**Q15.** Please provide information on the scale of the project (project area, area of plants and buildings, production capacity, amounts of power generation, etc.) Further, please explain whether an execution of ESIA is required on account of the large scale of the project in the country where the project is implemented.

This project includes overhead transmission lines reaching a total length of 900 km in Saudi territory and 11 km (Saudi portion) long marine cables connecting northwestern Saudi Arabia and Egypt.

This project will comprise of :

- Substations: Tabuk 1500MW Converter station & 3000MW Madinah East Converter station located within the boundaries of existing substations, and new transmission station near the gulf of Aqaba.
- HVDC OHTL: Tabuk to Madinah (228km), Madinah to Tabuk Portion 2 (c. 336km), and Madinah to Tabuk Portion 3 (c. 336km).
- Subsea cable Aqaba to Taba: Prysmian (11km (Saudi portion)).

ESIA is required for all the portion of OHTL and Submarine as this project is of large scale covering hundreds of KM of transmission line going through desert, sparse rocky areas, while for the convertor station EIA is not required because the stations are located within the boundaries of existing Substations and a new transmission station near the gulf of Aqaba is covered in the submarine ESIA.
