP (**Seismic EP**); and
- seabed site surveys and installation of subsea production infrastructure under the Subsea Infrastructure Installation EP (**Subsea EP**).

Updated consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#). Also attached are Commonwealth fishery figures.

As we are inviting consultation with you on each of the EPs above, for ease of reference, we have attached the information in this one email. In an effort to simplify feedback, we have also included a feedback template (Appendix A) which you may wish to use to provide your feedback specific to the proposed EPs.

Woodside has previously submitted Revision 1 of the **SITI EP** to NOPSEMA which has been available on the NOPSEMA website since January 2022

(https://info.nopsema.gov.au/environment_plans/575/show_public). Revision 0 of the **D&C EP** has been available on the NOPSEMA website since November 2021

(https://info.nopsema.gov.au/environment_plans/565/show_public). Revision 0 of the **Seismic EP** has been available on the NOPSEMA website since 18 October 2021

(https://info.nopsema.gov.au/environment_plans/559/show_public).

Woodside is preparing to submit a further revision of the SITI EP, D&C EP and Seismic EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in these revisions remain the same, with no material changes. The Subsea EP has not yet been submitted to NOPSEMA.

The SITI EP, D&C EP and Subsea EP fall under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

If you have additional feedback specific to each of the proposed activities described under the relevant EPs, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **8 March 2023**.

Activity:

	SITI EP	D&C EP	Seismic EP	Subsea EP
Summary:	Seabed intervention and trunkline installation activities in Commonwealth waters associated with the installation of a carbon steel pipeline (Trunkline) that runs approximately 430 km from the from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. This EP covers activities for the approximately 400 km section of the Trunkline in	Drilling and Completions activities in Commonwealth waters, including drilling and subsea tree installation activities for eight planned development wells and the potential for a further two contingency wells. Woodside may need to intervene, workover or re-drill the wells. Subsea inspection, monitoring, maintenance and subsea infrastructure repair activities may also be undertaken.	4D baseline seismic survey over the Scarborough and Jupiter fields. The proposed survey will be conducted over areas where seismic data has previously been acquired. The objective for the proposed activity is to acquire a new 3D seismic survey data that will provide the baseline for future 'time lapse' reservoir surveillance (or technically termed 4D baseline survey).	Seabed site surveys and installation of subsea production infrastructure. Activities include visual pre- and post-installation surveys, and installation of flowlines, umbilicals and risers and ancillary infrastructure, required for the flow and control of hydrocarbons and produced water to the Scarborough Floating Production Unit (FPU).

	Commonwealth waters. A separate EP covers activities in State waters.			Mooring legs and suction piles will also be installed and a gravimetry survey is also planned.
Location:	Activities run from the Scarborough FPU in WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, to the State waters boundary at the northern extent of the Dampier Archipelago.	Activities are located in Permit Area WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, Western Australia. Approximate development well locations for the eight planned wells are provided in Table 2 of the attached D&C EP Consultation Information Sheet.	The seismic survey will cover the Scarborough and Jupiter fields within Commonwealth waters, located in the Exmouth Plateau, approximately 214 km north west of Exmouth, Western Australia.	Activities are located in permit Areas WA-61-L and WA-62-L, around 374 km west-northwest of Dampier, Western Australia.
Approx. Water Depth (m):	~ 32 m – 1400 m	~ 900 m – 955 m	~ 800 m – 1,150 m	~ 900 m – 1000 m
Earliest commencement date:	Seabed intervention activities: Mid 2023 pending approvals, vessel availability and weather constraints. Trunkline installation activities: Q4 2023 pending successful completion approvals, vessel availability and weather constraints.	Activities planned to commence in H2 2023 pending approvals, vessel availability and weather constraints.	Activities planned to commence in H1 2023 pending approvals, vessel availability and weather constraints.	Activities planned to commence in H2 2023 (and estimated to be completed in 18 months with activities occurring in multiple campaigns).
Estimated duration:	~24 months across multiple campaigns	~50 – 60 days per well	~55 – 70 days	~18 months (cumulative) for the survey and installation activities
Distance from Operational Area to nearest town	The closest Commonwealth section of the trunkline on the State waters boundary is ~32 km north-west of Dampier.	~244 km north-northwest of Exmouth, 374 km west-northwest of Dampier.	~214 km north-west of Exmouth.	~ 244 km north-northwest of Exmouth, ~ 374 km west-northwest of Dampier.
Distance from Operational	• The trunkline corridor runs through the Montebello Marine	• ~83 km north of the Gascoyne Marine Park (Cwlth)	• ~46 km north of Gascoyne Marine Park Multiple Use Zone	• ~ 77 km north of the Gascoyne Marine Park (Cwlth)

FEEDBACK	SITI EP	D&C EP	Seismic EP	Subsea EP

4.42 Letter sent to Gascoyne Recreational Marine Users (65 Licence Holders) (6 February 2023)

Please direct all responses/queries to:
Woodside Feedback
T: 1800 442 977
E: Feedback@woodside.com.au

6 February 2023

Dear Stakeholder

Woodside previously consulted you on its submitted Environment Plans (EPs) to undertake the following activities in Commonwealth waters for the Scarborough development:

- seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (SITI EP);
- drilling and subsea tree installation activities for eight planned development wells and the potential for a further two additional contingency wells under the WA-61-L Scarborough Drilling and Completions EP (D&C EP);
- 4D baseline marine seismic survey (MSS) activities over the Scarborough and Jupiter field under the Scarborough 4D Baseline Marine Seismic Survey EP (Seismic EP); and
- seabed site surveys and installation of subsea production infrastructure under the Subsea Infrastructure Installation EP (Subsea EP).

Updated consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#).

As we are inviting consultation with you on each of the EPs above, for ease of reference, we have attached the information in this one email. In an effort to simplify feedback, we have also included a feedback template (Appendix A) which you may wish to use to provide your feedback specific to the proposed EPs.

Woodside has previously submitted Revision 1 of the SITI EP to NOPSEMA which has been available on the NOPSEMA website since January 2022 (https://info.nopsema.gov.au/environment_plans/575/show_public). Revision 0 of the D&C EP has been available on the NOPSEMA website since November 2021 (https://info.nopsema.gov.au/environment_plans/565/show_public). Revision 0 of the Seismic EP has been available on the NOPSEMA website since 18 October 2021 (https://info.nopsema.gov.au/environment_plans/559/show_public).

Woodside is preparing to submit a further revision of the SITI EP, D&C EP and Seismic EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in these revisions remain the same, with no material changes. The Subsea EP has not yet been submitted to NOPSEMA.

The SITI EP, D&C EP and Subsea EP fall under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

If you have feedback specific to each of the proposed activities described under the relevant EPs, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by 8 March 2023.

	SITI EP	D&C EP	Seismic EP	Subsea EP
Summary:	Seabed intervention and trunkline installation activities in Commonwealth waters associated with the installation of a carbon steel pipeline (Trunkline) that runs approximately 430 km from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. This EP covers activities for the approximately 400 km section of the Trunkline in Commonwealth waters. A separate EP covers activities in State waters.	Drilling and Completions activities in Commonwealth waters, including drilling and subsea tree installation activities for eight planned development wells and the potential for a further two contingency wells. Woodside may need to intervene, workover or re-drill the wells. Subsea inspection, monitoring, maintenance and subsea infrastructure repair activities may also be undertaken.	4D baseline seismic survey over the Scarborough and Jupiter fields. The proposed survey will be conducted over areas where seismic data has previously been acquired. The objective for the proposed activity is to acquire a new 3D seismic survey data that will provide the baseline for future 'time lapse' reservoir surveillance (or technically termed 4D baseline survey).	Seabed site surveys and installation of subsea production infrastructure. Activities include visual pre- and post-installation surveys, and installation of flowlines, umbilicals and risers and ancillary infrastructure, required for the flow and control of hydrocarbons and produced water to the Scarborough Floating Production Unit (FPU). Mooring legs and suction piles will also be installed and a gravimetry survey is also planned.
Location:	Activities run from the Scarborough FPU in WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, to the State waters boundary at the northern extent of the Dampier Archipelago.	Activities are located in Permit Area WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, Western Australia. Approximate development well locations for the eight planned wells are provided in Table 2 of the attached D&C EP Consultation Information Sheet.	The seismic survey will cover the Scarborough and Jupiter fields within Commonwealth waters, located in the Exmouth Plateau, approximately 214 km north west of Exmouth, Western Australia.	Activities are located in permit Areas WA-61-L and WA-62-L, around 374 km west-northwest of Dampier, Western Australia.
Approx. Water Depth (m):	~ 32 m – 1400 m	~ 800 m – 955 m	~ 800 m – 1,150 m	~ 900 m – 1000 m
Earliest commencement date:	Seabed intervention activities: Mid 2023 pending approvals, vessel availability and weather constraints. Trunkline installation activities: Q4 2023 pending successful completion approvals, vessel availability and weather constraints.	Activities planned to commence in H2 2023 pending approvals, vessel availability and weather constraints.	Activities planned to commence in H1 2023 pending approvals, vessel availability and weather constraints.	Activities planned to commence in H2 2023 (and estimated to be completed in 18 months with activities occurring in multiple campaigns).
Estimated duration:	~24 months across multiple campaigns	~50 – 60 days per well	~55 – 70 days	~18 months (cumulative) for the survey and installation activities

Distance from Operational Area to nearest town	The closest Commonwealth section of the trunkline on the State waters boundary is ~32 km north-west of Dampier.	~244 km north-northwest of Exmouth, 374 km west-northwest of Dampier.	~214 km north-west of Exmouth.	~ 244 km north-northwest of Exmouth, ~ 374 km west-northwest of Dampier.
Distance from Operational Area to nearest marine park	<ul style="list-style-type: none"> The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cwth), close to the northern boundary Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone 	<ul style="list-style-type: none"> ~83 km north of the Gascoyne Marine Park (Cwth) ~206 km north-west of Montebello Marine Park (Cwth) ~208 km north-northwest of Ningaloo Marine Park (Cwth) 	<ul style="list-style-type: none"> ~46 km north of Gascoyne Marine Park Multiple Use Zone 	<ul style="list-style-type: none"> ~ 77 km north of the Gascoyne Marine Park (Cwth) ~ 201 km north-west of Montebello Marine Park (Cwth) ~ 180 km north-northwest of Ningaloo Marine Park (Cwth)

6 February 2023

Dear Fishery Stakeholder

Woodside has submitted Environment Plans (EPs) to undertake the following activities in Commonwealth waters for the Scarborough development:

- seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (SITI EP); and
- seabed site surveys and installation of subsea production infrastructure under the Subsea Infrastructure Installation EP (Subsea EP).

Updated consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#). Also attached are State fishery figures.

As we are inviting consultation with you on each of the EPs above, for ease of reference, we have attached the information in this one email. In an effort to simplify feedback, we have also included a feedback template (Appendix A) which you may wish to use to provide your feedback specific to the proposed EPs.

Woodside has previously submitted Revision 1 of the SITI EP to NOPSEMA which has been available on the NOPSEMA website since January 2022 (https://info.nopsema.gov.au/environment_plans/575/show_public). Woodside is preparing to submit a further revision of the SITI EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in this revision remains the same, with no material changes. The Subsea EP has not yet been submitted to NOPSEMA.

The SITI EP and Subsea EP fall under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found [here](#).

If you have feedback specific to each of the proposed activities described under the relevant EPs, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by 5 March 2023.

Activity:

	SITI EP	Subsea EP
Summary:	Seabed intervention and trunkline installation activities in Commonwealth waters associated with the installation of a carbon steel pipeline (Trunkline) that runs approximately 430 km from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. This EP covers activities for the approximately 400 km section of the Trunkline in Commonwealth waters. A separate EP covers activities in State waters.	Seabed site surveys and installation of subsea production infrastructure. Activities include visual pre- and post-installation surveys, and installation of flowlines, umbilicals and risers and ancillary infrastructure, required for the flow and control of hydrocarbons and produced water to the Scarborough Floating Production Unit (FPU). Mooring legs and suction piles will also be

		installed and a gravimetry survey is also planned.
Location:	Activities run from the Scarborough FPU in WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, to the State waters boundary at the northern extent of the Dampier Archipelago.	Activities are located in permit Areas WA-61-L and WA-62-L, around 374 km west-northwest of Dampier, Western Australia.
Approx. Water Depth (m):	~ 32 m – 1400 m	~ 900 m – 1000 m
Earliest commencement date:	<p>Seabed intervention activities: Mid 2023 pending approvals, vessel availability and weather constraints.</p> <p>Trunkline installation activities: Q4 2023 pending successful completion approvals, vessel availability and weather constraints.</p>	Activities planned to commence in H2 2023 (and estimated to be completed in 18 months with activities occurring in multiple campaigns).
Estimated duration:	~24 months across multiple campaigns	~18 months (cumulative) for the survey and installation activities
Distance from Operational Area to nearest town	The closest Commonwealth section of the trunkline on the State waters boundary is ~32 km north-west of Dampier.	~ 244 km north-northwest of Exmouth, ~ 374 km west-northwest of Dampier.
Distance from Operational Area to nearest marine park	<ul style="list-style-type: none"> • The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cwth), close to the northern boundary • Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone 	<ul style="list-style-type: none"> • ~ 77 km north of the Gascoyne Marine Park (Cwth) • ~ 201 km north-west of Montebello Marine Park (Cwth) • ~ 180 km north-northwest of Ningaloo Marine Park (Cwth)
Operational Area and Exclusion Zones	<p>Temporary 500 m exclusion zones will apply around applicable seabed intervention and the Trunkline installation vessels.</p> <p>The Operational Areas are:</p> <ul style="list-style-type: none"> • Trunkline Project Area: The proposed trunkline from around KP 32 (Commonwealth – State Boundary) to KP 435 and 1.5 km either side of the proposed trunkline centreline. • Offshore Borrow Ground Project Area: Offshore Borrow Ground located in Commonwealth waters. 	<p>The Operational Area for activities includes a radius of:</p> <ul style="list-style-type: none"> • 1,000 m around location of the outermost concrete pads. • 1,500 m around location of subsea infrastructure. • 2,000 m around future location of FPU. • Temporary 500 m exclusion zone around vessels to manage vessel movements • An interactive map showing the location of the proposed activities will be available on the Woodside website and will be updated throughout the proposed activities
Vessels:	<p>Seabed intervention:</p> <ul style="list-style-type: none"> • Trailing suction hopper dredge • Offshore construction vessel • Rock Installation Vessel • Survey vessels • Support vessels • Fuel bunkering vessels <p>Trunkline installation:</p> <ul style="list-style-type: none"> • Pipelay Vessel multi-joint operation • Shallow Water Lay Barge 	<ul style="list-style-type: none"> • Light construction vessels • Heavy construction vessels • Heavy lift vessels • Derrick lay vessel • Reel-lay vessels • Survey vessels • Support vessels

	<ul style="list-style-type: none"> • Anchor handling vessel/tug • Pipe supply vessels • Offshore construction vessel • Survey vessels • Fuel bunkering vessels 	
--	---	--

Feedback:

If you have any issues or concerns with these activities, or any other issues relevant to this location, please respond to Woodside at: Feedback@woodside.com.au or 1800 442 977.

Your feedback and our response will be included in our Environment Plan which will be submitted to submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth)*.

Please let us know if your feedback for any of the activities proposed under an Environment Plan is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan to ensure this information remains confidential to NOPSEMA.

Please provide your views by **8 March 2023**.

Regards,

Woodside Feedback

5 CONSULTATION FOLLOW UP (FEBRUARY 2023)

5.1 Email sent to Australian Border Force (ABF), Director of National Parks (DNP), Australian Maritime Safety Authority (AMSA) – Marine Pollution, Department of Industry, Science and Resources (DISR), Department of Mines, Industry Regulation and Safety (DMIRS), Australian Petroleum Production and Exploration Association (APPEA) (22 February 2023)

Dear Stakeholder

Woodside is sending this email by way of a reminder that the consultation period is closing soon to provide feedback on Woodside's proposed activities for the Scarborough project. Please see our consultation information below and attached.

We would appreciate any feedback you may have by **26 February 2023** to support our development of the proposed Environment Plan.

Kind regards,

5.2 Email sent to Australian Fisheries Management Authority (AFMA) – 22 February 2023

Dear AFMA

Woodside is sending this email by way of a reminder that the consultation period is closing soon to provide feedback on Woodside's proposed activities for the Scarborough project. Please see our consultation information below and attached.

We would appreciate any feedback you may have by **5 March 2023** to support our development of the proposed Environment Plan.

Kind regards,AIMS

5.3 Email sent to Western Australian Marine Science Institution (WAMSI) – 22 February 2023

Dear [REDACTED]

Woodside is sending this email by way of a reminder that the consultation period is closing soon to provide feedback on Woodside's proposed activities for the Scarborough project. Please see our consultation information below and attached.

We would appreciate any feedback you may have by **5 March 2023** to support our development of the proposed Environment Plan.

Kind regards,
Woodside Feedback

5.4 Email sent to Department of Climate Change, Energy, the Environment and Water (DCCEEW) / Department of Agriculture, Fisheries and Forestry (DAFF) – 22 February 2023

Dear Department of Climate Change, Energy, the Environment and Water (DCCEEW) and Department of Agriculture, Fisheries and Forestry (DAFF)

Woodside is sending this email by way of a reminder that the consultation period is closing soon to provide feedback on Woodside's proposed activities for the Scarborough project. Please see our consultation information below and attached.

We would appreciate any feedback you may have by **5 March 2023** to support our development of the proposed Environment Plan.

Kind regards,

5.5 Email sent to Western Australian Fishing Industry Council (WAFIC) (22 February 2023)

Dear [REDACTED]

Woodside is sending this email by way of a reminder that the consultation period is closing soon to provide feedback on Woodside's proposed activities for the Scarborough project. Please see our consultation information below and attached.

We would appreciate any feedback you may have by **5 March 2023** to support our development of the proposed Environment Plan.

We would appreciate any feedback you may have by **5 March 2023** to support our development of the proposed Environment Plan.

Kind regards,

5.6 Email sent to Pilbara Line Fishery (8 Licence Holders) (22 February 2023)

Dear Fishery Stakeholder

Woodside is sending this email by way of a reminder that the consultation period is closing soon to provide feedback on Woodside's proposed activities for the Scarborough project. Please see our consultation information below and attached.

We would appreciate any feedback you may have by **5 March 2023** to support our development of the proposed Environment Plan.

We would appreciate any feedback you may have by **5 March 2023** to support our development of the proposed Environment Plan.

Kind regards,

5.7 Email sent to Exmouth Recreational Marine Users (50 Licence Holders) (22 February 2023)

Dear Stakeholder

Woodside is sending this email by way of a reminder that the consultation period is closing soon to provide feedback on Woodside's proposed activities for the Scarborough project. Please see our consultation information below and attached.

We would appreciate any feedback you may have by **5 March 2023** to support our development of the proposed Environment Plan.

We would appreciate any feedback you may have by **5 March 2023** to support our development of the proposed Environment Plan.

Kind regards,

22 February 2023

Dear Fishery Stakeholder

Woodside previously consulted you (correspondence dated 3 February 2023) on its submitted Environment Plans (EPs) to undertake the following activities in Commonwealth waters for the Scarborough development:

- seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**);
- drilling and subsea tree installation activities for eight planned development wells and the potential for a further two additional contingency wells under the WA-61-L Scarborough Drilling and Completions EP (**D&C EP**);
- 4D baseline marine seismic survey (MSS) activities over the Scarborough and Jupiter field under the Scarborough 4D Baseline Marine Seismic Survey EP (**Seismic EP**); and
- seabed site surveys and installation of subsea production infrastructure under the Subsea Infrastructure Installation EP (**Subsea EP**).

This correspondence included updated Consultation Information Sheets, which are also available on our website, providing additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures.

If you have feedback specific to each of the proposed activities described under the relevant EPs, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **5 March 2023**.

22 February 2023

Dear Fishery Stakeholder

Woodside previously consulted you (correspondence dated 6 February 2023) on its submitted Environment Plans (EPs) to undertake the following activities in Commonwealth waters for the Scarborough development:

- seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**); and
- seabed site surveys and installation of subsea production infrastructure under the Subsea Infrastructure Installation EP (**Subsea EP**).

This correspondence included updated Consultation Information Sheets, which are also available on our website, providing additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures.

If you have feedback specific to each of the proposed activities described under the relevant EPs, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **8 March 2023**.

Kind regards,

Woodside Feedback

5.38 Email sent to INPEX Alpha (22 February 2023)

Dear Titleholder

Woodside is sending this email by way of a reminder that the consultation period is closing soon to provide feedback on Woodside's proposed activities for the Scarborough project.

Please see our consultation information below and attached.

We would appreciate any feedback you may have by **26 February 2023** to support our development of the proposed Environment Plan.

Kind regards,

5.39 Letter sent to JX Nippon Oil & Gas Exploration (23 February 2023)

Please direct all responses/queries to:
Woodside Feedback
T: 1800 442 977
E: Feedback@woodside.com.au

23 February 2023

Dear Titleholder

Woodside has submitted Environment Plans (EPs) to undertake the following activities in Commonwealth waters for the Scarborough development:

- seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**);
- 4D baseline marine seismic survey (MSS) activities over the Scarborough and Jupiter field under the Scarborough 4D Baseline Marine Seismic Survey EP (**Seismic EP**); and
- seabed site surveys and installation of subsea production infrastructure under the Subsea Infrastructure Installation EP (**Subsea EP**).

Updated consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#).

As we are inviting consultation with you on each of the EPs above, for ease of reference, we have attached the information in this one email. In an effort to simplify feedback, we have also included a feedback template (Appendix A) which you may wish to use to provide your feedback specific to the proposed EPs.

Woodside has previously submitted Revision 1 of the SITI EP to NOPSEMA which has been available on the NOPSEMA website since January 2022 (https://info.nopsema.gov.au/environment_plans/575/show_public). Revision 0 of the Seismic EP has been available on the NOPSEMA website since 18 October 2021 (https://info.nopsema.gov.au/environment_plans/559/show_public).

Woodside is preparing to submit a further revision of the SITI EP and Seismic EP to NOPSEMA with recent changes. We confirm the activities, location and duration described in these revisions remain the same, with no material changes. The Subsea EP has not yet been submitted to NOPSEMA.

The SITI EP and Subsea EP fall under the primary environmental approval of the [Scarborough Offshore Project Proposal](#) (OPP). The OPP includes a detailed description of activities, an assessment of the potential impacts and risks and includes management measures to demonstrate that the potential impacts and risks will be of an acceptable level. It was accepted by NOPSEMA in March 2020 after an extensive public consultation process.

More information on the Scarborough Project can be found on our [website](#).

If you have feedback specific to each of the proposed activities described under the relevant EPs, please respond to Woodside at Feedback@woodside.com.au or 1800 442 977 by **8 March 2023** |

Activity:

	SITI EP	Seismic EP	Subsea EP
Summary:	Seabed intervention and trunkline installation activities in Commonwealth waters associated with the	4D baseline seismic survey over the Scarborough and Jupiter fields. The proposed survey will be conducted over areas where	Seabed site surveys and installation of subsea production infrastructure. Activities include visual pre- and post-installation

	installation of a carbon steel pipeline (Trunkline) that runs approximately 430 km from the proposed offshore Scarborough Floating Production Unit (FPU) to the existing onshore Pluto LNG facility. This EP covers activities for the approximately 400 km section of the Trunkline in Commonwealth waters. A separate EP covers activities in State waters.	seismic data has previously been acquired. The objective for the proposed activity is to acquire a new 3D seismic survey data that will provide the baseline for future 'time lapse' reservoir surveillance (or technically termed 4D baseline survey).	surveys, and installation of flowlines, umbilicals and risers and ancillary infrastructure, required for the flow and control of hydrocarbons and produced water to the Scarborough Floating Production Unit (FPU). Mooring legs and suction piles will also be installed and a gravimetry survey is also planned.
Location:	Activities run from the Scarborough FPU in WA-61-L in Commonwealth waters, about 374 km west-northwest of Dampier, to the State waters boundary at the northern extent of the Dampier Archipelago.	The seismic survey will cover the Scarborough and Jupiter fields within Commonwealth waters, located in the Exmouth Plateau, approximately 214 km <u>north west</u> of Exmouth, Western Australia.	Activities are located in permit Areas WA-61-L and WA-62-L, around 374 km west-northwest of Dampier, Western Australia.
Approx. Water Depth (m):	~ 32 m – 1400 m	~ 800 m – 1,150 m	~ 900 m – 1000 m
Earliest commencement date:	Seabed Intervention activities: Mid 2023 pending approvals, vessel availability and weather constraints. Trunkline Installation activities: Q4 2023 pending successful completion approvals, vessel availability and weather constraints.	Activities planned to commence in H1 2023 pending approvals, vessel availability and weather constraints.	Activities planned to commence in H2 2023 (and estimated to be completed in 18 months with activities occurring in multiple campaigns).
Estimated duration:	~24 months across multiple campaigns	~55 – 70 days	~18 months (cumulative) for the survey and installation activities
Distance from Operational Area to nearest town	The closest Commonwealth section of the trunkline on the State waters boundary is ~32 km north-west of Dampier.	~214 km north-west of Exmouth.	~ 244 km north-northwest of Exmouth, ~ 374 km west-northwest of Dampier.
Distance from Operational Area to nearest marine park	<ul style="list-style-type: none"> • The trunkline corridor runs through the Montebello Marine Park – Multiple Use Zone (Cwth), close to the northern boundary • Offshore borrow ground located to the north of the Dampier Marine Park Habitat Protection Zone 	<ul style="list-style-type: none"> • ~46 km north of Gascoyne Marine Park Multiple Use Zone 	<ul style="list-style-type: none"> • ~ 77 km north of the Gascoyne Marine Park (Cwth) • ~ 201 km north-west of Montebello Marine Park (Cwth) • ~ 180 km north-northwest of Ningaloo Marine Park (Cwth)

<p>Operational Area and Exclusion Zones</p>	<p>Temporary 500 m exclusion zones will apply around applicable seabed intervention and the Trunkline installation vessels. The Operational Areas are:</p> <ul style="list-style-type: none"> • Trunkline Project Area: The proposed trunkline from around KP 32 (Commonwealth – State Boundary) to KP 435 and 1.5 km either side of the proposed trunkline centreline. • Offshore Borrow Ground Project Area: Offshore Borrow Ground located in Commonwealth waters. 	<ul style="list-style-type: none"> • Three nautical mile radius safe navigation area around the seismic vessel, streamers and tail buoys during seismic operations • Marine users are requested to avoid this area during the survey to ensure the safety of the seismic vessel and third-party vessels • Refer to Table 3 of the attached Seismic EP Consultation Information Sheet for detailed survey location points 	<p>The Operational Area for activities includes a radius of:</p> <ul style="list-style-type: none"> • 1,000 m around location of the outermost concrete pads. • 1,500 m around location of subsea infrastructure. • 2,000 m around future location of FPU. • Temporary 500 m exclusion zone around vessels to manage vessel movements • An interactive map showing the location of the proposed activities will be available on the Woodside website and will be updated throughout the proposed activities
<p>Vessels:</p>	<p>Seabed Intervention:</p> <ul style="list-style-type: none"> • Trailing suction hopper dredge • Offshore construction vessel • Rock Installation Vessel • Survey vessels • Support vessels • Fuel bunkering vessels <p>Trunkline Installation:</p> <ul style="list-style-type: none"> • Pipelay Vessel multi-joint operation • Shallow Water Lay Barge • Anchor handling vessel/tug • Pipe supply vessels • Offshore construction vessel • Survey vessels • Fuel bunkering vessels 	<ul style="list-style-type: none"> • A purpose-built seismic vessel • One support vessel • A potential chase vessel, and • An additional spotter vessel (May to June) 	<ul style="list-style-type: none"> • Light construction vessels • Heavy construction vessels • Heavy lift vessels • Derrick lay vessel • Reel-lay vessels • Survey vessels • Support vessels

Feedback:

If you have any issues or concerns with these activities, or any other issues relevant to this location, please respond to Woodside at: Feedback@woodside.com.au or 1800 442 977.

Your feedback and our response will be included in our Environment Plan which will be submitted to submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth)*.

Please let us know if your feedback for any of the activities proposed under an Environment Plan is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan to ensure this information remains confidential to NOPSEMA.

Please provide your views by **8 March 2023**.

Regards,

Woodside Feedback

APPENDIX A

FEEDBACK	SITI EP	Seismic EP	Subsea EP

Attached: Consultation Information Sheets for the SITI EP, Seismic EP and Subsea EP

5.40 Email sent to JX Nippon via ENEOS (23 February 2023)

Good Afternoon [REDACTED],

My name is [REDACTED], and I work with Woodside Energy’s Corporate Affairs team.

Woodside has submitted Environmental Plans to undertake activities in Commonwealth waters for the Scarborough Development. A part of this involves receiving feedback from title and licence holders. ENEOS (formerly JX Nippon) is one of the aforementioned titleholders.

I have attached the relevant documents, and would appreciate if you could either provide us with feedback within the nominated window, or forward on to the correct person and include Feedback@woodside.com.au and my email, [REDACTED][@woodside.com.au](mailto:[REDACTED]@woodside.com.au) in the correspondence.

Please contact me on [REDACTED] or reply to this email if you require any clarification.

Kind Regards,

5.41 Email sent to Pilbara Ports Authority (22 February 2023)

Dear [REDACTED] and [REDACTED]

Woodside is sending this email by way of a reminder that the consultation period is closing soon to provide feedback on Woodside's Scarborough Seabed Intervention and Trunkline Installation EP (**SITI EP**). Please see our consultation information below and attached. We would appreciate any feedback you may have by **3 March 2023** to support our development of the proposed Environment Plan.

Kind regards,

5.42 Email sent to Wanparta Aboriginal Corporation (24 February 2023)

Hello [REDACTED]

In follow up to your email received on 31 January please let me know if you have received any questions from the Wanparta Directors regarding the Environmental Plan (EP) information shared with you to date for Scarborough and Nganhurra RTM.

This email provides further information on Woodside's decommissioning and drilling activities that we are seeking to understand if Wanparta has any interests in the Environment that may be affected (EMBA) relative to the attached information sheets and if Wanparta would like us to consult further on these EPs.

With the exception of removing the Nganhurra RTM and the Scarborough project, for which Woodside is seeking Wanparta's feedback as soon as possible, Woodside is also seeking Wanparta's feedback on these decommissioning and drilling activities by **17 March 2023**.

The plain English summary of each of these activities is attached, and I have provided a link to the more detailed consultation information sheets below. These activities are:

Decommissioning Activities:

- Stybarrow. Plug and abandonment (P&A) of the wells.
 - [consultation-information-sheet---stybarrow-plug-and-abandonment-environment-plan.pdf \(woodside.com\)](#)
- Griffin decommissioning.
 - [consultation-information-sheet---griffin-decommissioning-environment-plans.pdf \(woodside.com\)](#)

Drilling Activities:

- WA-34-L Pyxis Drilling and Subsea Installation.
 - [Consultation Information Sheet - WA-34-L Pyxis Drilling and Subsea Installation Environment Plan \(woodside.com\)](#)
- Julimar Appraisal Drilling.
 - [Consultation Information Sheet - Julimar Appraisal Drilling and Survey Environment Plan \(woodside.com\)](#)

If there is anything else, Woodside can do at this time to facilitate consultation, if Wanparta make an assessment that this is required to provide more information about these planned work activities, please let me know.

Thank you for your time in considering these matters

Please feel free to contact me on the details below if you require further information or assistance

Kind regards

5.43 Email sent to Ngarluma Aboriginal Corporation (NAC) (24 February 2023)

Good morning [REDACTED] and [REDACTED]

I mentioned I would be sharing more information when we met on Friday 17 February, to discuss the Environmental Plan (EP) information shared with you to date for Scarborough and Nganhurra RTM. This is the email with further information for NAC to consider if they have any interests in the EMBA (Environment that may be affected) relative to the attached information sheets.

It would be greatly appreciated if you could please acknowledge receipt and confirm the opportunity to meet with the NAC board when they are next due to meet on 29 or 30 March. We welcome the opportunity to spend a whole day with the board on a different day if that works.

This email provides information on Woodside's decommissioning and drilling activities that we are seeking to consult with NAC about.

With the exception of removing the Nganhurra RTM and the Scarborough project, for which Woodside is seeking NAC's feedback as soon as possible, Woodside is seeking NAC's feedback on these decommissioning and drilling activities by **17 March 2023**. The plain English summary of each of these activities is attached, and I have provided a link to the more detailed consultation information sheets below. These activities are:

Decommissioning Activities:

- Removal of the Nganhurra Riser Turret Mooring (RTM). Information about the RTM was previously emailed on 20 January. For ease of reference, the summary information is attached and the consultation information sheet for the RTM can be found at the link below.
 - [consultation-information-sheet---nganhurra-operations-cessation-environment-plan-revision.pdf \(woodside.com\)](#)
- Stybarrow. This involves two work activities that are subject to separate environment plans; plug and abandonment (P&A) of the wells and decommissioning the infrastructure.
 - [consultation-information-sheet---stybarrow-plug-and-abandonment-environment-plan.pdf \(woodside.com\)](#)
 - [Consultation Information Sheet - Stybarrow Decommissioning Environment Plans \(woodside.com\)](#)
- Griffin decommissioning.
 - [consultation-information-sheet---griffin-decommissioning-environment-plans.pdf \(woodside.com\)](#)

Drilling Activities:

- TPA03 Well Intervention.
 - [Consultation Information Sheet - TPA03 Well Intervention Environment Plan \(woodside.com\)](#)
- WA-34-L Pyxis Drilling and Subsea Installation.
 - [Consultation Information Sheet - WA-34-L Pyxis Drilling and Subsea Installation Environment Plan \(woodside.com\)](#)
- Julimar Appraisal Drilling.
 - [Consultation Information Sheet - Julimar Appraisal Drilling and Survey Environment Plan \(woodside.com\)](#)

In providing this information and requests for feedback, I acknowledge that we are working towards presenting to the NAC board at their next board meeting in March. Woodside would be most grateful for the opportunity to meet with NAC, at NAC's earliest convenience, and at a location suitable to NAC. Woodside would also be pleased to provide the resources necessary to hold this meeting and we look forward to receiving a budget for consideration. If there is anything else, we can do at this time to facilitate consultation about these planned work activities please let me know.

Thank you, [REDACTED] and [REDACTED] for consideration of these matters and work to progress these important consultations.

Please feel free to contact me on the details below if you require further information or assistance.

Regards

[REDACTED]

5.44 Email sent to Wirrawandi Aboriginal Corporation (WAC) (24 February 2023)

Good morning [REDACTED]

I hope your Friday is going well.

I mentioned I would be sharing more information when we met on Tuesday 21 February, to discuss the Environmental Plan (EP) information shared with you to date for Scarborough and Nganhurra RTM. This is the email with further information for Wirrawandi to consider if they have any interests in the Environment that may be affected (EMBA) relative to the attached information sheets.

It would be greatly appreciated if you could please acknowledge receipt and confirm the opportunity to meet with the Wirrawandi board when they are next due to meet in Perth in March.

This email provides information on Woodside's decommissioning and drilling activities that we are seeking to consult with Wirrawandi about.

With the exception of removing the Nganhurra RTM and the Scarborough project, for which Woodside is seeking Wirrawandi's feedback as soon as possible, Woodside is seeking Wirrawandi's feedback on these decommissioning and drilling activities by **17 March 2023**. The plain English summary of each of these activities is attached, and I have provided a link to the more detailed consultation information sheets below. These activities are:

Decommissioning Activities:

- Removal of the Nganhurra Riser Turret Mooring (RTM). Information about the RTM was previously emailed on 18 January. For ease of reference, the summary information is attached and the consultation information sheet for the RTM can be found at the link below.
 - [consultation-information-sheet---nganhurra-operations-cessation-environment-plan-revision.pdf \(woodside.com\)](#)

- Stybarrow. This involves two work activities that are subject to separate environment plans; plug and abandonment (P&A) of the wells and decommissioning the infrastructure.
 - [consultation-information-sheet---stybarrow-plug-and-abandonment-environment-plan.pdf \(woodside.com\)](#)
 - [Consultation Information Sheet - Stybarrow Decommissioning Environment Plans \(woodside.com\)](#)
- Griffin decommissioning.
 - [consultation-information-sheet---griffin-decommissioning-environment-plans.pdf \(woodside.com\)](#)

Drilling Activities:

- TPA03 Well Intervention.
 - [Consultation Information Sheet - TPA03 Well Intervention Environment Plan \(woodside.com\)](#)
- WA-34-L Pyxis Drilling and Subsea Installation.
 - [Consultation Information Sheet - WA-34-L Pyxis Drilling and Subsea Installation Environment Plan \(woodside.com\)](#)
- Julimar Appraisal Drilling.
 - [Consultation Information Sheet - Julimar Appraisal Drilling and Survey Environment Plan \(woodside.com\)](#)

In providing this information and requests for feedback, I acknowledge that we are working towards presenting to the Wirrawandi board at their next board meeting in March. Woodside would be most grateful for the opportunity to meet at Wirrawandi's earliest convenience, and at a location suitable to Wirrawandi. Woodside would also be pleased to provide the resources necessary to hold this meeting and we look forward to receiving a budget for consideration. If there is anything else, we can do at this time to facilitate consultation about these planned work activities please let me know.

Thank you, [REDACTED] for consideration of these matters and work to progress these important consultations.

Please feel free to contact me on the details below if you require further information or assistance.

Kind regards

[REDACTED]

5.45 Email sent to Yindjibarndi Aboriginal Corporation (24 February 2023)

Hello [REDACTED]

I understand you last spoke with [REDACTED] on 25 January regarding the Environmental Plan (EP) information shared with YAC for the Scarborough project activity and Nganghurra RTM.

This email provides further information on Woodside's decommissioning and drilling activities that we are seeking to understand if YAC has any interests in the Environment that

may be affected (EMBA) relative to the attached information sheets and if YAC would like us to consult further on these EPs.

With the exception of removing the Nganhurra RTM and the Scarborough project, for which I understand YAC has verbally advised they have no interests, Woodside is also seeking YAC's feedback on these decommissioning and drilling activities by **17 March 2023**.

The plain English summary of each of these activities is attached, and I have provided a link to the more detailed consultation information sheets below. These activities are:

Decommissioning Activities:

- Stybarrow. This involves two work activities that are subject to separate environment plans; plug and abandonment (P&A) of the wells and decommissioning the infrastructure.

5.48 Updated Shipping Lane Maps sent to Australian Hydrographic Office (AHO) and to Australian Maritime Safety Authority (AMSA) (included via a response on a separate Environment Plan) – 28 February 2023

Dear AHO,

As referenced below in our email to you on 27/01, the Shipping Lane figure for each EP's as relevant to their Petroleum Activities Program and associated Operational Area are provided

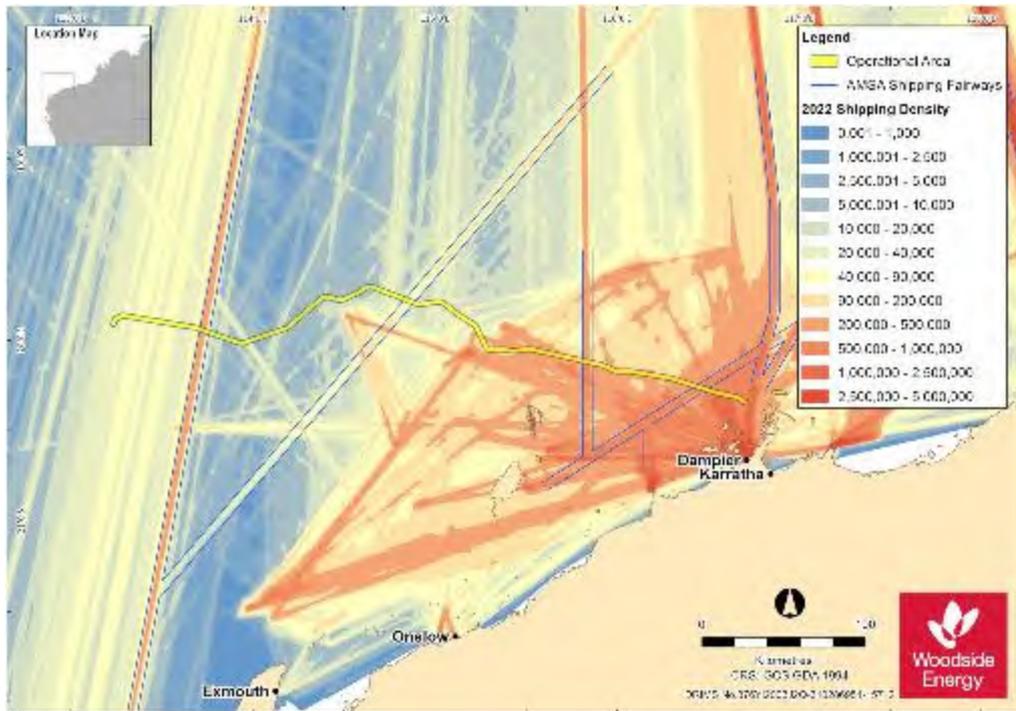

attached. A separate figure showing the Environment that May Be Affected (EMBA) for each activity has also been attached for reference.

Please let us know should you have any questions regarding the attached or require further information relating to any of the Scarborough activities.

Kind Regards,

Woodside Feedback

Operational Area

EMBA

- subsea decommissioning activities for the Griffin field under the **Griffin Decommissioning and Field Management EP, Griffin Gas Export Pipeline EP and Griffin Field Deviation EP**.
- subsea decommissioning activities for the Stybarrow field under the **Stybarrow Plug and Production EP, Stybarrow Decommissioning and Field Management EP and Stybarrow Field Deviation EP**.

Please find the attached Consultation Information Sheets relating to the above proposed environment plans (EPs). The Consultation Information Sheets provide background on the proposed activities, including maps, summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#). You can also subscribe to receive updates on our consultation activities by subscribing [here](#).

Should JX have feedback on the proposed activities, please let us know. Feedback received after the feedback dates (see emails attached) will continue to be assessed and responded to, as required, through the life of the relevant EP.

As we have invited consultation with you on each of the EPs above, for ease of reference, we have attached the information in this one email. In an effort to simplify feedback, we have also included a feedback template (Appendix A) which you may wish to use to provide your feedback specific to the proposed EPs.

Feedback:

If you have any issues or concerns with these activities, or any other issues relevant to these locations, please respond to Woodside at: Feedback@woodside.com.au or 1800 442 977.

Your feedback and our response will be included in our Environment Plans which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth).

Please let us know if your feedback for any of the activities proposed under an Environment Plan is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan to ensure this information remains confidential to NOPSEMA.

Woodside Feedback

5.50 Email sent to DoD – 13 March 2023

Good afternoon [REDACTED],

Thank you for the Department of Defence's feedback regarding the Scarborough SITI EP, D&C EP, Seismic EP and Subsea EPs, including providing a copy of its restricted airspace and Defence Training Areas off the WA Coast.

In line with Woodside's previous response to the Department of Defence's feedback in relation to the proposed activities, Woodside re-confirms that it notes the Department's advice on the location of the Operational Area and the presence of the North West Exercise Area (NWXA) and restricted airspace.

We also note your advice with respect to the location, identification, removal, or damage to equipment from unexploded ordinances (UXOs).

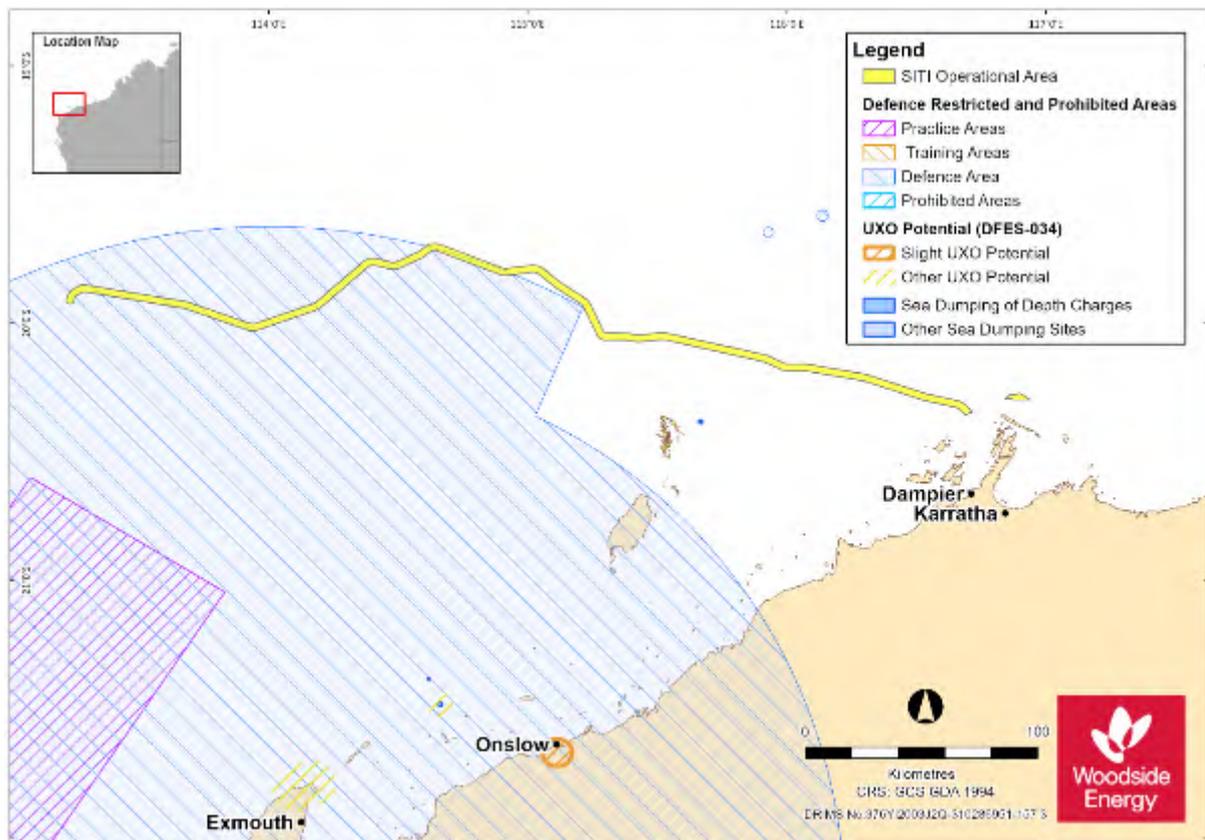

Please accept this as confirmation that:

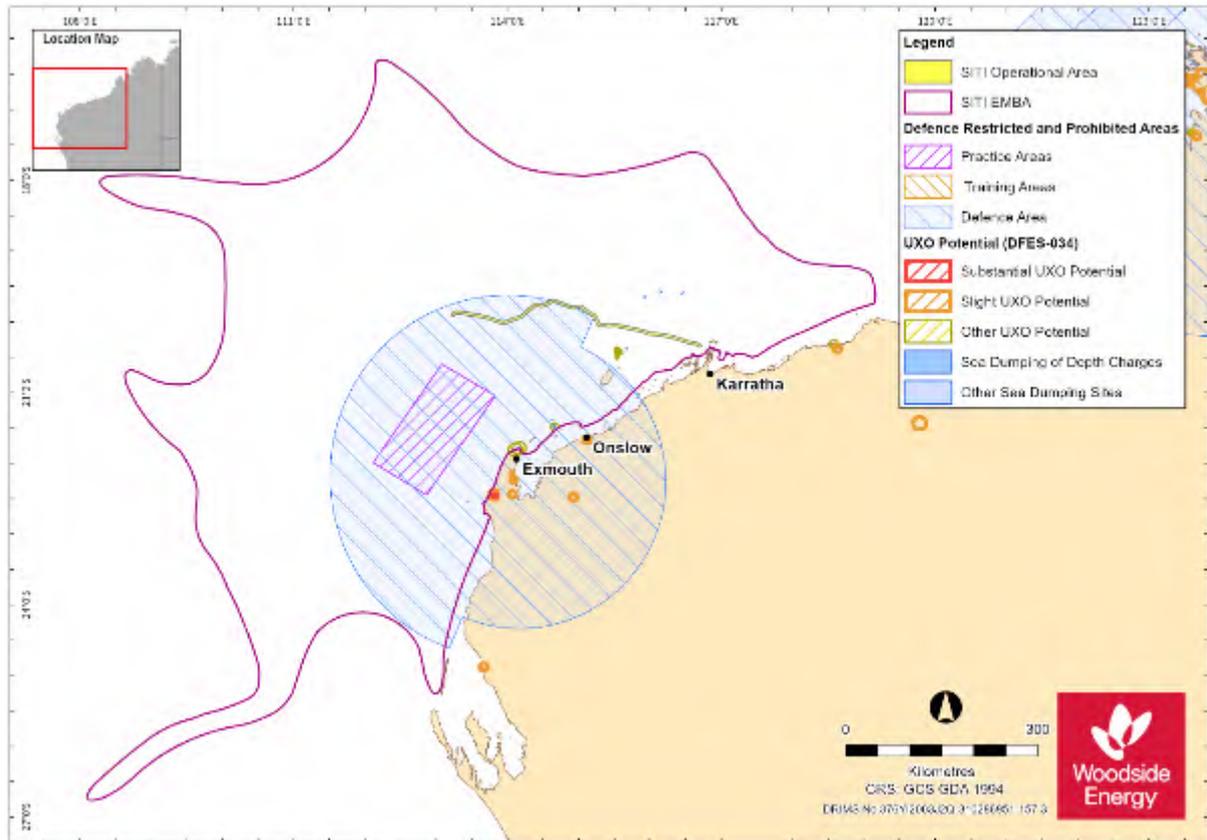

- Woodside will notify the Department of Defence at least five weeks prior to the commencement of activities.
- Woodside notes the requirement and contact details provided by the Department of Defence to engage with Airservices Australia if the restricted airspace is activated. Woodside will confirm restricted air space status with the Department of Defence as part of its commencement of activity notification.
- AHO has already been engaged for this activity and is included in our activity notification protocols. At its request, AHO will be notified four weeks prior to the start of activities.

The Defence figures for each of the proposed EPs as relevant to their Petroleum Activities Program and associated Operational Areas is attached. A separate figure showing the Environment that May Be Affected (EMBA) is also attached for reference.

Kind regards,

Woodside Feedback

5.51 Email sent to Western Rock Lobster Council (1 March 2023)

Hi [REDACTED]

Thank you for coming back to us.

Please find the attached Consultation Information Sheets relating to the below proposed environment plans (EPs) and requested feedback dates. The Consultation Information Sheets provide background on the proposed activities, including maps, summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#). You can also subscribe to receive updates on our consultation activities by subscribing [here](#).

I confirm that Woodside has provided this consultation information to Western Rock Lobster Fishery licence holders directly via post using DPIRD provided contact information. Woodside welcomes the Western Rock Lobster Council’s offer to provide consultation information to members directly as well.

Should members and/or the Western Rock Lobster Council have feedback on the proposed activities, we would welcome this by the feedback dates below. Feedback received after this date will continue to be assessed and responded to, as required, through the life of the relevant EP.

Feedback by 20 March 2023

- Seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the **Scarborough Seabed Intervention and Trunkline Installation EP** for the Scarborough development.
- Decommissioning of the Nganhurra RTM under the **Nganhurra Operations Cessation Environment Plan revision**.

Feedback by 25 March 2023

- Subsea decommissioning activities for the Griffin field under the **Griffin Decommissioning and Field Management EP, Griffin Gas Export Pipeline EP and Griffin Field Deviation EP**.
- Subsea decommissioning activities for the Stybarrow field under the **Stybarrow Plug and Production EP, Stybarrow Decommissioning and Field Management EP and Stybarrow Field Deviation EP**.
- Geotechnical and geophysical surveys, drilling and appraisal of the Julimar South-1 well (previously called JULA-P) and, plug and abandonment of Julimar South-1, if required, under the **Julimar Drilling and Surveys Environment Plan**.
- Drilling and subsea infrastructure installation activities for one well (PLA08) and contingent well intervention activities for current production wells, under the **WA-34-L Pyxis Drilling and Subsea Installation Environment Plan Revision**.

As we are inviting consultation with you on each of the EPs above, for ease of reference, we have attached the information in this one email. In an effort to simplify feedback, we have also included a feedback template (Appendix A) which you may wish to use to provide your feedback specific to the proposed EPs.

Please reach out if you have any questions.

Kind regards,

██████████

Feedback:

If you have any issues or concerns with these activities, or any other issues relevant to these locations, please respond to Woodside at: Feedback@woodside.com.au or 1800 442 977.

Your feedback and our response will be included in our Environment Plans which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth).

Please let us know if your feedback for any of the activities proposed under an Environment Plan is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan to ensure this information remains confidential to NOPSEMA.

APPENDIX A

FEEDBACK	Scarborough SITI EP	Nganhurra RTM EP	Griffin EPs	Stybarrow EPs	Julimar EP	PLA08 EP

5.52 Email sent to Western Rock Lobster Council (14 March 2023)

Hi [REDACTED],

I hope your week is going well.

Woodside is sending this email by way of a reminder that the consultation period is closing soon to provide feedback on Woodside’s proposed activities in Commonwealth waters. Please see our consultation email below.

Feedback by 20 March 2023

- Seabed intervention and trunkline installation activities for the section of the Trunkline in Commonwealth waters under the **Scarborough Seabed Intervention and Trunkline Installation EP** for the Scarborough development.
- Decommissioning of the Nganhurra RTM under the **Nganhurra Operations Cessation Environment Plan revision**.

Feedback by 25 March 2023

- Subsea decommissioning activities for the Griffin field under the **Griffin Decommissioning and Field Management EP, Griffin Gas Export Pipeline EP and Griffin Field Deviation EP**.
- Subsea decommissioning activities for the Stybarrow field under the **Stybarrow Plug and Production EP, Stybarrow Decommissioning and Field Management EP and Stybarrow Field Deviation EP**.
- Geotechnical and geophysical surveys, drilling and appraisal of the Julimar South-1 well (previously called JULA-P) and, plug and abandonment of Julimar South-1, if required, under the **Julimar Drilling and Surveys Environment Plan**.
- Drilling and subsea infrastructure installation activities for one well (PLA08) and contingent well intervention activities for current production wells, under the **WA-34-L Pyxis Drilling and Subsea Installation Environment Plan Revision**.

In an effort to simplify feedback, we have included a feedback template (**Appendix A**) which you may wish to use to provide your feedback specific to the proposed EPs.

We would appreciate any feedback you may have by the above feedback dates to support the development of our Environment Plans.

Kind regards,

[REDACTED]

5.53 Email and letter sent to Wirrawandi Aboriginal Corporation (WAC) – 3 May 2023

Good morning [REDACTED]

Please find attached a letter in follow-up to the meeting held with the Wirrawandi Aboriginal Corporation Directors and Elders in Perth on the 23rd March.

I look forward to connecting soon.

Kind regards

Karratha WA 6714

Dear [REDACTED]

MEETING 23 MARCH 2023 - TO DISCUSS ENVIRONMENT PLAN CONSULTATION WITH THE WIRRAWANDI ABORIGINAL CORPORATION DIRECTORS AND ELDERS

Thank you for the opportunity to meet with you, your team and the Directors and Elders on the 23rd March 2023 at the Exchange Tower in Perth. We appreciated the engagement and careful consideration of the matters presented at the meeting. Your support in enabling the opportunity is gratefully received, and we look forward to continuing to work with the Wirrawandi Aboriginal Corporation (WAC).

Firstly, Woodside acknowledges and respects that the WAC has interests in the Environment That May Be Affected (EMBA) by Woodside's Activities and wants to work so that impacts to these values and interests are as minimal as is reasonably practicable.

To this end Woodside presented the following at the meeting:

An Overview:

- About Woodside Energy (including area of operations, history and recent merger with BHP Petroleum)
- Environment Plans (including the Environment that may be Affected, Planned and Unplanned Risks)

Activity Overview and Discussion:

- Decommissioning Activities (covering Nganhurra RTM, Griffin and Stybarrow)
- Scarborough Project activities (covering field, trunkline, drilling and completions, subsea installation and seismic survey)
- Drill rig activities (covering Pluto, Julimar and TPA03)

Woodside and the Community

- Social impact Assessment
- Stakeholders Engaged

Future Relationship and Engagement

It was encouraging that during the face-to-face engagement the WAC directors and elders were actively engaged and requested further information or clarification on topics related to the proposed activities which we discussed and responded to during the meeting:

More specifically Woodside took a number of actions to follow up on as follows:

- WAC asked for more community information on rock art,

Response: Woodside has been providing information and briefings through a number of forums such as through the Murujuga Aboriginal Corporation and quarterly heritage meetings and are open

to feedback on this. Woodside will work with WAC on appropriate way to share information (eg via an agreed communications plan)

- WAC asked about Woodside activities near Dongara, noting that there was a sign beside the highway. Woodside responded that none of the present attendees were aware of these activities and an action was noted to provide an answer.

Response: Although Woodside has started exploring potential carbon sequestration (greenhouse offset) opportunities in the area we have no known current advertising campaigns in the area and no other known activity has been identified.

- WAC stated that Indigenous employment plans are not always effective. Woodside responded that there are specific actions being taken with regard to continually improving Employment and Training and Contracting and Procurement (C&P) strategies, one such example is supporting Tender Relief to support smaller businesses to navigate and prepare tender submissions. Woodside took an action to have our local Karratha based C&P representative engage with WAC for further discussion;

Response: [REDACTED] coordinated a meeting with C&P representatives held in Perth on 29th March. Further local engagement can be scheduled once dates are provided for when you are next in Karratha so we can set up a meeting to continue the conversation on the opportunities discussed and what other opportunities may be possible in the future

- WAC asked if the elders and board group could have a site tour, an action was taken to collaborate with WAC to explore this opportunity.

Response: [REDACTED] to connect with WAC to understand timeframes, who will be likely to attend in order to plan logistics and coordinate an opportunity accordingly.

Please note that the meeting of 23rd March and this response will be included in our Environment Plans (EPs) for the proposed activities which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth).

If you are providing feedback to us following this meeting, please inform us of any sensitive information, and we will make this known to NOPSEMA upon submission of the EPs to ensure this information remains confidential to NOPSEMA.

During the meeting WAC expressed a desire for continuing engagement and partnership. Woodside is committed to continuing consultation with Traditional Custodians beyond the submission of Environment Plans and this will not be WAC's only opportunity to engage with us.

We look forward to meeting with you to discuss these matters further, and so we can discuss putting in place the support that WAC seeks to continue engagement. Thank you again for providing us with the opportunity to present to WAC, your questions and for your careful consideration of the matters provided.

Please feel free to contact me, or alternatively [REDACTED] at [REDACTED]@woodside.com.

Sincerely

Via email

03 May 2023

[REDACTED]
Wirrawandi Aboriginal Corporation
Karratha Village
Shop 50, 5-15 Sharpe Ave
Karratha WA 6714

Dear [REDACTED]

MEETING 31 MARCH 2023 TO DISCUSS ENVIRONMENT PLAN CONSULTATION WITH THE WIRRAWANDI ABORIGINAL CORPORATION AND ROBE RIVER KURUMA JOINT HERITAGE ADVISORY COMMITTEE,

Thank you for the opportunity to meet on the 31st March 2023 at the Karratha International Hotel and for the careful consideration of the matters presented at the meeting. Your attendance and feedback is gratefully received, and we look forward to working with the Wirrawandi Aboriginal Corporation (WAC) and Robe River Kuruma Aboriginal Corporation (RRKAC) via their joint Heritage Advisory Committee (HAC).

Firstly, Woodside acknowledges and respects that the WAC and RRKAC have interests in the Environment That May Be Affected (EMBA) by Woodside's Activities and wants to work so that impacts to these values and interests are as minimal as is reasonably practicable.

To this end Woodside presented the following at the meeting:

An Overview:

- About Woodside Energy (including area of operations, history and recent merger with BHP Petroleum)
- Environment Plans (including the Environment that Might be Impacted, Planned and Unplanned Risks)

Activity Overview and Discussion:

- Decommissioning Activities (covering Nganhurra, Griffin and Stybarrow)
- Scarborough Project activities (covering field, trunkline, drilling and completions, subsea installation and seismic survey)
- Drill rig activities (covering Pluto, Julimar and TPA03)

Woodside and the Community

- Social impact Assessment
- Stakeholders Engaged

Future Relationship and Engagement

It was encouraging that during the face-to-face engagement the HAC directors and elders were actively engaged and requested further information or clarification on topics related to the proposed activities which was responded to during the meeting:

More specifically Woodside took a number of actions to follow up on:

- HAC asked for a map of SCATL shore crossing with heritage sites identified.

Response: The Scarborough trunkline shore crossing is outside of the scope of the EPs before the RRKWAC Heritage Advisory Committee. Heritage management for this area is conducted under the Scarborough Project Cultural Heritage Management Plan (CHMP), which is publicly available on our [website](#). This CHMP was approved

in January 2023, and builds on heritage surveys conducted with Yaburara and Mardudhunera people conducted through Wirrawandi Aboriginal Corporation and Murujuga Aboriginal Corporation. The location and scope of this activity meant that Robe River Kuruma Aboriginal Corporation did not need to input on this CHMP.

Detailed locations of nearby heritage sites have not been included in the CHMP at the request of Traditional Custodians. Publicly available heritage information is provided in Figure 5-1 on page 53 of the CHMP. Crucially, the heritage assessments described in 5.5 have confirmed:

- No heritage sites exist in the onshore footprint of the Scarborough project, including the shore crossing,
- The onshore footprint of the Scarborough project, including the shore crossing, is confined to previously disturbed land within the Pluto LNG facility, and
- No heritage sites were identified in the nearshore (i.e. state) waters.

The CHMP notes in 5.5.9 the intention to conduct Remotely Operated Vehicle inspections. This work has been completed with a qualified maritime archaeologist and also did not identify any heritage sites in nearshore waters.

- HAC asked for further discussion on community partnerships and commercial opportunities desired;

Response: Further local engagement can be planned when you are able to advise dates when you are next in Karratha to continue the conversation on what opportunities may be possible in the future

- HAC potential for global balance instability caused by gas extraction

Response: The mass of gas extracted, along with the mass of water influx are negligible in comparison to the mass of the earth's layers including solid crust, liquid mantle, core and the earth's atmosphere, and any water or ice on its surface. As a result the development of petroleum fields has a negligible impact on the earth's balance.

Please note that the meeting of 31st March and this response will be included in our Environment Plans for the proposed activities which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth).

If you are providing feedback to us following this meeting, please inform us of any sensitive information, and we will make this known to NOPSEMA upon submission of the Environment Plans to ensure this information remains confidential to NOPSEMA.

During the meeting the joint HAC of WAC and RRKAC expressed a desire for ongoing engagement and partnership. Woodside is committed to continuing consultation with Traditional Custodians beyond the submission of Environment Plans and this will not be RRKAC or WAC's only opportunity to engage with us. We look forward to meeting with you to discuss these matters further, and so we can discuss putting in place the support that WAC and RRKAC seeks to continue engagement.

Thank you again for providing us with the opportunity to present to you and for your careful consideration of the matters provided.

Please feel free to contact me at any time, or alternatively [redacted] at [redacted] woodside.com.

Sincerely

Via email

5.55 Email and letter sent to Robe River Kuruma Aboriginal Corporation (RRKAC) – 3 May 2023

Dear [REDACTED]

Please find a letter in follow-up to the consultation meeting held on 31 March 2023, with the Robe River Kuruma and Wirrawandi Aboriginal Corporations joint Heritage Advisory Committee.

Kind regards

[REDACTED]

5.56 Email sent to Murujuga Aboriginal Corporation (MAC) – 15 September 2023

Hello [REDACTED],

The third email this week from me to you, apologies for the volume of emails but this should be it for this week.

Further to my correspondence earlier in the week about a number of Woodside's decommissioning and project activities, I am writing regarding three of Woodside's Scarborough activities that have been the subject of our consultations to date, particularly in relation to potential impacts to MAC's interests, functions or activities in the environment that may be affected (EMBA) by these activities.

These activities are covered under the following environment plans (EPs):

Scarborough Project Activities

1. Scarborough Seabed Intervention and Trunkline Installation
2. Scarborough Drilling and Completions
3. Scarborough Subsea Infrastructure Installation

I am writing to notify you of Woodside's planned commencement date of these activities, and to seek your confirmation in relation to the following matters on or before the dates set out in the tables below:

- a. if you are aware of any people, who in accordance with Indigenous tradition, may have spiritual and cultural connections to the environment that may be affected by these activities that have not yet been afforded the opportunity to provide information that may inform the management of the activities; and
- b. if there is any information you wish to provide on cultural features and/or heritage values.

Environment Plan Open for Feedback	Planned Activity Commencement	Please Provide Feedback By:
Scarborough Seabed Intervention & Trunkline Installation	15 Oct 2023	28 Sep 2023
Scarborough Drilling and Completions	19 Oct 2023	28 Sep 2023
Scarborough Subsea Infrastructure Installation	17 Nov 2023	28 Sep 2023

I have attached the information relevant to each of these activities, and ask that you please distribute it to members or individuals who may be interested.

As with all of our activities, consultation remains ongoing. This means that we will take any feedback regarding the activities, or any other relevant information you may wish to provide, at any time during the activities and will assess this information using the mechanisms described in the EPs.

As you are aware, NOPSEMA has published a number of documents on consultation (please see [Document Hub | NOPSEMA](#)). For your convenience we have provided links to the following recent publications below:

- **Brochure:** [Consultation on offshore petroleum environment plans brochure.pdf \(nopsema.gov.au\)](#)
- **Guideline:** [Guideline: Consultation in the course of preparing an environment plan \(nopsema.gov.au\)](#); and
- **Policy:** [Draft policy for managing gender-restricted information PL2098.pdf \(nopsema.gov.au\)](#).

As you will see from the Guideline (link above), the purpose of consultation is to ensure that authorities, persons or organisations which are potentially affected by activities are consulted and their input is considered in the development of the environment plans. Consultation gives the titleholder an opportunity to receive information that it might not otherwise receive from those affected by the proposed activity, and for the titleholder to refine or change the measures it proposes to address impacts and risks by taking into account the information received. This process is intended to improve the titleholder's ability to minimise environmental impacts and risks from the activity.

We also want to make you aware that gender-restricted or other culturally sensitive information is managed carefully. If you have gender-restricted or other culturally sensitive information you wish to share, please let us know and we can discuss how to you want it to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so. The attached NOPSEMA "Policy for managing gender-restricted information" provides information on this.

As you are aware, Woodside provides various forms of assistance to PBCs, Traditional Custodian groups or individuals to support their participation in consultation. Please contact me if you have any questions or wish to discuss further how you would like to provide feedback.

We look forward to ongoing consultation with MAC and to progressing the various matters that have been the subject of our meetings and correspondence to date. As always, please let us know how we can support MAC to progress these matters and to participate in ongoing consultation with Woodside.

Kind Regards

██████████

5.57 Email sent to Ngarluma Aboriginal Corporation (NAC) – 15 September 2023

Hello ██████████,

A second email this week from me regarding environment plans, that should be it for this week. Apologies also as I see [REDACTED] and I doubled up on the previous email. I have sent separately to [REDACTED] as his email address was rejected by our system.

Further to mine (and [REDACTED]'s) correspondence earlier in the week about a number of Woodside's decommissioning and project activities, I am writing regarding three of Woodside's Scarborough activities that have been the subject of our consultations to date, particularly in relation to potential impacts to NAC's interests, functions or activities in the environment that may be affected (EMBA) by these activities.

These activities are covered under the following environment plans (EPs):

Scarborough Project Activities

1. Scarborough Seabed Intervention and Trunkline Installation
2. Scarborough Drilling and Completions
3. Scarborough Subsea Infrastructure Installation

I am writing to notify you of Woodside's planned commencement date of these activities, and to seek your confirmation in relation to the following matters on or before the dates set out in the tables below:

- a. if you are aware of any people, who in accordance with Indigenous tradition, may have spiritual and cultural connections to the environment that may be affected by these activities that have not yet been afforded the opportunity to provide information that may inform the management of the activities; and
- b. if there is any information you wish to provide on cultural features and/or heritage values.

Environment Plan Open for Feedback	Planned Activity Commencement	Please Provide Feedback By:
Scarborough Seabed Intervention & Trunkline Installation	15 Oct 2023	28 Sep 2023
Scarborough Drilling and Completions	19 Oct 2023	28 Sep 2023
Scarborough Subsea Infrastructure Installation	17 Nov 2023	28 Sep 2023

I have attached the information relevant to each of these activities, and ask that you please distribute it to members or individuals who may be interested.

As with all of our activities, consultation remains ongoing. This means that we will take any feedback regarding the activities, or any other relevant information you may wish to provide, at any time during the activities and will assess this information using the mechanisms described in the EPs.

As you are aware, NOPSEMA has published a number of documents on consultation (please see [Document Hub | NOPSEMA](#)). For your convenience we have provided links to the following recent publications below:

- **Brochure:** [Consultation on offshore petroleum environment plans brochure.pdf \(nopsema.gov.au\)](#)

- **Guideline:** [Guideline: Consultation in the course of preparing an environment plan \(nopsema.gov.au\)](#); and
- **Policy:** [Draft policy for managing gender-restricted information PL2098.pdf \(nopsema.gov.au\)](#).

As you will see from the Guideline (link above), the purpose of consultation is to ensure that authorities, persons or organisations which are potentially affected by activities are consulted and their input is considered in the development of the environment plans. Consultation gives the titleholder an opportunity to receive information that it might not otherwise receive from those affected by the proposed activity, and for the titleholder to refine or change the measures it proposes to address impacts and risks by taking into account the information received. This process is intended to improve the titleholder's ability to minimise environmental impacts and risks from the activity.

We also want to make you aware that gender-restricted or other culturally sensitive information is managed carefully. If you have gender-restricted or other culturally sensitive information you wish to share, please let us know and we can discuss how to you want it to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so. The attached NOPSEMA "Policy for managing gender-restricted information" provides information on this.

As you are aware, Woodside provides various forms of assistance to PBCs, Traditional Custodian groups or individuals to support their participation in consultation. Please contact me if you have any questions or wish to discuss further how you would like to provide feedback.

We look forward to ongoing consultation with NAC and to progressing the various matters that have been the subject of our meetings and correspondence to date. As always, please let us know how we can support NAC to progress these matters and to participate in ongoing consultation with Woodside.

Kind Regards

██████████

5.58 Email sent to Wirrawandi Aboriginal Corporation (WAC) – 18 September 2023

Hi ██████████

Apologies, the previous email sent through this afternoon, I neglected to include two other EP's, Scarborough Drilling & Completion and Scarborough Subsea Infrastructure Installation.

We have previously provided you information on Scarborough environment plans (EPs) seeking information on potential impacts to the interests, functions or activities that you may have in the environment that may be affected (EMBA) for each EP. This includes consultation in relation to:

1. Scarborough Seabed Intervention and Trunkline Installation EP
2. Scarborough Drilling and Completions EP
3. Scarborough Subsea Infrastructure Installation EP

Following on from EMAIL, Woodside is again writing to you to confirm:

- a. if you are aware of any people, who in accordance with Indigenous tradition, may have spiritual and cultural connections to the environment that may be affected by the activity that have not yet been afforded the opportunity to provide information that may inform the management of the activity; and
- b. if there is any information you wish to provide on cultural features and/or heritage values.

We have attached the information relevant to each of these activities and ask that you distribute it to members or individuals who may be interested.

The proposed commencement of activities under each of these EPs is included below. Please provide any relevant information prior to the date indicated. If no feedback is received relating to items a) and b) above by this time, Woodside will take this to mean that you do not wish to provide this information prior to the commencement of the activity.

Environment Plan Open for Feedback	Planned Activity Commencement	Please Provide Feedback By:
Scarborough Seabed Intervention & Trunkline Installation	15 Oct 2023	02 Oct 2023
Scarborough Drilling and Completions	19 Oct 2023	02 Oct 2023
Scarborough Subsea Infrastructure Installation	17 Nov 2023	02 Oct 2023

Please note that we will also take any feedback regarding the above, or any other relevant information you may wish to provide, at any time during the activity and will assess this information using the mechanisms described in the environment plan.

As you are aware, NOPSEMA has published a number of documents on consultation (please see [Document Hub | NOPSEMA](#)). For your convenience we have provided links to the following recent publications below:

- **Brochure:** [Consultation on offshore petroleum environment plans brochure.pdf \(nopsema.gov.au\)](#)
- **Guideline:** [Guideline: Consultation in the course of preparing an environment plan \(nopsema.gov.au\)](#); and
- **Policy:** [Draft policy for managing gender-restricted information PL2098.pdf \(nopsema.gov.au\)](#).

As you will see from the Guideline (link above), the purpose of consultation is to ensure that authorities, persons or organisations which are potentially affected by activities are consulted and their input is considered in the development of the environment plans. Consultation gives the titleholder an opportunity to receive information that it might not otherwise receive from those affected by the proposed activity, and for the titleholder to refine or change the measures it proposes to address impacts and risks by taking into account the information received. This process is intended to improve the titleholder's ability to minimise environmental impacts and risks from the activity.

We also want to make you aware that gender-restricted or other culturally sensitive information is managed carefully. If you have gender-restricted or other culturally sensitive information you wish to share, please let us know and we can discuss how to you want it to be managed. If you would prefer to provide the information directly to NOPSEMA, please do

so. The attached NOPSEMA “Policy for managing gender-restricted information” provides information on this.

As you are aware, Woodside provides various forms of assistance to PBCs, Traditional Custodian groups or individuals to support your participation in consultation. Please contact me if you have any questions or wish to discuss further how you would like to provide feedback.

Kind regards,

██████████

5.59 Email to Yinggarda Aboriginal Corporation (YAC) – 14 September 2023

Dear ██████████

Further to my correspondence yesterday about a number of Woodside’s decommissioning and project activities, and my email earlier today regarding a consultation framework / agreement between YAC and Woodside, I write regarding three of Woodside’s Scarborough activities. These activities were discussed during our meeting with the YAC Board in early July, particularly in relation to potential impacts to YAC’s interests, functions or activities in the environment that may be affected (EMBA) by these activities.

These activities are covered under the following environment plans (EPs):

Scarborough Project Activities

1. Scarborough Seabed Intervention and Trunkline Installation
2. Scarborough Drilling and Completions
3. Scarborough Subsea Infrastructure Installation

I am writing to notify you of Woodside’s planned commencement date of these activities, and to seek your confirmation in relation to the following matters on or before the dates set out in the tables below:

- a. if you are aware of any people, who in accordance with Indigenous tradition, may have spiritual and cultural connections to the environment that may be affected by these activities that have not yet been afforded the opportunity to provide information that may inform the management of the activities; and
- b. if there is any information you wish to provide on cultural features and/or heritage values.

Environment Plan Open for Feedback	Planned Activity Commencement	Please Provide Feedback By:
Scarborough Seabed Intervention & Trunkline Installation	15 Oct 2023	28 Sep 2023
Scarborough Drilling and Completions	19 Oct 2023	28 Sep 2023
Scarborough Subsea Infrastructure Installation	17 Nov 2023	28 Sep 2023

I have attached the information relevant to each of these activities, and ask that you please distribute it to members or individuals who may be interested.

As with all of our activities, consultation remains ongoing. This means that we will take any feedback regarding the activities, or any other relevant information you may wish to provide, at any time during the activities and will assess this information using the mechanisms described in the EPs.

As you are aware, NOPSEMA has published a number of documents on consultation (please see [Document Hub | NOPSEMA](#)). For your convenience we have provided links to the following recent publications below:

- **Brochure:** [Consultation on offshore petroleum environment plans brochure.pdf \(nopsema.gov.au\)](#)
- **Guideline:** [Guideline: Consultation in the course of preparing an environment plan \(nopsema.gov.au\)](#); and
- **Policy:** [Draft policy for managing gender-restricted information PL2098.pdf \(nopsema.gov.au\)](#).

As you will see from the Guideline (link above), the purpose of consultation is to ensure that authorities, persons or organisations which are potentially affected by activities are consulted and their input is considered in the development of the environment plans. Consultation gives the titleholder an opportunity to receive information that it might not otherwise receive from those affected by the proposed activity, and for the titleholder to refine or change the measures it proposes to address impacts and risks by taking into account the information received. This process is intended to improve the titleholder's ability to minimise environmental impacts and risks from the activity.

We also want to make you aware that gender-restricted or other culturally sensitive information is managed carefully. If you have gender-restricted or other culturally sensitive information you wish to share, please let us know and we can discuss how to you want it to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so. The attached NOPSEMA "Policy for managing gender-restricted information" provides information on this.

As you are aware, Woodside provides various forms of assistance to PBCs, Traditional Custodian groups or individuals to support their participation in consultation. Please contact me if you have any questions or wish to discuss further how you would like to provide feedback.

We look forward to ongoing consultation with YAC and to progressing the framework / agreement. As always, please let us know how we can support YAC to progress these matters and to participate in ongoing consultation with Woodside.

Sincerely

■

5.60 Missed number

5.61 Email to Buurabalayji Thalanyji Aboriginal Corporation (BTAC) – 14 September 2023

Dear ■

Further to my correspondence yesterday about a number of Woodside’s decommissioning and project activities, I write regarding three of Woodside’s Scarborough activities that have been the subject of our consultations to date, particularly in relation to potential impacts to BTAC’s interests, functions or activities in the environment that may be affected (EMBA) by these activities.

These activities are covered under the following environment plans (EPs):

Scarborough Project Activities

1. Scarborough Seabed Intervention and Trunkline Installation
2. Scarborough Drilling and Completions
3. Scarborough Subsea Infrastructure Installation

I am writing to notify you of Woodside’s planned commencement date of these activities, and to seek your confirmation in relation to the following matters on or before the dates set out in the tables below:

- a. if you are aware of any people, who in accordance with Indigenous tradition, may have spiritual and cultural connections to the environment that may be affected by these activities that have not yet been afforded the opportunity to provide information that may inform the management of the activities; and
- b. if there is any information you wish to provide on cultural features and/or heritage values.

Environment Plan Open for Feedback	Planned Activity Commencement	Please Provide Feedback By:
Scarborough Seabed Intervention & Trunkline Installation	15 Oct 2023	28 Sep 2023
Scarborough Drilling and Completions	19 Oct 2023	28 Sep 2023
Scarborough Subsea Infrastructure Installation	17 Nov 2023	28 Sep 2023

I have attached the information relevant to each of these activities, and ask that you please distribute it to members or individuals who may be interested.

As with all of our activities, consultation remains ongoing. This means that we will take any feedback regarding the activities, or any other relevant information you may wish to provide, at any time during the activities and will assess this information using the mechanisms described in the EPs.

As you are aware, NOPSEMA has published a number of documents on consultation (please see [Document Hub | NOPSEMA](#)). For your convenience we have provided links to the following recent publications below:

- **Brochure:** [Consultation on offshore petroleum environment plans brochure.pdf \(nopsema.gov.au\)](#)
- **Guideline:** [Guideline: Consultation in the course of preparing an environment plan \(nopsema.gov.au\)](#); and
- **Policy:** [Draft policy for managing gender-restricted information PL2098.pdf \(nopsema.gov.au\)](#).

As you will see from the Guideline (link above), the purpose of consultation is to ensure that authorities, persons or organisations which are potentially affected by activities are consulted and their input is considered in the development of the environment plans. Consultation gives the titleholder an opportunity to receive information that it might not otherwise receive from those affected by the proposed activity, and for the titleholder to refine or change the measures it proposes to address impacts and risks by taking into account the information received. This process is intended to improve the titleholder's ability to minimise environmental impacts and risks from the activity.

We also want to make you aware that gender-restricted or other culturally sensitive information is managed carefully. If you have gender-restricted or other culturally sensitive information you wish to share, please let us know and we can discuss how to you want it to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so. The attached NOPSEMA "Policy for managing gender-restricted information" provides information on this.

As you are aware, Woodside provides various forms of assistance to PBCs, Traditional Custodian groups or individuals to support their participation in consultation. Please contact me if you have any questions or wish to discuss further how you would like to provide feedback.

We look forward to ongoing consultation with BTAC and to progressing the various matters that have been the subject of our meetings and correspondence to date. As always, please let us know how we can support BTAC to progress these matters and to participate in ongoing consultation with Woodside.

Sincerely

■

5.62 Email to Robe River Kuruma Aboriginal Corporation (RRKAC) – 14 September 2023

Hi

■

We have previously consulted RRKAC on Scarborough environment plans (EPs) seeking information on potential impacts to the interests, functions or activities that you may have in the environment that may be affected (EMBA) for each EP. This includes consultation in relation to:

1. Scarborough Seabed Intervention and Trunkline Installation EP
2. Scarborough Drilling and Completions EP
3. Scarborough Subsea Infrastructure Installation EP
4. Scarborough Offshore Facility and Trunkline Operations EP

Following on from previous correspondence, Woodside is again writing to you to confirm:

- a. if you are aware of any people, who in accordance with Indigenous tradition, may have spiritual and cultural connections to the environment that may be affected by the activity that have not yet been afforded the opportunity to provide information that may inform the management of the activity; and
- b. if there is any information you wish to provide on cultural features and/or heritage values.

We have attached the information relevant to each of these activities and ask that you distribute it to members or individuals who may be interested.

The proposed commencement of activities under each of these EPs is included below. Please provide any relevant information prior to the date indicated. If no feedback is received relating to items a) and b) above by this time, Woodside will take this to mean that you do not wish to provide this information prior to the commencement of the activity.

Environment Plan Open for Feedback	Planned Activity Commencement	Please Provide Feedback By:
Scarborough Seabed Intervention & Trunkline Installation	15 Oct 2023	28 Sep 2023
Scarborough Drilling and Completions	19 Oct 2023	28 Sep 2023
Scarborough Subsea Infrastructure Installation	17 Nov 2023	5 Oct 2023
Scarborough Offshore Facility and Trunkline Operations	December 2024	11 Dec 2023

Please note that we will also take any feedback regarding the above, or any other relevant information you may wish to provide, at any time during the activity and will assess this information using the mechanisms described in the environment plan.

As you are aware, NOPSEMA has published a number of documents on consultation (please see [Document Hub | NOPSEMA](#)). For your convenience we have provided links to the following recent publications below:

- **Brochure:** [Consultation on offshore petroleum environment plans brochure.pdf \(nopsema.gov.au\)](#)
- **Guideline:** [Guideline: Consultation in the course of preparing an environment plan \(nopsema.gov.au\)](#); and
- **Policy:** [Draft policy for managing gender-restricted information PL2098.pdf \(nopsema.gov.au\)](#).

As you will see from the Guideline (link above), the purpose of consultation is to ensure that authorities, persons or organisations which are potentially affected by activities are consulted and their input is considered in the development of the environment plans. Consultation gives the titleholder an opportunity to receive information that it might not otherwise receive from those affected by the proposed activity, and for the titleholder to refine or change the measures it proposes to address impacts and risks by taking into account the information received. This process is intended to improve the titleholder’s ability to minimise environmental impacts and risks from the activity.

We also want to make you aware that gender-restricted or other culturally sensitive information is managed carefully. If you have gender-restricted or other culturally sensitive information you wish to share, please let us know and we can discuss how to you want it to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so. The attached NOPSEMA “Policy for managing gender-restricted information” provides information on this.

As you are aware, Woodside provides various forms of assistance to PBCs, Traditional Custodian groups or individuals to support your participation in consultation. Please contact

me if you have any questions or wish to discuss further how you would like to provide feedback.

Kind regards,

██████

5.63 Email to Nganhurra Thanardi Garrbu Aboriginal Corporation – (NTGAC) – 14 September 2023

Good morning ██████ and ██████, I hope your week is travelling well.

I am writing as ██████ is travelling presently.

During our meetings with the NTGAC Board we discussed various Scarborough project, decommissioning and project activities, particularly in relation to potential impacts to NTGAC's interests, functions or activities in the environment that may be affected (EMBA) by the activities. These activities are covered under the following environment plans (EPs):

Scarborough Project Activities

1. Scarborough Seabed Intervention and Trunkline Installation
2. Scarborough Drilling and Completions
3. Scarborough Subsea Infrastructure Installation

Decommissioning and Project Activities

1. Griffin Decommissioning & Field Management
2. Griffin Gas Export Pipeline Decommissioning
3. Griffin Field Decommissioning
4. Stybarrow Plug & Abandonment
5. Stybarrow Decommissioning & Field Management
6. Stybarrow End State Decommissioning
7. WA-34-L Pyxis Drilling and Subsea Installation
8. TPA03 Well Intervention
9. Julimar Appraisal Drilling and Surveys

I am writing to notify you of Woodside's planned commencement date of these activities, and to seek your confirmation in relation to the following matters on or before the dates set out in the tables below:

- a. if you are aware of any people, who in accordance with Indigenous tradition, may have spiritual and cultural connections to the environment that may be affected by these activities that have not yet been afforded the opportunity to provide information that may inform the management of the activities; and
- b. if there is any information you wish to provide on cultural features and/or heritage values.

I have attached the information relevant to each of these activities, and ask that you please distribute it to members or individuals who may be interested.

As with all of our activities, consultation remains ongoing. This means that we will take any feedback regarding the activities, or any other relevant information you may wish to provide, at any time during the activities and will assess this information using the mechanisms described in the EPs.

Scarborough Project Activities

Environment Plan Open for Feedback	Planned Activity Commencement	Please Provide Feedback By:
Scarborough Seabed Intervention & Trunkline Installation	15 Oct 2023	28 Sep 2023
Scarborough Drilling and Completions	19 Oct 2023	28 Sep 2023
Scarborough Subsea Infrastructure Installation	17 Nov 2023	28 Sep 2023

Decommissioning and Project Activities

Environment Plan Open for Feedback	Planned Activity Commencement	Please Provide Feedback By:
Griffin Decommissioning & Field Management	27 September	26 September
Griffin Gas Export Pipeline Decommissioning	27 September	26 September
Griffin Field Decommissioning	30 October	30 September
Stybarrow Plug & Abandonment	30 November	30 September
Stybarrow Decommissioning & Field Management	30 October	30 September
Stybarrow End State Decommissioning	30 October	30 September
WA-34-L Pyxis Drilling and Subsea Installation	1 November	15 October
TPA03 Well Intervention	1 November	15 October
Julimar Appraisal Drilling and Surveys	25 September	24 September

As you are aware, NOPSEMA has published a number of documents on consultation (please see [Document Hub | NOPSEMA](#)). For your convenience we have provided links to the following recent publications below:

- **Brochure:** [Consultation on offshore petroleum environment plans brochure.pdf \(nopsema.gov.au\)](#)
- **Guideline:** [Guideline: Consultation in the course of preparing an environment plan \(nopsema.gov.au\)](#); and
- **Policy:** [Draft policy for managing gender-restricted information PL2098.pdf \(nopsema.gov.au\)](#).

As you will see from the Guideline (link above), the purpose of consultation is to ensure that authorities, persons or organisations which are potentially affected by activities are consulted and their input is considered in the development of the environment plans. Consultation gives the titleholder an opportunity to receive information that it might not otherwise receive from those affected by the proposed activity, and for the titleholder to refine or change the measures it proposes to address impacts and risks by taking into account the information received. This process is intended to improve the titleholder's ability to minimise environmental impacts and risks from the activity.

We also want to make you aware that gender-restricted or other culturally sensitive information is managed carefully. If you have gender-restricted or other culturally sensitive information you wish to share, please let us know and we can discuss how to you want it to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so. The attached NOPSEMA “Policy for managing gender-restricted information” provides information on this.

As you are aware, Woodside provides various forms of assistance to PBCs, Traditional Custodian groups or individuals to support their participation in consultation. Please contact me if you have any questions or wish to discuss further how you would like to provide feedback.

We look forward to ongoing consultation with NTGAC and to progressing the various matters that have been the subject of our meetings with YMAC and NTGAC to date. As always, please let us know how we can support YMAC and NTGAC to progress these matters.

Sincerely

■

5.64 Email to Ngarluma Yindjibarndi Foundation Ltd (NYFL) – 14 September 2023

Hi ■

Emailing NYFL, similar to previous email sent through for Yindjibarndi Aboriginal Corporation.

We have previously provided you information on Scarborough environment plans (EPs) seeking information on potential impacts to the interests, functions or activities that you may have in the environment that may be affected (EMBA) for each EP. This includes consultation in relation to:

1. Scarborough Seabed Intervention and Trunkline Installation EP
2. Scarborough Drilling and Completions EP
3. Scarborough Subsea Infrastructure Installation EP

Following on from EMAIL, Woodside is again writing to you to confirm:

- a. if you are aware of any people, who in accordance with Indigenous tradition, may have spiritual and cultural connections to the environment that may be affected by the activity that have not yet been afforded the opportunity to provide information that may inform the management of the activity; and
- b. if there is any information you wish to provide on cultural features and/or heritage values.

We have attached the information relevant to each of these activities and ask that you distribute it to members or individuals who may be interested.

The proposed commencement of activities under each of these EPs is included below. Please provide any relevant information prior to the date indicated. If no feedback is received relating to items a) and b) above by this time, Woodside will take this to mean that you do not wish to provide this information prior to the commencement of the activity.

Environment Plan Open for Feedback	Planned Activity Commencement	Please Provide
---	--------------------------------------	-----------------------

		Feedback By:
Scarborough Seabed Intervention & Trunkline Installation	15 Oct 2023	28 Sep 2023
Scarborough Drilling and Completions	19 Oct 2023	28 Sep 2023
Scarborough Subsea Infrastructure Installation	17 Nov 2023	28 Sep 2023

Please note that we will also take any feedback regarding the above, or any other relevant information you may wish to provide, at any time during the activity and will assess this information using the mechanisms described in the environment plan.

As you are aware, NOPSEMA has published a number of documents on consultation (please see [Document Hub | NOPSEMA](#)). For your convenience we have provided links to the following recent publications below:

- **Brochure:** [Consultation on offshore petroleum environment plans brochure.pdf \(nopsema.gov.au\)](#)
- **Guideline:** [Guideline: Consultation in the course of preparing an environment plan \(nopsema.gov.au\)](#); and
- **Policy:** [Draft policy for managing gender-restricted information PL2098.pdf \(nopsema.gov.au\)](#).

As you will see from the Guideline (link above), the purpose of consultation is to ensure that authorities, persons or organisations which are potentially affected by activities are consulted and their input is considered in the development of the environment plans. Consultation gives the titleholder an opportunity to receive information that it might not otherwise receive from those affected by the proposed activity, and for the titleholder to refine or change the measures it proposes to address impacts and risks by taking into account the information received. This process is intended to improve the titleholder’s ability to minimise environmental impacts and risks from the activity.

We also want to make you aware that gender-restricted or other culturally sensitive information is managed carefully. If you have gender-restricted or other culturally sensitive information you wish to share, please let us know and we can discuss how to you want it to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so. The attached NOPSEMA “Policy for managing gender-restricted information” provides information on this.

As you are aware, Woodside provides various forms of assistance to PBCs, Traditional Custodian groups or individuals to support your participation in consultation. Please contact me if you have any questions or wish to discuss further how you would like to provide feedback.

Kind regards,

██████

5.65 Email to Malgana Aboriginal Corporation (MAC) – 14 September 2023

Good afternoon ██████,

Firstly, thank you for receiving and forwarding our recent correspondence to your Board. I left a message on your mobile earlier to enquire as to whether the Board may need any assistance from Woodside at this time.

Further to my correspondence yesterday about a number of Woodside's decommissioning and project activities, I write regarding two of Woodside's Scarborough activities that have been the subject of our consultations to date, particularly in relation to potential impacts to MAC's interests, functions or activities in the environment that may be affected (EMBA) by these activities.

The activities are covered under the following environment plans (EPs):

1. Scarborough Seabed Intervention and Trunkline Installation
2. Scarborough Subsea Infrastructure Installation

I am writing to notify you of Woodside's planned commencement date of these activities, and to seek your confirmation in relation to the following matters on or before the dates set out in the table below:

- a. if you are aware of any people, who in accordance with Indigenous tradition, may have spiritual and cultural connections to the environment that may be affected by these activities that have not yet been afforded the opportunity to provide information that may inform the management of the activities; and
- b. if there is any information you wish to provide on cultural features and/or heritage values.

Environment Plan Open for Feedback	Planned Activity Commencement	Please Provide Feedback By:
Scarborough Seabed Intervention & Trunkline Installation	15 Oct 2023	28 Sep 2023
Scarborough Subsea Infrastructure Installation	17 Nov 2023	28 Sep 2023

I have attached information relevant to each of these activities, and ask that you please distribute it to members or individuals who may be interested.

As with all of our activities, consultation remains ongoing. This means that we will take any feedback regarding the activities, or any other relevant information you may wish to provide, at any time during the activities and will assess this information using the mechanisms described in the EPs.

As you are aware, NOPSEMA has published a number of documents on consultation (please see [Document Hub | NOPSEMA](#)). For your convenience we have provided links to the following recent publications below:

- **Brochure:** [Consultation on offshore petroleum environment plans brochure.pdf \(nopsema.gov.au\)](#)
- **Guideline:** [Guideline: Consultation in the course of preparing an environment plan \(nopsema.gov.au\)](#); and
- **Policy:** [Draft policy for managing gender-restricted information PL2098.pdf \(nopsema.gov.au\)](#).

As you will see from the Guideline (link above), the purpose of consultation is to ensure that authorities, persons or organisations which are potentially affected by activities are consulted and their input is considered in the development of the environment plans. Consultation gives the titleholder an opportunity to receive information that it might not otherwise receive from those affected by the proposed activity, and for the titleholder to refine or change the measures it proposes to address impacts and risks by taking into account the information received. This process is intended to improve the titleholder's ability to minimise environmental impacts and risks from the activity.

We also want to make you aware that gender-restricted or other culturally sensitive information is managed carefully. If you have gender-restricted or other culturally sensitive information you wish to share, please let us know and we can discuss how to you want it to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so. The attached NOPSEMA "Policy for managing gender-restricted information" provides information on this.

As you are aware, Woodside provides various forms of assistance to PBCs, Traditional Custodian groups or individuals to support their participation in consultation. Please contact me if you have any questions or wish to discuss further how you would like to provide feedback.

We look forward to ongoing consultation with MAC. As always, please let us know how we can support MAC to progress these matters.

Sincerely

■

5.66 Email to Nanda Aboriginal Corporation (NAC) – 14 September 2023

Dear ■ and ■,

During Woodside's meeting with Nanda in April, we discussed various Scarborough project, decommissioning and project activities, particularly in relation to potential impacts to NAC's interests, functions or activities in the environment that may be affected (EMBA) by the activities. These activities are covered under the following environment plans (EPs):

Scarborough Project Activities

1. Scarborough Seabed Intervention and Trunkline Installation
2. Scarborough Subsea Infrastructure Installation

Decommissioning and Project Activities

1. Griffin Decommissioning & Field Management
2. Griffin Gas Export Pipeline Decommissioning
3. Griffin Field Decommissioning
4. Stybarrow Plug & Abandonment
5. Stybarrow Decommissioning & Field Management
6. Stybarrow End State Decommissioning
7. WA-34-L Pyxis Drilling and Subsea Installation
8. Julimar Appraisal Drilling and Surveys

I am writing to notify you of Woodside’s planned commencement date of these activities, and to seek your confirmation in relation to the following matters on or before the dates set out in the tables below:

- a. if you are aware of any people, who in accordance with Indigenous tradition, may have spiritual and cultural connections to the environment that may be affected by these activities that have not yet been afforded the opportunity to provide information that may inform the management of the activities; and
- b. if there is any information you wish to provide on cultural features and/or heritage values.

I have attached the information relevant to each of these activities, and ask that you please distribute it to members or individuals who may be interested.

As with all of our activities, consultation remains ongoing. This means that we will take any feedback regarding the activities, or any other relevant information you may wish to provide, at any time during the activities and will assess this information using the mechanisms described in the EPs.

██████

5.67 Email to Kariyarra Aboriginal Corporation (KAC) – 18 September 2023

Dear ██████

We have previously consulted Kariyarra Aboriginal Corporation on Scarborough environment plan (EP) seeking information on potential impacts to the interests, functions or activities that you may have in the environment that may be affected (EMBA) for each EP. This includes consultation in relation to:

1. Scarborough Seabed Intervention and Trunkline Installation EP

Following on from previous correspondence, Woodside is again writing to you to confirm:

- a. if you are aware of any people, who in accordance with Indigenous tradition, may have spiritual and cultural connections to the environment that may be affected by the activity that have not yet been afforded the opportunity to provide information that may inform the management of the activity; and
- b. if there is any information you wish to provide on cultural features and/or heritage values.

We have attached the information relevant to each of these activities and ask that you distribute it to members or individuals who may be interested.

The proposed commencement of activities under each of these EPs is included below. Please provide any relevant information prior to the date indicated. If no feedback is received relating to items a) and b) above by this time, Woodside will take this to mean that you do not wish to provide this information prior to the commencement of the activity.

Environment Plan Open for Feedback	Planned Activity Commencement	Please Provide Feedback By:
Scarborough Seabed Intervention & Trunkline Installation	15 Oct 2023	02 Oct 2023

Please note that we will also take any feedback regarding the above, or any other relevant information you may wish to provide, at any time during the activity and will assess this information using the mechanisms described in the environment plan.

As you are aware, NOPSEMA has published a number of documents on consultation (please see [Document Hub | NOPSEMA](#)). For your convenience we have provided links to the following recent publications below:

- **Brochure:** [Consultation on offshore petroleum environment plans brochure.pdf \(nopsema.gov.au\)](#)

- **Policy:** [Draft policy for managing gender-restricted information PL2098.pdf \(nopsema.gov.au\)](#).

As you will see from the Guideline (link above), the purpose of consultation is to ensure that authorities, persons or organisations which are potentially affected by activities are consulted and their input is considered in the development of the environment plans. Consultation gives the titleholder an opportunity to receive information that it might not otherwise receive from those affected by the proposed activity, and for the titleholder to refine or change the measures it proposes to address impacts and risks by taking into account the information received. This process is intended to improve the titleholder's ability to minimise environmental impacts and risks from the activity.

We also want to make you aware that gender-restricted or other culturally sensitive information is managed carefully. If you have gender-restricted or other culturally sensitive information you wish to share, please let us know and we can discuss how to you want it to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so. The attached NOPSEMA "Policy for managing gender-restricted information" provides information on this.

As you are aware, Woodside provides various forms of assistance to PBCs, Traditional Custodian groups or individuals to support your participation in consultation. Please contact

me if you have any questions or wish to discuss further how you would like to provide feedback.

Kind regards,

5.68 Email to Nyungamarta Karajarri Aboriginal Corporation – (NKAC) – 18 September 2023

Dear Nyangumarta Karajarri Aboriginal Corporation

We have previously consulted Nyangumarta Karajarri Aboriginal Corporation on Scarborough environment plan (EP) seeking information on potential impacts to the interests, functions or activities that you may have in the environment that may be affected (EMBA) for each EP. This includes consultation in relation to:

1. Scarborough Seabed Intervention and Trunkline Installation EP

Following on from previous correspondence, Woodside is again writing to you to confirm:

- a. if you are aware of any people, who in accordance with Indigenous tradition, may have spiritual and cultural connections to the environment that may be affected by the activity that have not yet been afforded the opportunity to provide information that may inform the management of the activity; and
- b. if there is any information you wish to provide on cultural features and/or heritage values.

We have attached the information relevant to each of these activities and ask that you distribute it to members or individuals who may be interested.

The proposed commencement of activities under each of these EPs is included below. Please provide any relevant information prior to the date indicated. If no feedback is received relating to items a) and b) above by this time, Woodside will take this to mean that you do not wish to provide this information prior to the commencement of the activity.

Environment Plan Open for Feedback	Planned Activity Commencement	Please Provide Feedback By:
Scarborough Seabed Intervention & Trunkline Installation	15 Oct 2023	02 Oct 2023

Please note that we will also take any feedback regarding the above, or any other relevant information you may wish to provide, at any time during the activity and will assess this information using the mechanisms described in the environment plan.

As you are aware, NOPSEMA has published a number of documents on consultation (please see [Document Hub | NOPSEMA](#)). For your convenience we have provided links to the following recent publications below:

- **Brochure:** [Consultation on offshore petroleum environment plans brochure.pdf \(nopsema.gov.au\)](#)
- **Guideline:** [Guideline: Consultation in the course of preparing an environment plan \(nopsema.gov.au\)](#); and
- **Policy:** [Draft policy for managing gender-restricted information PL2098.pdf \(nopsema.gov.au\)](#).

As you will see from the Guideline (link above), the purpose of consultation is to ensure that authorities, persons or organisations which are potentially affected by activities are consulted and their input is considered in the development of the environment plans. Consultation gives the titleholder an opportunity to receive information that it might not otherwise receive from those affected by the proposed activity, and for the titleholder to refine or change the measures it proposes to address impacts and risks by taking into account the information received. This process is intended to improve the titleholder's ability to minimise environmental impacts and risks from the activity.

We also want to make you aware that gender-restricted or other culturally sensitive information is managed carefully. If you have gender-restricted or other culturally sensitive information you wish to share, please let us know and we can discuss how to you want it to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so. The attached NOPSEMA "Policy for managing gender-restricted information" provides information on this.

As you are aware, Woodside provides various forms of assistance to PBCs, Traditional Custodian groups or individuals to support your participation in consultation. Please contact me if you have any questions or wish to discuss further how you would like to provide feedback.

Kind regards,

5.69 Email to Nyangumarta Warrarn Aboriginal Corporation (NWAC) – 18 September 2023

Dear Nyangumarta Warrarn Aboriginal Corporation

We have previously consulted Nyangumarta Warrarn Aboriginal Corporation on Scarborough environment plan (EP) seeking information on potential impacts to the interests, functions or activities that you may have in the environment that may be affected (EMBA) for each EP. This includes consultation in relation to:

1. Scarborough Seabed Intervention and Trunkline Installation EP

Following on from previous correspondence, Woodside is again writing to you to confirm:

- a. if you are aware of any people, who in accordance with Indigenous tradition, may have spiritual and cultural connections to the environment that may be affected by the activity that have not yet been afforded the opportunity to provide information that may inform the management of the activity; and

- b. if there is any information you wish to provide on cultural features and/or heritage values.

We have attached the information relevant to each of these activities and ask that you distribute it to members or individuals who may be interested.

The proposed commencement of activities under each of these EPs is included below. Please provide any relevant information prior to the date indicated. If no feedback is received relating to items a) and b) above by this time, Woodside will take this to mean that you do not wish to provide this information prior to the commencement of the activity.

Environment Plan Open for Feedback	Planned Activity Commencement	Please Provide Feedback By:
Scarborough Seabed Intervention & Trunkline Installation	15 Oct 2023	02 Oct 2023

Please note that we will also take any feedback regarding the above, or any other relevant information you may wish to provide, at any time during the activity and will assess this information using the mechanisms described in the environment plan.

As you are aware, NOPSEMA has published a number of documents on consultation (please see [Document Hub | NOPSEMA](#)). For your convenience we have provided links to the following recent publications below:

- **Brochure:** [Consultation on offshore petroleum environment plans brochure.pdf \(nopsema.gov.au\)](#)
- **Guideline:** [Guideline: Consultation in the course of preparing an environment plan \(nopsema.gov.au\)](#); and
- **Policy:** [Draft policy for managing gender-restricted information PL2098.pdf \(nopsema.gov.au\)](#).

As you will see from the Guideline (link above), the purpose of consultation is to ensure that authorities, persons or organisations which are potentially affected by activities are consulted and their input is considered in the development of the environment plans. Consultation gives the titleholder an opportunity to receive information that it might not otherwise receive from those affected by the proposed activity, and for the titleholder to refine or change the measures it proposes to address impacts and risks by taking into account the information received. This process is intended to improve the titleholder’s ability to minimise environmental impacts and risks from the activity.

We also want to make you aware that gender-restricted or other culturally sensitive information is managed carefully. If you have gender-restricted or other culturally sensitive information you wish to share, please let us know and we can discuss how to you want it to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so. The attached NOPSEMA “Policy for managing gender-restricted information” provides information on this.

As you are aware, Woodside provides various forms of assistance to PBCs, Traditional Custodian groups or individuals to support your participation in consultation. Please contact me if you have any questions or wish to discuss further how you would like to provide feedback.

Kind regards,

██████

5.70 Email to Karajarri Traditional Lands Association (KTLA) – 18 September 2023

Dear ██████

We have previously consulted Karajarri Traditional Lands Trust on Scarborough environment plan (EP) seeking information on potential impacts to the interests, functions or activities that you may have in the environment that may be affected (EMBA) for each EP. This includes consultation in relation to:

1. Scarborough Seabed Intervention and Trunkline Installation EP

Following on from previous correspondence, Woodside is again writing to you to confirm:

- a. if you are aware of any people, who in accordance with Indigenous tradition, may have spiritual and cultural connections to the environment that may be affected by the activity that have not yet been afforded the opportunity to provide information that may inform the management of the activity; and
- b. if there is any information you wish to provide on cultural features and/or heritage values.

We have attached the information relevant to each of these activities and ask that you distribute it to members or individuals who may be interested.

The proposed commencement of activities under each of these EPs is included below. Please provide any relevant information prior to the date indicated. If no feedback is received relating to items a) and b) above by this time, Woodside will take this to mean that you do not wish to provide this information prior to the commencement of the activity.

Environment Plan Open for Feedback	Planned Activity Commencement	Please Provide Feedback By:
Scarborough Seabed Intervention & Trunkline Installation	15 Oct 2023	02 Oct 2023

Please note that we will also take any feedback regarding the above, or any other relevant information you may wish to provide, at any time during the activity and will assess this information using the mechanisms described in the environment plan.

Kind regards,

■

5.71 Email to Wanparta Aboriginal Corporation (WAC) – 14 September 2023

Hi ■

Hope you are well.

This is a courtesy email as we did cover these Environment Plans (EPs) at our consultation meeting 31-Aug-23, however If there has been any change of opinion from Wanparta Aboriginal Corporation, please feel free to comment.

We have previously consulted with Wanparta on Scarborough EPs seeking information on potential impacts to the interests, functions, or activities that you may have in the Environment that May Be Affected (EMBA) for each EP. This includes consultation in relation to:

1. Scarborough Seabed Intervention and Trunkline Installation EP
2. Scarborough Drilling and Completions EP
3. Scarborough Subsea Infrastructure Installation EP
4. Scarborough Offshore Facility and Trunkline Operations EP

Woodside is again writing to you to confirm:

- a. if you are aware of any people, who in accordance with Indigenous tradition, may have spiritual and cultural connections to the environment that may be affected by the activity that have not yet been afforded the opportunity to provide information that may inform the management of the activity; and
- b. if there is any information you wish to provide on cultural features and/or heritage values.

We have attached the information relevant to each of these activities and ask that you distribute it to members or individuals who may be interested.

The proposed commencement of activities under each of these EPs is included below. Please provide any relevant information prior to the date indicated.

Environment Plan Open for Feedback	Planned Activity Commencement	Please Provide Feedback By:
Scarborough Seabed Intervention & Trunkline Installation	15 Oct 2023	28 Sep 2023
Scarborough Offshore Facility and Trunkline Operations	December 2024	11 Dec 2023

Please note that we will also take any feedback regarding the above, or any other relevant information you may wish to provide, at any time during the activity and will assess this information using the mechanisms described in the environment plan.

As you are aware, NOPSEMA has published a number of documents on consultation (please see [Document Hub | NOPSEMA](#)). For your convenience we have provided links to the following recent publications below:

No DNA evidence to back Higgins: defence

Continued from page 1

He said while Ms Higgins said she'd taken a photo after the alleged assault on April 13, 2019, there was no medical evidence supporting whether the image would have remained 3 days later.

"Her contention is of [alleged rape] victim Higgins," he said.

Mr Whitmore suggested Ms Higgins was trying to cover up what happened because it "would be pretty embarrassing" to be found passed out as a sexual assault victim.

"That's not good for you," he said.

"Is there a reasonable possibility this complaint is being made because her 'dream job' is being jeopardised, in any way?"

Mr Whitmore said the "alleged" rape of Ms Higgins was not an "allegation" of Ms Higgins' actions was that she "saw" Higgins "what happened that night, given her level of intoxication."

"She doesn't know what happened. You can't be satisfied he would reasonably expect that he knew what happened," he said.

However, Mr Drummond said Ms Higgins was an "intoxicated" woman and if her allegations had been a "fabrication", she was "quite the actor" who had managed to fool her own mother while remaining consistent in her story over the years.

"When she (allegedly) recalled something, she (allegedly) didn't know an answer, she (allegedly) didn't know," he said.

Ms Higgins' defence barrister had an account of rape at all, she didn't say it went for hours but just two to three minutes.

Mr Drummond said Ms Higgins had applied "political" tactics to the case of the alleged rape and was right to be concerned for the continued viability of her political career if she proceeded with a formal complaint.

"We don't see that this is a young lady who was on the radio at the time of the alleged rape and we say she was right to be scared, we

'Right to be scared': Higgins

say she was right to be cautious and we say she was right to come forward slowly and carefully as having her life over her head," he said.

Mr Drummond pointed to evidence given by Senator Reynolds to the court on Monday, where it was revealed she had asked Mr Whitmore to look at her DNA.

However, Mr Drummond said Ms Higgins was an "intoxicated" woman and if her allegations had been a "fabrication", she was "quite the actor" who had managed to fool her own mother while remaining consistent in her story over the years.

"When she (allegedly) recalled something, she (allegedly) didn't know an answer, she (allegedly) didn't know," he said.

Ms Higgins' defence barrister had an account of rape at all, she didn't say it went for hours but just two to three minutes.

Mr Drummond said Ms Higgins had applied "political" tactics to the case of the alleged rape and was right to be concerned for the continued viability of her political career if she proceeded with a formal complaint.

"We don't see that this is a young lady who was on the radio at the time of the alleged rape and we say she was right to be scared, we

and Bruce Lehmann on a crash in 2019 on Saturday the 23rd of March 2019.

While Mr Drummond said Ms Higgins was a "young, confident and funny" woman when she gave evidence, he said she was going to "drink whisky", pick up the phone and work on a question mark.

Mr Whitmore in his closing statement showed the jury CCTV footage captured Ms Lehmann going through parliamentary security screening only to have her cell phone.

Mr Drummond, however, said Ms Lehmann had told someone, including security and police, that she had been "impugned" to pick up documents and "work on question mark documents."

"Defendant was not sitting at the table when that happened, that was clearly not true," Mr Drummond said.

"We say this [parliament] was not a common place for her (Ms Higgins) alone, not a safe place to be, not a safe place to be in the middle of the night."

Mr Drummond also asked questions over Ms Lehmann getting the facts of the alleged rape from Ms Higgins alone in the dark before being seen by security guards.

Ms Lehmann said she left because she felt she was being "already accused" which Mr Drummond said was not accurate and the jury would still find some evidence that she was not the building.

The prosecution also argued Ms Lehmann had an "allegation" to Ms Higgins, backing her up in court on Monday, where it was revealed she had asked Mr Whitmore to look at her DNA.

However, Mr Drummond said Ms Higgins was an "intoxicated" woman and if her allegations had been a "fabrication", she was "quite the actor" who had managed to fool her own mother while remaining consistent in her story over the years.

"When she (allegedly) recalled something, she (allegedly) didn't know an answer, she (allegedly) didn't know," he said.

Ms Higgins' defence barrister had an account of rape at all, she didn't say it went for hours but just two to three minutes.

Mr Drummond said Ms Higgins had applied "political" tactics to the case of the alleged rape and was right to be concerned for the continued viability of her political career if she proceeded with a formal complaint.

"We don't see that this is a young lady who was on the radio at the time of the alleged rape and we say she was right to be scared, we

'No ones to prove anything': Bruce Lehmann

said she was right to be cautious and we say she was right to come forward slowly and carefully as having her life over her head," he said.

Mr Drummond pointed to evidence given by Senator Reynolds to the court on Monday, where it was revealed she had asked Mr Whitmore to look at her DNA.

However, Mr Drummond said Ms Higgins was an "intoxicated" woman and if her allegations had been a "fabrication", she was "quite the actor" who had managed to fool her own mother while remaining consistent in her story over the years.

"When she (allegedly) recalled something, she (allegedly) didn't know an answer, she (allegedly) didn't know," he said.

Ms Higgins' defence barrister had an account of rape at all, she didn't say it went for hours but just two to three minutes.

Mr Drummond said Ms Higgins had applied "political" tactics to the case of the alleged rape and was right to be concerned for the continued viability of her political career if she proceeded with a formal complaint.

"We don't see that this is a young lady who was on the radio at the time of the alleged rape and we say she was right to be scared, we

'At wit's end': rape accused knew his political career over

Rape accused Bruce Lehmann says he was at his "wit's end" and knew his political career was over after allegations of sexual assault were published and broadcast by the press.

The ACT Supreme Court on Tuesday released the transcript of Mr Lehmann's interview with the Australian Federal Police - recorded on April 13, 2019 - after it was played to the jury last week.

Mr Lehmann is on trial for the rape of former ministerial adviser Britanny Higgins, to which he has pleaded not guilty, and for tampering to be the only direct cause available.

The former leader told AFP detectives Emma Fitzgibbon and Marcus Brannan he knew he was "done" when Ms Higgins' allegations were published and said a journalist friend had been doing her best to help him.

"I understand [a reporter] has got footage of me trying to be across mental health for the first time because I'm at my wit's end," he said.

"Because I have politics."

Mr Drummond said the essence of the case was "whether Britanny Higgins made up the allegations of what happened to her on the night she was with Bruce Lehmann."

"If she did, it was obvious," he said.

"She (allegedly) said she was done, she has done consistently for 3 years."

He added that there was no way Ms Higgins could have continued to work in parliament after having had about 10 drinks and falling asleep on the couch in Senator Reynolds' office.

"You cannot consent to something if you're passed out," he said.

Mr Whitmore suggested to jury Ms Lehmann had "intoxicated" Ms Higgins.

"That's very, very important to a case like this where we have there's already been a bar hit by the media," he said.

"We are here for prosecution's case."

ACT Chief Justice Lee McCallum is expected to give a summary to the court on Wednesday and then return the jury for a deliberation.

SCARBOROUGH PROJECT ENVIRONMENT PLANS NOTICE

Woodside Energy Scarborough Pty Ltd (ACN 630 177 227) is proposing to conduct activities in Commonwealth waters for the Scarborough Project.

Three Environment Plans (EPs) have been developed in accordance with the regulatory framework by the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) under the Offshore Petroleum and Greenhouse Gas Storage Act 2006. The activities proposed under these EPs are set out in the summary environmental approval of the Scarborough Offshore Project (OCP) and will be conducted in the 400-relevant premises in the OCP. The OCP includes a detailed description of activities and an assessment of impacts with controls to ensure acceptable impacts. The OCP was accepted by NOPSEMA in March 2022 after an extensive public consultation process.

Woodside Energy

Scarborough Project Environment Plan Notice

Woodside Energy Scarborough Pty Ltd (ACN 650 177 227) is proposing to conduct activities in State Coastal waters of the Dampier Archipelago for the Scarborough Project.

The Environment Plan (EP) has been developed in accordance with the Petroleum (Submerged Lands) (Environment) Regulations 2012 administered by the Department of Mines Industry Regulation and Safety (DMIRS). The primary environmental approval for the Scarborough Development Narrative component was granted through Ministerial Statement No. 1172 dated August 2021.

Scarborough Trunkline Installation (State Waters) Environment Plan

Activity summary:	Seabed intervention and trunkline installation activities in State waters for the Scarborough Development.
Location:	Dampier Archipelago, North West Australia between the Coastal waters boundary and the Plus LNO facility.
Commencement date:	Anticipated around Q1 2023
Estimated duration:	Approximately 24 months across multiple campaigns. Activities will typically occur 24 hours per day, seven days a week, noting that not all activities will be undertaken at the same time.
Commencement of consultation:	March 2022
EP submission to DMIRS:	01 June 2022

Providing Feedback

Woodside consults relevant persons in the course of preparing EPs to notify them of the activity, to obtain relevant feedback to inform its planning for proposed petroleum activities in the region and to obtain input as to appropriate measures that may be adopted to mitigate the adverse environmental effects that the proposed petroleum activities may otherwise cause.

If you would like to comment on the proposed activities outlined above, or would like additional information, please contact Woodside before **Wednesday, 2 November 2022** via:

E Feedback@woodside.com.au
Tel Fax: 1800 442 977

A detailed consultation information sheet for the EP is available at: www.woodside.com.au/scb/ep/consultation-activities

Please note that stakeholder feedback will be communicated to DMIRS as required under legislation. Woodside will communicate any material changes to the proposed activity to affected stakeholders as they arise.

Please note that your feedback and our response will be included in our Environment Plan for the proposed activity, which will be submitted to DMIRS for acceptance in accordance with the Petroleum (Submerged Lands) (Environment) Regulations 2012.

Please let us know if your feedback for the activity is sensitive and we will make the known to DMIRS upon submission of the Environment Plan in order for the information to remain confidential to DMIRS.

Woodside Energy

Scarborough Project Environment Plans Notice

Woodside Energy Scarborough Pty Ltd (ACN 650 177 227) is proposing to conduct activities in Commonwealth waters for the Scarborough Project.

Three Environment Plans (EPs) have been developed in accordance with the regulations administered by the Regional Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) under the Offshore (Petroleum and Gas) (Environment) (Regulation) Act 2006. The activities proposed under these EPs are set out in the primary environmental approval of the Scarborough Offshore Project Proposal (OPP) and will be conducted in line with relevant provisions in the OPP. The OPP includes a detailed description of activities and an assessment of impacts, with controls to ensure acceptable outcomes. The OPP was approved by NOPSEMA in March 2020 after an extensive public consultation process.

Scarborough Seabed Intervention and Trunkline Installation Environment Plan

Activity summary:	Seabed intervention and trunkline installation activities in Commonwealth waters for the Scarborough Development.
Location:	Activities can happen Commonwealth – State waters boundary approximately 20 km north of Dampier Archipelago, Scarborough gas field located at Woodside-operated life boats WA-41-L, approximately 20 km east-northeast of the Burns Peninsula.
Earliest commencement date:	Seabed intervention activities in Commonwealth waters, vessel availability and weather constraints.
Estimated duration:	Trunkline installation activities Q4 2022 pending successful completion of State waters installation scope, approximately 24 months across multiple campaigns.
Commencement of consultation:	August 2022
EP submission to NOPSEMA:	01 December 2022

Scarborough Drilling & Completions Environment Plan

Activity summary:	Drilling and completion well installation activities for high pressure development wells and the proposal for a further five additional completion wells for the Scarborough Development.
Location:	204 km north-northwest of Exmouth, 278 km east-northeast of Dampier.
Earliest commencement date:	Q4 2022 pending approvals, vessel availability and weather constraints.
Estimated duration:	6-24 days per well. Activities will typically occur 24 hours per day, seven days per week.
Commencement of consultation:	July 2021
EP submission to NOPSEMA:	6 November 2021

WA-41-L and WA-42-L Scarborough Subsea Infrastructure Environment Plan

Activity summary:	Seabed surveys and installation of subsea production infrastructure required to support future production from the Scarborough Field.
Location:	24 km north-northwest of Exmouth, 278 km east-northeast of Dampier.
Earliest commencement date:	H2 2022 pending approvals, vessel availability and weather constraints.
Estimated duration:	Approximately 18 months (contingent) for the survey and installation activities. When underway, activities will be conducted 24 hours per day, seven days per week.
Commencement of consultation:	September 2022

Providing Feedback

Woodside consults relevant persons in the course of preparing EPs to notify them of the activity, to obtain relevant feedback to inform its planning for proposed petroleum activities in the region and to obtain input as to appropriate measures that may be adopted to mitigate the adverse environmental effects that the proposed petroleum activities may otherwise cause.

If you would like to comment on the proposed activities outlined above, or would like additional information, please contact Woodside before **Wednesday, 2 November 2022** via:

Scarborough Project Environment Plans Notice

Woodside Energy Scarborough Pty Ltd (ACN 650 177 227) is preparing to conduct activities in Commonwealth waters for the Scarborough Project.

Three Environment Plans (EPs) have been developed in accordance with the regulations administered by the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) under the Offshore Petroleum and Greenhouse Gas Storage Act 2020. The activities proposed under these EPs are set out in the primary environmental approval of the Scarborough Offshore Project Proposal (OPP) and will be conducted in line with relevant provisions in the OPP. The OPP includes a detailed description of activities and an assessment of impacts, with controls to develop acceptability criteria. The OPP was accepted by NOPSEMA in March 2022 after an extensive public consultation process.

Scarborough Seabed Intervention and Trunkline Installation Environment Plan

Activity summary:	Seabed intervention and Trunkline installation activities in Commonwealth waters for the Scarborough development.
Location:	Activities set from the Commonwealth – State waters boundary approximately 32 km north of Damper to the Scarborough gas field located at Woodside-operated site block WA-51-L, approximately 234 km west-northwest of the Burnt Peninsula.
Earliest commencement date:	Seabed intervention activities: Q4 2022 pending approvals, vessel availability and weather constraints. Trunkline installation activities: Q4 2022 pending successful completion of State waters installation scope, approvals, vessel availability and weather constraints.
Estimated duration:	Approximately 24 months across multiple campaigns.
Commencement of consultation:	August 2021
EP submission to NOPSEMA:	23 December 2021

Change to our standard variable interest rate.

Scarborough Drilling & Completions Environment Plan

Activity summary:	Drilling and subsea tree installation activities for eight planned development wells and the potential for a further three potential contingency wells.
Location:	244 km north-northwest of Esmerath, 234 km west-northwest of Damper
Earliest commencement date:	H2 2022 pending approvals, vessel availability and weather constraints.
Estimated duration:	~ 3000 days per well. Activities will be conducted 24 hours per day, seven days per week.
Commencement of consultation:	July 2021
EP submission to NOPSEMA:	8 November 2021

WA-51-L and WA-52-L Scarborough Subsea Infrastructure Environment Plan

Activity summary:	Subsea well surveys and installation of subsea production infrastructure required to support future production from the Scarborough Field.
Location:	244 km north-northwest of Esmerath, 234 km west-northwest of Damper
Earliest commencement date:	H2 2022 pending approvals, vessel availability and weather constraints.
Estimated duration:	Approximately 18 months (cumulative) for the survey and installation activities. When underway activities will be conducted 24 hours per day, seven days per week.
Commencement of consultation:	September 2022

Providing Feedback

Woodside consults relevant persons in the course of preparing EPs to notify them of the activity, to obtain relevant feedback to inform its planning for proposed petroleum activities in the region and to obtain input as to appropriate measures that may be adopted to mitigate the adverse environmental effects that the proposed petroleum activities may otherwise cause.

If you would like to comment on the proposed activities outlined above, or would like additional information, please contact Woodside before **Wednesday, 2 November 2022** via:

E: Feedback@woodside.com
Toll free 1800 442 977

A detailed consultation information sheet for each EP is available at www.woodside.com.au/woodside-consultation-activities. You can also subscribe to receive future information on proposed activities.

Please note that stakeholder feedback will be communicated to NOPSEMA as required under legislation. Woodside will communicate material changes to the proposed controls to affected stakeholders as they arise.

Please note that your feedback and our response will be included in our Environment Plan for the proposed activity, which will be submitted to NOPSEMA for acceptance in accordance with the Offshore Petroleum and Greenhouse Gas Storage Act 2020 (OPGSA) Regulations 2020 (CR).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the relevant EP in order for this information to remain confidential to NOPSEMA.

Scarborough Project Environment Plan Notice

Woodside Energy Scarborough Pty Ltd (ACN 650 177 227) is preparing to conduct activities in State Coastal waters of the Damper Antipole for the Scarborough Project.

The Environment Plan (EP) has been developed in accordance with the Petroleum (Submerged Lands) (Environment) Regulations 2012 administered by the Department of Mines Industry Regulation and Safety (DMIRS). The primary environmental approval for the Scarborough Gas Development Project component was granted through Ministerial Statement No. 1172 dated August 2021.

Scarborough Trunkline Installation (State Waters) Environment Plan

Activity summary:	Seabed intervention and trunkline installation activities in State waters for the Scarborough development.
Location:	Damper Antipole, North-West Australia between the Coastal waters boundary and the Pluto LNG facility.
Commencement date:	Anticipated around Q1 2023.
Estimated duration:	Approximately 24 months across multiple campaigns. Activities will typically occur 24 hours per day, seven days a week, noting that not all activities will be undertaken at the same time.
Commencement of consultation:	March 2022
EP submission to DMIRS:	23 June 2022

Providing Feedback

Woodside consults relevant persons in the course of preparing EPs to notify them of the activity, to obtain relevant feedback to inform its planning for proposed petroleum activities in the region and to obtain input as to appropriate measures that may be adopted to mitigate the adverse environmental effects that the proposed petroleum activities may otherwise cause.

Centre to offer medical services and child care

CAIN ANDREWS & KATYA MINNS

The Shire of Broome has approved a development application for a health and wellness centre which will feature a creche able to look after up to 100 children at a time.

The centre will also supply accommodation for medical centre staff with four short-term units to be built in the north-eastern corner of the lot.

The health and wellness centre will feature a dental practice, a GP clinic, pharmacy, beauty clinic, cafe, psychologist's office, physiotherapy office and two medical imaging tenancies with the project estimated to cost just over \$6.6m.

The development applicant will also have to donate just over \$30,000 for public art or to develop a public art installation equal to that value, thanks to the Shire's local planning scheme.

The site will be at Frederick Street between the Broome Boulevard Shopping Centre and the Broome Recreation and Aquatic Centre where the St Martin de Porres Re-engagement school sits. The school is now searching for a new location, according to the Shire agenda.

Shire president Desiree Male said the development was a step in the right direction for the tourist town.

"To have a private developer come in and put a proposal forward to build something (as) significant as this is fantastic," she said.

"Across the board, we are lacking dreadfully (in child care) and anything that can add to the shortfall is a benefit."

"We're really supportive and thankful that we have attracted this sort of investment in town and we look forward to when it opens."

The site of the proposed wellness centre development at Frederick Street.

Tanami sealing set for 10-year build timeline

DAN JERVIS-BARDY

The sealing of the Tanami track in northern WA will take a decade to complete, the Albanese Government has confirmed.

But Infrastructure Minister Catherine King's office is defending the timeframe, saying it would ensure a consistent and manageable stream of work for local contractors and time for proper consultation with communities along the route.

It was revealed during Senate estimates that \$434 million in Commonwealth funding to seal the Tanami was spread out across the next 10 years, suggesting that was how long it would take to finish the much-needed upgrade.

Sealing the track promises

huge social and economic benefits for communities in the East Kimberley, including making it cheaper and easier to transport goods.

The Opposition slammed the decade-long timeline as "completely unacceptable", accusing both the Albanese and McGowan governments of failing to prioritise the project.

Ms King's office confirmed — and defended — the plan in a statement to The West Australian.

"A 10-year rolling delivery time frame will ensure a steady and sustainable pipeline of works for local construction crews," a spokeswoman said.

"As a large, unsealed and remote road, a staged approach over time also allows for the necessary

planning, environmental approvals and consultation to occur — including with First Nations communities."

The spokeswoman said work on the first portion of the 313km track was expected to start in the middle of the year. The project — jointly funded with the WA Government — is expected to cost \$542 million.

"The WA Government is currently developing a delivery strategy which will inform the project's rollout for upgrading and sealing the road," she said.

"Both governments are working together to ensure construction can start as soon as possible on the project, which will improve road safety, connectivity as well as freight access and productivity."

YOU'RE INVITED TO COME AND TALK WITH WOODSIDE ABOUT OUR ACTIVITIES.

Woodside is preparing Environment Plans and wants to discuss these with relevant persons, before submission to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

Surf club rides crest of wave

CAM ANDREWS

The new Broome Surf Life Saving Club is set to open to the public by late July, with the main construction work of the \$5.5m project complete.

The club, due open to the public by late July, features a range of new facilities including new and increased storage areas, an education and function room, a new gym, bar and public toilets and showers. And the new facilities are already drawing in new members.

Broome Surf Life Saving Club Building director Rob Aristel said he was excited to see the building near completion after working on the project for the better part of a decade.

"In 2016 we started to get the project off the ground as the old building had reached the end of its life. What we're trying to do is make the club fully sustainable so it will be a lot easier for us to replace equipment, attract more members and even expand our patrolling time."

Broome Surf Life Saving Club manager Lauren Henderson said the new building would allow the

Bar manager Chris Andrzejczek, BSLSC chairperson Bec Farkunga, BSLSC Education director Carrie Selten, BSLSC Building director Rob Aristel, Broome Surf Life Saving Club manager Lauren Henderson. Picture: Cam Andrews

club to better service the community.

"The new facilities basically enhance our ability to achieve our core mission, which is to keep the community safe," she said. "It also enables us to purchase more equipment and have better training in our training rooms."

Ms Henderson said the new club was already attracting more members. "We've got the highest number of rippers enrolments this year than we've had since pre-COVID," she said. "There's close to 200 new enrolments and I think the excitement around the new club is part of the reason for that."

The new building doesn't just benefit our

club, but benefits the whole community as well."

Mr Aristel said the build wouldn't have been possible without sponsorship. "I'd like to thank Surf Life Saving WA and all of the sponsors for their ongoing support, we couldn't have done it without you," he said.

Major Sponsors for the project include Totally Workwear, Cleanaway, Lion, Broome Plumbing and Gas and Galvins Plumbing Supplies. Major contractors involved in the project include CWD Builders, Laird Tran Studios and the Shire of Broome. See more pictures inside the club at broomead.com.au

Man jailed for robberies on hotels

KATYA MURIN

The accomplice of a gang who acted as a "lookout" for his fellow offenders at the Oaks Hotel, a few days after breaking into and stealing alcohol from the Roebuck Bay Hotel, has been sentenced to 31 months imprisonment.

Anton Caleb Joseph Galova faced Broome's District Court on May 29 and pleaded guilty to six counts of aggravated burglary and stealing.

The court was told the 24-year-old was out drinking with friends and family at a residence before being convinced to accompany four other men to break into the Roebuck Bay Hotel at about

3am on March 18, 2022. Not wanting to be left behind, he went along with the group — helping peel open a metal door to one of the bars within the hotel and stealing 15 bottles of wine.

Three days later, he and the group went to Oaks Hotel on Robinson Street about 2am with the intention to burgle the bar for alcohol.

Galova kept a lookout for security as his fellow offenders used an axe to break the glass of the restaurant to gain entry into the bar, stealing bottles of liquor off the shelves.

An hour after leaving the hotel, the group returned for more alcohol but security was already investigating

the scene and had called police.

The police approached the men leaving the hotel on Guy Street, uncovering bottles of alcohol in their bags and immediately took them into custody.

Defence lawyer Nick Brookes said his client was "not a sophisticated individual" and that Galova did not believe he was fully involved in the crime, hence his co-operation with police when providing statements against the others involved.

District Court Judge Michael Bowden sentenced Galova to 31 months jail, backdated to March 21, 2022. He will be eligible for parole after serving 15½ months.

Muster ends with Party in the Park

CALLY DUPE

The East Kimberley's biggest festival came to a big close when hundreds gathered at Celebrity Tree Park for the Ord Valley Muster's Horizon Power Party in the Park.

The event — likely to become a staple of the Muster — was a true East Kimberley celebration, with performances, workshops, displays and fun for the family with local and guest entertainment.

Among the line-up was belly dancing, the East Kimberley College Primary School Choir, the Wild Brumby Line Dancers, the East Kimberley Community Choir, and the East Kimberley College Band.

Also featuring were bands Cruise Control, Girls from Oz and the Band of the First Brigade, from Darwin.

But arguably the most popular activity at this year's event was the Sorby Silver Search, a new rendition of what was for decades called the Diamond Dig.

Like many years before, participants took to three giant sand pits to dig for pop sticks marked with numbers corresponding with various prizes, which ranged from pond lights and a truck wash, to a stunning silver necklace.

There were three categories, a toddler section, kid section and adult section.

Ralner Winkler's persistence paid off, and after many attempts he won the top prize in the Ord Valley Muster Silver Search — a custom designed necklace designed by Kimberley Fine Diamonds and valued at \$1200.

The laughs just kept coming at Comedy in the Park show

CALLY DUPE

It was a night of side-splitting laughter at Kununurra's sold out Comedy in the Park, with a huge crowd of 900 turning out to enjoy the highlights of the Boab Meats Ord Valley Muster.

The comedy line-up was hand-picked by the festival organisers to ensure the laughs were non-stop all night, and included comedians Steph Tisdell, Chris Franklin, Bev Killick and Fabian Woods.

It was a global audience at this year's Comedy in the Park, with guests The Kim-

berley Echo spoke with bailing from across Australia and as far away as Oregon in the US.

Hosted by the hilarious self-confessed yobbo Franklin, the crowd roared with laughter listening to his mischievous antics and epic stories, tapping into everyone's inner braggart.

From his flannelled shirt to his double plunger thongs, Franklin's "Hogan-esque" style of comedy touched on the delicate issues of discovering he is one-sixteenth Aboriginal, booze and relationships.

"The audience was bril-

liant, we've had a great time up here, the Ord Valley Muster has looked after us well," Franklin said.

A proud Nooncar Yamman, Woods had the crowd chuckling with funny tales of traditional names and dances.

Bold, brassy and brutal honest, Killick had everyone shedding tears of laughter with her rough talking and mama jokes about plugging loving joggy mothers and grubby teenage boys.

Tisdell ended the show with her self-deprecating humour that kept audiences chuckling.

The crowd at this year's Comedy in the Park at the Ord Valley Muster. Picture: Ben Broadwith

Burney to blitz WA for Voice

DAN JERVIS-BARDY

Minister for Indigenous Australians Linda Burney will next month spend a full week criss-crossing WA to build grassroots support for the Voice to Parliament.

Ms Burney told an audience in Perth on Monday the people of WA had a "big job" in helping the referendum across the line.

In a speech to the Australian Institute of Aboriginal and Torres Strait Islander Studies summit, the minister said she would travel from "Kununurra to Claremont, from Perth to the Pilbara" to listen and talk to voters about the Voice to Parliament.

The rallying cry came as Canning MP Andrew Hastie launches a fundraising drive to position himself as a leading figure in the No campaign. The outcome in WA could be crucial because a majority Yes vote is needed in at least four of the six States to succeed.

Ms Burney recalled the shocking abuse she received when, as a State minister in 2010, she returned to the

Linda Burney

regional NSW town where she grew up.

She revealed how a man, who she suspected went to the same school as her, said: "You know, Linda, the day you were born was one of the darkest days this town has ever seen."

Ms Burney said the "nasty comments" she received in the schoolyard, were now directed at her on Twitter and Facebook.

She told the summit it was the First Nations people who were struggling to get their

voices heard, which gave strength to keep prosecuting the case for a Voice to Parliament.

"This referendum is once-in-a-lifetime opportunity," she said.

"We have within our grasp the chance to make a positive change that will last generations."

While Ms Burney and other Government ministers are upbeat about the referendum, polls suggest support is in decline.

The latest News showed fewer than half voters intended to support the constitutional change.

Yes campaign director Dean Parkin said the "tightening in the numbers" was understandable after heated political debate.

"The conversation has been bogged in Canberra politics, in a fair bit of negativity there," Mr Parkin told Sky News.

"That phase is coming to an end and so that will allow us to increase the focus on getting some more cut through on that conversation that's starting to grow significantly in communities."

Rio reaches \$1b Range milestone

CHEYANNE ENCISO

Rio Tinto has spent \$1 billion with WA businesses as it progresses the development of its Western Range joint venture with China Baowu Steel Group.

Simon Trott, iron ore chief executive of Rio Tinto, said the \$1b spend marked a considerable milestone.

"Rio Tinto spends billions of dollars with local suppliers across Western Australia and the Pilbara every year, helping support thriving communities across the State by providing local jobs for local people," he said.

The 25 million tonnes-a-year Western Range project will help sustain production of Rio's flagship Pilbara blend product from its existing Paraburdoo mining hub as the Eastern Range project depiles. China Baowu said it was pleased to see the Western Range project progressing smoothly.

Premier Roger Cook said significant projects such as the Western Range reinforced WA as an attractive and secure destination for business and investment.

"I want to commend Rio Tinto and Baowu on this latest project milestone and acknowledge their efforts in investing in WA to ensure WA businesses and workers benefit most," he said.

Rio in March reported it had spent \$2.6b with more than 2400 WA and Indigenous businesses in 2022 as part of its local buying program.

The figure included \$618m with Pilbara-based businesses, \$504m with Indigenous companies across WA, and \$418m with businesses run by traditional owners.

Rio Tinto iron ore chief executive Simon Trott and China Baowu vice-president Hou Angui.

We are hiring

6.4.4 Karratha FeNaCING Festival – 5 and 6 August

- On 5 and 6 August 2023, Woodside had a stand at the annual FeNaCING Festival in Karratha.
- Members of Woodside’s Corporate Affairs and Operations teams actively engaged with the community to discuss proposed EP activities.
- The stand included Consultation Information Sheets for a number of EPs including this EP.
- An EP consultation banner with QR code (linked to the Consultation Activities page on the Woodside website), a Scarborough Project banner, and Browse Project banners were displayed at Woodside’s stand.
- Approximately 2,000 people visited the Woodside stand (based on the number of completed consultation forms and questionnaires).
- All community members were encouraged to provide their views on Woodside activities through the Woodside feedback form on the Woodside website, or to subscribe to Woodside updates. An iPad was available for stakeholders to do this on the spot.
- This consultation opportunity was promoted in the Pilbara News on 2 August 2023, and a story appeared on the Woodside North West Facebook page on 2 August 2023.
- Community discussions centred on:
 - o Update of Woodside activities, and employment and contracting opportunities;
 - o General Scarborough project update and operations. A Scarborough operations map and Floating Production Unit images were available. There was general community interest and support for the project. Discussions included:
 - Location of the fields, distance from shore and water depth
 - Length of the pipeline
 - Interest that the Field Production Unit would not be fixed to the seafloor and its size
 - Progress and development of Pluto Train 2, and role of Pluto Train 1
 - Scarborough commencement and field life;

Melski's murals brought to life

DANIEL SPENCE

Tambrey Primary School has successfully brought renowned artist Mel Melski, popularly known as Melski, and her sister Tash to create three vibrant murals around the school premises.

With funding support from corporate entities like Woodside, FMG, and Pilbara Real Estate, as well as community contributions from Jervano, Martin, Santos, Yara, and QCEB Energy, the school raised more than \$20,000 to bring this art project to life.

Home to nearly 700 students, with a third of them having Indigenous backgrounds, school Deputy Principal Brett Whitbread and visual arts specialist Felicity Collins said the mission of the project was to celebrate diversity and create a sense of belonging by reflecting students' culture through artwork.

The school's mission was to create a profound sense of belonging by reflecting the students' culture through artwork.

What particularly attracted the school to Mel's artwork was its unique point-by-point style, which allowed students to actively participate in the mural creation process.

eager to engage the entire school community, the school declared a special "paint week," during which more than 400 students enthusiastically joined hands to contribute to the murals.

Throughout the week, students not only participated in the creation of the murals but also enjoyed immersive art sessions in the park, including painting, drawing, collaging, and chalk drawings – under the enchanting winter weather.

The entire experience served to nurture the students' creativity and appreciation for art, leaving a lasting impact on their artistic aspirations.

Ms Collins said she was thrilled to see the whole school coming together for a week of collaborative art.

"We were delighted to see students immersed in a week of collaborative art," she said.

"Students not only contributed to the creation of the mural but also with their involvement in the immersive art in the park session – which included painting, drawing, collaging and chalk drawings – while all outside soaking up the winter weather."

The artist was brought to the school to create murals.

this is your chance to make a change

Chevron's Community Spirit Fund is offering up to \$15,000 towards local projects.

Beyond supplying affordable, reliable, ever-cleaner energy – we believe we have an important role to play in helping local communities build a vibrant and prosperous future.

We do this by investing in programs which contribute to areas of health and wellbeing, education, environment and building thriving communities.

We're calling for applications for the Chevron Community Spirit Fund, offering donations of up to \$15,000 to not-for-profit organisations operating in the following Northwest locations:

- Carnarvon
- Coral Bay
- Dampier
- Denham
- Exmouth
- Karratha
- Onslow
- Port Hedland
- Roebourne
- Shark Bay

Applications are open now until 13 August 2023. To apply, head to australia.chevron.com

6.4.5 Passion of the Pilbara Festival – Onslow – 17 August 2023

- Woodside had a stand at the Passion of the Pilbara festival in Onslow.
- Members of Woodside’s Corporate Affairs team actively engaged with the community to discuss proposed EP activities.
- The stand included Consultation Information Sheets for a number of EPs including this EP.
- Approximately 100 people visited the Woodside stand.
- Community members were encouraged to provide their views on Woodside’s activities through the Woodside feedback form on the Woodside website, or to subscribe to Woodside updates.
- This consultation opportunity was promoted in a story on the Woodside North West Facebook page on 17 August 2023.
- Community discussions centred on:
 - a. Update of Woodside activities and employment opportunities.
 - b.
 - c. General Scarborough project update and operations. A Scarborough operations map and Floating Production Unit images were available. There was general community interest and support for the project. Discussions included:
 - Support for the project and dissatisfaction about protester activity against the project
 - Number of jobs during construction
 - Location of activities (noting activity was not off the coast of Onslow).
- One individual asked in relation to the Scarborough Project what Woodside was doing to protect the environment.

- Two individuals subscribed to the Woodside website to receive consultation information
- Kariyarra Aboriginal Corporation discussed business opportunities
- Nyamal Aboriginal Corporation discussed training and job opportunities
- Opportunities for engagement with Prescribed Body Corporate's (PBC's).

Pilbara News Advertisement – 13 September 2023

City of Karratha Mayor Peter Long. Picture: Tom Zuurmaier

Mayor runs again as candidates put forward pitches

DANIEL SPENCE

Nominations have closed for the 2023 Karratha mayoral and councillor elections, with the list of candidates running to be the city's next mayor being released.

Peter Long — who has been in the position since 2011 — will be running again and said, if re-elected, he would continue to provide Karratha with intelligent, safe and inclusive leadership.

"I am a full-time mayor, always able to receive your ideas," he said. "I love the Pilbara and our community."

Regional Development Australia Pilbara chief executive and former local government minister Tony Simpson is also running for mayor.

His vision is to join forces with State and Federal entities to progress childcare, health and housing solutions.

"I would work to draw major brand investments in retail and leisure to provide more options for residents. Identify land for a foreshore entertainment hub and infuse Karratha with festivals and quality entertainment," he said.

Brenton Johannsen — who ran for the seat of Durack at the recent Federal election under One Nation — said he would donate the entire mayoral allowance to charity.

"I will be a committed full-time mayor, my goal is to visit all businesses and resident groups on a regular basis to touch base and discuss any new issues," he said.

Mr Johannsen said his aims would be neighbourhood safety, more opportunities for locals, ratepayer discounts for local facilities, moving airport smokers' areas, and eco-friendly weed management.

As a sitting councillor, radio announcer, parent and former local business owner mayoral candidate Pablo Miller said he had got to know the people of Karratha.

"As your mayor, I will continue to not only listen but be a strong advocate for our community," he said.

Mr Johannsen said he was interested in expanding opportunities for young people and families, growing local and cultural tourism, supporting businesses and bolstering mental health services.

The owner of the North West Brewing Co Daniel Scott has a vision as mayor to grow Karratha's economy.

His plan is to create an education and sporting precinct between the TAFE and St Luke's College, with accommodation for secondary and tertiary students.

His plans also include a new home for the Pilbara Universities Centre, and a sporting hub for rugby, soccer, hockey and gymnastics.

Those running for council include Daniel Scott, Kieran Durr, Wayne Mothershaw, Mr Johannsen, Sarah Roots, George Levisianos, Bradley Dawey, Mr Simpson, James Corvo, Joseph Almonte and Geoff Harris.

Elections will be held for the four vacancies on October 21st.

South Hedland Square, Port Hedland – 19 September 2023

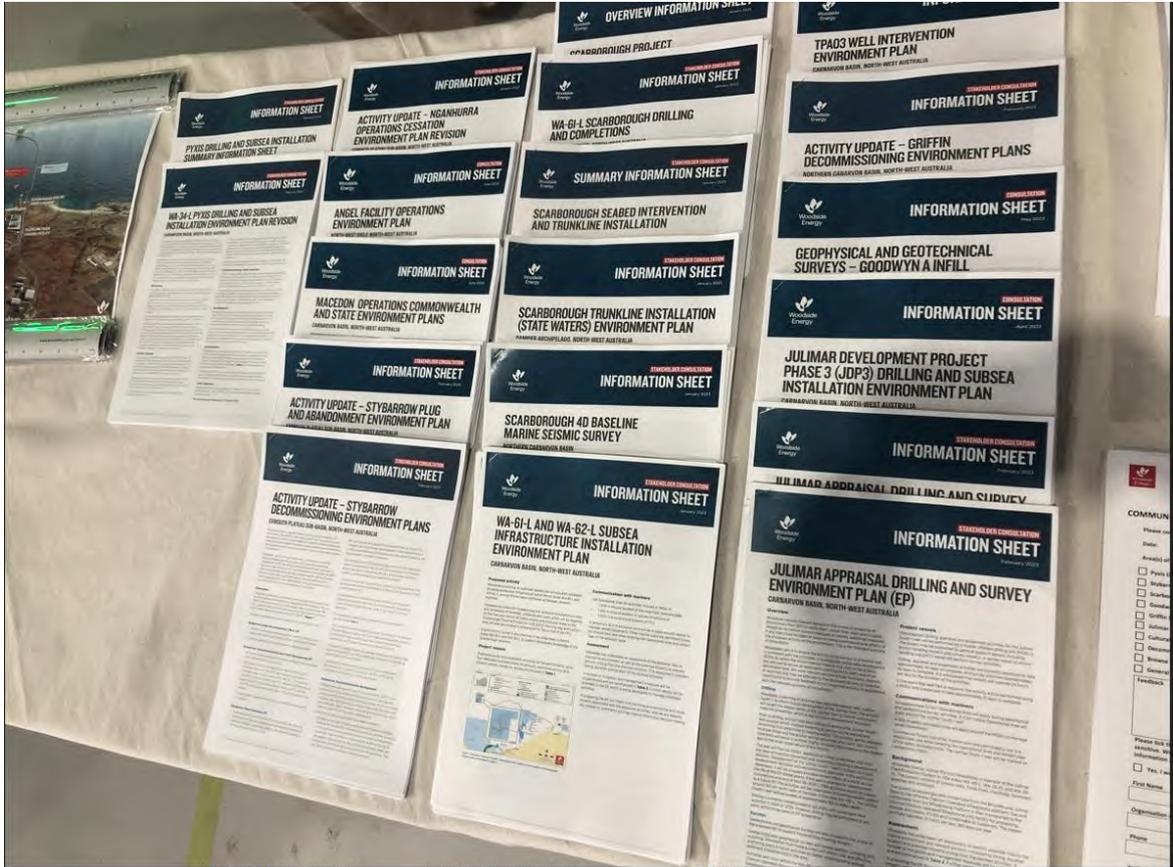

Woodside Office, Roebourne – 20 September 2023

6.5 Gascoyne region community activities

6.5.1 Community information session – Exmouth – 17 June 2023

- Woodside supported the PHI Helicopters community open day at the Exmouth Aerodrome on Saturday 17 June (10am – 1pm).
- Members of Woodside's Corporate Affairs, Environment and Scarborough Project teams actively engaged the community to discuss proposed EPs.
- Approximately 300 community people attended the event (adults and children).
- The majority of people wanted to understand Woodside's connection with PHI. There were also queries on contracting and job opportunities, including specifically for Scarborough activities.
- General questions from approximately five community members included:
 - Whales - what Woodside is doing to protect whales, what the impact to whales might be
 - The Scarborough FPU and nature of this i.e. is it DP or moored to the seabed, was it like an FPSO
 - General interest questions on Scarborough project - location, activities (i.e. trunkline installation, construction work at Pluto gas plant (within existing footprint), trunkline size and routing and why the location was chosen, field life and start up timing
 - Turtle nesting and lighting controls
 - Funding for whale shark research
- Many of the Consultation Information Sheets available were taken by attendees. Two attendees said they were taking the information sheets so they could see pipeline routes (for fishing opportunities), specifically mentioning permit numbers they were after.

Exmouth Community Information Session – Geotargeted social media campaign – June 2023

A Facebook information campaign was targeted in Exmouth to ensure it reached communities where the Consultation Information Session was planned to be held. Geotargeting points were also included for spaces between towns, cities and shires to ensure no areas were missed – you’ll see below there are latitude and longitude references for those locations.

Dates: 15 June 2023 – 17 June 2023

Platform: Facebook

Ad type/placement: Feed tile and story

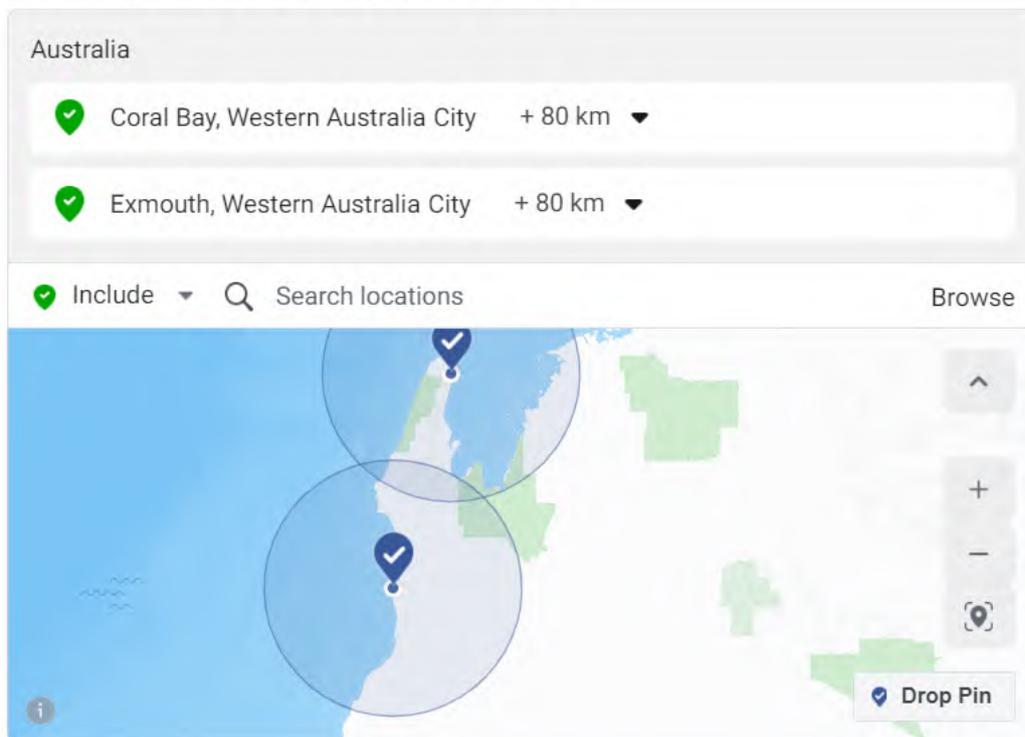

Reach: 6,801

Impressions: 8,237

Geotargeting (see below)

- 80km radius around Exmouth
- 80km radius around Coral Bay

Reach people living in or recently in this location. **i**

6.6 Presentation to Karratha Community Liaison Group – 29 June 2023

ENVIRONMENT PLAN CONSULTATION

- Changes to Commonwealth Environment Plan (EP) consultation requirements.
- Woodside is now consulting based on the **environment that may be affected (EMBA)** by a proposed petroleum activity rather than within the Operational Area.
- The EMBA is the largest spatial extent where unplanned events, no matter how unlikely, could potentially have an environmental consequence.
- Any person or organisation who does not wish to continue to receive EP consultation materials where they have only been assessed as 'relevant' for unplanned events in the EMBA, under the EP consultation requirements, please advise us in writing and we will not send further information.
- However, you should be aware that this request will need to be recorded in our EP documents and will be publicly available.
- We will be holding a drop-in session after this meeting for anyone in community who would like to know more about any of our EPs.

FIND OUT MORE ABOUT OUR PROPOSED ACTIVITIES

WOULD YOU LIKE TO KNOW WHAT WOODSIDE HAS PLANNED ON LAND AND SEA?

We emphasise open and transparent communication and feedback on our activities. To facilitate this, we have a range of consultation documents that we make available for review and comment.

You can access our consultation information sheets and provide feedback by visiting woodside.com/consultation-activities or by scanning the QR code.
