Applicant: NORTH CENTRAL RESOURCES, LLC Reference ID: North Central Resources No. 1 Prep Plant & Freshwater Impoundment O200113 B12-608-1800

dep (12/06/2012)

Status: ERIS - Closed - Issued

Type: Surface Mine Application #1

Permit ID: O200113

Printed: Oct. 27, 2020 9:56 AM

New Reporting Standards

The West Virginia Department of Environmental Protection (WVDEP) Division of Mining and Reclamation application fees change June 16, 2011.

Effective June 16, 2011:

- Notice of Intent to Prospect (PRO) \$2,000.00, regardless of tonnage.
- Surface Mine Application (SMA) \$3,500.00.
- Dam Control Application (DAM) \$300 application fee. (Fee applies to each dam certificate to be issued for new, modification, abandonment, or transfer categories.)
- Permit Revision (REV) \$2,000.00, if significant.
- Incidental Boundary Revision (IBR) \$2,000.00, if significant.
- Permit Renewal (RNW) \$3,000.00, if Quarry \$500.00.
- Permit Amendment (AMEND) \$2,550.00.
- Permit Transfer (19A) \$1,500.00 per permit, Quarry \$500.00 per permit.
- Operator Assignment (19) \$1,500.00 per permit.
- Inactive Status (INA) \$2,000.00, Quarry is free.
- Coal Removal for Construction Purposes (4C) \$3,500.00, paper application.

The West Virginia Department of Environmental Protection (WVDEP) Division of Mining and Reclamation has implemented the following new reporting standards.

Effective January 1, 2009:

- The new eMap file should conform to the WVDEP eMap standards and be attached in the "Maps and eMap Data Section" toward the end of each application. See documentation in that section.
- The "Maps and eMap Data Section" should generally contain, where appropriate, the proposal, drainage, and subsidence control maps along with the eMap. Please attach other drawings and maps in the specific section where they are discussed.
- DO NOT refer to any information existing only in another application, please provide the information in this application.

$\tilde{\circ}$	_	0 feet of any public park; or
$\tilde{\bigcirc}$	0	0 feet of a cemetery.
If any of the		vide proof of Valid Existing Rights (VER). Identify as Attachment C-6.

C-7: Right-Of-Way/Occupied Dwelling Information

_=	The state of the s
C	C-7. Complete the following to indicate whether or not any portion of the proposed permit area is:
	A. Within 100 feet of the right-of-way of any public road, except where mine haulage or access road
	joins such right-of-way;
	Yes No
	If Yes, provide the basis for this response and identify by checking the item(s) which apply:
	Proof of Valid Existing Rights; or
	Public Notice by Advertisement.
	B. Within 300 feet of any occupied dwelling;
	Yes No
	If Yes, provide the basis for this response and identify by checking the item(s) which apply:
	Proof of Valid Existing Rights; or
	Notarized written waivers which identify the dwelling(s) by number
	(corresponding to the proposal map).

Instructions: Bonding Instructions

Complete Bond Calculation Tables (D-2 Table 1-4) for each mining category applicable within the site boundary. It is **very important** that you complete this section in sequence they appear in the menu.

For Loadout Only and Haulroad Only sites, you do not need to complete a Bond Calculation Table.

Upon completion of the tables, you are ready to complete the General Bonding Section. Here you will break the site down by increment(s) and mining categories. You will see 3 additional options here that you do not have a direct Bond Calculation table for: EPZ Fill, contemporaneous reclamation waiver, and haulroad only. These are only available at this level, to properly reflect the override in rate from the tables.

If any of the tables are **changed after** the General Bonding Section and Bond Totals sections have been visited, you will need to open these pages in sequence and mark the section as incomplete and save the pages. This allows them to repopulate with the newest information and redo the calculations in these pages.

For Renewal applications:

Change in Bonding Method is allowed: full to incremental and incremental to full. Here again, complete Tables then go to General Bonding Section. When this page opens, before you start to make any changes, look down at your list of increments, their acres and mining category breakdowns. If any of this information is incorrect or missing (mining category breakdowns with acres) contact DEP and have this resolved. Once the information is updated in ERIS, DEP internal system, you will need to RESET this page to bring over the newest information. Double check the information after the reset and repeat if necessary.

	Describe the methodology for the determination, and the maintenance program for said postmining land
	use. Identify as Attachment F-4.
	See Attachment F-4
	If a postmining land use change is indicated, the premining land use and postmining land use must be
	included in the advertisement. The request for postmining land use change must meet the criteria
	described in the Surface Mining Reclamation Regulations.
F-5: Pro	ductivity of Land Prior to Mining Information
F-5.	Provide, using the best information available, a description of the productivity of land prior to mining and the average yield of food, fiber, forage or wood products from such lands obtained under high levels of management. <i>Identify as Attachment F-5.</i>
	See Attachment F-5
	Information on productivity and yield was obtained from the National
	Resources Conservation Service National Cooperative Soil Survey.
	pability of Land Prior to Mining and After Reclamation
F-6.	Provide, using the best information available, a description of the land's capability to support a variety of
	uses prior to mining AND after reclamation. <i>Identify as Attachment F-6.</i>
	See Attachment F-5
G-1: Aff	ected Publicly Owned Park Information
G-1.	Will any publicly owned parks be affected by the proposed operation?
	○ Yes No
	TO THE RESIDENCE OF THE PROPERTY AND THE RESIDENCE OF THE PROPERTY OF THE PROP
	If Yes, name and locate them on the PROPOSAL MAP and describe the measures to be taken to minimize of
	prevent adverse impacts from mining on these areas. Identify as Attachment G-1.
G-2: His	storic Places and Archaeological Site Protection Information
G-2.	Describe any cultural or historic resources listed, or eligible for listing on the National Register of Historic
	Places and any known archaeological sites within the proposed permit area and adjacent areas. Include a description of the measures to be taken to protect these resources. <i>Identify as Attachment G-2.</i> If None,
	check here:
G-3: Sta	ate Historic Preservation Officer Information
G-3.	The applicant shall provide to DEP, as a separate package, the following information for the State Historic
	Preservation Officer (SHPO) review and subsequent response:
	A. Two topographic maps of the proposed mining site and surrounding area;
	1. One at a scale of 1" to 500' color coded to show the boundaries and extent of the proposed
	surface mining operation; and
	2. One at a scale of 1" to 2000' to show boundaries of the proposed surface mining operation.
	2. One at a scale of 1 to 2000 to show boundaries of the proposed surface milling operation.
	B. Photographs of any structures (excluding trailers and temporary buildings, any structure built within
	the past twenty-five years, and equipment) situated on the proposed mining operation and directly
	adjacent to the operation; and
	C. A statement of the conditions of the proposed surface mining operation with particular attention given
	to any known historic, cultural, or archeological resources.
	Identify as Attachment G-3.
	SHPO clearance has been attached
1	

H-1: Fish and Wildlife Information

H-1. Provide fish and wildlife resources information for the proposed permit and adjacent area. Give a general overview for these areas including but not limited to habitat and forest cover types; physiographic region; common, unique, or important game and other indigenous plant and animal species. *Identify as Attachment H-1*.

See Attachment H-1

H-2: West Virginia Division of Natural Resources Wildlife Resources Section

H-2 Attach the West Virginia Division of Natural Resources, Wildlife Resources Section, Wildlife Lands Inquiry Response application letter and corresponding response.

Identify as attachment H-2.

The Lands Inquiry Database Request and response have been attached.

H-3: Site Specific Habitats or Species of Concern

H-3. Provide site-specific resource information necessary to address the respective habitats or species of concern if any, identified on the Wildlife Lands Inquiry Response. *Identify as attachment H-3*.

The Wildlife Resources Lands Inquiry Response from the West Virginia Division of Natural Resources has been included in Section H-2. All runoff from the proposed operation will be routed through sediment structures which will be monitored by the storm water requirements of the National Pollution Discharge Elimination System (NPDES) Water Pollution Control Permit which will diminish any adverse effect from occurring to the watershed as a result of this mining operation.

H-4: Endangered Species Act

H-4. Provide information at the site-specific level regarding endangered species and their habitats. Attach the applicant's initial application/notification letter to the West Virginia Department of Environmental Protection pertaining to the site-specific endangered species consultation relative to the proposal. (See permit handbook, section 27-4 for guidelines and applicability.) Attach the corresponding West Virginia Department of Environmental Protection response. In chronological order, continue to provide any further related documentation, determinations, correspondence, or related studies (e.g. bat survey, if applicable) up to and including completion/closure of consultation with the West Virginia Department of Environmental Protection. *Identify as attachment H-4*.

A site-specific endangered species consultation closure letter has been attached.

H-5: Disturbance and Adverse Impact Information

H-5. Provide a description of how, to the extent possible using the best technology available, the operator will avoid and minimize disturbances and adverse impacts to fish and wildlife and related environmental values during the surface mining and reclamation operations. Include protective measures that will be used during active mining. Also include restoration and enhancement measures that will be used during reclamation, where practicable. Where the plan does not include these measures, a statement shall be given explaining why they are not practicable. *Identify as attachment H-5.*

Only an area necessary to efficiently conduct refuse disposal activities will be permitted. Runoff will be directed into sediment control structures before discharging into local streams. Finished slopes will be seeded as soon as practical. Sedimentation control will be completed prior to any disturbance. Regular maintenance of the sediment control structures should minimize adverse impacts on fish and wildlife.

Through the mining, reclamation and sediment control plans, adverse impacts to fish and wildlife, and related environmental values will be minimized.

The Lands Inquiry Response was applied for by the applicant and has been provided. The Lands Inquiry Response identified Elk Creek as a high quality stream. The project is not anticipated to have any adverse impacts on Elk Creek due to proposed NPDES and SMCRA permit requirements.

I-6: Geologic Information Waiver Request

I-6.	Does	the applicant request a waiver of the requirement to provide certain geologic information?
	O Ye	
	0 10	.5 - 140
	If Yes	s, address A. and B. below:
	Α.	Check the type of waiver(s) requested:
	(Results of test borings as requested in I-11.
	(Engineering properties of soft rock for underground mines as requested in I-12.
	В.	Provide the specific source of existing equivalent information available upon which the request for waiver is based. <i>Identify as Attachment I-6.</i>
I-7: Certifi	ied Geo	ologic Cross Sections
I-7.		de certified geologic cross-sections which include the following: <i>Identify as Attachment I-7</i> .
	A.	Nature and depth of the various strata or overburden including geologic formation names and/or geologic members as described by the U.S. Geological Survey or other published geologic reports;
	B.	Presence of any known structural features such as faults, fractures, anticlines, synclines, and monoclines;
	C.	Depth of weathering identified during exploration and drilling;
	D.	Nature and thickness, in inches, of all coal or rider seams above and immediately below the proposed coal seam(s) to be mined;
	E.	Nature and thickness of the stratum immediately beneath the lowest coal seam to be mined;
	F.	Vertical distribution of aquifers and the name(s) of the stratum (or strata) in which the water is found. For each aquifer system, show the seasonal fluctuations in head and general water quality information. Also, provide appropriate cross-references to the detailed water quality information under the baseline ground water information section; and
	G.	Denote any potentially acid-producing materials, topsoiling, and durable materials.
	See M8)	Attachment I-7 and Geologic Cross Section A-A' (Drawing No. B12-608-

I-8: Certified Geohydrologic Map

- I-8. Provide a certified geohydrologic map identifying the following: Identify as Attachment I-8.
 - NOTE: Proposal map can be utilized only if this additional information does not make the map difficult to read.
 - A. Locations (latitude and longitude) and elevation of all bore holes and sampling sites;
 - B. All minerals croplines and the strike and dip of the coal to be mined;
 - C. Existing or previous surface mining limits with their permit numbers;
 - D. Location and extent of known workings of any underground mines and auger mined areas, including mine openings to the surface. Label these openings as to whether they are currently discharging water or are known to have discharged water in the past;
 - E. Areal extent of aquifers with the name(s) of the stratum (or strata) in which the water is found and show the anticipated direction of water movement;
 - F. Location and depth of all oil and gas wells, and their Office of Oil and Gas permit numbers, for all wells which are within the proposed mining limits (surface or underground) and/or within 1000 feet of the proposed permit boundary;
 - G. Presence and attitude of any known structural features such as faults; axial traces of synclines, anticlines, and monoclines; and any recognized fracture patterns of lineament traces;
 - Location of geologic cross-section(s).

See Attachment I-8 and Geohydrologic Map (Drawing No. B12-608-M5) and the Pittsburgh And Redstone Seam Mining Map (Drawing No. B12-608-M2)

I-9: Detailed Geologic Description

- I-9. Provide a detailed geologic description of the permit and adjacent areas which include the following: *Identify* as Attachment I-9.
 - A. Stratigraphic and lithologic descriptions of the area to be affected by mining;
 - B. Hydrogeologic setting including the areal and vertical distribution of all aquifers; seasonal differences in head; the name(s) of the stratum (or strata) in which the water is found; and the availability, movement, quality of ground water flow in all aquifer units;
 - C. Structural geology of the coal seam and the strata to be affected by mining both in the permit and adjacent areas, including faults, folds, fracture and lineament traces, and regional and site specific strike and dip:
 - D. Geochemical character of all strata and coal to be disturbed by mining and the potential of this strata for generating acid, alkaline, or iron-laden drainage;
 - E. Depth and degree of weathering of area strata and the effects this weathering has on the physical and geochemical properties of the overburden proposed for disturbance;
 - F. Effects of fracturing and weathering on the extraction of coal and the hydrologic regime;
 - G. Anticipated impacts of all proposed and existing operations on the geology and hydrology of the area, including impacts resulting from multiple seam mining and subsidence;
 - H. For underground mining operations (including auger mining) indicate whether or not there is the potential for gravity discharge(s) and the anticipated quantity and quality of the discharge(s) from each potential discharge site. For non-gravity discharge situations, indicate the potential for seepage along the outcrop barrier and the potential hydraulic head which might result in the underground workings. Indicate if the potential discharge will require chemical treatment.

See Attachment I-9 and Geohydrologic Map (Drawing No. B12-608-M5) and the Geologic Cross Section A-A' (Drawing No. B12-608-M8).

J-3: Baseline Surface Water Sample Information

Α.	Baseline Sampling Site Description - Surface Wa	ter					
	N/A (Not an option for SMA application)						
	Baseline Sampling Site Description - Surface	seline Sampling Site Description - Surface Water table added. (See instructions)					
B.	Provide Baseline Water Quality and Quantity information for the proposed permit area, adjacent areas and areas over the proposed mineral extraction. (See instructions)						
	N/A (Not an option for SMA application)						
	Baseline Surface Water Analysis added.						
	Parameters to be analyzed are:						
	Total Hot Acidity (mg/l or ppm) Total Alkalinity (mg/l or ppm) Total Dissolved Solids (mg/l or ppm) Total Iron (mg/l or ppm) pH (Std. Units) Sulfates (mg/l or ppm)	Mineral Acidity (mg/l or ppm) Aluminum (mg/l or ppm) Flow (cfs or gpm) Total Manganese (mg/l or ppm) Specific Conductance (µmhos) Total Suspended Solids (mg/l or ppm)					
C.	Provide one-time analyses for all Baseline Surface	Provide one-time analyses for all Baseline Surface Water sites. (See instructions)					
	N/A (Not an option for SMA application)						
	One-time Baseline Surface Water Analysis added.						
	Parameters to be analyzed are:						
	Total Acidity (mg/l or ppm) Total Aluminum (mg/l or ppm) Arsenic (mg/l or ppm) Cadmium (mg/l or ppm) Chromium (mg/l or ppm) Cyanide (mg/l or ppm) Field pH (Std. Units) Total Iron (mg/l or ppm) Total Manganese (mg/l or ppm) Nickel (mg/l or ppm) Phenols (mg/l or ppm) Silver (mg/l or ppm) Total Sulfates (mg/l or ppm) Temperature (C) Turbidity (mg/l or ppm)	Total Alkalinity (mg/l or ppm) Antimony (mg/l or ppm) Beryllium (mg/l or ppm) Total Chlorides (mg/l or ppm) Copper (mg/l or ppm) Total Dissolved Solids (mg/l or ppm) Flow (cfs or gpm) Lead (mg/l or ppm) Mercury (mg/l or ppm) Nitrates (mg/l or ppm) Selenium (mg/l or ppm) Specific Conductance (µmhos) Total Suspended Solids (mg/l or ppm) Thallium (mg/l or ppm) Zinc (mg/l or ppm)					

<u>J-4: Ba</u>	J-4: Baseline Ground Water Sample Information				
Α.	Baseline Sampling Site Description - Ground Water				
	N/A (Not an option for SMA application)				
	Baseline Sampling Site Description - Ground Water	er table added. (See instructions)			
B.	Provide Baseline Water Quality and Quantity information over the proposed mineral extraction. (See instructions	n for the proposed permit area, adjacent areas and areas)			
	O N/A (Not an option for SMA application)				
	Baseline Ground Water Analysis added.				
	Parameters to be analyzed are:				
	Total Hot Acidity (mg/l or ppm)	Mineral Acidity (mg/l or ppm)			
	Total Alkalinity (mg/l or ppm) Total Dissolved Solids (mg/l or ppm)	Aluminum (mg/l or ppm) Flow (cfs or gpm) or Depth of Water (ft)			
	Total Iron (mg/l or ppm)	Total Manganese (mg/l or ppm)			
	pH (Std. Units)	Specific Conductance (µmhos)			
	Sulfates (mg/l or ppm)	Total Suspended Solids (mg/l or ppm)			

.	Are there significant Aquifers on the proposed permit area, adjacent areas and/or areas over the proposed mineral extraction?						
	Yes						
	If Yes, Provide a description to include discharge rates or usage and depth to water under seasonal conditions. <i>Identify as Attachment J-5</i> .						
	See Attachment J-5						
•							
-6 : 1 J-6	Probable Hydrologic Consequences Information						
-0	Provide a statement describing the Probable Hydrologic Consequences (PHC) of the Proposed mining operation, with respect to the hydrologic balance, on the permit area, adjacent areas, and over the proposed mineral extraction. The statement must provide the following information: Identify as attachment J-6.						
	ruentiny as attachment 6-6.						
	WATER QUANTITY:						
	 Whether the proposed operation may result in water supply diminution or interruption for any ground o surface water source currently being used for domestic, agricultural, industrial or any other legitimate purpose; 						
	 Potential Impact the Proposed operation will have on flooding or streamflow alteration, including changes scoring and dewatering of streams; 						
	 Whether the proposed operation will disturb aquifers that significantly insure water use; Potential effects of the proposed operation on ground and surface water availability. 						
	WATER QUALITY:						
	Whether the proposed operation may result in water supply contamination for any underground or surface water source currently being used for domestic, agricultural, industrial, or any other legitimate purpose;						
	 Whether acid or toxic forming materials are present which could result in the contamination of surface ground water 						
	 Potential Impact the proposed operation will have on sediment yield; Potential impacts resulting from increases in total hot acidity, total suspended solids, dissolved solids, and other important water quality parameters. 						
	GRAVITY DISCHARGE/OUTCROP SEEPAGE:						
	 Potential for gravity discharge from the underground workings during and after mining, the potential impacts resulting from the complete failure of the outcrop barrier, and the formation of outcrop seepag faces. (Provide calculations) 						
	See Attachment J-6						
<u>·/: </u> -7.	PHC indications of Contaminated, Diminished, or Interrupted Ground Water Does the PHC indicate that a currently used or significant ground water resource is likely to be contaminated,						
	diminished, or interrupted?						
	○ Yes● NoIf Yes, provide the following information. <i>Identify as attachment J-7</i>						
	 Identify the alternative water source(s) and provide a detailed description of any aquifer, developed or undeveloped, proposed as an alternative water source; 						
	 If the alternative source(s) is developed, show the location on the proposal map using designation AW-AW-2, etc. 						
	 If the alternative source(s) is undeveloped, provide proposed plans and specifications. 						

J-8: PHC indications of Contaminated, Diminished, or Interrupted Surface Water

Provide water quality and quantity data demonstrating its suitability for the identified use(s).

	the PHC indicate that a currently used or significant surface water resource is likely to be contaminated,
aimin	ished, or interrupted?
_	
O Y	
	, provide the flood flows, base flows, and other characteristics to fully evaluate such probable hydrologic
	equences as water availability and suitability for both the pre mining and postmining land use in order to remedial and reclamation activities. <i>Identify as Attachment J-8</i>
Paguaet	for Waiver of Ground Water Monitoring
	iver of ground water monitoring requested?
O Yes	s No
	identify each individual water-bearing stratum for which a waiver is requested and demonstrate by use of
	C determination and other available baseline hydrologic and geologic information that the particular water-
	stratum is not one which serves or may potentially serve as a significant aquifer or one which ensures the
hydrolo	gic balance within the cumulative impact area.
	rovide letter(s) of permission to monitor domestic water supplies proposed as Monitoring sites. <i>Identify as</i> ment J-9
Allacin	ment 5-9
	The ground water and surface water monitoring plans are to be included in Section U of this
applic	ation.

O	Electronic Gubhnission Cystem i Initing
	B. Provide a detailed narrative to describe the major mining and reclamation activities of each phase of the Proposed operation. The narrative shall also address the following: <i>Identify as Attachment N-1</i> .
	 Consideration which was given to maximize the utilization and conservation of the solid fuel resource being recovered so that re-affecting the land in the future will be minimized;
	 Appropriate steps which will be taken to comply with applicable air and water quality laws and regulations and applicable health and safety standards;
	 Fugitive dust control plan to be employed during site preparation, mining and reclamation. When required, provide an air quality monitoring program and locate monitoring station(s) on proposal map;
	 How topsoiling materials will be removed, stored, stabilized, protected, and redistributed;
	 Include Phase Map(s) drawn to scale which indicates the sequence for each phase.
	See Attachment N-1B
N-2: A	dditional Mining Permits for Connected Operation(s) Are other operations anticipated in connection with this proposed operation which will require additional
IN-2.	surface coal mining permits? Yes No
	If Yes, Identify the lands subject to surface mining and the size, sequence and time of the operations. <i>Identify</i>
	as Attachment N-2.
	A coal refuse impoundment and deep mine are proposed adjacent to the facilities proposed in this application. They are separate SMAs but will be in the review
	process concurrently with this application.
N-3: Si	urface Mining/Augering Within Underground Mine Boundary Information
N-3.	Is surface mining and/or augering to occur within 500 feet of an underground mine?
	○ Yes No
	If Yes, Complete the following:
	A. Indicate the status of the underground mine:
	O Abandoned O Active O Temporarily Inactive O Explain Below
	B. Provide the following information. <i>Identify as Attachment N-3</i>
	Office of Miner's Health, Safety and Training approval and subsequent MSHA Approval;
	Approval of the underground operator and/or owner; and
	 A description of impact of this proposed operation upon underground mining.
	mporary Storage and Final Disposal of Waste Information
N-4.	Provide a description of the measures to be used for the temporary storage and final disposal of waste such as grease, lubricants, paints, flammable liquids, garbage, abandoned machinery, timber, brush, treatment
	chemicals (flocculents, pH adjusters, coal processing, etc.), and other combustibles generated during the
	mining activities. Identify as Attachment N-4
	Waste generated by this operation, including grease, lubricants, paints, flammable liquids, garbage, abandoned machinery, mine timbers, timber brush,
	treatment chemicals, or other combustible materials, will not be buried or
	permanently disposed of on site. Oil products and by-products shall be stored in
	watertight containers until they can be picked up by an approved waste management company for disposal off site. Merchantable timber may be sold.
	Brush that is cleared from the site shall be burned in accordance with local laws
	and regulations.
	Note: Identify all temporary and permanent storage and/or disposal sites on the PROPOSAL MAP or SITE PLAN MAP

		Prep Plant Pad	431929

O-3: Backfilling and Regrading Requirements Compliance Information

O-3. Provide a description of how the operation will comply with backfilling and regrading requirements.

Identify as Attachment O-3.

GENERAL BACKFILLING AND GRADING PLAN

Final reclamation of the site will involve the removal the Freshwater Impoundment Dam, all structures at the plant site and backfilling the site to its approximate original contour. The material removed from the dam will be evenly spread over the borrow area. Topsoil from the temporary topsoil area will be placed on the material and seeded. No toxic and/or acid producing materials will be used for the backfilling operation. The post mining configuration will conform to a slope necessary to achieve the required minimum long-term static safety factor of 1.3. Refer to the enclosed cross-sections.

Revegetation will be kept current by establishing a permanent vegetative cover on regraded areas by the end of the second growing season. Operable regrading equipment will be kept on the permit area or adjacent permits until satisfactory completion of grading unless otherwise approved by the Director.

The operator shall establish on all regraded areas and all other disturbed areas a diverse, effective and permanent vegetative cover of the seasonal variety native to the area, or introduced species that are compatible with the approved postmining land use. This established vegetative cover shall be capable of stabilizing the soil from erosion, regeneration and plant succession. At a minimum, a temporary or permanent vegetative cover shall be established by the end of the first growing season and a permanent vegetative cover shall be established by the end of the second growing season.

If rills and gullies form that disrupt the post-mining landuse, they will be repaired. Temporary vegetative cover will be rapidly established around ponds, stockpiles, etc., where erosion is likely to occur.

TIME SCHEDULE FOR REGRADING AND BACKFILLING

Regrading and backfilling will be completed as contemporaneously as practicable with mining operations and as reflected on the approved mining and reclamation plan. Provided, however, that reclamation activities shall be initiated within thirty (30) days, and final backfilling and regrading shall be initiated within one hundred eighty (180) days of completion of underground operations. Should site conditions or weather make adherence to these guidelines impractical, the period of time required to be current may be reasonably extended by the director.

COMPLIANCE WITH BACKFILLING & GRADING TIME LIMITS

O-4: Delay of Contemporaneous Reclamation Variance Request

O-4.		variance for delay of contemporaneous reclamation requested? √es No
		s, provide the following information. E: If Yes and approved by DEP, bond rate is \$5,000 per acre.
	A.	From which standard(s) is variance sought? (i.e., acreage, time and/or distance limits)
	B.	For each standard from which a variance is sought, state a specific alternative limit of the same type.
	C.	A narrative statement supported by documentation and sound scientific and/or engineering data that describes and demonstrates on the basis of site-specific conditions that compliance with the standard(s) is technologically and economically infeasible.
	D.	A sequential plan showing all phases of mining and reclamation, including specific time frames for completing each phase. The plan must describe at what point reclamation operations will commence and how such operations will advance in relation to mining operations throughout all proposed operations.
	E.	Describe any environmental impacts that may result from the delay in reclamation;
	F.	Identify on the PHASE MAP the specific surface areas for which a variance is requested
	Iden	tify as Attachment O-4.

O-5: Approx	D-5: Approximate Original Contour (AOC) Variance Request							
O-5.	ls a variance from approximate original contour (AOC) being requested for:							
	A.	Remined Areas Yes No If Yes, provide the following information: • A demonstration that the volume of reasonably available spoil is insufficient to completely backfill the reaffected or enlarged highwall; • A demonstration that any highwall remnant left after mining will be stable and not pose a hazard to the public safety or the environment.						
		Identify as Attachment O-5 - Remined Areas.						
		NOTE: If Yes, attachment is required.						

B.	Steep Slope Areas Yes No If Yes, provide the following information: • Alternate postmining land use request (Complete F-4 of this application); • The proposed postmining land use of the affected land is limited to industrial, commercial forestry, cropland, residential or public (facility) use; • All highwalls will be completely backfilled in a manner that results in a static safety factor of 1.3; • Only spoil not necessary to achieve the postming land use may be removed from the mine bench; • The watershed of the permitted and adjacent areas will be improved by reducing pollutants, environmental impacts or flood hazards; provided that, the watershed will be deemed improved only if: • The amount of total suspended solids or other pollutants discharged to ground or surface water from the permit area will be reduced, so as to improve the public or private uses or the ecology of such water, or flood hazards within the watershed containing the permit area will be lessened by reduction of the peak flow discharge from precipitation events or thaws; and • The total volume of flow from the proposed permit area, during every season of the year, will not vary in a way that adversely affects the ecology of any surface water or any existing or planned use of surface or ground water; • Appropriate federal, state, and local government agencies were provided an opportunity to comment on the proposed postmining land use and deemed it to be an equal or better
	 economic or public use; The plan is designed and certified by a registered professional engineer to assure stability, drainage, and configuration necessary for the intended use of the site; The surface landowner requested in writing that a variance be granted to achieve the approved alternative postmining land use; The alternative postmining land use requirements are met; All other applicable requirements of the Act and regulations, except for those relating to AOC, are met. Identify as Attachment O-5 - Steep Slope Areas. NOTE: If Yes, attachment is required.
C.	Mountaintop Removal Areas Yes No If Yes, provide the following information: • Alternate postmining land use request (Complete F-4 of this application); • The proposed postmining land use of the affected land is limited to industrial, commercial forestry, cropland, residential or public (facility) use; • The proposed use constitutes an equal or better use compared with the premining use; • The proposed use will be compatible with adjacent land uses and existing state and local land use plans; • County commissions and other state and federal agencies were provided an opportunity to review and comment on the proposed land use; • The application contains a specific plan and assurances that the proposed postmining land use will be: • Compatible with adjacent land uses; • Practicable with respect to financing and completing the proposed use; • Supported by commitments from public agencies where appropriate; • Planned pursuant to a schedule attached to the reclamation plan so as to integrate the mining operation and reclamation with the postmining land use;
	 Designed by an approved person to assure the stability, drainage, and configuration necessary for the intended use of the site; and Obtainable according to data regarding expected need and market. All other requirements of the Act will be met. Identify as Attachment O-5 - Mountaintop Removal Areas. NOTE: If Yes, attachment is required.
	necessary for the intended use of the site; and Obtainable according to data regarding expected need and market.All other requirements of the Act will be met. Identify as Attachment O-5 - Mountaintop Removal Areas.

Identify on the PROPOSAL MAP the specific surface areas for which a variance is requested.

D.

O-6: Backfill Benches Minimum 1.3 Static Safety Factor Information

O-6. Provide a description of techniques to be utilized, including stability analyses to demonstrate that the backfilled benches will meet a minimum static safety factor of 1.3.

Identify as Attachment O-6.

Final reclamation of the site will involve backfilling the permit area to approximate original contour which included backfilling benches in the railroad loop area.

The backfill will be composed of a mixture of rock and soil but will be predominantly rock blasted form the site during construction. The angle of lateral friction for the size and type of rock encountered in this area should, at a minimum, be 35 degrees.

O-7: Seal and Management of Mine Openings Information

O-7. Provide a description of the measures to be used to seal or manage mine openings, exploration holes, auger holes, boreholes, wells encountered and other openings within the proposed permit areas. Include design specifications for ensuring stability under anticipated hydraulic heads for each permanent entry seal and downslope barrier. Include drawings, etc. required to adequately support the description of the proposed measures.

Identify as Attachment O-7.

There are no known unsealed mine openings, exploration holes, auger holes, boreholes or wells. Drawing No. B12-608-A7 is a typical seal detail for boreholes, drill holes/wells. Typical seal details for mine openings and auger holes are shown on Drawing Nos. B12-608-A7 and B12-608-A15.

O-8: Acid/Toxic Strata Burying, Blending, Segregating and Treating Plan

O-8. Provide a plan for burying, blending, segregating, and/or treating acid/toxic strata to avoid adversely affecting water quality and revegetation. Include drawings, etc. required to adequately support the plan. Identify as Attachment O-8.

See Attachment O-8 and Drawing No. B12-608-A13 entitled "Typical Placement Detail For Acid Toxic and/or Elevated Selenium Material".

O-9: Planting Plan

)		Electronic Submission System Printing
O-9.	Provi	de a planting plan which includes the following:
	A.	A prediction of the minesoil character based on overburden analysis, soil analysis, and other available information;
	В.	Proposed treatment to neutralize acidity;
	C.	Method of mechanical seed bed preparation;
	D.	Application rates and analysis of fertilization;
	E.	Application rates and types of mulch;
	F.	Application rates and species of perennial vegetation including herbaceous and woody plants;
	G.	Areas to be planted or seeded to trees and shrubs;
	H.	A maintenance schedule and procedures; and
	I.	 A plan for temporary vegetation cover to include the following: Species Seeding rate; and Timing.

O-10: Postmining Land Uses

Identify as Attachment O-9.

See Attachment O-9

O-10. Postmining land uses indicated in F-4 of this application.						
	Primary	Secondary	Land Use Name			
	•	0		Hayland or Pasture	~	

·1.	Provide a map showing ephemeral/intermittent stream delineations in accordance with the WVDEP October 1999 Guidance Policy for all obvious channels within 100 feet of the proposal area.
	Comment below or Attach P-1 Map.
	See Drawing No. B12-608-M18 entitled "Stream Delineation Map"
	Does this stream delineation indicate that a variance to disturb land within 100 feet of an intermittent or perennial stream is required? Yes No
	If Yes, provide a narrative to show that surface mining activities will not:
	A. Adversely affect the water quantity of the stream;
	B. Adversely affect the water quality of the stream;
	C. Adversely affect other environmental resources of the stream (e.g. physical, biological, water uses, etc.);
	D. Cause or contribute to violations of applicable state or federal water quality standards.

P-2: Pere	nnial Stream Sediment Control Structure Variance Request
P-2.	Is a variance requested to locate a sediment control structure in a perennial stream?
	Yes No
	If Yes, provide justification and demonstrate that there is no other suitable location for such structure.
	Identify as Attachment P-2.
	Pond B exists in an area currently considered non-jurisdictional open water area
	but will be considered perennial following mining activities.
	ration/Relocation of Natural Stream Channel Variance Request
P-3.	Is a variance requested for a stream channel diversion?
	If Yes, indicate if the stream channel diversion is temporary or permanent and provide information
	required by the West Virginia Surface Mining and Reclamation Regulations for stream channel
	diversions. Identify as Attachment P-3.
	See Attachment P-3
D 4: Usa	of Eviation Dualnama Churchuna
	of Existing Drainage Structures
P-4.	Are any existing drainage structures proposed to be used?
	○ Yes
	If Yes, provide information in 'Existing Drainage Structures'.
P-5. Sadi	ment Control Structures Capacity Information
P-5.	Will all sediment control structures, including temporary sediment control, have the capacity to store
J 0.	0.125 acre-ft. of sediment for each acre of disturbed area?
	Yes
	103
	If No, provide a justification for alternate storage requirements which demonstrates that effluent limits will
	be met. <i>Identify as Attachment P-5.</i>
P-6: Cons	structed Drainage Structure Permanent Impoundment Information
P-6.	Will any drainage structure be constructed in a manner which will create a permanent impoundment?
	○ Yes ⑥ No
	If Yes, identify permanent structures and provide documentation for the following:
	<u> </u>
	A. Size and configuration will be adequate for its intended purpose;
	B. Structure will not result in the diminution of the quality and quantity of water utilized by adjacent
	or surrounding landowners or agricultural, industrial, recreational, or domestic use, and
	C. Structure will be suitable for the approved Postmining land use.
	Identify as Attachment P-6.

P-7: Drainage/Sediment Control Structure(s) Information

- P-7. Provide the following information for each drainage or sediment control structure:
 - A. Description, location map, plan view, profile, and cross sections of the structure;
 - B. Geotechnical investigation (if applicable);
 - C. Complete and accurate design and construction specifications;
 - D. Seguence or timetable for construction in relation to the disturbed area to be controlled;
 - E. Operation and maintenance procedures, including methods and location for disposal of the sediment and/or sludge;
 - F. Timetable and plans to remove each structure, including permanent structures;
 - G. Drainage control for all regraded areas;
 - H. Engineering techniques used in design of structures; and
 - I. Certification and periodic inspection procedures.

NOTE: Design plans, cross-sections, and profiles of engineered structures must be based on mapping or surveying data of adequate detail and accuracy. The registered professional engineer or licensed land surveyor certifying design of such facilities is responsible for insuring such adequacy.

Identify as Attachment P-7.

See Attachment P-7 and Drawing Nos. B12-608-E12, B12-608-E13, B12-608-E14, B12-608-E22, B12-608-E23 and B12-608-E30

P-8: Temporary Drainage Control Structure(s) Information

- P-8. Provide the following information for each **temporary** drainage control structure:
 - A. Description, location map, plan view, profile, and cross sections of the structure;
 - B. Complete and accurate design and construction specifications;
 - C. Sequence or timetable for construction in relation to the disturbed area to be controlled;
 - D. Certification and periodic inspection procedures.

Identify as Attachment P-8.

See Attachment P-8 and Drawing Nos. Drawing No. B12-608-A18 and Drawing No. B12-608-A3

P-9: Component Drainage Table

P-9. Complete the following table:

Drainage Structure	Drainage Area(s)	Total Acres	Disturbed Acres	Required Volume Acre- Feet	Designed Volume Acre-Feet
Pond No. 5	P-5	28.1	28.1	3.51	3.90
Pond No. 6	P-6	6.7	6.7	0.84	1.0
Existing Pond B	P-B, SD-1, DD-4 & DD-5	148.1	73	9.13	9.44
Treatment Pond 1A/1B	TP-1	11.6	9.7	1.21	3.98
Treatment Pond 2A/2B	TP-2	4.3	2.0	0.25	3.98
Sediment Ditch No. 1	SD-1	26.9	19.9	2.49	2.50

P-10.	Will water treatment facilities, other than sediment control, be required? ○ Yes ■ No
	If Yes, include the following:
	A. Design, plans and schedule for treatment during and after mining;
	B. A description of the treatment unit and settling facilities;
	C. Reagent;
	D. Operation and maintenance procedures, including methods and location for disposal of sludge; and
	E. Certification and periodic inspection procedures.
	Identify as Attachment P-10.
P-11: WVD P-11.	OCA or MSHA Regulations for Water Retention Structures Information Will any water retention structure be constructed in such a size or manner that it will be subject to the provisions of the West Virginia Dam Control Act and/or the MSHA regulations?
	Yes NoIf Yes, provide the design for each structure and include documentation required by the WV Dam Control
	Act and/or MSHA regulations. <i>Identify as Attachment P-11</i> . See Attachment P-11 for the Application to Construct a Dam, being submitted simultaneously herewith.

Q-1: Primary Road(s) Plans and Specifications

P-10: Required Water Treatment Facilities Information

)		Electronic Submission System Printing
Q-1.	Prov	ide plans and specification for each primary road to include the following;
	A.	Design drawings, plan view, map, construction specifications and cross sections;
	В.	Road width, gradient, and surfacing materials;
	C.	Fill embankment and road cut;
	D.	Culverts, bridges, and low-water crossing;
	E.	Drainage ditches and structures;
	F.	Operation and maintenance procedures;
	G.	Certification and periodic inspection procedures; and
	Н.	Abandonment and/or removal plan.
	Iden	tify as Attachment Q-1.

R-3: Excess Spoil Disposal Structures Information Detail

U		Electronic Submission System Printing
R-3.	Provide	the following information for each excess spoil disposal structure.
	Α.	Plan view, profiles and cross sections drawn to scale;
	B.	A detailed description of : • Clearing, grubbing and topsoil handling;
		 Clearing, grubbing and topson nariding, Construction of underdrains and source of underdrain rock;
		Type and source of materials to be placed in the fill;
		Construction sequence;
		 Construction methods including transportation and compaction of materials;
		Surface protection and maintenance;
		Abandonment plan; andCertification and periodic inspection procedures.
		Certification and periodic inspection procedures.
	C.	Geotechnical investigation to include:
		Depth to bedrock and character of bedrock; Compliant Com
		 If applicable, the number, location and depth of foundation borings or test pits, and the log of each. Indicate the location on the PROPOSAL MAP;
		A survey identifying all springs, seepage and ground water flow observed or anticipated
		during wet periods;
		 A technical description of the rock materials to be utilized in durable rock fills, rock
		underdrains, rock chimney cores or rock drainage blanket, including durability tests;
	D.	Hydrologic and hydraulic designs to include:
		Calculations, specifications, and drawings for diversion ditches; and
		 Calculations and engineering assumptions considered in the design of the underdrain.
	E.	Stability analyses addressing both static and dynamic loading conditions to include:
		 Documentation and rationale used to determine cohesion (c), friction angle (�) and density of
		foundation material;
		 Documentation and rationale used to determine cohesion (c), friction angle (�) and pore pressure ratio (phreatic surface) of fill material; and
		Results of stability analyses.

R-3: Excess Spoil Disposal Structures Information Detail

U		Electronic Submission System Finding
R-3.	Provide A.	the following information for each excess spoil disposal structure. Plan view, profiles and cross sections drawn to scale;
	В.	A detailed description of :
		Clearing, grubbing and topsoil handling;
		Construction of underdrains and source of underdrain rock;
		Type and source of materials to be placed in the fill;
		Construction sequence;Construction methods including transportation and compaction of materials;
		 Construction methods including transportation and compaction of materials, Surface protection and maintenance;
		Abandonment plan; and
		Certification and periodic inspection procedures.
	C.	Geotechnical investigation to include:
		Depth to bedrock and character of bedrock;
		If applicable, the number, location and depth of foundation borings or test pits, and the log of Applicable the location on the RDOROGAL MARK. Applicable the location on the RDOROGAL MARK.
		 each. Indicate the location on the PROPOSAL MAP; A survey identifying all springs, seepage and ground water flow observed or anticipated
		during wet periods;
		 A technical description of the rock materials to be utilized in durable rock fills, rock
		underdrains, rock chimney cores or rock drainage blanket, including durability tests;
	D.	Hydrologic and hydraulic designs to include:
		 Calculations, specifications, and drawings for diversion ditches; and Calculations and engineering assumptions considered in the design of the underdrain.
	_	
	E.	Stability analyses addressing both static and dynamic loading conditions to include: • Documentation and rationale used to determine cohesion (c), friction angle (�) and density of
		foundation material:
		 Documentation and rationale used to determine cohesion (c), friction angle (�) and pore
		pressure ratio (phreatic surface) of fill material; and
		Results of stability analyses.
	Identify	as Attachment R-3.
	See At	tachment R-3
R-4: Ro		<u>Buttresses or Key-Way Cuts</u> ck-toe buttresses or key-way cuts included in any fill designs?
114.		
	○ Ye	s No provide the following:
	A.	The number, location and depth of borings or test pits;
	В.	Engineering specifications used to design the rock-toe buttress or key-way cut;
	C.	Type of material and engineering properties of the material used for the key-way or rock-toe; and
	D.	Plan view, cross section and profiles.
	laeriiii	ry as Attachment R-4.
R-5: Du	urable Ro	ock Fills
R-5.	Are th	ere any proposed durable rock fills?
	O Ye	
		provide calculations for each durable rock fill certified by a Registered Professional Engineer that at
		30% of the fill volume will be durable rock. <i>Identify as Attachment R-5.</i>
S-1. Dr	onosed	Underground/Augering Operations?
Note:	-	Certificate of Approval for Mine Opening must be obtained from the Office of Miner's Health, Safety, and
		aining for underground mines.

S-1.	Are underground or augering operations proposed?
	○ Yes No
	If Yes, provide the following and complete items S-2 through S-6:
	 A. Topographic Map of a scale 1"=1,000' (Subsidence Survey Map); B. Mine Development Map; and
	C. Supplemental Mine Maps.
	oposed Blasting ing proposed?
is biasi	ing proposed? Sizes O No
If Yes,	complete this entire section and attach a BLASTING MAP.
Once t	he application is approved, any changes to this map or plan must be approved by the Secretary.
-	
	<u>asting Operations</u> sting operations be conducted within 1,000 feet of any building used as a dwelling, public building, school, church,
	munity or institutional building?
● Ye	es O No
If "Yes"	, show a 1000 feet radius from from the structure(s) into the permit area, and complete the following:
A.	Is a site specific blast design included? ○ Yes ● No
	If "No", submit and obtain approval prior to blasting within 1000 feet of structure(s).
В.	Will blasting operations be conducted within 300 feet of a protected structure?
	○ Yes No
	If "Yes", provide a waiver allowing blasting within 300 feet, signed by the owner and occupant (if applicable).
T 0: DI	and the second s
	asting Near Underground Mine asting operations be conducted within 500 feet of an underground mine?
_	Yes O No
If No,	go to T-4. If Yes, complete the following:
A.	Show underground workings on map.
B.	Attach WV Office of Miner's Health, Safety and Training approval. Identify as attachment T-3B.
C.	Are works Active? ○ Yes ● No
	If Yes, provide MSHA approval, Underground Operator s Approval and Safety measures to protect underground miners and operations during blasting. <i>Identify as attachment T-3C</i> .
D.	Is a Site-Specific Blast Design included to address protection of the underground mines and miners and environmental concerns?
	○ Yes ● No
	If "No", submit and obtain approval prior to blasting within 500 feet of underground mine.

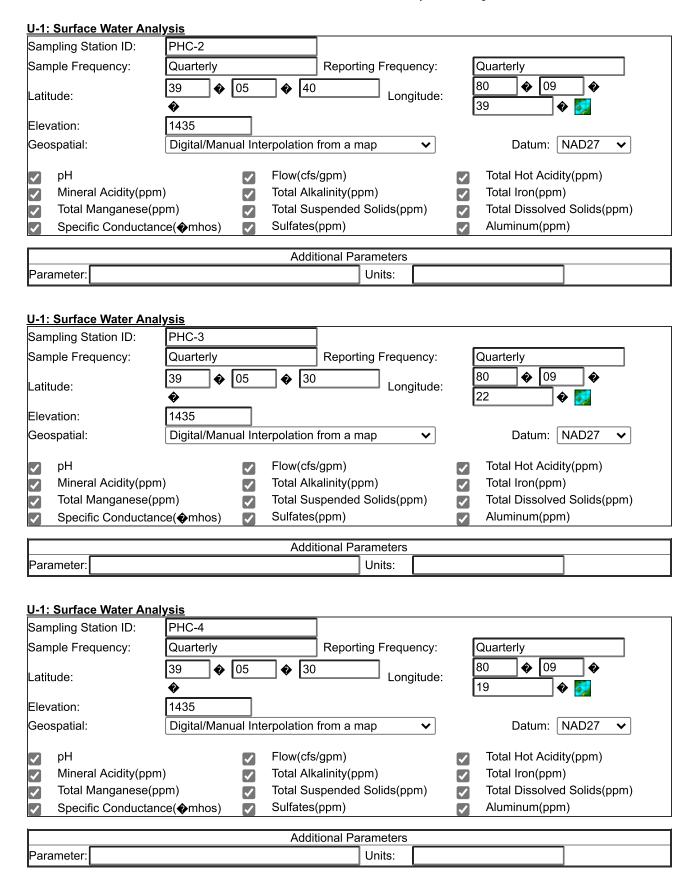

T-4: Structure Owners and Occupants

A.	Provide names and complete addresses for each owner and occupant, of protected structures or structures located within the pre-blast survey area as defined in WV Code (SCMRA) 22-3-13a(a)(1) and (2). <i>If the occupant is not the owner, list the name and address of both the owner and occupant.</i>								
В.	If NONE , check here Provide names and addresses of owners of all other manmade structures, located in the pre-blast area, not defined as protected structures as identified in 199CSR-1-2.2 (public utilities, underground mines, gas wells/lines, power lines, cemeteries, public roads, etc.), and not directly associated with a dwelling listed in "A".								
	If NONE , check here								
C.	For an IBR, amendment or revision, include a copy of the most recently approved T-4A and B list then indicate by a new list the structures added by this application If N/A , check here If NONE , check here								
	Identify each and every structure shown on the Blasting Map. Month and year list(s) complied (mm/yyyy): 11/2012								
	This date must be current to 1 year.								
Struct	ture ld: - Owner: - Occupant: -								
Name	Similar Stapania								
Stree									
City:									
Coun									
Zip:	NA Phone:								
IT "Yes	s", provide as an attachment written permission from the owners of these structures.								
	Blasting Plan ral Blasting Plan								
The fo	ollowing general blasting plan will be adhered to by the permittee. Any departures from this general plan must have val of the Secretary prior to being implemented.								
	permittee is proposing any departures from the general blasting plan, not already addressed in attachments T-1 gh T-5, then identify below and provide attachment if applicable.)								
agree Chap blasti	epartures from the general blasting plan are proposed. The Applicant es to be subject to the Surface Coal Mining and Reclamation Act, oter 22, Article 3, Section 3A-5. At a minimum of 14 days prior to ing, a site specific blast plan, prepared and signed by a certified er, shall be submitted to and approved by the Office of Explosives and ing.								

- A. For each shot, the blast record (log) will include information required by rule under 199CSR1-3.5 at a minimum. The approved blast record (log) form EB-37 will be used unless the Secretary approves an alternate blast log prior to use.
- B. Prevent adverse effects with attention given to the geological and topographical conditions depicted in pre-mine core drilling and site-specific information of current drill operations in the blast area.
- Consider weather effects such as wind speed and direction, temperature inversions, and cloud cover to minimize air blast and dust.
- Will employ safety precautions in designing, loading, and detonating a blast and when handling, transporting, storing, and disposing of explosives.
- E. Comply with limitations for ground vibration and air blasts (unless waived in item T-5) as prescribed by rule under 199CSR1-3.6c, h and i.
- F. Prevent injury to persons and damage to public and private property outside the permit area and prevent changes in the course, channel or availability of ground or surface water outside the permit area.
- G. At the blaster-in-charge discretion, traffic will be blocked when blasting in close proximity of public roads.
- Comply with WV Code 22-3-22a (blasting restriction/site specific blast design) requirements addressed items of this section.
- I. Comply with WV Code 22-3-13(b)(15) use of explosives and inventory.
- J. Agree to be subjected to WV Code 22-3A-5 (Underground mining operations are not subject to this).
- K. Incorporate a blasting inspection and monitoring program, including specific provisions for monitoring ground vibrations and air blast if this operation is a surface coal extraction operation. The monitoring will occur on the calendar quarter at minimum. One blast of each type (binder, pre-split, production) on same occurrence (first, second, third...) will be maintained. The seismograph will be set up and maintained in accordance with ISEE standards and located at the nearest "protected" or "other" structure, whichever is closest to the blast. Full waveforms will be attached to the blast log.
- L. Full wave forms will be attached to blast log within 24 hours if scaled distance is exceeded or any unusual circumstances occurs (fly rock, suspected air blast, etc.).
- M. The legal advertisement (use form EB-38) will include all required information and will be submitted to OEB prior to blasting. The type of warning device must be specifically identified. Any changes to the type of audible warning signals must be re-advertised and re-notification to residents.
- N. The letter of notification of the blasting schedule will be sent certified mail to local governments, public utilities, owners of other man-made structures and each resident within the pre-blast area and persons who regularly work in the pre-blast area to advise of the blasting schedule, warning signal and access control. The warning signal to be used must be consistently listed in form EB-38 and this notification.
- Comply with WV Code 22-3-13a pre-blast survey requirements and use forms EB-39, EB-39A, EB-39B, EB-39C and EB-39D.
- P. Any changes to the blast plan must be submitted to and approved by OEB.

U-1: Surface Water Monitoring Plan

- U-1. Provide a surface water monitoring plan to include the following:
 - Monitoring site locations;
 - B. Quality and quantity parameters; and
 - C. Sampling and reporting frequency.

Z2: Blasting Advertisement

PUBLIC NOTICE OF BLASTING OPERATIONS ADVERTISEMENT NORTH CENTRAL RESOURCES, LLC, , 200 CHAPEL BROOK DR, BRIDGEPORT, WV 26330 Notice is hereby given that situated in Union District of Barbour ✓ County, approximately miles northwest (Direction) of Volga (Nearest Post Office) will be conducting blasting activities in accordance with all State and Federal Laws and as approved by the Department of Environmental Protection. Blasting activities will occur Monday through Saturday from sunrise to sunset No blasting shall be conducted on Sunday. Blasting is to commence on NA iii and continue through NA iö Ten minutes prior to and immediately after each blast, all access to the specific area will be safeguarded from unauthorized entry. The warning signal prior to each blast shall be from a(n) airhorn (air horn, siren or other specific device) audible to at least one half (1/2) mile from the blast. The warning will be given three (3) minutes prior to detonation and will consist of three (3) short blasts of five (5) seconds duration with five (5) seconds between each blast. The all clear signal shall be one long blast from a(n) airhorn (air horn, siren or other specific device) of twenty (20) seconds duration. Blasting shall be conducted in such a way so as to prevent adverse impacts to the public or the environment. Blasting activities will not be conducted at times other than those announced in the blasting schedule except in the event of an emergency situation where rain, lightening, or other atmospheric conditions, or operator or public safety requires unscheduled detonations.

eMaps: Maps and eMap Data Section

This section is to attach, where appropriate, the proposal, drainage, and subsidence control maps along with the eMap. Click the 'Attachments' button at the top right.

The eMap file is used by WVDEP to update the GIS database. It will prevent errors in representing the applicant's permit features that arise from manually georeferencing and digitizing scanned images of permit maps. It also will reduce misrepresentation due to data being out of date.

- 1. This file should contain a subset of features found on proposal/drainage and subsidence control plan maps.
- 2. A file is only required for actions that also require a proposal/drainage map, renewal/progress map, final map, or subsidence control plan map.
- 3. Applicants should use the available CAD templates for DWG files, or follow instructions for creating shapefiles or a personal geodatabase.

The eMap file for this application should conform to the WVDEP eMap standards as defined at the following location:

eMap Standards Requirements

WVDEP eMap AutoCAD Templates are available at the following locations:

Template files for North Zone

Template files for South Zone

A free dwg file viewer can be downloaded from the following location: (Click the "Download Now" button)

Free Autodesk DWG viewer

For any questions about the eMap file or standards, please contact:
